This amounts in substance to the suggestion that America shall start out to police the world. America will first establish standards for human relations which presumably will be somewhat higher than our own since we are not particularly proud of our gangster record or of the southern sharecroppers as shown in Tobacco Road.

Then America will see to it by war, if necessary, that every

Then America will see to it by war, if necessary, that every country shall accord to its citizens at least this minimum of human

rights. We shall start out in a great crusade to extend the Declara-tion of Independence to give to people everywhere the right of life, liberty, and the pursuit of happiness. Certainly no sensible person believes the United States can em-bark on any such program in violation of almost every precedent in our life as a nation and in flat contradiction of every rule of interour life as a nation and in flat contradiction of every rule of inter-national law and our own foreign policy over a century.

Don Quixote tilting at windmills would not make a more sorry

Don Quixote tilting at windmills would not make a more sorry picture than Uncle Sam.

Persecution in a righteous cause did not begin and it almost certainly will not end with this generation. "The blood of the martyrs is the seed of the church." America has terrific problems here at home to solve before we start out to clean up the world. Ten million still unemployed seek an opportunity too long denied to provide for 25,000,000 dependent women and children the bare necessities of life. Seven million farmers ask only a chance to live and support their families in an American way of life and to receive for their labor at least their daily bread. The laborer is worthy of his hire and the farmer must receive the cost of his production if he is ever to survive.

Is it not the first duty of America to solve these problems here at home before launching out in a crusade to save the world?

But the second argument for American adventures overseas is more difficult to meet. We are told that America itself is endangered by these aggressive dictatorships. In myriad ways through all the subtle agencies of modern propaganda it is suggested to us that we must fight not only to save people elsewhere but in very truth to save our own hide.

This argument urges that a triumphant Japan, Germany, and

This argument urges that a triumphant Japan, Germany, and Italy will soon be knocking at our doors upon the prostrate forms of Great Britain and France and Russia.

This is the picture that is kept more or less constantly before our eyes and the song that is dinned forever in our ears.

A more improbable picture it is difficult to conceive. Modern wars are fought with raw materials. The dictatorships are whipped before they start, and this they know full well. They possess perhaps 5 percent of the earth's resources with which it is suggested they may seize the remaining 95 percent.

they may seize the remaining 95 percent.

The dictatorships possess approximately 7 percent of the population of the globe with which to dominate the other 93 percent.

Their geography violates every military requirement. Italy is an exposed salient that would be annihilated in any major war with

exposed salient that would be annihilated in any major war with France and Great Britain, and this Mussolini knows better than anyone else. Japan could not carry on a major struggle for 3 months without annihilating the British fleet, because Japan is absolutely dependent upon oil from overseas.

Only Germany has any sort of a compact position with internal lines of communication to essential raw materials. China and Ethiopia are proving very difficult morsels to digest. If China can ever be pacified, it will even then require decades of effort and billions of investment to be converted from a liability into an asset.

asset. Meanwhile Russia, the colossus of the north, lurks in the back-ground waiting the time to strike. With practically unlimited natural resources shielded in the almost impenetrable fastness of the Urals and Siberia, Russia may contemplate the European and Asiatic struggles with an oriental calm—even as may the United States.

It is the same old struggle of the balance of power to defend or acquire gains. Great Britain has played this game for four centuries with an amazing degree of success, accumulating a colonial

empire with 400,000,000 population and a collection of natural resources without parallel in the history of the world. France and Russia have also done very well.

This is not an invitation to a fool's paradise. The Congress is seeing to it with amazing unanimity that America shall be adequately prepared. The Navy, the Army, and the Air Corps are being properly prepared for the defense of the Americas against

being properly prepared for the defense of the Americas against any foreign foes.

Attacks upon other countries by our governmental authorities do not help our trade or our prestige in the world. One does not go around calling names unless he is looking for a fight.

If England does not consider it wise or prudent to sever trade relations with the dictatorships, certainly America may consider well the course.

well its course.

America may wisely mind its own business in the Americas. Let us devote our surplus energies to putting 10,000,000 Americans back to work and to giving 7,000,000 farmers an American market for their products.

Let us be properly and adequately prepared to defend the Amer-

icas and then let us keep out of the European and Asiatic mess.

This generation has given the lives of 50,000 American boys and billions of our wealth to make the world safe for democracy. The sacrifice has seemed to be in vain. Let America now take a lesson from other countries. Let us take advantage of our unique geographical position to preserve here some vestige of civilization. Perhaps America may yet become the "lost horizon," where civilization will be found, as Europe and Asia look across the oceans from the ruin they have wrought.

This is the picture of an America—not as an ostrich, with head buried in the sand, but as a beacon light of peace and ordered progress for the salvation of the world.

There would be no need for concern in the United States if we There would be no need for concern in the United States if we decide first to spare no effort in intelligently maintaining an adequate defense force, hold fast against efforts to involve us in foreign troubles, and make it plain to all concerned, and mean it, that we will fight quicker than a wink if our vital interests are disregarded. We think the prospects of war for the United States will be extremely small if we keep a powerful striking arm for all the world to see, make no secret of our intention of using it on anyone who challenges our vital interests, and then proceed to mind our own business with nothing more than a watchful eye to give to the

own business with nothing more than a watchful eye to give to the follies to which our neighbors may commit themselves.

Relief-Recovery-Reemployment

EXTENSION OF REMARKS

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, April 21, 1939

RADIO ADDRESS BY HON. J. WILLIAM DITTER, OF PENNSYL-VANIA, APRIL 2, 1939

Mr. DITTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address which I delivered over the Columbia Broadcasting System from station WCAU, Philadelphia, Pa., Sunday, April 2, 1939:

The most important job for Congress today is what it has been for the last 6 years—to put America back to work. That job has not been done. And it never will be done until a radical change is made in Washington—until business is given a real chance to get going. I know and I believe you know this chance to get going has not been given, although a lot of promises to do so have been made. The latest bait is business appeasement. It is intended to take the place of the old "breathing spell" which proved to be mostly spell and not much breathing. Ever so often the New Deal feels compelled to hold out the hope that the Government will stop its war upon business and permit confidence in private enterprise and the normal American spirit of commercial adventure to go ahead with the big job of getting America back to work. It looks as if appeasement will have a shorter life than the breath-It looks as if appeasement will have a shorter life than the breathing spell, for the latest word from the White House indicates that business can expect no help from administration leaders in either policy or program. The hoped-for tax relief has evaporated and the long-promised and eagerly awaited economy program has gone with the wind. In the meantime W. P. A. is the cold comfort held out to the millions of unemployed men and women who are looking for real jobs and real work.

W. P. A. from the beginning has been the favored child of the New Deal. It was a law unto itself and could do as it pleased. Blank checks for billions were given to it to squander as it would. It was shielded from criticism as long as possible and only a national scandal opened the door for a partial examination of its inhuman treatment of the needy unemployed. Every suggestion for a reformation of its policies and an improvement in its administration has been scorned. Instead of being a part of a relief program it has become a gigantic business employing highly paid advertising men, publicity agents, and other specialists such as are found in private business for the purpose of selling merchandise and services. Care and caution have been thrown out the window in the wildest and most extravagant dissipation of public funds ever seen. The whole thing has been misguided and mishandled. With this record, which has not been denied or explained, W. P. A., the petted and spoiled child of the New Deal, now asks for a hundred and fifty million dollars more to continue its joy ride of shameful waste and its hit-and-run treatment of its joy ride of shameful waste and its hit-and-run treatment of the unemployed.

As a member of the Appropriations Committee of the House of Representatives I have seen W. P. A. at close range during the time that it has made frantic efforts to wangle the additional one-hundred and fifty millions from the taxpayers. What W. P. A. needs more than anything is a very fine-tooth combing and no one should demand it more than the men and women who have suffered as a

demand it more than the men and women who have suffered as a result of its inhuman treatment. Who is responsible for this high-handed scheme of waste when there is so much real want?

I believe you want to know why W. P. A. is spending more than \$300,000 for a window-dressing exhibit at the New York World's Fair. Is this economy? I believe you want to know why W. P. A. has an administrative staff of 34,000 employees who are not W. P. A. workers, but 34,000 overpaid Federal officeholders. Is this fair? I believe you want to know why W. P. A. has increased the salaries of countless of these administrative officeholders, why salaries have jumped in W. P. A. from \$2,000 to \$7,500 a year, why \$9,500 a year and traveling expenses is necessary for any W. P. A. official while \$60.50 men are fired. Is this human? I believe you want to know why W. P. A. has spent thousands upon thousands of dollars for elaborately illustrated and expensively bound advertising booklets, the only purpose of which can be to put on a sales campaign for this squandering syndicate. Is this justifiable? In a nutshell you, and many other Americans with you, want to get the low-down on this outfit that has run wild under the pretense of doing a relief job, and that today shows no intention of changing its policy or its methods.

changing its policy or its methods.

Last week the House of Representatives adopted by the overwhelming vote of 352 to 27 a resolution to launch a thorough and searching inquiry into the whole scheme of W. P. A. administration.

Republicans and Democrats alike voted for this proposal, first upon the ground that the issue of honest and efficient relief is a matter far above partisan politics; and, secondly, on the ground that the grave political abuses already brought to light in W. P. A. justify a real house cleaning—to the end that the vast sums assessed against the taxpayers for relief shall actually be spent in assistance to the needy and not to high-paid superintendents and supervisors and to extravagant schemes of political propaganda,

supervisors and to extravagant schemes of political propaganda, nor diverted to political hangers-on.

The W. P. A. hearings before the Appropriations Committee have been most revealing. Inhuman treatment of the relief problem is seen everywhere. Politics, pay rolls, and purges stand out as the main attraction of the big show. In one congressional district W. P. A. workers were assigned to a house-to-house vote solicitation. In another, W. P. A. workers were ordered to paint election posters for a New Deal candidate. In at least two States W. P. A. officials were actually entered as congressional or senatorial candidates, one with the open boast that W. P. A. votes alone would decide the election. Shall we continue to hand over millions of dollars for an administration of relief of this kind when no assurance has been given of a change of heart? Shall we appropriate more millions to encourage such unkind and

when no assurance has been given of a change of heart? Shall we appropriate more millions to encourage such unkind and inhuman treatment of our needy unemployed?

Every honest person must admit that the relief load should be heaviest when business is at low ebb—and correspondingly lighter when business conditions improve. But W. P. A. has operated on an entirely different basis. Their rolls skyrocketed when business was on the upgrade. Let's look at the figures. From May to November last year industrial production increased from 77 persons. ness was on the upgrade. Let's look at the figures. From May to November last year industrial production increased from 77 percent to 103 percent of normal. With this improvement each week saw more and more people back at their regular jobs, and yet the W. P. A. rolls jumped by more than half a million from last May to last November. Of course, you will remember the elections were held last November. Political pay rolls not relief pay rolls consumed the major part of the appropriations made for W. P. A. last year. If these political pay rolls had been eliminated W. P. A. could have met every need for the unemployed out of the original appropriation. Does anyone dare defend such brutal the original appropriation. Does anyone dare defend such brutal treatment of human need?

On the other hand, if W. P. A. does reflect the real unemployment conditions, then the New Deal has failed sadly in its recovery efforts.
Millions of men are looking for jobs; real jobs and real work;
W. P. A. berths do not satisfy them. They want the chance to earn a living; not the privilege of a hand-out.

America wants recovery; not relief—recovery of jobs in industry

wants tecevery, not tener—tecevery of jobs in industry and of hope in the future.

We have heard much of the boasted humanitarianism of the New Deal. With one hand it has expended billions for relief. With the other it has browbeaten business, burdened it with regulations, and throttled it with oppressive taxation. It has lashed it with denunciations, branded it as criminal, and held it up to public contempt. Then, bound and gagged, business has been told periodically to absorb the unemployed.

Unjust as this has been to business, it is no less unjust to the

unemployed, for it cuts them off from private industry, keeps them

the wards of the Government, and robs them of the right to work

In handling the problem of relief, the administration has sought merely the remedy of the suffering caused by the disease of unemployment, rather than the cure. Forgetting that unemployment is the result of the plight of business, it has insisted upon regarding relief as an isolated question. It has ignored the vital relationship of the problem to the entire economic system. At one time it had much to say about the forgotten man. Today the forgotten man is the man condemned to the hopeless future of dependency upon

It will take more than a few soft words to encourage private industry. Actions have always spoken louder. Only by easing the burden under which business is now staggering, only by setting the Nation's financial house in order, will business be encouraged and

enabled to go forward.

enabled to go forward.

Hate won't make work. Fear won't make work. Taxing the life out of business won't make work. Breathing spells won't make work. There is only one thing that will make work, and that is cooperation with business, aiding business, encouraging business, providing for business the one thing it needs—confidence—a confidence that the signals will be set to go by adminstration leaders. istration leaders.

istration leaders.

We must put America back to work. This must be the watchword. Back to work for the unemployed. Back to work for idle capital and empty factories. Back to work for all to the task of creating a better world. Only thus can America be better fed, better housed, and better clad. Only thus can there be life in abundance for all. Who can doubt that there is work to do? A thousand necessities and comforts are yet to be created. There are miracles of science waiting to be discovered to save and to enrich the life of man. Only under an administration dedicated to such a program can America once more more forward.

to such a program can America once more move forward.

The granting of adequate and proper relief has never been questioned or challenged by the Republicans in Congress. We questioned or challenged by the Republicans in Congress. We yield to no party in a sincere concern and deep regard for the needy. We grant no monopoly on charity. We believe that ingrained in the American spirit is the virtue of humble charity, a charity that "valunteth not itself," a charity which enjoins every man to regard himself as his brother's keeper.

We want to give the whole relief dollar to the needy unemployed, not half of it to the political boss.

We want to return the administration of relief to the States where it properly belongs.

where it properly belongs.

We want to restore relief as a national expression of a noble

humanitarian sentiment of assistance.

We want to indict in the fair court of public opinion those who have profaned the ennobling impulses of charity by making of

it a disgraceful political wallow.

We want a policy of genuine appeasement. We want to appease the outraged sense of public morality brought about by W. P. A. In this effort we need the active support of every citizen in the land—for when corruption and a callous sense of moral irresponsibility make their abiding place in government, the soul of a nation persists. a nation perishes.

So Maine Goes

EXTENSION OF REMARKS

HON, RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Friday, April 21, 1939

EDITORIAL FROM THE BANGOR DAILY NEWS OF APRIL 20, 1939

Mr. BREWSTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bangor Daily News of Thursday, April 20, 1939, reprinted from the Providence Journal of March 27, 1939:

> [From the Bangor Daily News of April 20, 1939] SO MAINE GOES

(Reprinted from the Providence Journal of March 21, 1939)

Events again have shattered the slogan, "As Maine goes, so goes the Nation." Maine, which, with Vermont, once declared it would rather be right than be the President's, increased its Federal incometax collections almost 25 percent this month, while receipts throughout the rest of the country declined on an average of 30 percent

Not only was Maine the only New England State with greater returns during the first 20 days of March this year than during the corresponding period of 1938, but it was the only State in the Union so listed by the Treasury Department. Even Vermont's total fell from \$821,855 to \$507,494, thus proving that 1936 political independence or stubbornness (depending on the partisan viewpoint) had nothing to do with the case.

Local wonder at the record apparently prevents Maine officials from disclosing reasons for the good showing. Rhode Island's decrease, of course, is easily explained. The absence of certain conditions and calamities which played havoc here last year may have improved Maine's condition. In any event, that State remains a part of the United States, and an encouragingly substantial part at that. If the Nation will not always go with it at election time, Maine at least helps the Nation go at income-tax time.

Why Slander a State? — Misleading, Malicious Misinformation Deliberately Distributed—Stop! Look! Listen!

EXTENSION OF REMARKS

HON, CHARLES A. PLUMLEY OF VERMONT

IN THE HOUSE OF REPRESENTATIVES Friday, April 21, 1939

ARTICLE FROM THE BARRE (VT.) TIMES

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from Commissioner of Agriculture E. H. Jones, of Vermont, appearing in the Barre Times, April 18, 1939, refuting certain statements of feature articles in the metropolitan press:

[From the Barre (Vt.) Times of April 18, 1939]

IMPORTED MAPLE SUGAR NOT BRANDED AS VERMONT—COMMISSIONER E. H. JONES, OF VERMONT AGRICULTURE DEPARTMENT, REPLIES TO IMPLICA-TIONS IN SOME METROPOLITAN PAPERS

Refuting statements in certain recent feature articles in the metropolitan press, which implied that out-of-State maple sirup was shipped here, relabeled, and sold as the Vermont product, Commissioner of Agriculture E. H. Jones has sent the following letter to the editors of several large city papers, including the Baltimore Sun and the New York Times:

"The implication made by feature story writers in the metro-politan press that such maple sirup produced in other States is brought to Vermont, processed and marketed as a Vermont product is too serious a charge to be allowed to pass unrefuted. Such propaganda apparently makes good publicity for the locality being featured, but should not be taken seriously by the public, because it is untrue. These inferences are resented by every loyal Vermonter. It is obvious that Vermont would have nothing to gain

it is untrue. These inferences are resented by every loyal Vermonter. It is obvious that Vermont would have nothing to gain by such questionable procedure. Her position of prestige as to the premier maple State could not possibly be enhanced by permitting, let alone encouraging, imported sirup, much of which is inferior in grade and flavor, to masquerade as a Vermont product.

"That some maple sirup is imported from other States by Vermont packing companies is readily agreed. With the charge that this sirup is then sold under Vermont label I vigorously disagree, and as a result of investigations to disclose the facts of the matter, I state that to my best knowledge and belief the accusation is false and without foundation of fact.

"The term, 'Vermont maple,' means a product manufactured only from the sap of maple trees growing in Vermont. The laws, both State and Federal, relative to misbranding of food products are so strict and so rigidly enforced that this charge of open violation is as preposterous as it is unfounded. Furthermore, be it said, the Vermont maple packers are men of integrity, who abide by these laws. Through the courtesy of the secretary of their association I have in my files the written and signed assurance of all of the leading maple packers in Vermont that no sirup imported by them from other States is marketed as pure Vermont maple. Such sirup is branded 'Pure maple,' not 'Pure Vermont maple.'

"In the words of a former Presidential candidate, 'Let's look at the record,' and see if we can determine how this erroneous propaganda may have originated: Vermont is the headquarters for maple products and as the leading packing plants of the country are

the record," and see if we can determine how this erroneous propaganda may have originated: Vermont is the headquarters for maple products and as the leading packing plants of the country are located here immense quantities of maple sirup are shipped into Vermont each year. Large importations come from Canada and New York, lesser amounts from Maine, Ohio, and Pennsylvania, and a little from Maryland and New Hampshire. By far the largest part of this sirup is made into sugar and sold for manufacturing purposes such as the flavoring of ice cream, tobacco, and various other products. Such processing of maple sirup imported into Vermont is comparable to cotton produced in Georgia being woven into fabrics in South Carolina or the distribution of Wisconsin butter in eastern markets without identification of its source. Since there is ample proof that our maple products are not improperly branded the imputation of unethical procedure on the part of the Vermont maple industry may not only be disregarded by the public but should not be further featured by overzealous columnists."

America, What of the Future?

EXTENSION OF REMARKS

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Friday, April 21, 1939

RADIO ADDRESS BY HON. LEO E. ALLEN, OF ILLINOIS

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered last night over the Columbia Broadcasting System by my colleague from Illinois, Hon. Leo E. ALLEN:

Fellow citizens, I am speaking to you within view of the dome of the Nation's Capitol in Washington. This time I am addressing myself, not alone to you who live on the farm side and in the metropolitan areas of the great State of Illinois, but also to those of you who live everywhere, from the northernmost boundary of our great "north woods" to those who abide in the little "cabins in the cotton" of the great South.

I have come today to speak to you on questions which are of the most vital concern to us here in the Nation's Capital. To myself those questions are, first, the domestic policy within the United States; and, second, our relations toward the question of war or peace in Europe and the Far East.

United States; and, second, our relations toward the question of war or peace in Europe and the Far East.

No Member of Congress, my friends, can think in terms of international relations without having brought to his mind the memories of a great and distinguished citizen of Illinois, the late Senator, the Honorable J. Hamilton Lewis.

Long a powerful and beneficent influence in our foreign affairs, the contractor will in view of its present state of bysteria suffer a

our country will, in view of its present state of hysteria, suffer a great loss by having to endure without his sympathetic understanding, kindly wisdom, and keen insight into the imperialistic designs of both sides to the question of war or peace now agitating the heads of government everywhere.

the heads of government everywhere.

America, as never before, needs the wisdom, the sagacity, and the penetrating vision of its elder statesmen to offset the counsel of bureaucratic, internationally minded economists, who would barter its cotton and its corn in order to impose their personal conception of a better form of government upon the people of

other lands.

What difference, I ask, does it make to our citizenship along what river or chain of mountains the boundaries of the States of central or southern Europe, Africa, or Asia are laid? What matters it to us whose flag and of what empire flies over Djibouti or Tunisia?

What difference to us whether foreign countries be ruled by so-called czars, kaisers, or kings, or whether they be designated as commissars, fuehrers, or duces? They all rule with an iron hand. The type of government they want is for them to decide.

What difference to us in America whether the standing army of soldiers in any European nation be 600,000 or 800,000 men? Rather should we concern ourselves with the standing army of our own

What difference to us in America whether the standing army of soldiers in any European nation be 600,000 or 800,000 men? Rather should we concern ourselves with the standing army of our own unemployed, mounting up into the twelve of millions of our men and women who are walking the streets looking for work.

I would have you believe with me that the true perfection of statesmanship and of administrative leadership rests not in the honeyed words that one speaks but, rather, in the rugged, simple virtues with which he pursues to the realization of his every public promise, beneficence, and accomplishment.

What is our future? Are we to be engulfed in another foreign war? Are we to send millions of our young men to foreign shores to be slaughtered, under the guise of making the world safe for democracy? Our answer is a decided "no." You remember back in 1917, when they told us there wasn't enough democracy throughout the world. Today, 22 years afterward, I ask you if there isn't less democracy throughout the world than there was before we entered that gigantic struggle, a struggle that cost the lives of millions of young men and the destruction of hundreds of billions of dollars in property.

I would ask you if Stalin in Russia hasn't more power than any of the late unsuspecting czars? I would ask you if it isn't true that even though the late Kaiser of Germany had far more power than any good man should possess and more power than any good man would want if Hitler hasn't even more overn? Tabing more power than any good man would want if Hitler hasn't even more power than any good man would want if Hitler hasn't even more power than any good man would want if Hitler hasn't even more power than any good man would want if Hitler hasn't even more power than any good man would want if Hitler hasn't even more power than any good man would want if Hitler hasn't even more power than any good man would want if Hitler hasn't even more power than any good man would want if Hitler hasn't even more power than any good man wou

that even though the late Kaiser of Germany had far more power than any bad man should possess and more power than any good man would want, if Hitler hasn't even more power? Taking you down to sunny Italy, I would ask you if Mussolini hasn't more power than possessed by any of the late Kings of Italy? Coming over to this country. I wonder what that great World War President, that great Jeffersonian Democrat, Woodrow Wilson, would think and say about the usurpation of power by our present Chief Executive, the centralization of power in the hands of one man in this country. The delegation of power by a supine and supercilious Congress to Mr. Roosevelt in violation of the Constitution, and then these powers delegated to a group of crack-brain bureaucrats.

For regardless of the difference of opinion between the great Republican and great Democratic leaders, both major parties up to 1933 believed in certain American principles. They both believed in the sovereignty of the people, in three independent branches of our Government, free from interference. Both major parties believed the best government to be that government that governed least. Both major parties believed it best that the least centralization of power in Washington the better. Both major parties, until 1933, held the Supreme Court in reverence and respect. So to you men today who helped make the world safe for democracy, to you men today who helped make the world safe for democracy, to you people who contributed much for a successful conclusion of the war, I would say: "Let us remain out of those many foreign controversies. Let us insist that our Government formulate a foreign policy designed to keep us out of foreign entanglements. Let us plainly and in no uncertain terms advise them of our attitude: policy based on fairness, not only to all foreign governments but, above all, based on fairness to our own people; a policy that they might easily comprehend; a policy that our own people can clearly understand, instead of the present indefinite policy, based on uncertainty, blindness, and intrigue." Above all, I would say: "That the mouthings of high governmental officials should cease, and cease immediately." Utterances of unthoughtful governmental officials will do more to get us into another war than any other thing. But, as acute and as serious as our foreign relations are, our internal problems are greater. We must not be unmindful that our for-eign problem can easily be solved if we remain out of foreign argueign problem can easily be solved if we remain out of foreign arguments, if we have a strong Army and Navy for defense purposes only, if we discontinue arraying class against class in our own country and give the local people peace and contentment, in order that we can have a united people in this country. Above all, we must insist on the deporting of aliens who are bringing arguments; ideas, and doctrines of the Old World to our shores. They must be told in no uncertain terms that we have no place for those things in the Inited States. United States.

To most of us, the solution of our own economic problems is more important than the solving of world problems. In the United States we still find ourselves in a depression equally as bad as during the world depression. But while other nations have economically improved themselves since 1934, our Nation has not made any permanent gain.

When I became a Member of Congress in 1933, I resolved that I would applied the sound policies of the Roosevelt administration and give constructive criticism to the unsound policies. I think most of you would do the same. By reason that the different bureaus in Washington hire hundreds of publicity men at the taxpayers' expense to extol to the world the virtues of the New Deal, there isn't any need of me elaborating on the sound policies upon which we agree. Carloads of New Deal publicity from the various departments of our Government leave Washington daily. various departments of our Government leave Washington daily. Each hour you can hear some New Deal exponent on the radio broadcasting to the people how much the New Deal has done for them. Therefore, I am going to devote my short time to constructive criticism. I realize that new dealers object to constructive criticism. They say: "The Republicans and the 'horse and buggy day' Democrats haven't any plan or program. But we have, The best program I know that would bring this country back to a normal condition is the very program, and it was a conservative one, that Mr. Roosevelt ran on in 1932. At that time Mr. Roosevelt had a solution for all our problems. He was going to put everybody back to work; he was going to cut Federal expenses 25 percent; he was going to take the Government out of business; he was going to regain foreign trade; he was going to chase the money changers from the temple. What is the record of his achievements? There are more unemployed than when he took office, an increase in our national debt of approximately \$20,000,000,000, which is now over \$40,000,000,000, our warehouses filled. 000,000, which is now over \$40,000,000,000, our warehouses filled with cotton and agricultural products, and a complete loss in our world trade with the exception of munitions of war, and Federal pay rollers nearly doubled.

As a Republican Member of Congress, I am deeply concerned in the success of our party. However, I am no advocate of a Repub-licanism that places Republicanism above country. The reason the New Deal has failed is because while they artificially and temporarily helped a small percentage of the people, they have brought untold sufferings to a much higher percentage, including genera-tions of unborn. The biggest problem before us is unemployment. Do you know there are over 4,000,000 young men and women in the United States today between the ages of 18 and 24, many of them being a high-school or college graduate, that have never had a job in their lives? Unquestionably there are listeners who sacrificed much to send your children to school who now find there are no positions for your sons and daughters under our present New Deal system of a more abundant life, a life that consists of a C. C. C. job, then a W. P. A. job, finally an old-age pension. You and I know that Mr. Roosevelt hasn't any plan to put the people back to work. In all his fireside chats he never mentions the subject. There isn't any new dealer that can tell you his plan. Ask one and see. You must never forget that a W. P. A. worker is just as sick and tired of the New Deal as the rest of us. They want real

Our country has been constantly warned and constantly led from one emergency to another. One emergency is declared be-cause prices are too high and must come down; another emergency

cause prices are too high and must come down; another emergency is declared because prices are too low and must come up; another emergency is declared because prices are too low and too high at the same time, so they must go up and down at the same time. One time the Chief Executive blames the recession on some unnamed man sitting in a little office in Wall Street and now we find him inferring that if we can restore peace in Europe recovery will be effected in the United States; that unemployment will vanish, relief appropriations disappear, and Government finances find

themselves corrected with a balanced Budget. Again this administration would drag a red herring across the trial of our own economic ills and shift the discussion from a consideration of our national problems to American interest in international affairs. Why has this been done? Come to Washington if you want to learn. Here you will find a fight going on between "third-term Roosevelt new dealers" and the "stop Roosevelt bloc." War talk is the chief weapon of the third-term new dealers. They talk promiscuously of war. The press of London, Paris, and Warsaw are helping the cause of the third-term Roosevelt new dealer by attempting to convince their nationals and colonials alike that America will go to war on their side.

their side.

In conclusion, my countrymen, believe me as a Member of Congress who served in France with the A. E. F., several years before I was of voting age, that I will do all in my power to keep those on the C. C. C., the W. P. A. rolls, and others off the muster and draft rolls of any New Deal American expeditionary forces, and, further, that I will do all in my power to bring peace and economic contentment to the people of this country by insisting on the return of sound and sane legislation in order to instill a much-needed confidence to those who give gainful employment.

In this stand I am sure you will agree with me.

The Farmer and the Tariff

EXTENSION OF REMARKS

HON, ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

ARTICLE BY GEORGE N. PEEK AND HENRY CARTER

Mr. WOODRUFF of Michigan. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing an article entitled "The Farmer and the Tariff," by George N. Peek and Henry Carter, published in the Saturday Evening Post of December 10, 1938. I commend this article to the careful consideration of every Member of the House of Representatives and the Senate:

[From the Saturday Evening Post of December 10, 1938] THE FARMER AND THE TARIFF

(By George N. Peek and Henry Carter)

One thing is certain: The farmers of this country are not content One thing is certain: The farmers of this country are not content with their present lot under the New Deal. Farmers don't like acreage control; they don't like competitive farm imports; they don't like loss of markets, foreign and domestic; and they don't like their loss of income under the dual New Deal policies of crop restriction and encouragement of competing farm imports. For all the myriad plans and all the billions of dollars which the New Deal has showered upon agriculture, farm income is still some 25 percent below the average of the twenties, which, be it said, were years of grave agricultural depression. More ominous yet, under years of grave agricultural depression. More ominous yet, under the present regime of control programs, increased farm imports, and failure to hold or regain foreign markets for agriculture, farm income is tending to fall, not to rise.

The farmers don't like it. Half a billion dollars in Government checks is not adequate compensation for an actual loss of two to three billion dollars a year in farm income and perhaps twice that

checks is not adequate compensation for an actual loss of two to three billion dollars a year in farm income, and perhaps twice that in potential income. The farmers want something definite done about it. In some quarters their resentment has found expression in the formation of "noncooperating" associations of farmers, in the erection of signs: "This is private property, A. A. A. keep out." In Iowa there has been agitation for export subsidies. In South Dakota farmers have been urging guaranteeing costs of production for domestic consumption. In the South they are pressing for Federal cotton loans at parity levels. In Kansas and other parts of the Middle West the movement for domestic allotment has reached impressive proportions. On the Facific coast and elsewhere there has been agitation for embargoes on competitive farm imports and for a radical change in Secretary of State Hull's trade-agreements program. The La Follette movement nas found its greatest strength in its denunciations of the Wallace economics of agricultural scarcity. Even Jerome Frank, of the S. E. C., a fervent apostle of New Deal philosophy, has published a significant condemnation of the economics of scarcity and of the errors of our foreign trade and financial policy.

WHAT THE FARM PEOBLEM IS

WHAT THE FARM PROBLEM IS

WHAT THE FARM PROBLEM IS

To head off the rising storm of farm dissatisfaction, Secretary
Wallace has been talking very fast, indeed. In rapid succession he
has offered a program of export subsidies, has suggested subsidizing
the sale of farm surpluses to the unemployed and those on relief,
has advocated a revival of processing taxes for benefit payments, and
has announced a sweeping reorganization of the Department of
Agriculture, all of which may presage a basic change of administration policy, and which, again, may mean nothing of the sort. What

farmers think it means is suggested by the striking Republican election victories throughout the farm States. In Kansas, Senator election victories throughout the farm States. In Kansas, Senator McGill, coauthor of the 1938 Farm Act, has been decisively beaten. In Idaho, Senator Pope, one of the stanchest supporters of the administration farm and foreign-trade policy, could not even get renominated. And even more pointed repudiation of the administration's farm policy is found in the election returns in Iowa, the home State of Secretary of Agriculture Wallace.

What will come of it all is impossible here to predict. The farmers may again be sold out or overridden, as so often in the past. Again there may be here the seeds of a new farm movement comparable to that of the twenties, which finally overthrew Herbert Hoover and the Republican Party. Whatever the outcome, the American farm problem is still to be solved.

What is the American farm problem? Simply stated, it is that

American farm problem is still to be solved.

What is the American farm problem? Simply stated, it is that the farmer does not get enough for what he raises to buy from tariff-protected industry the things he wants and needs. He lacks buying power. The causes of this lack of buying power are many and complex. The farmer has successively blamed the railroads, the middlemen, the packers and processors, the speculators, the bankers, the trusts, the industrial tariff, and the Government, and often enough he has been right. However, the real problem lies deeper than these. Briefly, it can be described as stemming from the determination of the American farmer that he shall not become the determination of the American farmer that he shall not become a peasant, and his earnestly held conviction that in a country such as the United States this need not and should not be his lot.

a peasant, and his earnestly held conviction that in a country such as the United States this need not and should not be his lot.

He has a good argument. Our characteristics as a Nation and our national needs are not the same as Europe's or Asia's. They are not the same as England's. By the same token, the solution of our problems is not to be found by importing English, European, or Asiatic patterns of policy. We differ from them all in that we enjoy a continental domain which provides very nearly all the resources necessary to complete self-containment. Geographically, we are well-nigh impregnable to any important military attack. Economically and strategically, we are unique in the world. Thanks to our political unification as a Nation, we command within the United States the richest trade area in the world. We have prospered and grown as a nation by keeping that trade area primarily for ourselves. We have done this by avoiding entangling alliances with foreign nations and by our policy of protection—the protective tariff and, more recently, our immigration barriers.

Nevertheless, we still need some foreign trade. We need coffee and tea; we need rubber and silk; we need manganese, nickel, tin, and certain other minerals and raw products for the economical operation of our industries. The rest we have ourselves. We are close to 95 percent self-contained as matters stand now, even though we still find many things which, for the present, it is easier or cheaper to import. To pay for these necessary or wanted imports we must export a part of what we produce—surplus crops and certain of our industrial products, such as automobiles, typewriters, machinery, and other special products, which have in demand abroad. In the case of our export or surplus crops, which we produce in excess of the normal demands of the domestic market, we have an added incentive to export in order to get the surplus which the domestic market will not absorb out of the country, and so prevent it from demoralizing domestic prices. Foreign

THE HOLE IN THE TARIFF WALL

But, aside from these considerations, there is no particular virtue or advantage attached to foreign trade as such—indeed, if the depression has taught us anything, it has demonstrated the folly and danger of depending on foreign markets and on foreign sources of supply rather than making the effort to round out our own production and to develop our internal buying power, including the buying power of our great farm population. Our greatest economic asset is the domestic American market for our own goods. To preserve it against destructive price influences from abroad is our primary task. That is why we have a protective tariff; that

is why we have immigration laws.

is why we have immigration laws.

The tariff principle affords one vital element of protection, although we may have to consider more seriously the question of strengthening it by imposing quantitative and other restrictions on certain of our imports. The immigration laws are a muchneeded protection to our standards of labor and wage scales. But there is one great gap in our protective system. It is our failure to protect adequately the producer of export crops against the impact of world prices in an otherwise protected system. The trouble is that the tariff does not work when it comes to protecting the prices of the crops which we grow in excess of domestic demands, the surplus of which we export for sale on world markets. Upon these crops we have to meet world prices and the competition of countries with low wage or even coolie costs of production, and it is these world prices on our surpluses which in turn have been allowed to influence the domestic price at which such export crops are sold in this country. These export crops—wheat, cotton, to-bacco, corn and corn products, livestock products—make up the major part of our farm production, and yet, in an otherwise probacco, corn and corn products, livestock products—make up the major part of our farm production, and yet, in an otherwise protected economy, they have obtained but little domestic price protection, no matter how high the tariff rates might be set. Thus the producer of export crops is obliged to sell at unprotected—that is, low—prices both at home and abroad, but for the industrial products which he buys he has to pay the world price plus the industrial price benefit of the American tariff. This is a main cause of the disparity between farm and industrial prices of which American agriculture has long complained. This is the gap in our protective system which must be closed. The New Deal, notwithstanding its promises, has not closed it.

A FIELD FOR GOVERNMENT ACTION

Some day the farmer who now produces for export may be able to sell his entire output at home; the increase and spread of domestic purchasing power and, more particularly, the development of new uses for farm products in industry will tend to enlarge his of new uses for farm products in industry will tend to enlarge his domestic markets and to diminish his need of export outlets. But that day is not yet here, and until it is measurably within reach he must continue, in self-protection, to export his surplus. Here lies an obvious and imperative field for direct Government action and assistance. Under the New Deal the farmer is not getting it. Above all else, he needs a fair return for what he sells at home, so that he can afford to buy the tariff-protected products of industry which he can afford to buy the tariff-protected products of industry which he can prove really get it so long needs. He is not getting it, and he can never really get it so long as his return is measured in terms of world prices only without some mechanism to offset the inability of the tariff to protect the prices at which he sells export, or world, crops in the domestic market.

market.

In recent weeks Secretary Wallace has revived the long-agitated plan of paying export subsidies on certain export crops. This proposal has achieved some popularity in certain farm circles as promising to keep surpluses from piling up on the home market and as offering an added return upon our surplus production. At the best, however, under present world conditions this plan can offer no more than temporary relief.

than temporary relief.

From the domestic point of view, it is likely to encourage excessive production for export, with ever-increasing demands upon the Federal Treasury. Further, it would tend to drive down world prices, the more so if other exporting nations follow suit, with inevitably damaging effects upon our domestic price levels. Its success would depend primarily upon a degree of acquiescence or cooperation on the part of foreign governments which nothing in past or present world conditions gives us any reason to expect. Still more important, it does not touch the real problem, which is that of increasing and effectively protecting the return on the portion of those crops which is domestically consumed. Instead, it diverts attention and effort from the main economic problem of our depression, which is that of encouraging and increasing doour depression, which is that of encouraging and increasing do-mestic consumption and domestic buying power, and, above all, of insulating that purchasing power against the ill winds which blow in from all four corners of the earth.

THE PROCESSING TAX

Another approach, and a sounder one in principle, was made under the original A. A. A. in the form of the processing tax. The processing tax as actually applied had grave defects. It was a visible tax, and hence an unpopular one. Moreover, it was linked in its administration to the principle of acreage control. Consequently, when the Supreme Court in 1936 pronounced Federal acreage control unconstitutional, the processing tax received a blow from which it will not easily recover. Nevertheless, given the fact and the nature of our otherwise protected economy, the principle upon which the processing tax was based—that of assuring the export farmer a parity price on what he raised for domestic consumption—was thoroughly correct. This was the basic principle of the old McNary-Haugen bills in the original farm program of the twenties: "An American price for American consumption independent of the McNary-Haugen bills in the original farm program of the twenties:
"An American price for American consumption independent of the
world price for the surplus." This principle was recognized by the
Democratic platforms of 1928 and 1932. It was specifically endorsed
by Governor Smith in 1928 and by Mr. Roosevelt in his 1932 cam
paign. In 1936 it was also accepted in the Republican platform and
by Governor Landon, which should come close to making it unanimous. But it would seem that President Roosevelt, Secretary Wallace, and Secretary Hull had other ideas, for what they have brought about is devaluation, acreage control, decreased protection on farm products in the American market, and declining foreign markets for export crops.

The direct effect of devaluation on farm prices is not easy to determine. At first it was helpful in some special instances. However, as other nations have marked down their currencies to match our devaluation, this advantage has tended to disappear. A bale of cotton, for example, will now bring only a little more than half as much gold as it did before devaluation, a drop which closely corresponds with the actual amount by which the dollar was devalued. Furthermore, devaluation was in the main disapwas devated. Futermore, devaluation was in the main disappointing so far as correcting the disparity between agricultural and industrial prices was concerned, since its inflationary effect applied not only to farm prices but to all prices. Moreover, it failed to increase appreciably the foreign demand for American farm products, as foreign buyers tended to use the vastly increased farm products, as foreign buyers tended to use the vasta purchasing power given them by devaluation for security trans-

purchasing power given them by devaluation for security transactions rather than for the purchase of American goods. Farm exports remained stationary or fell off in value and quantity, but foreign investments in the United States increased by about \$6,000,000,000 during the 4 years 1934 to 1937, inclusive. On the record, devaluation does not appear to have been the answer.

Acreage control has fared little better. We have had 5 years of crop restriction and acreage control from Washington. Two of those years, 1934 and 1936, to the chagrin of the planners, have been years of unforeseen but none the less serious droright, which, coupled with the artificial restrictions imposed by Washington upon our farm production, compelled us to purchase unparalleled quantities of foodstuffs from abroad. The crop year of 1937–38, however, was one of superabundant crops, so much so as to be a headache to the A. A. A. and to cause it to apply new and more rigorous controls for the current crop year. This is hardly an impressive record for the proponents of acreage control, and, in fact, they have recognized it by shifting their present emphasis from acreage control to marketing control, pro-

posing that only limited quantities of certain domestic crops shall be permitted to come on the home market. Yet even behind this camouflage, currently described as the ever-normal-granary plan, lies the same principle of scarcity through restricting production which characterized the New Deal's administration of the original A. A. A. and its successor, the so-called Soil Conservation Act. The trouble with one is the trouble with all—that they presume a control over nature, including human nature, which mankind has never possessed, and in all probability never will. Nature insists on producing and man insists on helping her produce for him. "You can expel Nature with a pitchfork, but she will ever return."

CROP-RESTRICTION PROGRAMS

All this could have been foreseen from the start. What it amounted to was, in effect, an attempt to raise the domestic prices of export crops by raising world prices. As such it was foredoomed to failure, for, rich and powerful though we are, we are not rich enough or powerful enough to underwrite world markets and world prices any more than we can underwrite world currencies or world peace. Instead, acreage restriction and the temporary price rises which were effected in the United States encouraged other nations which were effected in the United States encouraged other nations to increase their acreage—cotton affords a striking example—and to undersell us in our former markets. Internally, these price rises, even though supplemented by half a billion dollars a year in Government checks, have not been sufficient to offset the losses in farm income incurred from restricted production and loss of export markets. And even now those temporary price rises have vanished before the bumper crops of 1937–38. According to Department of Agriculture figures, cotton prices went down to an index of 69 as of September 1938 against 107 in June 1937. Grain prices went to an index of 63 against 139 in June 1937. The ratio of all farm prices received to those the farmer has to pay fell from 93 in June 1937 to 78 in September 1938.

1937 to 78 in September 1938.

Beyond the crop-restriction programs, however, there has been another factor which has produced a complex of New Deal inconsistency and conflict of policy of almost pathological proportions. That factor is the school of thought represented by Secretary of State Hull and his free trade internationalist ideals. In its original fight upon the depression the New Deal, whatever its failures, rightly set the restoration and production of American price and wage levels and employment as its essential objectives. In his wage levels and employment as its essential objectives. In his campaign speeches of 1932, and in his message to the London Economic Conference of 1933, President Roosevelt enunciated and made unmistakably plain his determination to seek these ends primarily by national means. This clearly meant, or should have meant, a policy of economic and financial self-containment, with its concomitant policy of adequate protection, particularly protection for agriculture. Nevertheless, as a result of obscure but compelling political exigencies, President Roosevelt receded from this position. Instead, Secretary Hull was permitted to embark on his long-cherished dream of effecting a general reduction of the tariff, including reductions on the farm products; this in spite of the fact that his undertaking was in patent contradiction to the President's declared policy and ran directly counter to the purpose of the major recovery effort, which was to restore and readjust our internal price and wage levels. price and wage levels.

RECIPROCAL-TRADE AGREEMENTS

Mr. Hull's undertaking is generally known as the reciprocal trade agreement program. This is a misnomer, for whatever the Hull agreements may be, they are not reciprocal. Instead of representing quid pro quo trades with foreign nations, with particular reference to the specific crops and surpluses which were disrupting our economy, the "Yankee trading" of which Mr. Roosevelt had spoken in 1932, the benefits of the Hull agreements have been automatically extended to all other nations—excepting Germany, which, for political and other reasons, has been in Mr. Hull's black books. This has meant a progressive lessening of our prowhich, for political and other reasons, has been in Mr. Hull's black books. This has meant a progressive lessening of our protection against uncontrolled imports from abroad, with their definitely depressant effect upon our domestic price and wage levels. It has also meant a progressive loss of our power to bargain on behalf of our great export crops—cotton, wheat, tobacco, corn, and other products—whose producers were already at the worst possible advantage, owing to the gap in our protective system which leaves the domestic prices of our export crops at the mercy of world markets and world prices. This, the administration could not or would not see. It would not bargain aggressively on behalf of our export crops, and presently it has found itself increasingly unable to do so. The outcome speaks for itself, for on the record practically all the advantages obtained for agriculture through the trade agreements have been confined to specialty crops of relatively small economic importance, and for our great export crops practically no advantages at all have been forth-coming.

coming.

From the start it was clear that the Hull trade-agreement program was hopelessly at odds with our internal program of raising domestic prices; conspicuously so in the matter of domestic farm prices. As has been noted, the A. A. A. program was at first successful in effecting some rises in farm prices. In spite of its errors, it might have been more so if it had been supplemented by an aggressive trading policy on behalf of our major export crops. But it was precisely this aggressive trading which not only was lacking but was actually vetoed by the administration when the Export-Import Bank attempted it. Consequently, under the administration policies, the farmer still sells his export crops substantially at world prices, but has to do his buying at protected prices. The gap in the protective system is still wide open and the administration has, in

Small wonder then that the farmer becomes confused and resentful when he is told, on the one hand, to restrict his production and, on the other, that the United States should increase its imports, including imports of competitive farm products.

What the crop-restriction and trade-agreement program com-bined have done to American agriculture is not cheerful reading. According to Department of Commerce figures, cotton exports or example, fell from the 1921–32 yearly average of 7,554,000 bales—9,059,000 in 1932—to 6,023,000 in 1937, as Brazil, India, Egypt, and other cotton-growing countries took advantage of our restriction policies to increase vastly their own cotton acreages and to undersell

policies to increase vastly their own cotton acreages and to undersell us in our former markets.

Between 1932 and 1937 foreign consumption of American cotton fell off over a third in quantity, while foreign consumption of other growths almost doubled, the American share of the world cotton market dropping from about 44 percent in 1932 to less than 24 percent in 1937. Similarly, wheat exports, which had averaged 126,000,000 bushels yearly, 1921–32 (41,200,000 in 1932), fell to 21,-609,000 bushels in 1937; corn from an ayerage of 40,000,000 bushels in 1937; corn from an ayerage of 40,000,000 bushels. 609,000 bushels in 1937; corn from an ayerage of 40,000,000 bushels, 1921–32 (8,775,000 in 1932), to 5,834,000 bushels in 1937; meat products from an average of 564,000,000 pounds, 1921–32 (191,013,000 in 1932), to 123,639,000 pounds in 1937; animal oils and fats, edible, from an average of 894,000,000 pounds, 1921–32 (612,157,000 in 1932), to 146,375,000 pounds in 1937. A considerable part of these last export losses must, of course, be attributed to the 1934 and 1936 droughts, which, coming on top of the restriction programs, not only nearly wiped out our export of these and other products but led to large increases in our imports of competitive farm products. These in turn helped materially in swelling our total agricultural imports, as reported by the Department of Agriculture, to \$1,157,493,000 in value in the crop year 1937–38, as compared with \$613,-37,000 in 1932–33; \$638,952,000 in 1933–34; \$933,774,000 in 1934–35; \$1,141,191,000 in 1935–36; and \$1,538,327,000 in 1936–37, the drought year.

AGRICULTURE'S GRIEVANCE

AGRICULTURE'S GRIEVANCE
These unfavorable developments in the position of agriculture under the New Deal are not, of course, attributable solely to the trade-agreement program. The onus must also be shared by President Roosevelt, Secretary Wallace, and an inscrutable Providence. However, the charge of agriculture against the trade-agreement program—and it is a serious charge—is that the program has failed to take due account of the special position and special needs of American agriculture; that by making tariff concessions on competitive farm products, notably in the Cuban and Canadian needs of American agriculture; that by making tariff concessions on competitive farm products, notably in the Cuban and Canadian agreements, and by its failure to employ the full bargaining power of the United States on behalf of our major export crops, the tradeagreement program has aggravated, and has not alleviated, the still depressed condition of agriculture and its disparity with industry. Mr. Hull has entered frequent and angry denial of these charges, but the charges still stick. He has let foreign farmers into the American market, and has failed to protect the interests of our major export farmers in foreign markets.

But it is frequently argued, if we don't accept imports, how can foreigners buy our exports, including our farm surpluses? Armed with this axiom of orthodoxy, many of our exporters, bankers, and theoretical economists have flocked to the Hull standard. It is a doctrine which elicits high acclaim in Great Britain

ard. It is a doctrine which elicits high acclaim in Great Britain and other important trading nations with a stake in the American and other important trading nations with a stake in the American market, present and future. It carries on its face a high degree of plausibility and has been further elaborated by some of our most ingenious economic casuists—Secretary Wallace indeed once went to the extent of opposing the development of an American merchant marine, on the ground that it would hurt the profits of foreign shipping interests and hence would impair foreign purchasing power. Nevertheless, whatever force the argument may once have had with relation to international exchanges of mechandise was negated even before Mr. Hull got to work as a once have had with relation to international exchanges of merchandise was negated even before Mr. Hull got to work, as a result of our devaluation of the dollar in 1933-34 and our adoption of a policy of buying gold and silver from all comers at prices greatly above the world market. Under this policy we started importing on a huge scale months before ever the Reciprocal Trade Agreements Act became operative. Under it we have been a great importing nation ever since, our principal imports being gold and silver. Under it these imports have far outweighed any small advantage we may have enjoyed as exporters of merchandise. As a result foreigners have had on net balance during the last 4 years a sum total of excess dollar exchange amounting to five and eight-tenths billion dollars, and, instead of being an exporting nation, we have become the world's greatest importing nation on net balance. nation on net balance.

AMERICAN BARGAIN COUNTER

Against these huge imports of gold and silver there has been no corresponding increase in the purchase by foreigners of our merchandise. In particular they have refrained from purchasing our farm surpluses except when the price has been low enough to suit them. Neither has there been any attempt to make payments on the \$10,000,000,000 worth of war debts owing to us. Instead, foreigners have used this surplus dollar exchange for security transactions, for repurchasing, often at greatly depreciated prices, their own bonds floated in this country—official figures show one series of repurchases of more than \$2,000,000 worth of foreign bonds at an average price of 27½ cents on the dollar—and for the purchase of American long- and short-term securities, American bonds, stocks and repurchased for hulling a back to be a few forms. chase of American long- and short-term securities, American bonds, stocks, real property and for building up bank balances. Figures on the increase of foreign holdings in the United States are not available in definitive form but judging from the reports of the Department of Commerce on the United States international balance of payments these increases amounted approximately to \$6,000,000,000 in the 4 years 1934 to 1937, inclusive, a figure which corresponds significantly with our six and three-tenths billions in net purchases of gold and silver. Altogether they have brought the grand total of foreign investment in the United States to an amount which may be roughly estimated as between nine and ten billion dollars, a factor of very considerable importance in its potential influence on American affairs and American economy, particularly in times of international crisis or war.

In times of international crisis or war.

A variation of the foreign purchasing-power argument in support of the trade-agreement program is found in the claim that the program increases so-called triangular trade and hence world trade as a whole, which, it is argued, in turn must operate to the advantage of American trade. This would be very pretty if true. Unfortunately, it is something less than realistic in that it apparently ignores the revolutionary changes which have taken place in the character of world production and world trade during the past 20 years. In that time modern technology and production methods have made r nbelievable strides. They are spreading to former raw-meterial countries: they are beinging new competitors. former naw-material countries; they are bringing new competitors into world markets; they are cutting new channels of trade. Everywhere they are making possible measures of national self-containment which would have been unimaginable a generation ago. The trend in nearly every country of importance is toward policies of economic self-containment. It is deriving an ever-in-

policies of economic self-containment. It is deriving an ever-increasing velocity by reason of the wars and apprehensions of war which are assailing the world.

The post-war and depression break-down of international currency exchanges has all but destroyed the old pre-war system of settling international accounts, either by gold shipments or by the triangular method of payment. Trade between nations has become increasingly a matter of direct trade, or barter of surplus supplies, agricultural and industrial. League of Nations figures indicate that such increases as have occurred in international trade since the depression have been in the field of direct bilateral trade as contrasted with so-called triangular trade. trade as contrasted with so-called triangular trade.

ENGLAND'S ABOUT FACE

Even England, the mother of free trade and sponsor of the doctrine of triangular trade, has reversed her foreign trade and financial policy. She went off gold in 1931. She has adopted a program for rebuilding her neglected agriculture and of protecting her gram for rebuilding her neglected agriculture and of protecting her industries to such an extent that today, with a population one-third of ours, she collects more than \$1,000,000,000 annually in import duties as compared with our own collections of about \$400,000,000. She has embarked, through the Ottawa agreements and other preferential arrangements with foreign nations, upon a course primarily concerned with the promotion of direct internation trade. This is fundamental British policy, whatever surface concessions she may make to Mr. Hull in the hope of securing his diplomatic support in Europe.

face concessions she may make to Mr. Hull in the hope of securing his diplomatic support in Europe.

Germany has carried this policy of direct internation trade to an even higher stage of development through her system of barter and rationalized foreign trade to supply her needs. With her newly won political and economic hegemony of central Europe, there is every indication that she will carry it still further in the direction of self-containment in the trade and economic area now under her control and influence. This area is a rich market, but one which it will be difficult for us to enter except at the sacrifice of Mr. Hull's theories and methods of foreign trade.

It is not out of place to note that in 1934 and 1935 Mr. Hull re-

of Mr. Hull's theories and methods of foreign trade.

It is not out of place to note that in 1934 and 1935 Mr. Hull refused to sanction the Export-Import Bank's proposal for large-scale sales of cotton to Germany on mutually advantageous terms, that in 1935 he placed Germany on his commercial blacklist, and that he has lost few opportunities to indicate his general dislike of the German Government. Germany may still want or need to do some trading with us, but under present conditions it is more likely to be on her terms than on Mr. Hull's. The expansion of Germany in central Europe affords an important and perhaps decisive impetus to the world-wide trend toward self-containment. This is notes an important and pernaps decisive impetus to the world-wide trend toward self-containment. This is the tide which Mr. Hull has sought to turn by opening up the American market to foreigners at the expense of domestic prices and our domestic producers. The effort may be magnificent, but it is neither good economics, good business, nor good sense.

However, the final plea made for the trade-agreement program rises above such mundane considerations and seeks justification in the high moral glein that he remained the American selection.

in the high moral claim that by opening the American market to foreigners and by seeking to increase general world trade we are promoting world peace. World peace, of course, is a plea which has an especial appeal for the American people, and properly so. On the other hand, when it is made for the purpose of justifying a specific governmental program or course of action, it requires objective examination. Unfortunately for the argument, objective consideration suggests that there is, in fact, no perceptible connection between world trade and world peace, and, further, that trade promotes at least as many wars as it prevents. Certainly the huge international trade of pre-war days did not prevent the outbreak of the World War in 1914. Neither did Great Britain's pre-war policy of free trade operate to keep her out of that conflict. On the contrary, most historians are agreed that the struggle between Germany and free-trade England for control of world trade must be reckoned as one of the basic causes of the war. In like manner, the century-long struggle for the unprotected markets of China may be said to be a major cause of that nation's vicissitudes and her present invasion by Japan.

SIGNPOSTS FROM HISTORY in the high moral claim that by opening the American market to

SIGNPOSTS FROM HISTORY

Germany's aggressive course in central Europe represents in large measure an effort to supply her economic wants by controlling

the trade of that area. Analogous examples can be expanded inthe trade of that area. Analogous examples can be expanded inclefinitely. Confining it to a handful of instances taken from our own history, it is plain that trade was a major factor in causing our Revolutionary War; in getting us into the War of 1812 and the World War; and that, so far as our participation in the latter struggle was concerned, it was in no wise delayed or prevented by the low-tariff policy of the Wilson administration.

As this is written large is completing a conquest of all captures.

the low-tariff policy of the Wilson administration.

As this is written, Japan is completing a conquest of all eastern China; Italy has conquered Ethiopia; the war in Spain is in its third year of destruction; Germany is remaking the map of central Europe; Europe has just escaped the catastrophe of a general war by the narrowest of margins—opinions differ as to whether the crisis has been passed or merely deferred. The United States is entering upon a defense program of unprecedented extent. There has been a disturbing amount of talk in certain high circles to the effect that in case of any major conflict we shall be "inevitably" effect that in case of any major conflict we shall be "inevitably" dragged in; that we cannot stand aloof from European issues of war and peace, but must take a direct hand in their settlement, even to the extent of going to war—indeed, some have seen a veiled statement of this position in President Roosevelt's appeal to the powers

at the height of the war crisis.

In the face of this, if it be true that world trade and the trade-In the face of this, if it be true that world trade and the trade-agreements program are making for world peace, or even for the peace of the United States, the connection is far from clear. Against this is the ominous possibility that the administration policy of tying our fortunes more closely yet with those of Great Britain and the so-called democratic bloc, of meshing ourselves with world economy, is actually making it more difficult, if not impossible, for us to stay out of the next great European war, if and when that war comes. Perhaps the hard fact is that world trade and world peace do not run parallel, but are instead diverging forces sometimes coinciding sometimes not. To regard them as forces, sometimes coinciding, sometimes not. To regard them as synonymous is to ignore history. To declare that the trade-agreements program promotes world peace is as meaningless as to claim that it has abolished or reduced disease. Such justifications of it are either naive or else they are disingenuous. In neither case can they be accepted as a safe guide for the conduct of our national effeits or for the formulation of an economic policy suited to our affairs or for the formulation of an economic policy suited to our needs.

needs.

To meet our needs—the needs of agriculture and of the Nation—drastic changes are necessary. Present administration policies are destroying our unique political, economic, and military security. They are exposing us increasingly to involvement in the economic and political disasters of other nations. Present administration policies are holding open and even widening the gap in our protective system. By so doing they are prolonging unemployment and depression. Finally, by perpetuating and increasing our dependence on foreign sources of supply and upon foreign markets which we may or may not be able to hold, present administration policies are stifling one of the most promising hopes we have of agricultural and industrial progress and of permanent farm and national recovery.

agricultural and industrial progress and of permanent farm and national recovery.

Signs are not lacking that we may be on the threshold of a technological revolution in agriculture no less far reaching than the industrial revolution of the eighteenth and nineteenth centuries. Already we are witnessing such achievements as the utilization of southern slash pine for the making of paper and newsprint now imported; of the use of grain alcohol as a component of motor fuel; of the employment of milk byproducts in the making of paint and plastics; of the transformation of cornstalks into wall-board and other building material. Already cotton is being used of paint and plastics; of the transformation of cornstants into wall-board and other building material. Already cotton is being used successfully as a road-building material, and other new uses for it are being sought. Synthetic rubber and synthetic silk made from common domestic farm growing may be with us any day. Likewise, experience and experimentation are showing that many farm products or their substitutes, now imported, can be advantageously produced here. Vegetable oils and fats are examples; the soybean and tung oil are others. There will be more.

THE BLOCKED RURAL ROAD

It is in new domestic uses and markets for agriculture, in the development of new sources of farm wealth such as these, in the preservation of our domestic market for them, that the future of our agriculture lies. Indeed, with these our farm problem might well become not one of surpluses but rather a question of our ability to produce to meet these new demands. All that this nascent development toward agricultural progress and farm recovery needs is a little protection and encouragement. Yet upon it lies the dead hand of New Deal government with its twin

it lies the dead hand of New Deal government with its twin policies of crop restriction and tariff reduction. Against it stands the outspoken opposition of New Deal leaders; in Secretary Wallace's phrase, "It would displace our imports"; as Secretary Hull might say, "It would interfere with the trade-agreement program." The special, if unintended, victim of these administration policies is the farmer, and gradually he is coming to know it. But the ultimate sufferer is the whole Nation. Without a prosperous agriculture, national prosperity sickens and declines. We cannot build a prosperous agriculture on a basis of peasantdom, repression and restriction of farm wealth. The world, including the farm world, is changing fast. We and our Government must change with it. That way lie progress, recovery, prosperity, security. That road is being blocked by present administration policies. Those policies must be changed. New Deal or no New Deal, that road must be cleared.

Constitution Hall and the Marian Anderson Incident-Rule Followed-No Question of Prejudice, Personality, or Discrimination

EXTENSION OF REMARKS

HON. WILL M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1939

EXCERPT FROM THE FIRST ANNUAL REPORT OF MRS. HENRY M. ROBERT, JR., PRESIDENT GENERAL, DAUGHTERS OF THE AMERICAN REVOLUTION

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from the first annual report of Mrs. Henry M. Robert, Jr., president general, Daughters of the American Revolution, Forty-eighth Continental Congress, Tuesday, April 18, 1939, which contains the facts in connection with the request for the use of Constitution Hall for a concert by Marian Anderson on April 9, 1939, to wit:

[Excerpt from the report of the president general, Mrs. Henry M. Robert, Jr., Forty-eighth Continental Congress, April 1939]

The fiftieth anniversary approaches. The visits of the president The fiftieth anniversary approaches. The visits of the president general to all parts of the country convince her of the interest of the members, of their eagerness to work, and of their sincerity of purpose. She suggests as the most important step for the next 2 years an effort to know your own society. There are many phases of its activity largely unknown to the general membership. They sometimes look upon the national board of management as something remote and apart from themselves, whereas it is you, yourselves, who make the national board of management.

Every member must know that when any State elects its State regent, it is then choosing a member of the national board of management, and that her duties in that capacity may involve even greater responsibilities than those required as the regent of her State.

As you listen to the reports of the national chairmen, and realize that the activities of this society reach out to touch groups of all races, creeds, and nationalities in every section of the country, and as you look at this great block of properties with the same problems of maintenance, upkeep, and care as any other great city block of buildings, remember that you as individuals within your States and as members of this continental congress are determining the character of the direction of these activities and these proporties in the as members of this continental congress are determining the character of the direction of these activities and these properties in the selection of your national officers and State regents. As members, you should know that this society, although adhering strictly to business principles in its management, has difficulties not encountered by organizations of a purely business or commercial character.

The members of your national board of management serve entirely without compensation. They pay their own expenses, both for traveling and for hotels. They cannot, therefore, be called tofor traveling and for hotels. They cannot, therefore, be called together for special meetings as need arises, because the society has no right to put that added strain upon purely voluntary service, however willing the members may themselves be. Because of the fact that the widely scattered directorship cannot be quickly called together, experience has shown that its daily activities of management must be controlled by rules adopted as necessity arises. This is only a fair protection both to the society and to those officers who may temporarily be in charge in Washington. The society has been obliged to work out a system of its own adaptable to its needs.

If the executive officers of the society were resident in Washington, few or no rules would be necessary, for each question could be decided individually as it arises. These are never adopted arbitrarily, but only as actual experience shows their need. For example, soon after Constitution Hall was opened it developed that it would be arter constitution Hall was opened it developed that it would be manifestly unfair to permit an attraction at night by one company when a similar attraction by another company had been given on the same afternoon. In consequence, as a guide to the managing director for future similar situations, a rule was adopted providing that when the hall was engaged for a definite afternoon, no rival attraction of similar nature would be permitted on the night of the same day. Experience dictated this rule as both necessary and fair.

It should be further noted that, having once been adopted, a rule cannot be set aside by any individual officer. It may be changed or suspended only by the same board or authority creat-

The voluntary basis of service of the society should at all times be recognized. If it paid its board members, their attendance

could be expected whenever needed. The first fact for the general membership to recognize is that with all of the responsibilities of a great business, the society cannot conduct its affairs by the same methods. Members in every State have contributed to these properties. They are the real owners. They erected these buildings for their own use and have a personal affection for them. They have been happy to share their use with others, not for profit, but as a contribution to the cultural life of Washington. If Constitution Hall had been built commercially, the income has not been sufficient to cover interest alone on the investment, even without maintenance and repairs. If it were operated commercially, thus requiring return on investment, the cost for its use for practically all events now held there would be prohibitive. Only because those who built it for their own use, ask no return upon a great investment, is it possible for the people of this community to share at all in its advantages. The only reason the building exists and that it can be opened to others, is that women in every State and in chapters in other countries through the years of hard and united effort brought their gifts to Washington.

In the beginning there were no rules except that all events should be of dignity and refinement and not in contradiction to the ideals of the society. With experience a number of rules developed. If certain plans proved impracticable, they could not be continued. As a result of actual experience, a rule was adopted which has remained in force through parts of four administrations and which has recently been under discussion. That rule arose because of unpleasant experiences in attempting to go contrary to conditions and customs existing in the District of Columbia, as a result of which the society was widely criticized in letters and comments in the press for not cooperating, even though actually all restrictions

had been waived.

Statements were incorrect and were not based upon facts. rience showed the society that it could not go contrary to or further than the customs existing in the city in which its properties were located. There was no question of prejudice, personality, or discrimination. This society has consistently through its nearly 50 years been a friend of, and has worked for, many minority groups.

years been a friend of, and has worked for, many minority groups. It will continue to do so.

The question was merely this: Could the society by continuing a practice contrary to accepted custom cope with its difficulties? In business, if any venture is accompanied with results detrimental to the company or corporation, the practice is discontinued. The rule under question was simply that, under the conditions existing in the District of Columbia, the community did not accept the step which the society had taken. Experience proved that it could not proceed further than local conditions warranted. The very fact that the rule attracted no attention through parts of four administrations indicated that it was in accordance with existing customs.

In January of this year a committee asked for the use of Constitution Hall for a musical event on April 9. The hall was already

In January of this year a committee asked for the use of Constitution Hall for a musical event on April 9. The hall was already engaged by another musical organization for that date. In so informing the committee, the rules were also explained, and the statement made that any request for exception to those rules should be addressed to the president general. Shortly afterward, with no request yet in writing, letters began to appear in the press. Comment and adverse criticism gathered like a snowball. More than 3 weeks after the first approach by the committee, during which time agitation and comment had increased, and the society had been charged with bad faith, the president general received the first communication, and then this asked for April 9, the date which the committee had been informed 3 weeks previously was already engaged. Much conjecture and untruth was published. For example, question was raised as to whether the hall was really engaged, whereas last October the society's magazine published that date as booked, and many subscribers held season tickets including it. season tickets including it.

Information and letters received during this period clearly indicated that the question was not one regarding a single artist but involved far-reaching changing social forces. By the time the national board met on February 1, the real question had become so involved with entanglements that it could not be considered alone. Let it be noted that this date was the first on which a society constituted as ours could consider the question of a change or an exception in its rules.

or an exception in its rules.

An important consideration was that, to make an exception, would be in direct contradiction to existing agreements with concert bureaus who have regularly used the hall for some years and whose agreements cover a period of years. The society would therefore have opened itself to legal responsibility for violation of its own agreements. This was an important factor affecting the action but he heard.

These facts were stated more briefly in a letter to the national board, which includes the State regent of every State. The meeting of the national board, at which 41 members from all parts of the country were present, realized the seriousness of the decision to be made. After careful consideration of all factors involved the board decided, through a ballot vote, that no exception could be made.

The membership should distinctly understand that to have made an exception would not only have been in violation of signed agreements of the society, and customs for all similar properties in Washington, but would have meant that the society retreated under fire of widely scattered groups and organizations, many of

whom knew nothing of the facts, and whose interest had nothing

to do with the real question.

To have changed a rule while it was entangled with so many factors having nothing to do with the rule would have been to surrender the society to influences inimical to its purposes and efforts. When independence of action is threatened, and when fog

beclouds real issues, there can be no surrender.

Let all understand that there was never a question of one person or one artist. The only question under discussion was whether, in view of all existing conditions, an exception could be made in rules of long standing.

If a single inappropriate or undignified comment has been made or published during this discussion, it has been without the authority or knowledge of the national society.

Is it reasonable that one group of women alone, whose properties are privately owned, whose buildings were possible only through voluntary contributions of its members in all parts of the country accumulated during nearly 50 years of effort, be expected to work out the problems of vast groups backed by great changing social forces?

social forces?

Conditions are the same as when experience dictated the need of the rule. This is not a question for the Daughters of the American Revolution alone to solve. When the community at large has worked out its problem, the Daughters of the American Revolution will be willing, as at all times, to adapt its policies to practices and customs in accordance with the highest standards of the community.

If this incident can teach that issues must be kept clear-cut and free from entanglements which obscure the real principles in-

If this incident can teach that issues must be kept clear-cut and free from entanglements which obscure the real principles involved; if it can lead the members to know more of the problems and difficulties of the society and emphasize the necessity of seeing the whole picture before forming judgment; if it can lead those who speak without knowledge to search for truth; if it can emphasize the need of decisions without malice and a patriotism without prejudice, it will have served its purpose.

The War Debts Again

EXTENSION OF REMARKS

HON. CHAUNCEY W. REED OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

Mr. REED of Illinois. Mr. Speaker, I have today introduced House Resolution No. 17. It is similar to one introduced in the Senate a week ago which is now before the Foreign Relations Committee of that body. I realize that this is an unusual resolution. For many years we in the United States have been deeply concerned over the failure of many of the European nations to repay the sums of money loaned to them by our Government during and immediately after the World War. Today when many of these defaulting nations are again talking war and attempting to involve us in their quarrels with each other it seems pertinent to request of them a settlement of that which is so long overdue.

I believe an effort should be made to secure an adjustment of this debt which cost American taxpayers some thirteen

billions of dollars.

While the appointment of ambassadors, other public ministers, and consuls rests solely with the President, upon the advice and consent of the Senate, yet the House of Representatives, upon whom devolves primarily the duty of raising revenue, is deeply concerned in the collection of these war

The Senate resolution and the one I have introduced suggest that the appointment of William Griffin, editor and publisher of the New York Enquirer, as special envoy to Italy, England, Germany-for the Czechoslovakian debt-France, and other nations now in default to this Republic for the purpose of assuring the collection of these debts would meet with the utmost satisfaction of the Members of this Congress.

I am especially pleased to sponsor this vital measure in the House, since Mr. Griffin is a native son of the district in Illinois I am privileged to represent in the House of Representatives. His ancestral abode is in Wheaton, III., county seat of Du Page County, and home of that progressive educational institution, Wheaton College, well known throughout the

LXXXIV-App-101

country. The history of this youthful, self-made American publisher has become somewhat of a saga in the State where

I formerly served as prosecuting attorney.

There is still another reason, Mr. Speaker, why we of Illinois would be especially gratified by the passage of this resolution. In a sense it would be a mark of homage and remembrance to our late United States Senator James Hamilton Lewis, a close friend of Mr. Griffin, who made noncancelation of war debts one of the strongest issues in his career as a statesman.

In furtherance of the spirit of the resolution Griffin already has had many face-to-face conferences with the leaders of the war-debt-defaulting nations. Among those with whom this outstanding journalist and publisher has discussed war debts are David Lloyd George, former Prime Minister of England; Winston Churchill, former Chancelor of the Exchequer of England; Albert Lebrun, President of France: Lord Robert Cecil. President, the League of Nations Union and former Minister of Blockade; and Count Galeazzo Ciano, Foreign Minister of Italy. He is well versed in the policies and politics of European statecraft, and if anyone is able to represent America with honor and distinction I am sure he is the man.

Events of the last two decades have demonstrated to the most cursory observer that many of the defaulting debtors, instead of paying Uncle Sam, have turned the money due him into more and more munitions and armaments of war, and he is now confronted with a spectacle of wily European diplomacy intent on involving him in another foreign war.

That great President, Calvin Coolidge, admirably summed up the question of the war debts in his New England nutshell fashion when he remarked of the European defaulters,

"They hired the money, didn't they?"

Radio Discussion of National Labor Relations Act

EXTENSION OF REMARKS

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

RADIO DEBATE BETWEEN HON. EDWARD R. BURKE, O NEBRASKA, AND HON. SHERMAN MINTON, OF INDIANA

Mr. NORRIS. Mr. President, there occurred last night a very interesting debate over the radio between the Senator from Nebraska [Mr. Burke], the Senator from Indiana [Mr. MINTON], and some others on the subject of the National Labor Relations Act. I have a copy of that joint debate in my hand and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the debate was ordered to be printed in the RECORD, as follows:

> AMERICAN FORUM OF THE AIR NATIONAL LABOR RELATIONS ACT

The National Labor Relations Act was the subject of discussion

The National Labor Relations Act was the subject of discussion here tonight, Sunday, April 23, 1939, by United States Senator Edward R. Burke, Democrat, of Nebraska, and United States Senator Sterman Minton, Democrat, of Indiana.

The discussion was presented by WOL, Washington, in cooperation with WOR, Newark, over the coast-to-coast network of the Mutual Broadcasting System.

Following the discussion, which originated in the auditorium of the Department of the Interior Building in Washington, a panel consisting of the following participants commented extemporaneously on the remarks of the speakers of the evening: Joseph Padway, counsel, American Federation of Labor; Lee Pressman, counsel, Congress of Industrial Organizations; United States Representative Clare E. Hoffman, of Michigan, and Richard Strout, Christian Science Monitor. Christian Science Monitor.

The American forum of the air is under the direction of Theo-

dore Granik, prominent attorney and educator, who presided as chairman of the program.

Announcer McCormick. From the Nation's Capital, we present the American Forum of the Air. WOL, in cooperation with WOR,

presents another in the regular weekly series of forum broadcasts witnessed by a large audience assembled in the studio-auditorium of the new Department of the Interior Building.

The facilities of this auditorium have been graciously extended in the interest of promoting unrestricted discussion of topics interesting to the Nation at large and conducted by a nonpartisan

organization.
You first will hear both sides of the issue discussed by two speakers, representing opposite viewpoints.

Following the speakers, an extemporaneous panel discussion will take place in an endeavor to cover all phases of the subject.

The forum is arranged and directed by Theodore Granik, prominent attorney and educator, who will preside as chairman. Mr.

Chairman Granik. Thank you, Mr. McCormick.
Congressional hearings on the National Labor Relations Act
have once again brought the spotlight of public attention on this
vital problem. After a 2-year struggle in the Congress, the act was signed by President Roosevelt on July 5, 1935. his statement at the time:
"A better relationship between labor and management is the

ins statement at the time:

"A better relationship between labor and management is the high purpose of this act. By assuring the employees the right of collective bargaining, it fosters the development of the employment contract on a sound and equitable basis. By providing an orderly procedure for determining who is entitled to represent the employees, it aims to remove one of the chief causes of wasteful economic strife. By preventing practices which tend to destroy the independence of labor, it seeks, for every worker within its scope, that freedom of choice and action which is justly his."

The act has been the subject of bitter controversy. Critics have demanded its repeal or sweeping revision, as well as complete revamping of its administrative agency. They contend that the Board has been biased and unfair, and that the act, although set up to protect the rights of organized employees, does not protect the rights of employers.

About 10 days ago the Senate Labor Committee began hearings on a series of proposals to amend the act, and similar hearings are expected shortly to get under way in the House. The eyes of the Nation have been focused on these sessions, which will develop in detail the pros and cons of all phases of the problem.

Appearing at his own request as the first witness before the Senate Labor Committee, distinguished Senator Robert F. Wagner, of New York, author of the law and nationally renowned for the liberal legislation he has sponsored, said:

"The National Labor Relations Act, has played a notable con-

of New York, author of the law and nationally renowned for the liberal legislation he has sponsored, said:

"The National Labor Relations Act has played a notable constructive role in our national life. To millions of workers it has brought a better understanding of their employer's problems, and the material and spiritual value of participating in a free organization of their fellows for mutual aid and protection. To most employers who have given the principles of the act a fair trial it has brought labor peace, and, beyond that, a more human relationship with workers based on the mutual respect and understanding that grows out of free bargaining between free men. These employers—and they now represent the overwhelming majority—are among the chief beneficiaries of the Labor Act."

Among those urging the contrary point of view before the committee were Senator Edward R. Burke, of Nebraska, and Congressman Clare Hoffman, of Michigan, who are here with us tonight to amplify their views.

Outstanding leaders in Government, business, and labor will

Outstanding leaders in Government, business, and labor will testify within the next few weeks, with the issue expected to reach the floors of both the Senate and House before this session ends.

The American forum of the air has thought it timely, there-

fore, to present a discussion on the subject tonight.

Senator Burke will open the discussion, and he will be followed by Senator Sherman Minton, of Indiana, who was this week chosen as the Democratic Whip of the Senate, succeeding the late Senator

Immediately following their remarks we will present an informal panel discussion. Our panel members, with Congressman Hoffman, will be Joseph Padway, general counsel of the American Federation of Labor; Lee Pressman, general counsel of the Congress of Industrial Organizations (the C. I. O.); and Richard L. Strout, correspendent of the Christian Science Monitor.

And now we present Senator Burke:

ADDRESS BY SENATOR EDWARD R. BURKE, OF NEBRASKA

Senator Burke. As the first witness to appear before the Senate Committee on Education and Labor in its consideration of proposed amendments to the National Labor Relations Act, Senator Wagner described the hearings now in progress as "momentous." Whether they result in a demonstration that the act needs no change, that its administration has been wise and free from bias

change, that its administration has been wise and free from bias or prejudice, or the contrary is shown, in either event the examination now under way is of the utmost importance. For we are dealing here with a subject that touches very closely the welfare and the happiness of more American citizens than are directly and vitally affected by any other single piece of legislation.

These hearings are momentous. Equally so was the use of that term by the distinguished author of the act, coupled with his further statement that he thoroughly approves of the study being made. That he will actively support any changes which the evidence clearly shows to be necessary. For that has not been and unfortunately is not now the attitude of those extreme partisans who have seized upon this act as an effective means of forcing upon the country far-reaching changes in our economic system. To them this act is sacrosanct. With consummate skill they have been working, day in and day out, to create prejudice against

those who seek by wise amendment to make this law a sound instrumentality of good. Although the most reliable polls of public opinion disclose that not less than 75 percent of the people of the country are dissatisfied with the way the statute is being enforced and favor changes in the law, these ardent advocates have insisted that it must not be touched. There is a general belief that continual harassment of employers, for which the way her been connected to which by the people of outside interthe way has been opened so wide by this method of outside inter-ference in the labor relationship, is the surest method of keeping business and industry from expanding, and millions of willing workers from profitable employment. Yet we are told this law must not be touched.

must not be touched.

On the contrary, the change should begin in the very first section. Instead of declaring that labor disturbances are due solely to the unfair practices of employers in denying to their employees freedom in organizing and in refusing to bargain collectively with them, let the truth be stated. Labor troubles have been due in part to such practices by a limited number of employers, and in part to unfair practices of certain employees and labor organizations. If it is real freedom for the workers of the country that is our goal, let the law protect them from threats, interference, or coercion from any source.

So this section is amended by declaring it to be the policy of the

coercion from any source.

So this section is amended by declaring it to be the policy of the United States to encourage the development of friendly and mutually fair relations between employers and employees by protecting the practice and procedure of collective bargaining, by protecting the exercise by workers of full freedom of voluntary association, self-organization, and designation of representatives of their own choosing for the purpose of negotiating the terms and conditions of their employment, and by imposing reasonable restraints in the public interest upon certain improper practices in the employer-employee relationship, by whomsoever engaged in.

What are those unfair labor practices? As the statute now reads, only an employer can be guilty of wrong. The amendment covers both parties to the relationship. It is now an unfair labor practice for an employer to interfere with, restrain, or coerce his employees

for an employer to interfere with, restrain, or coerce his employees in the exercise of the rights guaranteed in this act. The same prohibition should be made applicable to employees and labor organizations, to the end that the worker may be completely free to join or refrain from joining any labor organization, to continue or cease his employment, and to select his representatives for collective bargaining.

collective bargaining.

Because of repeated interpretations that the Board has placed upon this noninterference section, which rulings have had the practical result of placing all employers in a strait jacket without liberty to pass on to their employees any information or advice that might be helpful to them, even when wholly disassociated from any threat or interference, it has been thought necessary to add a proviso. It shall not be considered an unfair labor practice for an employer to confer with his employees or counsel and advise with them about any matter within the scope of this

Company unions will still be denounced. Likewise any discrimination in regard to tenure of employment or any term or condition thereof for the purpose of encouraging or discouraging mem-bership in any labor organization. It will still be an unfair labor practice for an employer to refuse to bargain collectively with the

accredited representatives of his employees

accredited representatives of his employees.

Employees, in turn, will violate a fair-labor practice if, in the course of a dispute, they violate the laws of the jurisdiction where the dispute occurs. The national policy is to afford the machinery for the peaceful adjustment of grievances through free collective bargaining. If workers take the law into their own hands—say, by engaging in the destruction of the employers' property by using the sit-down strike technique to enforce their demands—they should not at the same time be free to enjoy the great advantages which this act confers.

It is complained that the amendments constitute a restriction on the right to strike. All that is provided is that if the worker wants the protection and benefit of this act, he must stay within certain limits in the method of the exercise of that right. If there is a valid contract not to strike for a certain period, the agreement must not be treated as a scrap of paper. A further, and to me a most reasonable limitation, is that to remain protected by this act a strike may be called only after an affirmative vote by secret ballot of a majority of the workers in the unit

vote by affected.

In his statement to the committee, Senator Wagner said that it In his statement to the committee, Senator Wagner said that it is his aim "to be the friend of every man who works honestly for a living, regardless of what union he belongs to or whether he belongs to a union at all." To that I wholeheartedly subscribe. To carry that principle into effect requires two further changes in this section. To my mind it is an intolerable thing that a man who desires to work honestly for a living, who is capable and efficient in the performance of his duties, an employee who has been honestly working for a living for years, may be told any day that under the law of the country he loves and is ready to defend with his life, he cannot continue to hold his job unless he will join a under the law of the country he loves and is ready to defend with his life, he cannot continue to hold his job unless he will join a certain labor organization. It is immaterial whether his reasons for not choosing to join are good or bad. The vital point is that someone else is permitted to decide the question for him. It approaches hypocrisy to claim to be the friend of every man who works honestly for a living, regardless of what union he belongs to or whether he belongs to a union at all, and at the same time support a statutory, compulsory closed shop which throws the above principle to the winds. Let the union sell to the worker on its merit the benefits of belonging. Let interference with the free exercise of that right by the employer, by the union organizer, or by anyone else, be strictly prohibited. But the closed-shop prin-ciple has no place in this act, which is supposed to guarantee complete freedom to workers.

Nor is the compulsory deduction from a worker's wages of union Nor is the compulsory deduction from a workers was a dues consistent with that freedom about which we speak. It may be a helpful device to keep unwilling members in line. But that is be a helpful device to keep unwilling members in line. But that is all. The closed shop and the check-off can be logically defended only by those who are willing to take the position that there is something more important than the freedom of the individual to make his own decisions. However valuable a strong labor organization may be, when it comes to forcing a worker against his will to join, or compelling him to remain in when he wants to quit,

the sacrifice of individual freedom is too great.

The act should provide for a Labor Board representative in equal number of both parties to the labor relationship—employer and employee. The general public, which is so vitally affected by the maintenance of industrial peace, should also have a voice in its decisions. A board so constituted has been heretofore recommendations. mended by such authoritative spokesmen of labor as Mr. Green, Mr. Lewis, and Secretary Perkins. This change would go far toward convincing the country that Congress is sincerely trying to establish good will in a relationship where real success is otherwise impossible.

impossible.

Procedure must be improved. If a grievance exists, the employer should be promptly notified. He should have a reasonable time to make correction to the satisfaction of his employees. Failing that, and within a limited period, it would be in order for a complaint to be filed by the Board. In getting at the truth, although technicalities should be avoided, there ought to be substantial compliance with the rules of procedure that prevail in courts of law and equity. Findings of fact to be conclusive should be supported by the weight of the evidence. If, despite these safeguards, the accused is not satisfied to have his case judged by the same body that investigated the controversy determined there was same body that investigated the controversy, determined there was, according to its standards, sufficient cause to proceed, and then prosecuted the case, he should have the right of prompt removal to the United States district court for speedy trial

The major portion of these amendments which I propose have just been enacted into law by the Wisconsin Legislature to supplant the so-called Little Wagner Act that has been in force in that plant the so-called little Wagner Act that has been in force in that State. The handwriting appears on the wall. Those who are wise will read and give heed. There should be fundamental changes made in the National Labor Relations Act at this session of Congress. That can be done without impairing the sound objectives of the act. There is danger in delay.

Mr. Granik, Thank you, Senator Burke.

You are listening to the American forum of the air, presenting a discussion on the National Labor Relations Act.

We have just heard Senator EDWARD R. BURKE, of Nebraska. And now we are happy to present Senator SHERMAN MINTON, of Indiana. Senator MINTON.

ADDRESS BY SENATOR SHERMAN MINTON, INDIANA

Senator Minton. The purpose of the National Labor Relations Act was to protect labor in its right to belong to a union and to have that union represent labor in its dealings with its employers. That is what is known as collective bargaining. No one disputes the right of labor today to bargain collectively, just as capital bargains collectively. The board of directors of a corporation or a farm cooperative represent and bargain collectively for the stockholders of the corporation or the members of the cooperative.

Labor asks to do the same thing. You say if everyone concedes this right of labor to join a union, and through that union to bargain collectively, why the Labor Board? Not quite all accept the right, in practice, at least. There still exists a small minority of chiselers that hire spies to spy upon the workers to find out who the union leaders and members are so they can fire them. They spend hundreds of thousands of dollars a year hiring der Head" Cohen and a bunch of pug-uglies to break strikes and assault workers. They spend hundreds of thousands to arm with gas and deadly weapons, thugs to be set upon the workers. They spend thousands in fostering a company union to be run by the employer and to sit upon the employer's knee by Charlie Mc-Carthy, to listen to his master's voice. In short, anything from spying, thuggery, assaulting, and a free use of money is used by the few to halt the organization of labor.

The overwhelming majority of the employers are fair, and want to be fair, to their workers. It is the small minority of chiselers that made it necessary to pass the National Labor Relations Act. It is the Tom Girdlers and Jimmy Rands that make it necessary for all employers to have legislation directed to them. We always have to legislate against the chiseling, racketeering, or criminal minority. The Good Book itself says: "The law was not made for the honest man."

The National Labor Relations Act was passed to enable workers to join the union of their choice, without interference from the boss. What member of the general public is willing any more to leave complete control of workers' destinies in the hands of employers, to discharge and blacklist workers, whose only sin is a desire to join a union, and have that union represent them in dealing with their boss.

The right to organize is just. The device of collective bargaining is a hopeful path to industrial peace. Everyone agrees, so let's stop giving lip service to collective bargaining and give it a chance to

In 1933 the present administration said for the first time that collective bargaining was here to stay. The Republican Party had always pleasantly endorsed collective bargaining, but it never did anything about it. In the spring of 1935 this administration kept its promise to labor and enacted under the leadership of one of the greatest liberals of all time, Senator Wagner, the National

Labor Relations Act.

They could accept the act, Employers had two alternatives. Employers had two alternatives. They could accept the act, and make collective bargaining a reality, such as had been known by the railroads and the Needle and Garment Workers for 20 years. Or, they could defy the act and deny their employees the right to join the union they wanted. The employers chose to defy the act. They suspended its operation for almost 2 years, during which time labor witnessed the boss defying the law, and he defield it in a wave of sit-down strikes. This was labor trouble, but heaves of the National Labor Relations Act, but in defining not because of the National Labor Relations Act, but in defiance

Here are the steps by which, through unremitting publicity and litigation, the chiseling minority of American employers nullified the act and excoriated the Board. The Manufacturers' Association and the chamber of commerce declared the act unconstitutional before it was passed. Fifty-eight Liberty League lawyers signed an cpinion that the act was unconstitutional, and advised the employers to defy the law. One hundred and one employers tied the Board's hands by injunctions. Employers refused to obey the law. Only one of them complied with the Labor Board's ruling during

Only one of them complied with the Labor Board's ruling during the Board's first 18 months of existence.

How did labor feel about all that during those 18 months? Where was its magna carta of rights? Where these long-deferred hopes? Where, indeed! Tied up in injunctions. Throttled over conference tables where, instead of worker and employer representatives meeting to settle their mutual affairs, lawyers and employers' associations met to strangle labor's hopes. Labor lost patience. Workers went back to direct action, and the strikes of the winters of 1936 and 1937 ensued.

In the spring of 1937 the Supreme Court upheld the labor law. The Liberty League lawyers' "kangaroo court" had been overrued. Then, before the law had a chance to work, the Manufacturers' Association, the chambers of commerce, the chiseling employers, and the propagandizing newspapers they control began to yell for repeal and, by misrepresentation, to seek to destroy the Labor Board. Some wanted to kill the act outright—bloody murder! Some, like Senator Burke, wanted to chloroform it, while he proceeded to take out all its vital organs, under the subtle plea of amendment. amendment.

Under these adverse and trying circumstances, the Labor Board Under these adverse and trying circumstances, the Labor Board prepared five cases, upon which the act was upheld by the Supreme Court. It had prepared and brought to the Supreme Court five cases of such unimpeachably sound law and procedure that the Nation, anticipating opposite decisions, was left gasping with astonishment. Under a cloud of hostility and suspected unconstitutionality, the Board had gone about its business. It had persuaded big steel, Goodyear Rubber, International Harvester, and others to give up their company unions. It had established sound precedents in a new body of labor law. It did all this under the most destructive barrage of hostility and misrepresentation that any agency of this Government has ever endured.

Senator Burke says he wants to protect the rights of the workers.

Senator Burks says he wants to protect the rights of the workers and to save the desirable objectives of the act. He has offered a number of amendments. We haven't time to look at all of them. Although on an appeal to the courts by every other federal board, the facts as found, if based upon substantial evidence, are board, the facts as found, if based upon substantial evidence, are binding upon the court, Senator Burke wants the courts not to be bound by the facts the Labor Board finds. That is just a little amendment that takes the heart out of the act! If the Senator wants to be fair, why this discriminatory amendment? Another amendment of the Senator would, in effect, give the employer a change of venue from the Board and permit him to try the case before the court, not simply confine him to his appeal, as is now the practice. the practice.

No other Federal board is subjected to such procedure. Why this discrimination against the Labor Board? "All in the interest of fair play," says Senator Burke.

Labor and its friends will not be fooled by the voice of Jacob

as long as they can feel the hand of Esau.

By propaganda, nurtured by Senator Burke himself, there has been carried on a campaign to discredit the greatest piece of legis-lation ever enacted for the benefit of the laborer, and to discredit the finest administrative job ever done by a Federal agency. This is a campaign to destroy the Labor Act and the Labor Board, not to save them.

In the last session of Congress, Senator Burke made all these threadbare charges against the Labor Board in a resolution which he had heard before the Judiciary Committee, of which he is a member, and the resolution was unanimously voted down by the member, and the resolution was unanimously voted down by the committee, even Senator Burke himself admitting he had no evidence to sustain the charges. That didn't discourage the Senator. He proceeded to get some evidence; if not evidence, at least some propaganda. By the aid of a multigraph in the Senate Office Building and an addressograph in the Manufacturers' Association in the Chamber of Commerce, the Senator began soliciting people to write him and tell him how awful the Labor Act was. The campaign of misrepresentation against the Labor Board has been going on for over a year. The public is led to believe that the Labor Board acts in violation of the Constitution, arbitrarily and without semblance of due process of law.

What are the facts? The Supreme Court, in 13 out of 17 cases before it involving action of the Labor Board, upheld the Labor Board on all grounds 13 times; 2 cases the Board was partially sustained; 2 cases the Board's order was set aside. That is a batting average of .760 for the Labor Board, while all other Federal agencies during the same period in the same Court have an average of only .640. In the circuit court of appeals, out of 45 decisions dealing with enforcement of the act, the Board has been wholly sustained in 32, partially in 2, and its order set aside in 11 cases. That is a

record unparalleled in American administrative law.

You have heard it loosely and freely charged that the labor unrest, sit-down strikes, and other strikes were due to the Labor Act and its administration. The facts are just the opposite. The various labor troubles and sit-down strikes occurred in 1936 and 1937 when the employers had the Labor Act enjoined. Since the Supreme Court upheld the act in 1937 to date the Labor Board has functioned as a constitutional body, and during that period sit-down strikes have disappeared and all strikes have been reduced by half, and only one-third as many nearly were involved in these strikes. So it to a plain third as many people were involved in these strikes. So it is a plain, unvarnished falsehood that the Labor Act and its administration

unvarnished falsehood that the Labor Act and its administration have increased labor trouble.

Two distinguished scholars of Columbia University, Professors Gellhorn and Linfield, after examining meticulously every order and act of the Board since its founding, had this to say about the Board:

"The procedures developed by the Board have been characterized not by a despotic disregard of the Constitution * * * but rather by a lively desire to afford to parties the fullest opportunity to urge their points of view. * * * By some the Board has been denounced for methods alleged to be un-American and not in harmony with the genius of our democratic institutions. The authors are satisfied that the denunciations find no support in fact." satisfied that the denunciations find no support in fact,

In conclusion let me urge you to be fair, and admit that the Labor Board has performed a most difficult task in a highly satisfactory manner. Our experience has indicated a few minor changes in the act may well be made. The friends of labor will not stand for the repeal of this act or its emasculation by destructive amendments. Labor ought to have its rights. Labor intends to have its rights, and despite the unhappy current splits in its ranks, labor will not patiently endure another postponement of its hopes.

Chairman Granik. Thank you, Senator Minton.

And this concludes part 1 of tonight's forum presentation.

Announcer McCormick. The panel discussion will be presented immediately following station identification.

This is the coast-to-coast network of the Mutual Broadcasting Co.

Announcer McCormick. We continue with the second half of the American forum of the air, originating in the studio-auditorium of the new Department of the Interior Building in Washington, D. C. We return you to the chairman, Theodore Granik. Chairman Granik. And now, as part 2 of tonight's forum on The National Labor Relations Act, we present an informal panel

discussion.

Our panel members are: Congressman Clare E. Hoffman, Michigan; Joseph Padway, general counsel of American Federation of Labor; Lee Pressman, general counsel of Congress for Industrial Organizations (the C. I. O.); and Richard L. Strout, of the

Christian Science Monitor.

Mr. Strout will open the discussion.

PANEL DISCUSSION

Mr. RICHARD STROUT. This is one of the most bitter contro-Mr. Richard Strout. This is one of the most bitter controversial subjects in Congress, and you have just listened to two of the hardest-hitting Senators in Congress. We have with us another Member of Congress who represents a third point of view. Fortunately for me, I am just an impartial and supposedly objective newspaper correspondent, and I feel a good deal at the present moment like Daniel in the lions' den. I know these people are aching to go, and I only hope I can climb a tree before I am devoured by the lions. I hope they will fight each other and not eat me.

eat me. Sitting immediately at my right is Congressman Hoffman, who has a third point of view. Then we have the point of view of the A. F. of L., which wants the law amended part way, and the C. I. O., which does not want it amended at all. I understand Mr. Hoffman would prefer to have the law abolished. Is that correct, Mr. Hoffman?

Representative Clare E. Hoffman. No; only so far as the per-

sonnel of the Board may be changed.

Mr. Strout. Isn't that the same thing?

Mr. Steout. Isn't that the same thing?
Representative Hoffman. No. Senator Miniton said no one disputes the right to bargain collectively. I say they do, the Board does, and you can prove it if you look at the record of the Board, because on July 13, 1937, a union representing a majority of the employees of a company petitioned the Board for a certificate of representation. The Board didn't give it, but induced the company to enter into a contract with a rival union, and when they had set the stage to influence the votes they held an election, and when their favorite was defeated the Board still continued to recognize this contract of collective bargaining with the defeated union, and denied the majority of employees the right to bargain collectively. It is the case of Harris versus the Labor Board, decided on the 27th day of February, 1939, by the United States Supreme Court.

Mr. Stroott. Mr. Pressman, as I understand it, you don't want

Mr. Strout. Mr. Pressman, as I understand it, you don't want to have this changed at all. Is that correct?

Mr. Lee Pressman. Mr. Strout, the C. I. O. and its affiliated organizations are absolutely opposed to the amendments which

are now pending before Congress in the several bills. The C. I. O. believes the National Labor Relations Act to really be the Magna Carta for labor. We therefore watch very carefully as to exactly who is opposing the amendments. When we find a Senator, namely Senator Burke, proposing a list of amendments under the guise of expressing the pious hope and desire of protecting every workingman in the country, we also have to notice the fact that Senator Burke was one of the 12 Senators that voted against the passage of the National Labor Relations Act.

We also would like to point out that Senator Burke, on returning from a trip to Europe, including Germany, stated upon his arrival that he thought Mr. Hitler had done a fine job for the workingman. In a country where every right of the workingman had been completely demolished, Senator Burke found a fine job being done!

fine job being done!

So we look over his amendments very carefully and we find among his amendments practically every one intended to emasculate and abolish the National Labor Relations Act. We are absolutely in accord and in sympathy with the views expressed by Senator MINTON.

Senator Minton.
Mr. Strout. The A. F. of L., as I understand it, is halfway between. Is that true, Mr. Padway?
Mr. Joseph Padway. No; you are mistaken, Mr. Strout. The A. F. of L. is not halfway between the other two. The A. F. of L. does not subscribe to the amendments by Senator Burke at all. The A. F. L. still subscribes and adheres to the basic principles of the National Labor Relations Act. I believe that when the act was proposed and was being discussed before Congress it was its strongest proponent. It still is.

But one must distinguish between the basic principles on which the act is founded and the administration of that act. It is one thing to say that an act subscribes to and supports principles of

thing to say that an act subscribes to and supports principles of self-determination, self-organization, freedom of choice of representatives, and quite another to place that authority in a board, and the power and discretion exercised by that board in such a way that many of these fundamental principles are either evaded or entirely denied to those who were to be the benefactors of the

act.
That is the position of the American Federation of Labor, and in proposing its amendments it intends to bring the act back to the fundamentals, to the basic principles under which it was sponsored, and which it was enacted under, and we propose that either sored, and which it was enacted under, and we propose that either this administration, the present Board, or some subsequent board if the present Board is unwilling or unable to do it, shall administer the act in such a way as those basic guaranties remain with and for the workers who are to benefit by it.

Representative Hoffman. Mr. Strout, Mr. Pressman said that he regarded with suspicion the amendments coming from certain sources. I wonder if he has forgotten a long time ago someone inquired whether any good could come out of Nazareth.

Mr. Pressman. I prefer to limit our discussion to the National Labor Relations Act.

Representative Hoffman. That's it, and no one except the labor organizations can propose amendments which will be any good.

I call his attention to the fact that the Labor Board itself denies the right of—

the right of-

Mr. Strout (interposing). I see Senator Burke champing at the bit. I wonder if he wants to come in on this.

Senator Burke. In most debates the one that opens has some opportunity to say something in rebuttal. I had to make my talk and the other gentlemen came on. If I could have a moment or two, without interfering—

Mr. Stroutz About 2 minutes

Mr. STROUT. About 2 minutes.

Senator Burke. What I want to say might take a good deal

longer than that.

As a logical argument directed to the advisability of considering As a logical argument directed to the advisability of considering the adoption or rejection of certain amendments, I thought Mr. Pressman's argument reached a new low in all phases. Mr. Pressman says that instead of looking at the amendments themselves which I presented in general here, that we look at the man who offered them, that Senator Burke voted against this act.

I did; and why? As the record will clearly show, because there was voted down on the floor of the Senate an amendment offered

was voted down on the noor of the Senate an amendment offered in good faith to prohibit coercion, intimidation, or threats coming from any source. When that was voted down I knew this act would not be a success and voted against it, and I am as proud of that vote as of any I have cast in the Senate.

Then he goes on with some misquotation he never read in any newspaper, because it was never quoted as he presented it at all, about some remarks I am supposed to have made on returning from Europe last September, when the labor question was not discussed at all. discussed at all.

But I want to say just this word, and my 2 minutes are not quite up, in reference to Senator Minton, also. I would like to

have about 5 minutes for him.

have about 5 minutes for him.

He said in the first place I offered a resolution a year and a half ago and had to abandon it. I offered a resolution asking the Senate Judiciary Committee to consider the functioning of the Labor Board as a court. The Judiciary Committee decided, and I joined with them because that was the general consent, that this was a matter that ought to be handled by the Committee on Education and Labor, that when they were ready to take up the consideration of amendments, that was the place to consider it, so I gracefully bowed to that.

Just one other thing and I will be through. He said also that the sit-down strike epidemic was caused by the fact that some employers fought against and questioned the constitutionality

of the Labor Act. As a matter of fact, he knows, and everyone here knows, that if the Labor Board had had its way, if the Supreme Court had not overturned it, the sit-down strike would supreme Court had not overturned it, the sit-down strike would be a duly accredited and recognized method of labor warfare in this country today. The Labor Board did everything that it could from the time that epidemic started to encourage it and spread it all over the country. That should not be blamed upon anyone who now wants to amend this act.

Senator Minton. I challenge Senator Burke to show any place in the record where the National Labor Relations Board ever countenanced a sit-down strike.

Senator Burker Senator Minton, if you haven't followed the

Senator Burke. Senator Minton, if you haven't followed the Fansteel Metallurgical case from the place it started until it was decided by the Supreme Court with only two dissenting votes, who didn't themselves attempt to justify the sit-down strike, you ought to know that that is exactly what the Labor Board

Senator Minton. Time won't permit, but it held nothing of the kind. The Senator ought to read the case.

Mr. Pressman. Mr. Strout, may I please answer Senator Burke?
I had attempted to divide my time and give a little more time to Senator BURKE.

I had first attempted to explain how organized labor felt when it heard an expression from Senator Burke about being for the laboring man. I shall now address myself to some of the specific amendments that Senator Burke has proposed.

Senator Burke purports to amend the National Labor Relations Act by providing that even where—give me enough time to answer,

Mr. HOFFMAN.

Representative Hoffman. I was wondering, Mr. Pressman, how this time is divided.

Mr. Pressman. He provided that even where an employer has unfairly discriminated against an employee that even under those conditions, according to Senator Burke's amendment, all the Board can do is hold that the employer has violated the law, yes; but all he need do is pay a little tip, a little severance pay, but but all he need do is pay a little tip, a little severance pay, but that the employee, under this amendment, cannot be placed back to work. What an easy way for employers to break every union and any organization's attempt to organize the employees in its plant.

Another amendment, on which I will be very brief. As Senator

Another amendment, on which and the Minton has stated—
Representative Hoffman (interposing). Mr. Strout, it seems to me this is just like C. I. O. practice. They want everybody to join that, and take their time.

Mr. Pressman. They want to—

Is this a discussion or a

Representative Hoffman (interposing). Is this a discussion or a

Mr. Strout. You have 2 more minutes, Mr. Pressman.
Mr. Pressman. I assume that is the customary way of Mr.
HOFFMAN arguing his case.

Another amendment says that the employers may at any time remove their cases from the Labor Board and take them directly to the courts. That is Senator Burke's idea of playing fair with

an administrative agency.

Another amendment of Senator Burke is to the effect that employers may, regardless of any other provision of the act, confer, counsel, and advise with the employees. In other words, he meant, as we understand the relationship between an employer and employee who is unorganized into a union of his own choosing, that he may tell him whatever he cares to say; he may, through his words, through his actions, show that employee what might happen if he joins a union. But under the words "may confer, counsel, and advise with his employees," regardless of any other provision of the act, that employer will be free from the restraints that this act

attempts to impose on the employer.

Mr. Strout. Now, Mr. Pressman, time does not permit any more.

We want to hear Mr. Padway, of the A. F. of L. I wonder if he

won't come in on this.

Mr. PADWAY. I was trying to get away from this scrap and remain peaceful and quiet.

I would rather confine myself not to personalities but really to one of the real things people should know about it. There are two points that Senator Burke makes, and I would like to respectfully discuss them so that those who are listening in and those who are here may understand them.

I think Senator Burke is wholly in error when he makes the point that a closed shop is a compulsory imposition upon employees and contrary to democratic fundamentals. Let's see. Please don't applaud; I don't want to use too much time. Let's see if I can't get this across. Senator Burke leaves us under the impression that the closed shop is something that is imposed upon employees. Now,

The closed shop is a condition to be bargained for between the employees and their representatives—if it is an exclusive bargaining representative selected by a majority, so much the better—and the employer. The employer doesn't have to grant the closed shop. It is entirely up to him. He may want to do it as a matter of desire. Pardon me if I give you a personal example. All my stenographers and secretaries are in the union.

Mr. Strout. I think we will give you about half a minute more,

Mr. HOFFMAN.

Mr. Panway. All right. I want these people in the union. It is my preference, and the employees don't object. Since they don't, why should I not have that right? In other words, it is a condition to be bargained for, similar to wages, hours, or anything else.

I want to take this half moment to answer this matter of Senator BURKE'S. I think, Senator BURKE, you are wholly in error in the premise that a majority vote is a good thing in order to have a strike sanctioned. The strike on the part of 1 individual out of 10,000 or on the part of a minority, is merely an expression of freedom of speech. A man disagrees with his employer on terms and conditions and goes out on a strike to tell the world about it. That is all.

And the Supreme Court has sanctioned it, and you couldn't con-Mr. Strout. The thing that surprises me in this is the apparent agreement between the C. I. O. and the A. F. of L. I confess I didn't

expect that.

Mr. Padway. Wait until we get before the committee in a few days. We will not be so beautifully agreed.

Mr. Strout. What is the difference? I wonder if you could

explain that.

Mr. Padway. The difference is not between the C. I. O. and the A. F. L.; the difference is between the C. I. O. and the Board and the A. F. L. and the Board. The C. I. O. seems to like the Board and has a good reason. Had the Board treated the A. F. L. as it has treated the C. I. O., we would like it just as much.

Mr. Pressman. It would have been a simple matter for Mr. Padway to address himself to the actual facts in the case, with regard to about 70 cases which have been before the Labor Board, involving the union question, whether craft unions or industrial

regard to about 70 cases which have been before the Labor Board, involving the union question, whether craft unions or industrial unions shall prevail in a particular place.

My understanding of the cases is that in every single case where a craft union has asked for a craft union and a substantial membership was shown by the craft union in that unit, the craft unit was designated by the Labor Board as the appropriate unit. With regard to the other cases—

Mr. Strout (interposing). Just a minute, Mr. Pressman. I think Mr. Hoffman has something to say about it.

Representative Hoffman. Well, if Mr. Pressman permits us to get in. The difference between these two gentlemen arises out of the fact, as Mr. Padway said, that if the Board had treated the A. F. L. as it treated the C. I. O., everything would be fine. The Board just got through skinning the A. F. L. on the west coast and taking away about 13,000 members of the A. F. L., compelling them to go into the C. I. O.

Mr. PRESSMAN. I gathered from Mr. Padway that Mr. Hoffman was

not his spokesman.

Mr. Padway. It strikes me that everyone here can speak for himself.

Mr. Pressman. With regard to another set of cases that I believe has raised an issue between the A. F. L. and the C. I. O. before the Labor Board, namely, the invalidation by the Labor Board of contracts which an employer has entered into with a particular union, we are absolutely in favor of the policy and the interpretation of the act made by the Board, namely, that where the Labor Board finds that a labor organization, whether it be a company union or other-wise, has been assisted in obtaining its membership in a particular

wise, has been assisted in obtaining its membership in a particular plant, and has been assisted in connection with the obtaining of such contracts as part of a pattern and a program for the employer to express his preference for that union against any other union that the employees may choose, that such a contract does not represent the free expression on the part of the employees, free from interference and assistance from the employer.

Mr. Strout. Mr. Padway, does that meet with your attitude?

Mr. Padway. Well, it doesn't quite meet with my attitude, but there is a different way of approaching the thing. First I would like to answer Mr. Pressman's previous statement that figures show that the Board has been kinder or has decided cases more often in favor of the A. F. L. than the C. I. O. You know, that has been bandled around so much, I think it first came out in an article in Fortune, and everybody has picked it up, and I am almost beginning to believe it myself, I have read it so much.

It reminds me of a fellow who comes up before a judge and says, "I am a pretty good fellow. Don't send me to jall. I have done wrong 5 times, but I was a good fellow 25 times."

He tells you it decided so many cases in favor of the C. I. O.

done wrong 5 times, but I was a good fellow 25 times."

He tells you it decided so many cases in favor of the C. I. O. and so many in favor of the A. F. L. Every time the Board took a unit away from the A. F. L. it was committing a wrong, on the basis that it took it away. That is, the Board claimed that it has the power and discretion to say to the A. F. L., with a craft set-up, can say to that craft, "Here, we will say whether or not you can vote as a craft or not." And then it will say, "We find the balance of the considerations to be equal, and you may vote as a craft," or "We find the balance of considerations to be unequal and we won't let you vote as a craft"—willy-nilly, whether the union likes it or not. That never was intended, it is wrong, and we don't want them to have that power. to have that power.

We say the unit itself, the craft group, will decide whether they want to be merged or vote without any right on the part of the Board to say yes or no. That is the way with labor. That was the intention of Congress, the expression contained in the report, and the Board has adopted this unit rule, this doctrine which is a perversion of the very basic principles of the act, from the unit rule. We quarreled with the Board on that and will continue to quarrel until it either changes the rule or Congress does.

In respect to contracts, I guess the appropriate term to be used, and what Mr. Pressman has in mind, is what is known as a coerced

majority. The employer drives a majority into his organization or the one he would like, and thereupon the contract made under such circumstances should be invalidated. The fact of the matter is, such contracts are never majority contracts, and that, Represent-

ative, is never an exclusive bargaining agency. The Board hears the testimony and says, "You are not—"
Mr. Strout (interposing). Mr. Padway, we have only 1 minute

Mr. Padway. Give it to me; you couldn't do anything better.
Representative Hoffman. Mr. Padway represents about 4,000,000
workers, the A. F. of L.; Mr. Pressman claims to represent a like
number. Don't forget there are 20,000,000 workers outside who
aren't organized and who have a right to some representation.
Mr. Padway. Give us time, Mr. Hoffman, and we will organize

them.

Representative Hoffman. You will do it by force, whether they will or not, eh?

Mr. Padway. We don't do it by force. All we ask is that the employer keep his hands off.

Representative Hoffman. The farmer is right there on the job.

Mr. Pressman. I agree with Mr. Padway: if the act will be left intact, so that the workers will really have a complete, free right to organize into unions of their own choosing, it won't take very long before all the workers will be organized.

CONCLUSION

Announcer McCormick. So we conclude another broadcast of The American forum of the air, presented by WOL in cooperation with WOR every Sunday at 8 p. m., eastern standard time.

Tickets to this broadcast may be had by sending your request to station WOL, Washington, or WOR, 1440 Broadway, New York City. In the interest of education Burland Printing Co., of New York and Washington, prints and distributes, free of charge, a limited number of copies of the entire proceedings of this broadcast. Address your requests and comments to WOL, Washington, D. C.

D. C.

The American forum of the air is arranged and directed by Theodore Granik, prominent attorney and educator who presided as chairman tonight.

This is Stephen McCormick speaking.

This is the Mutual Broadcasting System.

American Democracy

EXTENSION OF REMARKS

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

ADDRESS BY HON. EDWIN C. JOHNSON OF COLORADO

Mr. LOGAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Colorado [Mr. Johnson] in the city of Trenton, N. J., on Saturday night, April 22, before a State-wide rally of Delaware and New Jersey Odd Fellows celebrating the one hundred and twentieth anniversary of the founding of Odd Fellowship.

There being no objection, the address was ordered to be

printed in the RECORD, as follows:

THE RELIGION OF AMERICAN DEMOCRACY IS FRATERNITY

In these days of international confusion when political systems are subjected daily to widespread and critical examination, it seems appropriate in a gathering of fraternalists to discuss our own democracy from the standpoint of a fraternalist. We justifiably take great pride in the Government established by the founding fathers of America, and that pride should naturally create in us a desire to learn all about its essential nature so that we may better understand its particular motives and more constructively support its peculiar virtues.

WHAT IS DEMOCRACY?

Democracy is as difficult to describe as is religion and as hard to define as is society. If I should propound the query "What is democracy?" to 10 of my listeners tonight, doubtless I would receive 10 different replies.

One might say: "A democracy is a country in which all men are could."

equal."

Another: "A government of the people, by the people, for the people."

people."

Another: "The greatest good of the greatest number."
Or: "The Golden Rule administered by political agencies."
Or: "Equality of civil rights."
Noah Webster, author of my dictionary, puts it: "Government by the people." Hitler would likely sneeringly shout: "It is a lawless, deprayed, ignorant, degenerate, incompetent failure"; and Stalin would probably thump his chest and gloatingly reply that "democracy is communism." My own definition is that democracy

is a political and social institution based upon civil equality providing for free expression in the arts, sciences, religion, and enterprise, depending for its workability upon the mutual confidence and respect of its citizens and having for its great objective the betterment of man.

the betterment of man.

Before a democracy can function with any degree of success the individuals who compose it must be bound together in common aspirations, common standards of conduct, and common ties of ideals and habits. They must exercise a community feeling of tolerance, patience, loyalty, and patriotism.

It takes an advanced people to assume the difficulties and delicacies of such a government. Under some governments public opinion exists, if it exists at all, in a most limited way, but in our American democracy it determines the whole course of public policy. policy.

ORIGIN OF DEMOCRACY

According to Gladstone, "the American Constitution is the most wonderful work ever struck off at a given time by the brain and purpose of man." But I do not want to stop with that sacred document—the Constitution. Our form of government expresses the collective soul of our people as it can be expressed in no other way because our democracy goes far beyond its Constitution for the inspiration of its origin. That origin is unmistakably in the hearts of its founding fathers and in no other place. The Constitution of the United States of America makes no reference to God and makes no provision for religious dependence or allegiance of any kind. That fact, however, does not indicate that our democracy has no religion. Only a mistaken conception of both religion and democracy would lead to such an erroneous conclusion.

DEMOCRACY DIFFICULT

Democracies are said to be characteristically indirect in action, awkward in method, delayed in decision, and inefficient in administration. If one were searching for the most efficient government, and if efficiency were all that he were interested in, he would hardly choose a democracy. Governments since the dawn of history have been afflicted with the evils of waste, extravagance, inefficiency, and convention to a greater or lesser degree and these tory have been afflicted with the evils of waste, extravagance, inefficiency, and corruption to a greater or lesser degree, and these vices have been especially difficult for democracies to master. Most emphatically peoples who are backward, disinterested, careless, ignorant, and indolent have no business experimenting with a democracy. A personal government will suit their poor purposes much better. There are millions of human beings throughout the world incapable of forming a reasoned and considered judgment. If they have a conviction, it has been given to them by someone else. Many peoples in the world today are not fitted for anything more difficult than the goose step and the hard, exacting dictator. Only the most enlightened, individualistically inclined, enterprising, ambitious, and idealistic human beings are qualified to operate a democracy. democracy.

In our blind devotion to its blessings of liberty and freedom we In our blind devotion to its blessings of liberty and freedom we would like to see all people have democratic government, but since so many of them are not fitted by political experience for the peculiar responsibilities and the absorbing duties of democratic government, nothing could be worse for the world today than to place all of them regardless of their capacity, their ambition, and their training under such a system. If they do not have an overwhelming desire in their hearts for its liberty and freedom, a democracy ought not be forced upon them, for doubtless they would quickly succumb to the horrors of utter chaos and mob confusion quickly succumb to the horrors of utter chaos and mob confusion as soon as they were left to their own independent action.

BROTHERHOOD VERSUS BRUTE FORCE

There are two distinct influences, either of which is common to all governments. One of them is brute force; the other reason; and when reason is supported by the invisible, intangible, spiritual element of brotherly love, the basis for a successful democracy is at hand.

Men there are who do not admit that there is such a thing as a religion of democracy. But that should not be surprising, for men there are standing in the solemn shadow of silent, majestic men there are standing in the solemn shadow of silent, majestic mountains, whose sharp, rocky peaks reach so high into the heavens that they are perpetually clothed in the white robes of purity, and in that magnificent presence these foolish men, who in contrast appear like mere microscopic pygmies, do deny God. Men there are who look out upon a wide expanse of never-ending ocean and behold the angry, rolling, ominous waves plunging and breaking and lapping like the tongue of a she wolf, and fail to experience the inward emotion which fills an understanding heart until it spontaneously bows in humble supplication to the God who governs such mighty works. Men there are who peer down miles into the spontaneously bows in numble supplication to the God who governs such mighty works. Men there are who peer down miles into the mystery of the narrow chasm of the Grand Canyon with its crazy patchwork of colored walls, or are deafened by the roar of the mighty Niagara, or set their watches by the spouting, boiling geysers of Yellowstone, and yet are not religiously impressed. Men there are who know all about the universe—the stars, the moons, and the suns—without recognizing the implications of a religious

So do not expect man to recognize the most apparent demonstrations of religion. None are so blind and none are so deaf as those having eyes yet see not and having ears hear not. There is a religion of democracy and its power and its force and the phenomena of its manifestations can be understood. I speak not of creeds or dogmas or ecclesiasticisms or bishops or cathedrals. I am thinking about the religion that is inherent in democracy itself, and I am not contemplating, directly or indirectly, a union of church and state. The spiritual factor of democracy is to be found in the heartthrobs of its citizens.

DEMOCRACY OF ANCIENT GREECE

The ancient Greeks established a beautiful democracy that flour-The ancient Greeks established a beautiful democracy that hourished for a time and then vanished as though swallowed by the earth itself. The Roman republic, too, had its glorious day in history before it entered the untimely sepulcher of oblivion. Ancient Greece mistakenly thought the soul of democracy was to be found in art and culture and learning and beauty. But also there was nothing in a culture founded upon paganism that could successfully resist the selfshness that was intrinsically interwoven into site democratic currents. into its democratic system.

I recall a painting supposedly depicting the ancient Greek republic wherein 40 slaves under the lash supported a huge platform upon which 10 artists were at work. Destiny decreed that the culture and art and democracy, and paganism and selfishness of ancient Greece should crumble into dust together and be no more.

THE DEMOCRACY OF ANCIENT ROME

Ancient Rome was more practical and realistic. In fact, she built her democracy around utility. Only useful things in the eyes of the Romans were worth preserving. Efficiency was the watchword and the objective and the purpose and the very soul of this ancient republic. Seeking more and more utility became a Roman passion until that passion strangely enough opened the very grave into which ambitious and selfish men successfully buried the shining light of Roman democracy forever. The goddess of culture was too idealistic to protect the Greek republic against greed and selfishness; and the god of utility, demanding more and more efficiency, as the miser fanatically hoards gold coin upon gold coin, forgot other more important considerations and lost the supreme prize. supreme prize.

A NEW THEOLOGY

These republics thrived and died before the lowly Nazarene had introduced into the world the new theology of the fatherhood of God and the brotherhood of man that was destined to make democracy work. Brotherly love was as foreign to these ancients as the modern automobile. Art and culture and learning and beauty have ever been uplifting influences of manifold importance to the happiness of mankind, but without the support of a constructive religion they are as naught. To get the most possible out of every material thing is certainly advantageous to man and it cannot be denied that the ancient Romans succeeded tremendously in that regard, but democracles like men do not live by bread alone; they cannot endure merely on learning and efficiency. Only by a well-developed conception of fraternity and brotherly love can democracles live, for these things are the very essence of democracy. Man is naturally a cruel, bloodthirsty, destructive, war-loving animal—covetous, selfish, and harboring a vigorous hatred toward everything which he does not understand. It takes something more than an appreciation of art or a devotion to utility to overcome these powerful animal instincts. devotion to utility to overcome these powerful animal instincts.

Christ was nailed to a cross when he attempted to lead men away

Christ was nailed to a cross when he attempted to lead men away from them and his immediate followers were burned at the stake for preaching peace and good will, but slowly man's ferocious character has been gradually subdued as he has grasped more and more the significance and strength of brotherly love.

H. G. Wells asserts that "in the race between education and catastrophe, catastrophe is winning." Catastrophe did win against education in ancient Greece, but in ancient Greece education was nullified by selfishness and paganism. Under American democracy man is recognized as a social being with an appreciation of art and a determination to develop utility but at the same time exercising brotherly love and friendship. Catastrophe will not soon overtake that combination. overtake that combination.

BIRTH OF DEMOCRACY

American democracy lived long before the Declaration of Independence or the adoption of the Bill of Rights. It had its birth in America in the town hall of New England and in the House of Burgesses in the Old Dominion. Roger Williams, a deeply religious man and an early devotee of practical democracy, saw in personal and religious freedom the path to glory. In attempting to understand America we should not forget that it was founded by refugees who had felt the heavy heel of the persecutor and for the most part had migrated to a dangerous wilderness fraught with savages and wild animals, not for adventure or gold, but for liberty and freedom. Taxation without representation drove the colonial fathers into violent revolution in answer to Patrick Henry's dramatic plea for "liberty or death." Democracy has gradually developed and grown up about us through many generations until now it seems as natural as the air we breathe.

I do not know whether the hen came before the egg or whether the egg was first, but I do know that you can have neither hen

the egg was first, but I do know that you can have neither hen nor egg unless you have both. I do not know whether the philosophy of brotherhood came before American democracy or whether American democracy was first, but like the hen and the egg, without both you will have neither. It is my belief that they reached these bleak shores simultaneously and that they will remain together until the end.

GOOD GOVERNMENT AND GOOD MEN

American democracy is not just a pretty ideal. It is the most practical builder of men's souls yet devised by the will and intelli-gence of man, and its principles when applied in the land in which we live give substance and form to the American way of life. Out

of this unique system we secure good, competent government on the one hand, and progressively improved individuals on the other. The men we admire most are the men who cling to high ethical standards, reason well, and act decisively. We would have men be positive and not be negative. Men learn to swim by swimming and positive and not be negative. Men learn to swim by swimming and to act by acting, and to make decisions by making decisions, and in no other way. If man were created a pawn to be moved about at will in someone's game, then it would not be so important that he have the capacity to think clearly, to make decisions wisely, and to act constructively. If man be a dumb, driven ox and nothing more, then religion and fraternity and democracy are all merely a waste of time. But man was created in the image of God, and to him was given the divine blessing of a free conscience to act upon his own determination and to reach his own decisions. decisions.

REGIMENTATION

I have a very dear friend who is without doubt one of the ablest penitentiary wardens in this country. His success in this field has been absolutely phenomenal. Cruel, desperate, daring outlaws under his influence become as docile as little children. This is a statement which this warden recently made:

"When a prisoner comes to us a living example of the failure of church, school, and home, we still know that we can make a good

church, school, and home, we still know that we can make a good convict out of him—and we do. Good convicts are the product of discipline. We do not know what else we can do with him, because agencies better equipped for soul shaping have already failed."

There is food for thought in his observation. This warden's prisoners are quick to learn that if they behave properly they will be treated fairly and given every consideration within the bounds of reason, and if they do not behave they will promptly get what is coming to them in oversized doses. When occasion demands, he does not hesitate to fiog them and give them long "stretches" in solitary confinement. That makes good convicts out of them all right, but it does not necessarily prepare them for their duties as citizens against the day when they are to be released from prison and again take up their lives as active members of society in a and again take up their lives as active members of society in a democracy where men must act, associate with other free men, and make decisions voluntarily on some other basis than the prospect of immediate and certain retribution. In freedom and not in regi-mentation lies the road to progress. In a democracy one is given the full choice over his own conduct and is not charged with misconduct until he wrongs someone else. If man harbors a friend-ship for humanity in his heart, he will not wrong his fellows, and he will be a good citizen not out of fear of punishment but because the desire of his heart will be to serve his fellows to the best of his ability. You have heard of honor among thieves; criminologists who have made a deep study of the subject say there is no honor among thieves. Men who have real friends and who are loyal to that friendship do not become thieves.

SELFISHNESS ENEMY NO. 1

Citizens who are absolutely selfish, without interest in other people, are in no position to contribute anything at all toward democratic government. If they cannot be converted or reformed, they might better be abandoned to the most straight-laced dictatorial government to be found where selfishness can join its bosom torial government to be found where selfishness can join its bosom companion, brute force, and take for its own whatever it has the strength to take, remembering, of course, that whosoever lives by brute force will likely die by brute force. If, on the other hand, one have concern for others, if he be interested in promoting fellowship and mutual understanding and human welfare, and if he loves his fellowman as he loves his own life, then and then only does he have the qualifications presserve to constructively. only does he have the qualifications necessary to constructively serve as a useful citizen in a free democracy. Selfishness and brute force in a democracy, as they are in a fraternity, are wholly out of place.

Our fraternity has declared selfishness to be mankind's enemy

No. 1, and it, therefore, calls for an unrelenting war to the death against this vile monster. Selfishness has not only wrecked innumerable lives and left them dishonest, criminal, and lost, but it numerable lives and left them dishonest, criminal, and lost, but it has been the direct cause of nearly all the wars and all the high crimes of history. A disregard for the rights of others is the unmistakable symptom of selfishness. The greatest threat to American democracy today is the sneaking, unconventional, unsocial outlaw within our borders who mistakes license for liberty and selfishly swindles, robs, and murders with a sneering disregard for the rights and well-being of his fellows.

SCHOOLS, CHURCHES, AND FRATERNITIES

There are at least three well-defined, stabilizing instrumentalities in America which to the extent they prepare the hearts of men for the difficult responsibilities of citizenship facilitate the men for the difficult responsibilities of citizenship facilitate the effectiveness of the democratic processes. I refer to schools, churches, and fraternities. Through one or the other of these great institutions nearly every citizen is reached and influenced at least to some extent. Without them I am convinced that American democracy would give way under pressure to mob rule with all of the mob's hysteria, ignorance, prejudice, and ill-considered action. They stimulate individual improvement in character and that individual improvement is reflected in improved citizenship. When the church or the school or the fraternity starts an individual in the right direction, something is accomplished for the whole democratic society, for the common weal of all is directly affected by the conduct of each. Under a democracy the individual is tremendously important. Under a totalitarian state that is not true.

Totalitarian governments thrive best under pagan religions and widespread ignorance of the people, for they must assume that righteousness and good conduct are not related, that material

things govern, that might makes right, and that man exists for the state and not that the state exists for man. Such a philosophy takes mankind no place. Fraternity is manifestly out of its sphere in such an ideology, since it holds to the diametrically opposite belief. No one realizes that fact better than the dictator himself. Under a despot man needs to know but blind obedience to authority, and the blinder the obedience the better for him. He needs to recognize but one master—the totalitarian state. Like the good recognize but one master—the totalitarian state. Like the good convict in the penitentiary, it is not necessary for him to think or assume responsibility; he needs only to obey. Despots would gladly destroy every church, every school, and every fraternal impulse within their realm because they recognize the spiritual power emanating from such institutions is a direct challenge to their authority based on force. They never place dependence upon the willingness of free men to serve their fellow men. They honor and respect no motive short of brute force. They rely wholly upon power to carry out their will; they depend upon fortifications, armaments, and weapons, and the devastation derived from their use. They have no conception of the virtues and joy of doing right for friendship's sake—they think only in terms of compelling the obedience of all to might.

SAVAGE SENTIMENTS

SAVAGE SENTIMENTS

Il Duce Benito Mussolini in a recent speech to his cheering Black Shirts deliberately spoke these savage sentiments: "What are the three words which form your dogma? Believe,

obey, fight!"

Our three fraternal words are: Friendship, love, and truth. Mussolini continues:

"No matter how things go, we wish to hear no more about brotherhood, sisterhood, and such other bastard relationships, because relationships between states are relations of force and these relations of force are the determining elements of their policy."

America bases her relations with other nations on the invincible policy of being a good neighbor. That is the American democratic way.

"The Italian motto," Il Duce continued, "must be more cannon, more ships, more airplanes."

And now this significant warning: "Woe to the weak."

Our motto, on the other hand, is more charity, more humanity, more peace, and we earnestly plead the cause of the widow and the orphan.

I am not criticizing Mussolini. I quote him to emphasize the fundamental differences between his despotism and our American fundamental differences between his despotism and our American democracy. He has made a very frank, honest statement. He is not a hypocrite. He has given to the world a true description of the nonreligion of the Fascist system of government in forcible, understandable language. Strangely enough, he has adopted the same system of government for freemen which my friend, the warden, found necessary for desperadoes. Under that severe disciplinarian despotism, Italy may become rich in material things, but what shall it profit her if she gain the whole world and lose her own soul? Italy has many desperate problems with which I do not pretend to be familiar, and desperate problems sometimes require desperate methods. It is not for me to choose Italy's form of government; it is enough for me to strive with all my might to keep such a system out of America. I do not want America to quarrel with Mussolini or go to war with him over the political philosophy and the political system which he has every right to adopt, with the consent of his own citizens; but I do want Americans to realize their own good fortune, and I do want to predict that Americans will make far greater progress under our system of government in building the kind of men the Universal. Father would have us be.

PREPARATION

We should learn from a study of the historical experiences of men that a preparation has to be made in their hearts before the kind of government to which we are so wholeheartedly devoted can exist. Under the Treaty of Versailles many democracies were set up here and there only to go down one by one because their citizens either were not interested in performing the grave responsibilities of citizenship required by democratic government or the people in these suddenly formed democracies could not comprehend its virtues or how to use its freedom. Its failure should have caused no surprise—the surprise should have been in its success. It is idle to believe that democracy can be spread throughout the world by the sword or that it can be bestowed upon a people by any outside influence. If there be not an overwhelming desire in men's hearts for the liberty and freedom of democratic government, if they do not have a religious fervor for democratic government, if they do not have a religious fervor for democratic government, if they do not have a religious fervor for its virtues, and if they are not willing to devote thought and time and energy to it, and if need be die for it, then of its own weight, it must fall. Rushing headlong into democracy without cultivating it is sheer folly. I would repeat again and again and again that men must be prepared in their hearts for the trying responsibilities of citizenship under a democracy and they must desire the blessings of liberty and freedom above all things if democracy is to succeed.

Religion, education, and fraternity have rendered a magnificent service in bringing about a very definite awakening of faith in

Religion, education, and fraternity have rendered a magnificent service in bringing about a very definite awakening of faith in America—faith in our way of life, faith in our ability to overcome the influences however subtle that would destroy our democracy. As a result we are now aroused to the necessity of constantly and continuously nurturing, protecting, and stimulating it. We now recognize democracy as a growing, living thing and realize that the great need of the future is for these three agencies to continue to teach and instruct and inspire Americans until they understand that equality and rights and privileges

and liberties can be experienced and guaranteed only so long as they themselves intelligently and voluntarily assume the duties and make the sacrifices incumbent upon democratic citizenship. We hear entirely too much about the liberties and freedom of democracy and not nearly enough about its duties and respon-

RELATIVE AND PROGRESSIVE

All fraternalists are not fraternal to the same degree; some are in the kindergarten of fraternalism while others have advanced until they have earned their master's degree. Fraternalism is relative and it is progressive, just as education and religion and democracy are relative and progressive. As men understand these principles and practice them and live them, they become more and more proficient in them, and the more proficient they become the more forceful and constructive are they as citizens. There is no conflict whatsoever between the ideology of democracy, fraternalism, and a religion that teaches the fatherhood of God and the brotherhood of man. Each contributes toward the other's objectives until they blend into a perfect harmony of purpose and accomplishment. Each of them in its own right makes a mighty fertile field in which the others may develop and grow. in the kindergarten of fraternalism while others have advanced

TRUTH BASIS OF FRATERNITY

Our fraternity places a higher value upon spiritual things than it does upon material things. It teaches that wealth and power are quickly dissipated. It recognizes man as a social being and does everything it can to encourage his sociability. It teaches the joy and satisfaction to be found in friendship; it encourages men to work harmoniously together and it urges them to become their brother's keeper in the truest sense of the term and to make human welfare life's great objective. It preaches that truth is the basis for loyalty and friendship. That kind of fraternity, my

friends, is the religion of American democracy.

Democracies are absolutely dependent upon the confidence of their citizens in each other, and that calls for the exercise of much faith. Fraternity is devoted to the building of faith of man in men. You often hear one say "he is so honest that he thinks everyone is honest." To have confidence that others are thinks everyone is nonest. To have confidence that others are honest, men themselves must be honest. Crooks think that all men are either crooks or fools. They feel that they can depend upon no man because they know in their hearts that no man should depend upon them. It is a great compliment to you if you believe in your fellows, because that indicates that you yourself possess the very qualities which you attribute to others.

AN UPWARD SPIRAL

And now, in conclusion, I must make it perfectly clear that our fraternity wisely refrains from all political and religious con-troversy. As fraternalists we are not interested in creeds or dogmas as such, but as fraternalists we are tremendously interested in the spiritual values of government. We fraternalists see a natural working relationship between brotherly love and the demonatural working relationship between brotherly love and the demo-cratic processes. We are devoted to democratic government be-cause the spiritual implications of that form of government are so completely in harmony with our own fraternal philosophy. Point out to me an American whom you consider to be a true fraternalist and I will tell you without speculating or guessing or error that he is a constructive force of no small proportions in his American citizenship. It cannot be otherwise. If government be conducive to individual development, growth, and progress, spiritual blessings will flow from that happy circumstance as freely as fragrance from a rosebud which in turn will cause government to become more conducive to individual development, growth, and progress. It thus becomes a never-ending upward

spiral.

If one be a believer in the democratic processes as applied to the practical functions of government, he must necessarily have faith in his fellow man, an intense interest in his welfare, a genuine respect for his ideals, a willingness to accept the verdict of the majority and a firm conviction that spiritual things are far more to be desired and sought after than material things, and above all he must have a passion for truth which carries with it the conviction that honesty and square dealing establish the proper foundation for all harmonious human relationships. Fraternity instructs its membership with all the energy it possesses in each and every one of these imperishable truths and these virtues are the spiritual fibers from which American democracy is woven.

America's Foreign Policy

EXTENSION OF REMARKS

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

RADIO ADDRESS BY HON. CLYDE M. REED OF KANSAS

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech recently delivered by the very able Senater from Kansas [Mr. Reed], entitled "A Sound Foreign Policy."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A SOUND FOREIGN POLICY

printed in the Record, as follows:

A SOUND FOREIGN POLICY

We live in a world of alarms. The people of Europe live in constant fear that the immediate phases of the game of power politics may bring open war between groups of nations. This game is not new in Europe. It has been played on that continent for 2,000 years. The present situation is not different in principle from a dozen or a score of similar situations during that time produced in much the same way as the present situation was produced.

As inhabitants of the world, we are interested in what happens in any part of the world. As citizens of the United States of America, living on the Western Hemisphere, we have no immediate concern—at least, we should have no immediate concern—in the results of the game of power politics as played in Europe. This game is just what the term I have used implies. It is a scramble between nations or groups of nations for territory, for economic advantage, for control of land and river and sea, all to their own advantage and to their own glory, if it be such. Alexander the Great and Darius were not essentially different in design or method from Mussolini and Hitler. Through his military genius and the power of his armies, Napoleon changed the map of Europe much more than Adolf Hitler has done so far by threat of force. Mussolini is an insignificant figure compared to Julius Caesar, but the motive moving the heads of European nations today are in no important respect different than they have been through the centuries. Today communication is instantaneous; the world is immediately informed of what has transpired anywhere. Quickened travel and transportation have made this planet into a comparatively small neighborhood. In these two latter respects, and in these two only, do we face any new fundamental factors in the European situation.

I am measuring my words tonight. Our people have been agitated and their emotions constantly stirred by frequent—perhaps planned—expressions from those high in authority, and some not so h

are in the same position. Their concern is with the Old World, and their own affairs, and not ours. I make that declaration in spite of the constantly reiterated intimations that our welfare is bound up in participation, economic as the minimum, and military assistance as a maximum, with a group of nations involved in the European tangle.

Lest anyone charge that this declaration may have a partisan tinge, I quote the words of a Democratic leader, Senator Walsh, of Massachusetts, in a speech as recent as last Monday, when on the floor of the Senate he said:

of Massachusetts, in a speech as recent as last Monday, when on the floor of the Senate he said:

"I deem it is the sworn duty of every American statesman, especially those in the United States Senate, to whose custody and judgment the Constitution fixes responsibility in part for sharing with the executive department of the Government the determination of foreign policy, to speak out frankly and boldly when the occasion demands it to safeguard the interests of the American people and protect our country against the threatening ravages of war. Now, if ever, is the time for plain talk—talk for the benefit of warmongers the world over, so they may know where we stand, what we will undertake to further world peace, and, more specifically, to renounce those obligations sought to be imposed upon us by selfish powers abroad which we unqualifiedly must refuse to assume—talk to reassure the American people that we intend to preserve peace by all honorable means in our power."

I want to read again those words which have especial reference to the point I am taking, i. e., that we have no obligation to interfere or participate in behalf of any power or group of powers in Europe. I repeat these words of Senator Walsh:

"To renounce those obligations sought to be imposed upon us by selfish powers abroad which we unqualifiedly must refuse to as-

"To renounce those obligations sought to be imposed upon us by selfish powers abroad which we unqualifiedly must refuse to assume—to reassure the American people that we intend to preserve peace by all honorable means in our power."

As certain as we are gathered here tonight the people of America overwhelmingly demand peace, not war. We are their accredited and responsible Representatives in the Congress of the United States and our first duty is to maintain peace. Every act of ours should be thoughtfully considered with that primary object in view. We must not be led aside from that purpose by any specious statements of policy—no matter from what source they come. The Congress of the United States is equally responsible with the executive department for the preservation of peace. We are not only entitled but

it is our obligation to exercise, in the final analysis, our own judgment upon these tremendous issues.

My mail is burdened with letters from my own people and from

My man is buttleted with reteets that in my own people and flow all the country beseeching me to avoid war and preserve neutrality. This term "neutrality" is one susceptible of varying definitions. It isn't a simple matter—it is a most complex one. Evil consequences could easily flow from any error that we make. There are pending in both Houses of the Congress numerous bills and resolutions dealing with the question. I shall not undertake to discuss them in detail here. I shall, however, purely as a personal matter, state my own definition of neutrality.

A state of war in any important part of the globe changes many of the everyday rules of life and business for those nations who would avoid being drawn into the conflict. It is difficult, not easy, would avoid being drawn into the conflict. It is difficult, not easy, to walk a straight line in these circumstances and to keep ourselves aloof from the dangers of entanglement. Once war begins in Europe or elsewhere, efforts, open and furtive, will be made to get us to depart from the policy of keeping our hands off. In charting a proper course we must be governed, I believe, by logic and not by emotion. We may like one side and detest the other side. I have that feeling. I can't help it. I am not ashamed of it. It is only the human instinct. But we must face realities. I do not want my sympathies or my detestations to overcome my reason and my logic. In the event of a serious and prolonged war, means of carrying on will be sought in this country by one, and perhaps both, sides.

In the event of a serious and prolonged war, means of carrying on will be sought in this country by one, and perhaps both, sides. We will be urged to do this, and that, and the other. My conception of true neutrality is to treat the rest of the world, aside from the Western Hemisphere, alike. They will want our foodstuffs, our fibers, our metals, and perhaps our manufactured articles. The courses that we may choose to follow and maintain true neutrality are these: 1. To sell nothing to anybody. Or—2. To sell anything to anyendy.

thing to everybody.

I favor the latter course. We are a productive nation and have a surplus of food and other things above our own requirements. There is no reason, in my opinion, why we should deny to any part of the rest of the world, whether engaged in war or not, any part of the surplus we have above our own needs. To do so would not only disturb our own economic situation, but would unnecessarily denring a world needing our surplus and needing it more

essarily deprive a world needing our surplus, and needing it more, perhaps, because of war, than would be the case otherwise.

But to this policy I would attach a condition that a clear title to anything we sell to any nation or group of nations engaged in war must pass from American citizens to a foreign purchased. war must pass from American citizens to a foreign purchased before the commodities purchased leave our shores. You can call this the "cash and carry system" if you will, or the "come and get it" method, if you choose. I have no quarrel with phraseology on this point, but it represents my idea of a correct policy for us

It doubtless will be urged that in following such a policy we might favor one side or the other, depending upon the fact of some nation or group of nations being more able to purchase from us and protect the sea transportation of their purchases to destination. Such an inequality may result. But that inequality is not of our making, and there is nothing that we can do to change the fact. If we hold ourselves out, honestly and sincerely, to permit foreign nations engaged in war to buy under precisely the same circumstances, it is my belief we have fulfilled our whole duty. Once we depart from this policy, there is no place, using the vernacular of the street, "for us to get off."

I am unqualifiedly opposed to the suggestion that the President of the United States (or even the Congress of the United States) should set his judgment upon a foreign war and declare what nation or nations are to be considered the aggressor. Such determinations are not usually simple things and sometimes are matters of controversy which even decades of discussion do not settle. Mostly these things are matters of opinion or viewpoint, not to say

Mostly these things are matters of opinion or viewpoint, not to say bias or prejudice. I have opinions of my own on this point as to conflicts raging, and conflicts threatened in the world, but I, too, may not be free from emotion or bias, and certainly I would not make my own opinion the basis for a national policy for the United States. It is dangerous business for us to attempt to sit in judg-

states. It is dangerous business for us to attempt to sit in judgment, and I think would inevitably lead us into trouble, with grave danger of leading us finally into war.

Neither is it clear to me what we may do "short of war" that would be effective and, again, not lead us eventually into the conflict. Once we determine the "aggressor" and begin to take sides it is difficult, if not impossible, to find a stopping place short of the logical result of our action, which would be participation in the conflict itself.

the conflict itself.

I do not believe we can solve the problems of Europe. I think that those persons in America who believe that we can make any substantial contribution to that end are disregarding the lessons substantial contribution to that end are disregarding the lessons of history. Europe has fought over boundary lines; racial and religious questions; over dynastic ambitions; and over spheres of influence for a thousand years. So far as I can tell, they will be continuing the same old fight in the same old way for the next thousand years. After every period of war and conquest, the conquerers have sought to "freeze" the boundary lines that resulted from the conflict. From Alexander the Great to Bismarck all failed. What is there in the present situation to believe that even with our intervention any different result could be accomplished?

In last year's compagin in Kansas I discussed at length with

In last year's campaign in Kansas, I discussed at length with the people of my State these questions and at the end of this part of my discussion, I always made this declaration: "That if elected Senator, I would never, under any conceivable circumstances, vote to send an American soldier across the sea to fight over a

European boundary line."

I repeat that declaration here now: "As a Senator of the United States, I pledge my faith to the people of Kansas and to the people of this country that I shall live up to that promise."

Seventy-five Years of Wisconsin Cheese Making

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

RADIO ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a speech delivered by me over the radio on April 24, 1939, on the subject Seventy-five Years of Wisconsin Cheese Making.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

This week the whole Nation is helping Wisconsin celebrate the diamond jubilee of cheese making in America's greatest dairy State which I have the honor to represent in the United States

Seventy-five years ago, Chester Hazen, a pioneer dairyman in Wisconsin opened the first cheese factory in the State at Ladoga near Ripon, noted as the birthplace of the Republican Party. Prior to that time cheese had been made in the kitchens of farm homes. Hazen's venture was laughed at. People jokingly referred to the factory as "Hazen's Folly."

But Hazen's vision was not as idle droom. His fectors grow and

But Hazen's vision was not an idle dream. His factory grew and prospered. Gradually other factories were built. Today more than 1,900 cheese factories dot the verdant hills and valleys of Wisconsin. In these factories dot the verdant fills and valleys of Wisconsin. In these factories each year is produced half the Nation's cheese or more than 340,000,000 pounds. The art of cheese making is an ancient and honorable one, going back thousands of years. A sheepherder in Palestine was the world's first cheese maker. Over his shoulder he carried a skin pouch containing a day's ration of milk. Toward the end of the day he sought a shady spot and sat down to refresh himself. Imagine his surprise to discover the contents of the pouch were now a thickened mass. The call's stomach from which the milk rough was made had an environ earliest rount. from which the milk pouch was made had an enzyme called rennet that was still active. The rennet had curdled the milk. The sheepherder tasted the new product—liked it—and mankind had its first cheese.

The early settlers in Wisconsin were hardy pioneers who drove their cattle with them when they came West. Sturdy and industrious people, Scandinavians, Germans, Swiss, Dutch, English, and Irish—contributed to lay the foundation for the 200,000 dairy farms which today make Wisconsin the greatest dairy State in the Nation. These people found in Wisconsin many natural advantages, temperate climate, fertile grasslands, and crystal-clear waters. More than 2,000,000 dairy cows, foster mothers of the human race, today make dairying the backbone industry of the State. Dairying is the largest single agricultural enterprise in the United States.

A pound of Wisconsin whole-milk cheese represents 5 quarter of the state of the state.

of pure, clean milk. Wisconsin natural cheese is high in health and energy-producing qualities. Cheese is the only food that can be served in any part of the meal from salad to dessert, and at

be served in any part of the meal from salad to dessert, and at anytime, anywhere. We urge you to eat Wisconsin natural cheese regularly for its food value, economy, and taste appeal. As I said to the Senate of the United States recently, if you eat Wisconsin cheese, it will not create gas on the brain, and without gas on the brain there will be no war.

We are proud to celebrate Wisconsin Cheese Week in Washington, the Nation's Capital, this week with fitting ceremonies and festivities. Tomorrow morning, Tuesday, April 25, at 11 o'clock, the biggest and best cheese in the world, Wisconsin's 2,200-pound cheese, is being exhibited at the east steps of the Capitol Building. Goliath, as the big cheese is called, has come here from Madison, Wis., under the auspices of the Wisconsin Department of Agriculture and Markets, and will be displayed throughout Washington during the week. A cheese statue of Vice President Garner will be presented to his wife on the Capitol steps tomorrow. tomorrow.

tomorrow.

Luncheon clubs and civic organizations are featuring Wisconsin cheese on their menus this week. Stores in all parts of the city are emphasizing Wisconsin cheese sales. As a climax to the week's cheese activities, Wisconsin natural cheese will be served in the Senate and House dining rooms on Friday, April 28, which is the date of the diamond jubilee birthday celebration. Simultaneously, thousands of people will gather at Ladoga, Wis., on the site of the State's first cheese factory, to honor Chester Hazen, the man whose foresight and courage laid the foundation for a great industry in Wisconsin, America's dairyland.

APPENDIX TO THE CONGRESSIONAL RECORD

District of Columbia Recorder of Deeds

EXTENSION OF REMARKS

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

LETTER BY PROF. KELLY MILLER

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the RECORD a letter written by Prof. Kelly Miller, of Howard University, to the editor of the New York Sun, and published in that newspaper of the issue of March 16, 1939. The letter has to do with the effect of the socalled Griffenhagen plan on the office of the recorder of deeds of the District of Columbia.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Sun, March 16, 1939] A NEGRO'S OFFICE-THE GRIFFENHAGEN BILL WOULD AFFECT THE RECORDERSHIP

To the EDITOR OF THE SUN.

Sir: When President Garfield appointed Frederick Douglass re-corder of deeds of the District of Columbia and Senator B. K. Bruce corder of deeds of the District of Columbia and Senator B. K. Bruce-Register of the Treasury in 1881 he recognized these distinguished colored citizens because of their standing and worth and service to the Nation and to the Republican Party. It was not a part of his purpose to have these places forever thereafter earmarked as reservations for the colored race under succeeding administrations. When Grover Cleveland succeeded to the Presidency in 1885 he first appointed James C. Matthews, of Albany, N. Y., and then William Monroe Trotter, of Boston, Mass., both Negro Democrats, to the position for which Frederick Douglass had paved the way. Since that time it has become traditional with both political parties to assign a colored man to this lucrative and important post.

Negro politicians throughout the Nation aspire to the recordership of deeds as their peculiar racial patronage. Both the Republican and the Democratic Parties have now come to look upon this office as the position in the Federal service for satisfying the ambition of

Negro politicians.

From time to time there has been repeated effort to deprive the From time to time there has been repeated effort to deprive the Negro even of this small crumb of official comfort. The local District Commissioners have insisted that, as the function of this office is purely local, the appointment of the recorder should come under their jurisdiction. The pending Griffenhagen bill for the reorganization of the District government advocates the city management plan, which would, of course, abolish the national character of this office and limit it to its purely local function. Against all such attempts Negro politicians, North and South, Democratic and Republican alike, have registered an emphatic protest on the ground publican alike, have registered an emphatic protest on the ground that the race would thus be eliminated from the highest responsible

that the race would thus be eliminated from the highest responsible position which falls to their lot under the Federal Government.

The recordership of deeds is the only independent bureau of the Government which remains under Negro handling and control. It is the only assignment which is appointed by the President and confirmable by the Senate and is directly responsible to the President, with no higher intermediate control. The recorder appoints his own personnel and handles his own pay roll, and has full charge of the management of his office.

At one time the Registership of the Treasury and the Ministership to Haiti were assigned to this category. Woodrow Wilson in 1921 endeavored to keep up the traditions by appointing a Negro Democrat to this post, but being unable to secure his confirmation from an unfriendly Senate he withdrew the nomination and sent in the name of a full-blooded Indian as Register of the Treasury. While he was unable to sustain the tradition of a colored appointee he still gave it some semblance of color by the assignment of an Indian substitute. Since then neither a Republican nor a

of an Indian substitute. Since then neither a Republican nor a Democratic President has sought to honor the precedent.

The Ministership to Haiti, because of its diplomatic importance, in light of the Panama Canal and the international complications of the Caribbean situation, has been considered to involved and delect to be hearded by says. of the Caribbean situation, has been considered too involved and delicate to be handled by any Negro citizen. Three Republican and two Democratic Presidents have taken the same view of this appointment and filled this position with a white diplomat. This leaves the recordership of deeds as the only remaining vestige of full authority under the President now exercised by any Negro in the public service.

The recordership of deeds has been under Negro headship for nearly 60 years. The most distinguished names of the race have figured on the list. Frederick Douglass, B. K. Bruce, William Monroe Trotter, C. H. J. Taylor, John C. Dancey, Henry Lincoln Johnson, and William J. Thompkins have been conspicuous among the number.

During all of these years the conduct of this office has been efficient and satisfactory. There has never been any charge of mismanagement or loss of public confidence. The office has measured up to the required standard of the public service and has met the approval of 12 Presidents under whom Negro recorders served.

The Negro press, pulpit, and leaders in public life of all political

parties are now memorializing Congress and the President to defeat the pending reorganization bill and to keep this office under Negro management which has prevailed for the last 60 years. In demanding the continuance of this office as a racial reserva-tion, the Negro advocates may seem to be illogical and inconsistent. Of all men, the Negro insists upon the conduct of public affairs without distinction or discrimination on account of processor colors of tion, the Negro advocates may seem to be illogical and inconsistent. Of all men, the Negro insists upon the conduct of public affairs without distinction or discrimination on account of race or color or previous condition. Race prejudice, however, does not conform to the formulas of logic, the standards of ethics, nor the creed of democracy. The treatment which the Negro receives in church, in schools, in industry, and in public life violates all such canons. Race prejudice makes it all but impossible for the advocates of 100-percent democracy to be consistent and logical, and wholly impossible for the Negro to be so. He is compelled to make the best adjustment possible under circumstances which he does not create and cannot control.

It must be said however, that the recordership of deeds is not

It must be said, however, that the recordership of deeds is not a Jim Crow office and does not operate on the basis of segregation. The personnel of the office consists of five or six hundred appointees divided about equally between the races. Throughout the 60 years under Negro headship there has never been the slightest indication of race friction or antagonism. Indeed, this office furnishes the best laboratory of racial good will in the Federal service.

Kelly Miller, Howard University.

Washington D. C. March 14

WASHINGTON, D. C., March 14.

Proposed Amendment of National Labor Relations

EXTENSION OF REMARKS

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

ARTICLES BY HON. ROBERT F. WAGNER, OF NEW YORK, AND HON. EDWARD R. BURKE, OF NEBRASKA

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an article by the Senator from New York [Mr. WAGNER] on the subject of proposed amendments to the National Labor Relations Act, published in the Washington Post of April 23, 1939, and also an article on the same subject by the Senator from Nebraska [Mr. Burke] published in the Washington Post of April 16, 1939.

There being no objection, the articles were ordered to be

printed in the RECORD, as follows:

[From the Washington Post of April 23, 1939]

SENATOR WAGNER DEFENDS LABOR ACT AS WEAPON FOR INDUSTRIAL PEACE—PROVIDES DEMOCRATIC PROCEDURE, HE SAYS—AUTHOR OF LEGISLATION, NOW UNDER ATTACK, RESTS CASE ON THE RECORD OF JUSTICE IN STRIFE SETTLEMENTS—HOLDS OPPONENTS SEEK TO IMPEDE LAW—SENATOR BURKE'S AMENDMENTS SEEN DEVIATING FARTHER FROM THE "BEATEN PATH" THAN THE PRESENT MEASURE

(By Senator ROBERT F. WAGNER)

The Senate Committee on Education and Labor is now holding hearings on proposed amendments to the National Labor Relations Act. As the author of the law, I welcome this open-minded inquiry, with full confidence that an impartial examination can lead only to vindicating the act in principle and possibly perfecting it in

There are three main avenues of approach which any government may elect in dealing with the relationship between capital and labor in the modern industrial world.

The first is too simple. If there is injustice in industry, if strikes occur, if commerce is interrupted and communities disrupted, if blood runs in civil strife, a government conceivably might turn its back and stop its ears. Our own history is filled with instances where we allowed the human misery and economic waste of strikes to continue until one party or the other was exhausted. When it was all over, we sometimes appointed high-sounding investigatory commissions to perform the unhappy and profitless post mortems.

TOTALITARIAN IDEA ALLOWS NO FREEDOM

The second avenue of approach swings over to the opposite extreme. It is based upon the assumption that an all-wise and all-powerful State should dictate every phase of the relationship between workers and employers, the length of the day, the size of the pay, the amount of production, the terms upon which men must go to their work and leave their work. This totalitarian idea is embodied in the Communist and Fascist regimes.

In consequence of such policies, there are no strikes in Nazi Germany, Fascist Italy, or Soviet Russia. But neither is there political or industrial freedom. Peace has been purchased not by the establishment of justice but by suppressing discontent and forcing it underground. I do not believe that a system based upon that kind of peace can permanently endure.

Between these two extremes, of doing nothing on the one hand and trying to do too much on the other, there is the middle way, the way of industrial democracy, the American system.

the way of industrial democracy, the American system.

THE MIDDLE WAY IS MOST DEMOCRATIC

In economic affairs, this system rests upon "liberty of contract." Liberty of contract in turn depends upon equality of bargaining power. Equality of bargaining power, in turn, depends upon collective bargaining, because the unorganized worker is pitifully weak compared to the organized employer.

For about a century the courts of America, the majority of employers and workers in America, and public opinion in America have expressed their belief in collective bargaining. But until recent years there was a small but ruthless minority who denied to labor the right to organize and bargain collectively which they themselves enjoyed. Discriminatory discharges, yellow-dog contracts, unfair labor injunctions, industrial spies, and privately hired ruffians employed as company police were all weapons in the unfair fight. The consequences were not only injurious to the legitimate aspirations of labor but were equally injurious to the legitimate aspirations of fair-minded, law-abiding, and peace-loving industry.

DESIGNED TO ELIMINATE CAUSES OF STRIFE

DESIGNED TO ELIMINATE CAUSES OF STRIFE

The sole purpose of the National Labor Relations Act was to remove this most troublesome cause of industrial unrest. The act adhered closely to a few basic principles evolved through years of trial and error. It did not propose to establish compulsory arbitration, to fix hours, wages, or working conditions. It did not displace the work of the Conciliation Service of the Department of Labor. It did not interfere with the normal exercise of the employer's right to hire or fire, or to operate his business in his

own way.

All it did was to codify and clarify an age-old bill of industrial rights. The discriminatory discharge, the yellow-dog contract, and the company-dominated union were proscribed. The law required the employer to bargain collectively with representatives chosen by a majority of employees in the appropriate unit, and authorized the holding of elections to determine employee representation. By these means the act was designated to extirpate the main causes of bitter industrial strife and to encourage the voluntary settles. of bitter industrial strife, and to encourage the voluntary settle-ment of differences between industry and labor around the conference table by the methods of industrial democracy.

RESULTS SINCE 1937 ARE CONSIDERED

Because of its purposes, any fair appraisal of the National Labor Relations Act must commence with a discussion of whether it has

tended to reduce strife between employers and workers.

Senator Edward R. Burke, of Nebraska, who severely criticized the act and its administration in an article in the Washington

the act and its administration in an article in the Washington Post last Sunday, seems to satisfy himself with the statement that "What results might have been achieved in diminishing the causes of labor disputes * * must remain a matter of surmise." I am not satisfied, and I do not think that the public will be satisfied, with "surmise" on this vitally important subject. The facts show that promptly following the Supreme Court decisions in 1937, which, by upholding the labor act, afforded the first opportunity for its genuine functioning, there has been a marked decline in industrial strife.

NUMBER OF STRIKES HALVED IN FIRST YEAR

In 1938, the first full year of operation under the Supreme Court's mandate, there were only about one-half as many strikes, one-third as many workers involved in strikes, and less than one-third as much working time lost through strikes as in the year 1937. Less working time was lost through strikes last year than in any year since 1931, although the general tempo of business activity was higher than in 1932, 1933, 1934, or 1935. Indeed, the number of workers involved in American strikes last year, in relation to total population, was substantially lower than in Great Britain, notwithstanding that country's much heralded progress in labor relations. relations.

The proportions of workers involved in strikes over organization or collective-bargaining issues declined in 1938 to a level far lower than the average for the last 10 years. The sit-down strikes, which flared into a national menace during the early months of 1937 preceding the Supreme Court decisions, had virtually disappeared but the hegipting fleet reset.

by the beginning of last year.

In all, the act has provided a peaceful forum for about 20,000 cases involving over 4,500,000 workers. About 95 percent of the cases closed under the act have been adjusted according to its terms without even issuing a complaint or holding a formal beauting. hearing.

ELECTION PROCEDURE NO LONGER CRITICIZED

Resort to the democratic procedure of the ballot box for determining employee representatives has become so frequent that during the last fiscal year it has involved a majority of the employees seeking relief under the act. It is interesting to observe that the election procedure, once vigorously opposed in some quarters when invoked by workers, is now demanded by employers themselves. The act has thus brought lasting benefits to workers, employers, and the people as a whole. Today hardly a responsible person openly challenges its objectives or advocates its repeal. In the

light of this record of unchallenged accomplishment, those advocating major amendments of the act must carry the burden of proof.

PROPOSALS TO CHANGE ACT FALL IN TWO GROUPS

The proposals to change the National Labor Relations Act fail, broadly speaking, into two groups. First, there are proposals to change the administrative framework of the act; and, second, there are proposals to change the substantive features of the act, by which I mean the provisions defining certain industrial rights and prohibiting certain industrial wrongs. Without questioning in the slightest the motives of those sponsoring amendments, I believe that many of the changes proposed would seriously impair the principles of the act and weaken its proper functioning.

Senator Burke, after scoring the administrative features of the law, writes that in matters of administration "it will be far better breachers to follow the bester press."

hereafter to follow the beaten path." Let us see how the Senator's amendments satisfy his own test.

amendments satisfy his own test.

First, Senator Burke proposes that wherever an employer has committed a wrong against an employee under the Labor Act, the employee shall be denied redress by the Board or by the courts if the employer can show that the employee has committed some other wrong. While the doctrine of "clean hands" has some application in courts of equity, it is not the function of a legislature to provide that two wrongs make a right, to substitute recrimination for justice, or to excuse grave abuses because small ones may be committed. Certainly this proposal of Senator Burke's is a marked departure from the beaten path.

BURKE'S ABGUIMENTS ARE DISCUSSED

BURKE'S ARGUMENTS ARE DISCUSSED

Second, Senator Burke proposes that the National Labor Relations Board as an administrative agency shall be bound substantions Board as an administrative agency shall be bound substantially by all the rules of evidence prevailing in courts of law. He also proposes that the courts shall give only prima facie weight to findings of fact by the Board, thus substituting the judgment of the courts for the judgment of the administrative tribunal as to every detail of the case. In both of these proposals, it is transparent that Senator Burke is suggesting an abandonment of the accepted principles of administrative justice which have evolved gradually over 50 years, and which have been acclaimed by practically every leader of the bench and bar, including Chief Justice Hughes. Here, again, Senator Burke is neglecting to follow the beaten path. beaten path.

Third, Senator Burke proposes that a party proceeded against in any case before the Board shall have power to transfer the conin any case before the Board shall have power to transfer the controversy from the Board to the district court. I do not recall any more radical departure from our whole system of administrative justice, and I cannot reconcile this proposal with Senator Burke's avowed determination to "follow the beaten path."

The truth is that it is the present National Labor Relations Act which "follows the beaten path," because the present act is modeled closely upon the Interstate Commerce Act, the Federal Trade Commerce Act and most other Federal trade controlled to the property of the property

mission Act, and most other Federal statutes creating administrative agencies to deal with specialized controversies.

SUPREME COURT HAS UPHELD ACT

The best proof that the National Labor Relations Act is in conformity with our traditional principles of justice is that in 18 successive decisions concerning the act the Supreme Court of the United States has not nullified a single line of it. In the words of Chief Justice Hughes, "We construe the procedural provisions (of the act) as affording adequate opportunity to secure judicial pro-tection against arbitrary action in accordance with the well-settled rules applicable to administrative agencies set up by Congress to aid in the enforcement of valid legislation."

In short, most of the changes in the procedure under the Labor Act recommended by Senator Burke and others represent a striking departure from time-tested principles. Without having that intent, they would, in my opinion, have a particularly devastating effect upon the poor worker seeking to maintain his rights. They would substitute for the easily available methods of the administrative tribunal the costly and complex methods of litigation that are too expensive and time consuming for the poor man to afford. They would burden employers with interminable litigation, and they would choke the courts with countless controversies.

MAJORITY VOTE ON STRIKES MEANS SERVITUDE

Now let us turn to some of the substantive proposals put forward by Senator Burke. In the first place, Senator Burke proposes to make it illegal for workers to strike except by majority vote. This proposal means that a minority group of workmen could be prevented by law from refraining from work, simply because a majority of their fellows were not in favor of refraining from work. Such a proposal smacks of involuntary servitude. I hope that we shall never see the day in America when any group of men is forced under any conditions to sell its labor against its will.

A second proposal of Senator Burke is even more startling. Under the present National Labor Relations Act, where the Board and the reviewing court find that a worker has been discharged unjustly because of collective-bargaining activities, the Board and the court have the power to require that the worker be restored to his employment.

Senator BURKE would remove this protection. He would substitute for it a provision allowing an employer who has acted wrong-fully in this respect to buy off the wronged employee with some-thing called "severance pay," instead of restoring him to his job. I should like to know what kind of "severance pay" can be a just substitute for the right to work. How can "severance pay" ever compensate for the job unjustly taken away from a worker who has tried to protect his standards of living?

UNFAIR CLAIM HAS NO PRACTICAL BASIS

As a third proposal, Senator Burke, along with others, suggests that the Labor Act be amended to prevent "coercion, intimidation, or interference from any source."

This last-mentioned proposal is generally argued for on the following broad ground: Since the Labor Act prevents employers from "interfering" with the self-organization of workers, but does not prevent labor unions from "interfering" with the organization of workers, therefore the Labor Act is "unfair."

It is obvious that this argument of "unfairness" has no practical reality. The right to organize without employer "interference" afforded labor by the act is no greater than the right which employers enjoy to organize without the slightest "interference" from their

workers.

As for the claim that the act should be amended to prevent labor unions as well as employers from "interfering" with the organization of workers, one might as well say that the law should be amended to prevent trade associations from "interfering" with the organizations of employer groups. Participation in the organization of labor is a proper function of labor unions; it is not a proper function of the employer. Violence and racketeering by either party in labor controversies are, of course, already subject to local law.

WOULD PREVENT LABOR ORGANIZATION

The real effect of the proposals to prevent "interference or coercion from any source" is to make it legally impractical for labor unions to engage in the organization of labor, which is the very intent and purpose of labor unions. Such an amendment would restore all the evils of the unfair labor injunction and the whole long train of other unfair restrictions upon the efforts of labor to organize. The consequences, whatever the intent, would be to destroy labor's newly won equality of bargaining power, and restore labor to the status of the economic underling.

economic underling.

While caution should be the watchword in any tampering with a statute that so largely combines industrial peace with economic justice, I have never maintained that the National Labor Relations Act is perfect nor sought to prevent its perfection. I believe, for example, that under appropriate safeguards, employers should be entitled to petition the Board for an election when they are caught between the cross-fire of two rival labor groups. The present hearings may also develop other proposals for strengthening the act and advancing its basic principles.

ACT AN INFLUENCE FOR INDUSTRIAL PEACE

At the same time, since the National Labor Relations Act in its At the same time, since the National Labor Relations Act in its present form has proved a powerful weapon for industrial peace, and since its fundamental principles of industrial democracy are sound, the act must be preserved. It will be a tremendous evil and a tremendous loss to the whole American people if anything is done to impede the act's operation or emasculate its principles. That risk no friend of democracy wants to take.

I feel confident that my approach to this problem is shared, and that whatever action Congress may decide upon will reflect these views.

these views

[From the Washington Post, Sunday, April 16, 1939]

SENATOR BURKE, BRANDING LABOR BOARD UNFAIR, SEEKS WAGNER ACT CHANGE—BELIEVES QUESTION SHOULD BE REOPENED—AMENDMENT TO ABOLISH PRESENT BOARD, AND CREATE AN "IMPARTIAL" ONE URGED AS BASIS FOR INDUSTRIAL PEACE—PRESENT ACT ONE-SIDED, SAYS LEADER-DECLARES IT PLACES ALL THE BLAME ON THE EMPLOYER

(By Senator EDWARD R. BURKE)

A recent reliable poll of public opinion (the Gallup Survey, published in the Washington Post March 10) indicates that twothirds of the people of this country feel that something should be done promptly to make the Wagner Act more of an instrument of good. Outright repeal is favored by a growing number. The tree is so diseased, these people feel, that it cannot be saved by grafting helpful amendments to it. They would abolish the Labor Board, too; make a fresh start in an effort to establish more satisfactory, labor relations. factory labor relations.

There is a stronger sentiment, however, for constructive amendment of the law and improved administration. Many suggestions along this line have been submitted to Congress. The Senate Committee on Education and Labor has indicated a willingness to take testimony and give serious consideration to the problem in its entirety. This seems to the writer the proper course to pursue. its entirety.

ACT'S SCOPE IS NARROW

The principle underlying the Wagner Act is extremely narrow in its scope. It may be stated thus: In our highly complex industrial its scope. It may be stated thus: In our highly complex industrial system the individual worker is at a distinct disadvantage in dealing with his employer in relation to wages, hours, and working conditions. To give the employee equality of bargaining power he must be free to unite with his fellow workers. If labor is permitted to organize at will and choose representatives to bargain for it, justice may be secured without resort to strikes or violence. But employers have not been willing, it is said, to surrender their advantage. They deny their employees the right to organize. They refuse to accept the procedure of collective bargaining. The result—industrial strife.

To correct this situation, the Wagner Act imposes the obligation on employers to bargain collectively with the representatives chosen

by their employees. In order that there may be no interference, restraint, or coercion exercised upon workers in organizing and choosing representatives to speak for them, certain interfering practices that employers have resorted to—or might resort to—are denounced as unfair labor practices. A Government agency is established to investigate complaints, to designate the proper bargaining unit, to conduct elections when necessary, and in general to prefer the rights guaranteed to workers. to protect the rights guaranteed to workers.

CALLS LABOR BOARD UNFAIR

What results might have been achieved in diminishing the causes of labor disputes and bringing about improved conditions in the relationship between labor and management if the enforcement of the act had been placed in the hands of broad-minded, unblased, capable administrators, must remain a matter of surmise. For certainly these qualities cannot be attributed to the three members of the Labor Board and the extensive organization they have built up. built up.

They have demonstrated conclusively that they are zealots and fanatics, more interested in promoting a certain type of unionization than in anything else. They have no patience with the independent-minded workers who prefer to follow a course other than the one the Board thinks they ought to take. The employer has no rights that are entitled to respect. Even a great labor organization declares that in the exercise of the tremendous power vested in it, the Labor Board has been constantly guilty of flagrant bias and prejudice.

prejudice.

To correct this situation I have offered an amendment to abolish the present agency. In its place there would be set up a three-man board, one of whose members would be chosen because of his special knowledge, experience, and qualifications in dealing with the subject of labor relationship from the standpoint of the employee. A second would be selected because of his insight into the employer's side of the problem. The third, in a general way, would be the representative of the public.

Such a well-balanced board could go far toward making the legislative promise of industrial peace a reality. It would be incumbent upon the President to comb the country for the three ablest men in this field, and the duty of the Senate to refuse confirmation unless the choices were well made.

COURT DECISIONS HAVE CHECKED BOARD

Recent decisions, particularly of the Supreme Court, have checked some excesses of the Labor Board. It is considered expedient, however, to write the following safeguards into the statute: The findings of fact by the board shall be conclusive only when sustained by the weight of the evidence, and if the order requires affirmative action, the findings shall constitute prima facie evidence only.

In the conduct of hearings complete fairness in the issuance of subpenas will be required. The rules of evidence that prevail in courts of law and equity shall be substantially followed. (In many, possibly in the great majority of hearings conducted up to this time, there has been a shocking abuse of the privilege granted by Congress to seek the truth without regard to the customary rules of procedure.)

It will be far better hereafter to follow the beaten path. found that the complaining party has violated the law of the jurisdiction where the dispute occurs, has engaged in a sit-down strike or other unfair labor practice, such practice shall be a complete

defense of the accused.

PRESENT ACT ONE-SIDED

The one who would avail himself of the benefits of the act, who seeks the aid of the Board to make his rights effective, must come before it with clean hands. He cannot take the law into his own keeping, destroy the property of others, commit acts of violence, and then demand that the orderly processes of collective bargaining be enforced for his benefit.

Probably the most frequent complaint against the present act is that it is one-sided. It places the blame for labor disturbances upon the employer alone, and applies its punitive provisions to that one party to the labor relationship. Everyone knows that there has been fault on both sides. Some employers have been shortsighted. Some policies of labor have been selfish and productive

of trouble.

If we really want to try out collective bargaining, and if we desire to throw the protection of the law around this guaranteed right, then there must be an amendment that will insure the worker freedom from coercion, intimidation, or interference from any source. Such an amendment I have offered. If adopted, it would thereafter be an unfair labor practice for anyone to attempt to interfere with the right of a worker to join or refrain from joining any labor organization, to continue or cease employment, and to select in his own way representatives to bargain for him.

INTERFERENCE BY RIVAL GROUP RULED OUT

No longer would it be possible for a rival group of employees to interfere with the conduct of a business where there is no dispute between workers and management. The right to engage in lawful strikes would be preserved, but it would be illegal to strike except upon majority vote by secret ballot or to strike in violation of a valid contract.

There is no more un-American policy than that of the closed shop. It violates fundamental rights of the citizen. I believe in unionization—voluntary unionization. No employer ought to be required or permitted to impose as a condition of employment that a worker must join or refrain from joining any organization.

APPENDIX TO THE CONGRESSIONAL RECORD

AGAINST CLOSED-SHOP CLAUSE

That part of the present law that authorizes and encourages the closed shop should be stricken out. Instead, it should be declared an unfair labor practice for an employer to encourage or discourage membership in any labor organization by discrimination in regard to hiring or firing. Remove all interference with the freedom of the worker, and let the benefits of organization be sold on their

merits.

Another interference with the freedom of the employee is the imposition of the check-off system of collecting union dues and assessments. When a worker has been persuaded to join a union he should not be forced to stay in against his will. As long as he is satisfied that the organization is being properly conducted, and is rendering him and his fellow workers a worth-while service, there will be no trouble about collecting his dues. To require that the deduction be made from his pay check is an admission that all is not well, that the individual is not continuing as a voluntary member. tary member.

RIGHT TO ADVISE EMPLOYEES PROTECTED

Another amendment restores to employers a fundamental right denied to them by the Labor Board. That is the right to confer with and advise their employees at all times, providing there is nothing in the nature of a threat or any semblance of coercion or intimidation.

Certainly the employer should have the right to petition for an Certainly the employer should have the right to petition for an election. He is required to deal with the representatives of the majority of his workers. Since this obligation rests upon the employer, it is only fair play that he be accorded the use of the only available means—that of petitioning for an election—to determine whether any contending group actually speaks for a majority.

On the question of designation of the appropriate unit, the present law is clearly defective. The matter is left solely to the discretion of the Board.

CRAFT UNITS GIVEN PRECEDENCE

Immense harm has resulted. This provision has tended to widen the breach between the contending labor factions. One of the amendments offered by me specifices that craft units shall be given precedence in all cases; next come plant units; finally, the employer unit may be imposed only in the absence of a petition for the content of th tion from either craft or plant unit.

The board will be required to consider the will of the employees.

No one else should be permitted to dictate what that decision

ought to be.

Labor organizations that desire to be recognized for collective-Labor organizations that desire to be recognized for collective-bargaining purposes should meet certain requirements. As a condition precedent to certification, there should be kept on file with the Labor Board copies of their constitutions and bylaws, the names of their officers, and the names of those who will act as bargaining agents, all of whom must be American citizens. A current financial statement should be in the hands of the Board, and a copy furnished to each member of the union.

A complaint should not be filed against any employer until after he has been given written notice of the details of the grievance and accorded a reasonable opportunity to correct the difficulty. Stale demands should be barred. If we are seeking peace in industry, we should not sanction the bringing forth of alleged grievances that have been permitted to go unchallenged for more than 6 months.

WOULD PROTECT ALL WORKERS

One of the chief objects of labor legislation is to protect the worker from being discriminated against because of his union activities. In the case of discharge of a worker it is often a most difficult question to determine whether the discharge was due

difficult question to determine whether the discharge was due to such unfair discrimination or was due to actual inefficiency, insubordination, or some other justifiable ground.

The present Labor Board has rendered many outrageous decisions in this type of case, so many that employers today run a great risk in attempting to maintain any sort of plant discipline. It is felt that when an employer has acted wrongfully in this respect he should be required to award to the employee what may be called "severance pay," rather than to order the worker restored to employment.

Where there is an absence of good will it is difficult to see how a proper labor relationship can be established and maintained.

The Board sends out its agents to investigate complaints. If it decides to proceed against the luckless employer it furnishes its own examiners to hear the case and to rule with a free hand on the admission or rejection of evidence.

It provides its own attorneys to prosecute. It grants or denies the issuance of subpenas at will. It furnishes from its staff economic advisers to build up the proper background. When the evidence is completed it calls out whatever may be found of a damaging nature against the employer. Then it is ready, after a customary 30-minute argument, to enter judgment.

NEED REORGANIZATION OF WHOLE SET-UP

To have anything like justice done under such conditions would require a very different board than we have and a complete reorganization of the whole agency. Even then there should be a further check to assure the citizen his day in court.

An amendment is offered to provide that safeguard. Under this amendment anyone against whom a complaint is filed may, within 20 days, have the case removed to the United States district court. Prompt hearing will be required.

The Labor Board, through its attorneys, will present the evidence it has gathered of violation of the act, and shall prosecute the case. The only thing the Board will not be permitted to do, if this procedure is followed, will be to decide its own case. This provision would not necessarily mean that there would be many removals.

WOULD REMOVE NECESSITY FOR DELAY

The existence of the right of removal would of itself be a powerful incentive to insure fair hearings before the Board. But if the right of removal should be frequently exercised, the amendment provides machinery for the appointment of additional judges. The Board is now far behind in its work. This is not meant as a criticism but as a statement of a situation that should be corrected. Delay in these proceedings should not be tolerated.

as a criticism but as a statement of a situation that should be corrected. Delay in these proceedings should not be tolerated. As a final word, let it be said that the amendments that have been offered set forth the national policy to encourage friendly and mutually fair relations between employees and employer.

ACT DOES NOT FOSTER GOOD WILL

The chief weakness of the act, as it stands, and of its administration, has been a complete failure to lay any stress upon the necessity of fostering good will between workers and management. There is no chance for increased production, a larger measure of employment, a constantly rising standard of living, except in continued emphasis upon the mutuality of interest of all who participate in that production, worker measure for the standard of the standard of the production workers measure in the standard of the standard ipate in that production—worker, manager, investor.

ipate in that production—worker, manager, investor.

We must make industry succeed, because this is the only foundation for higher wages, shorter hours, improved working conditions, and a fair return on capital. This is to be brought about by protecting the practice and procedure of voluntary collective bargaining, which an amendment defines in these words:

"The phrase 'collective bargaining' for the purposes of this act shall be understood to mean the meeting together of the employer and his employees, through accredited representatives voluntarily

chosen by them, with the full and free opportunity for negotiating concerning the terms or conditions of employment."

The adoption in major part of the amendments offered will guarantee such a result. Workers for the first time will have full freedom of organization and choice of representatives. Justice to all parties to the labor relationship will usher in an era of industrial peace.

Junior Jackson Day Dinner

EXTENSION OF REMARKS

HON, ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

ADDRESS BY HON. JAMES A. FARLEY

Mr. BARKLEY. Mr. President, I ask unanimous consent to insert in the RECORD a speech delivered here in Washington last Wednesday night by Hon. James A. Farley at the Junior Jackson Day Dinner, sponsored by the Young Democratic Clubs of the District of Columbia, together with the introduction of the toastmaster preceding the speech.

There being no objection, the speech and introduction were ordered to be printed in the RECORD, as follows:

Senator Barkley. Ladies and gentlemen of this great audience in

Senator Barkley. Ladies and gentlemen of this great audience in the Mayflower Hotel, and the greater audience outside—greater in numbers, but not in quality—it is my great privilege at this hour to present to you a great American.

The dictionaries tell us that politics is the science of government, and that a politician is one who is versed in the science of government. The man whom I shall introduce in a moment qualifies under that definition of a politician. Not only is he a great American, he is a great organizer of democracy and, in the true sense of the word, a great statesman. There have been in the history of the Nation many Cabinet members: there has never been sense of the Word, a great stateshall. There have been in the history of the Nation many Cabinet members; there has never been one in any capacity in the Cabinet of any President who performed his duties more intelligently, who was more loyal to the conceptions of democracy under which he has labored, and who has given greater satisfaction to those who honored and trusted him, than the man whom I shall momentarily introduce.

than the man whom I shall momentarily introduce.

Not only a politician in the true sense of the word, but a statesman also, an author also; but greater than all of these, a great American, a great administrator, James A. Farley, Postmaster General of the United States and chairman of the Democratic National Committee.

Mr. Farley, Ladies and gentlemen, being a Young Democrat myself—or at least young in spirit—I am happy to join you tonight in this meeting, the real purpose of which is to prepare ourselves for the common task which lies ahead.

I have learned from experience that Young Democrats are apt to be politically minded, and as I am inclined that way myself, it may be a good idea to talk about the subject in which we all have a lively interest. In other words, during the course of these brief remarks, I propose to say something about the Presidential election of 1940.

We have a saying at party headquarters that elections are worked.

election of 1940.

We have a saying at party headquarters that elections are won between campaigns, and certainly this year is no exception. Victory seldom comes to the political party that sits by in idle contentment, hoping to win the prize by profiting through the mistakes of its opponents. The only safe course is to get ready far in advance, to organize on a sound basis, to work long hours and hard at the manifold tasks which go to make up the framework of a greenerful company.

and hard at the manifold tasks which go to make up the framework of a successful campaign.

Having that thought in mind, I am pleased to note that you are already on the firing line. The Democratic Party has given the representatives of youth an important place at the council table and this wise policy has paid heavy dividends in the election results of the past few years. You may be sure that it will be continued. In fact this willingness to understand the problems of young voters—and to seek their advice and cooperation—has been a major factor in the notable achievements of the Roosevelt administration.

You have a large stake in the outcome of next year's Presiden-

You have a large stake in the outcome of next year's Presiden-You have a large stake in the outcome of next year's Presidential election. It is an old American custom, as each succeeding election comes around, for solemn political orators to warn the voters that the approaching crisis is the most momentous to face the Republic since the time of George Washington. I like to avoid exaggeration. Yet, I think everyone will agree that it is impossible to overemphasize the gravity of the present world situation. The man who occupies the White House during the next few years will be compelled to carry a burden of almost superhuman pro-portions. He will be called upon to make decisions upon the outcome of which will rest the destiny of his own generation and the destiny of generations that come after. In such a situation, a profound duty rests upon those of us who are actively engaged in politics to exercise the utmost care in choosing our course of action.

After a political party has been in authority for a number of years, it is only natural that the electorate should weigh its accomplishments and its mistakes with a critical eye. An administration which honestly attempts to correct social and economic

complishments and its mistakes with a critical eye. An administration which honestly attempts to correct social and economic evils of long standing is certain to awaken the ill-will of a host of discontented foes. When these foes enlist under a single banner for the sole purpose of overthrowing the party that happens to be in power, they make an imposing array, provided they are able to keep their lines intact while at the same time concealing from the voters their real purpose.

It is up to us to appraise the situation with candid eyes, to take stock on the basis of conditions as they exist today. It would be silly and stupid for me or anyone else to assert that the smashing triumphs which the Democratic Party won over a bankrupt Republican Party in the last two Presidential elections will be repeated in 1940. Even the G. O. P. can hardly be relied upon to exhibit the same brand of blind indifference to the national welfare that marked its conduct in those elections. The elephant is a plodding beast but it has a long memory and the old wounds still rankle and smart. Jumbo is a trifle more alert and he has learned that the political tricks which delighted the audience back in the gay days before the 1929 crash are out of date and need revising. He is ready for streamlining if his managers can only do the job.

The Republican Party, in fact, has bowed to the inevitable and is

The Republican Party, in fact, has bowed to the inevitable and is ready to offer the country a diluted brand of Roosevelt policies as a substitute for the original. The party leaders, of course, are just as ready to other the country a thritted trained or Recosevel politics as a substitute for the original. The party leaders, of course, are just as barren of constructive ideas as they ever were. Although 10 years have passed since it first became apparent that new methods had to be devised to meet the needs of a high-speed industrial civilization, the opposition leadership has failed to put forward a program or even a single policy that would help to solve the Nation's pressing problems. I believe that Dr. Glenn Frank's policy committee is still laboring at the task, but the committee's report is now about 2 years overdue, indicating that the discovery of a formula was far more difficult than the membership anticipated. In the meantime, however, the G. O. P. has embraced a sort of part-time program for everyday needs. As experience demonstrates the wisdom of President Roosevelt's policies, whether on banking, or housing, or social security, or soil conservation, the Republican leadership gravely exclaims, "Me, too. That's what we would have done had we been in power." Having placed every possible obstacle in the path of President Roosevelt's reforms, they now insist that they should be given at least partial credit for what he accomplished over their stubborn opposition.

By this process of catching on to the Roosevelt coatalls, the

stubborn opposition.

By this process of catching on to the Roosevelt coattails, the Republicans hope to slip by and capture the great prize in 1940. We should bear in mind that they are masters at the art of intimidating the voters by raising up straw men and predicting calamities that never will occur. They also do fairly well at promising benefits that fail to materialize. They used the "full dinner pail" to capture one presidential election, and several years later they increased the ante to "two chickens in every pot and two cars in every garage." I assume they will be equally generous in their promises next year.

The "outs" in American politics have a tremendous advantage over the "ins." They enjoy the luxury of criticizing the efforts of the administration in power without being called upon to demonstrate what they would do under like circumstances. The

volume of criticism directed against the Roosevelt administration has swollen to huge proportions because the Chief Executive has had the courage to act with vigor and foresight in the face of perils, both foreign and domestic, that could be met in no other way. It is a common human trait for individuals to enjoy the sound of their own voices. The opponents of the Roosevelt administration have been vocal for so long that they mistake their own cat-calls for the solid weight of American public opinion. They made the same mistake 3 years ago.

It is not my purpose to underrate the size or the resourcefulness of the ground reference in the universe that other purposes is to unverse or the resourcefulness of the ground reference in the universe that the size of the ground reference is to unverse the ground overthrow the

It is not my purpose to underrate the size or the resourcefulness of the groups whose purpose is to uproot and overthrow the accomplishments of the Roosevelt administration. The long struggle to restore social and economic justice in America has offended certain financial overlords who conducted the economic affairs of the Nation to their own profit and according to their own notions, during the long years of Republican rule that followed the World War. They are worthy foemen during these times of world-wide economic distress and uncertainty. They care very little about who occupies the White House if only they can "get rid of Roosevelt."

But if they are ready for the fray so are we. I realize that

But if they are ready for the fray, so are we. I realize that optimism is the prevailing note in the ranks of Republican leaders. They hope the long dry spell is about over. When things get dull they even compile fascinating maps and charts, showing that if one more State with a large electoral vote falls into their column, the election is practically over. I admire their zeal but perhaps the time has come for us to do a little reckoning

zeal but perhaps the time has come for us to do a little reckoning on our own account.

Let me say at the utset that pessimism has no place in the Democratic outlook for 1940. While we have no wish to delude ourselves into thinking that another landslide is inevitable, I believe sincerely that the next President of the United States will be a Democrat. The result will be decided by the collective good sense of the American people and the people know that the greatest record of constructive reform in recent history has been brought to reality by the administration now in power. We enter the lists with confidence because the weight of evidence is on our side. And may I add that this confidence will not be shaken by the lists with confidence because the weight of evidence is on our side. And may I add that this confidence will not be shaken by straw votes, test votes, newspaper polls, trial balloons, or gloomy prognostications, no matter from what source they originate or how convincingly they are presented. The business of picking the winner in advance is a delightful pastime, especially for those who find it a means of profit as well as entertainment. During the past 7 years, the Democratic Party has suffered an alarming series of defeats in the game of straw voting. You recall that the poll formerly looked upon as the most reliable of all, consigned the Democratic cause to bitter and humiliating defeat in 1936. We managed to survive that disaster. In fact, during the 7-year period beginning in 1932, despite the warnings of the experts, the Democratic Party has managed to win four national elections by successive majorities hardly equaled in the previous history of the country. I am satisfied with that record and I think you are too. The poll of the electorate continues to be the only one that really matters.

It is well to recall that the opposition party always has the

matters.

It is well to recall that the opposition party always has the advantage until the time comes to nominate a candidate. In the old days the Republicans had a simple formula that very often worked amazingly well. They merely nominated a figurehead, fastened him securely to a pleasant front porch, and then sent forth an army of compelling orators to herald the glad tidings that a new Sir Galahad was about to enter the White House under the stabilizing influence of the G. O. P. That method is now out of date, thanks to the development of modern means of communication and transportation.

The Republican promines selected in 1940 will face the unpleasant of the s

cation and transportation.

The Republican nominee selected in 1940 will face the unpleasant prospect of standing under the spotlight to tell the voters in his own words what he proposes to do about the complex problems of public life. He will be compelled to reveal whether he prefers the sane and forward-looking policies of President Roosevelt or the dismal, do-nothing days of former President Hoover when speculation ran riot and the farmers, the workingmen, and the aged were left to shift for themselves. The Republican candidate of 1936 was caught in a similar dilemma. Unfortunately for him, he decided to sidestep under the advice of presumably clever advisers, and before he got through he made himself the worst defeated candidate for the Presidency in history. The voters dislike evasion, and political dodging has become a very dangerous art.

The only thing necessary for a Democratic victory in 1940 is for us to do our part. The presence here tonight of so many youthful Democrats, filled with zeal and enthusiasm, is ample evidence that you are ready to close ranks and march forward, united and militant, toward the goal we have in mind. A great leader has shown the way and those who enlisted under his banner have not been

disappointed.

disappointed..

A political party to be successful must have a platform that appeals to the electorate. Your platform is the splendid record in office of President Franklin D. Roosevelt. To those who scoff and jeer at his accomplishments—a habit quite fashionable in some quarters—your answer is plain and to the point: There is no man now living who could have carried the Nation through the storms and dangers of the past 6 years as well as he has done. Confronted by problems of appalling magnitude, hampered and hindered by those who should have offered help and encouragement, the Chief Executive has lifted his country from the bog of depression and pessimism in which he found it to the high road that leads to peace,

prosperity, and progress. He has won the great triumph by substi-tuting courage for caution, action for apathy, and statesmanship for

petty politics,
From his predecessor in office President Roosevelt inherited a mass of economic wreckage and a disheartened people. He found it neces sary to restore the fabric of industry and commerce, to curb old wrongs and abuses, to revive the normal channels of trade in a disorganized and disordered world. He found it necessary to carry on a host of emergency activities on top of the arduous duties which always burden the man in the White House. He has done the job ably and well, and again I repeat that no one of his critics could

have done it half as well.

The right to criticize the President has its roots deep in the The right to criticize the President has its roots deep in the American system of government, and no one who sincerely believes in democracy would lift a finger to curb or abate that right. Very often it serves a useful purpose. Yet I should like to point out that many of the most vocal critics should thank their lucky stars that the man at the helm in these trying times has been Franklin D. Roosevelt. Had the destiny of the country been in weaker hands, these dissatisfied individuals might have found themselves far worse off than they are today. Does anyone contend that if the Republican candidate of 1936 had been elected to the White House, the United States would be better off than it is today? Does anyone seriously contend that he was equipped to perform the exacting duties of the Presidency better than the present Chief Executive?

Every nation in the world has felt the menace of chaos and social upheaval in this changing period, and no nation has come through the crisis in better shape than the United States of America. We were fortunate to have a leader who sensed that this age was touched with destiny and the vision to meet the situation before it was too late. I submit that the basic reforms of the Roosevelt administration will never be undone.

of the Roosevelt administration will never be undone.

What are the things for which President Roosevelt has consistently fought and labored? He said it was wrong for the farmers to live on the verge of poverty and he has done everything in his power to lift the buying power of agriculture. He said it was wrong to compel worthy men and women to work for less than a living wage. He said it was wrong for speculators to gamble with If ying wage. He said it was wrong for spectuators to gamble write-out restraint with other people's money. He said it was wrong to abandon the unemployed to their own luckless fate. He said it was wrong to let the old folks face the twilight of existence without security or financial independence. For all of these great evils, he has sought the remedy, and in doing so, he has won the hearty acclaim of every right-thinking citizen in the land. President Roosevelt has given new hope and encouragement to

acclaim of every right-thinking citizen in the land.

President Roosevelt has given new hope and encouragement to millions because he has consistently raised a mighty voice in their behalf. He has restored the old vision of America as a land of opportunity and fair dealing for all. He has revived the moral standards of the Nation and let it be known that the welfare of the humblest citizen is the just concern of government.

This is the record on which we stand. This is the permanent platform of the Democratic Party, and this is the message which you and I and every single worker in the party organization must bring home to the electorate between now and next election day. Tell the voters that the ideals of Jefferson and Jackson still live

Tell the voters that the ideals of Jefferson and Jackson still live in the works and accomplishments of Franklin D. Roosevelt. Let us keep the faith and do our part and we need have no fear of the outcome in 1940. Let us rest our case on the great good sense of the American people.

Forest Products Laboratory

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

STATEMENT BY HON. ALEXANDER WILEY, OF WISCONSIN, BEFORE THE SENATE APPROPRIATIONS COMMITTEE

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by myself today relative to the Forest Products Laboratory before the Senate Committee on Appropriations, which is now considering the Agricultural Department appropriation bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the committee, in connection with the item in the agricultural appropriation bill for forest products, I wish to present for your consideration the following facts con-cerning the Forest Products Laboratory.

BACKGROUND

The Forest Products Laboratory is the only Federal laboratory devoted to wood utilization; its work is national in scope, relating to wood-use problems in all the States; it is located at Madison.

Wis., and is maintained by the Forest Service, United States Department of Agriculture. It functions in cooperation with the University of Wisconsin.

In recognition of the national importance of the laboratory's work, Congress enacted the McSweeney-McNary Forest Research Act in 1928, which authorized the stepping up of forest-products research from \$500,000 annually to \$1,000,000 annually by 1938. Since then the Federal Government has constructed a new \$900,000 building for the Forest Products Laboratory and expended an additional \$500,000 for new equipment and facilities to take care of this planned expansion.

planned expansion.

In spite of the foregoing, the present appropriation today is only \$628,000, which is \$12,000 less than it was 6 years ago and \$372,000 less than was authorized 10 years ago. The laboratory's unexcelled facilities are being used only at one-half capacity, and its personnel has been reduced about 12 percent since 1929. Actually by a slow attrition process the Federal program for forest-products research is gradually breaking down, yet nobody acquainted with the critical importance of its work believes that this should be permitted.

SCOPE AND PURPOSE OF WORK

The laboratory's work is aimed at reduction of waste, improvements in logging, milling, fabricating and conversion of forest products, and at the development of new markets and new products from wood.

Very serious consideration must be given to insuring adequate new uses and markets to absorb the annual increment of the oncoming forest crop. Research to broaden the uses of wood, and wood fiber, should be expanded now because there is always a serious time lag between the results obtained by researches and their availability and their adaptation to practical uses.

REASONS JUSTIFYING THE \$1,000,000 APPROPRIATION MAGNITUDE OF FORESTRY PROBLEMS

The forestry problem in the United States is concerned with 630,000,000 acres of forest land, of which 462,000,000 acres is classed commercial for growing and marketing of forest crops; this is an area substantially larger than the total agricultural area of the United States.

United States.

Seventy percent of this vast area of forest land is in private ownership which furnishes 98 percent of the products now going into commerce, the processing of which gives direct support to 6,000,000 people, contributes to the support of 2,500,000 farm families, and to the success of industries valued in 1929 at \$10,000,000,000 and to the consumption of forest products valued at \$3,000,000.000. Sustained forest management on private lands is the real crux of the national forest problem, which can be met only to the extent that there appears to be reasonable opportunity for the profitable utilization of the crop.

MARKET FOR LUMBER DECLINING

It is well known that the per capita and total use of lumber by It is well known that the per capita and total use of lumber by the American public declined from 1909 to 1929 during an unprecedented boom period, and has further precipitously declined during the depression. This is not only seriously detrimental to the stabilization of forest employment, but it is also retarding the State, farm, and commercial development of forest lands, upsetting small communities dependent on forest industries, contributing to tax delinquency in local government units, discouraging protection against fire by private owners, and preventing silvicultural improvements of established forests through lack of profitable markets for thinnings and improvement cuttings.

CONTRAST WITH RESEARCH ON AGRICULTURAL CROPS

The Federal Government last year provided for the establishment of four \$1,000,000 agricultural-research laboratories, which will require from \$3,000,000 to \$4,000,000 annually for their operation, to promote the development of new and improved indusation, to promote the development of new and improved industrial uses for agricultural crops, it has also authorized \$1,000,000 additional to study and develop foreign markets for them. This is in addition to \$20,000,000 to \$30,000,000 regularly appropriated annually for research and extension to develop agricultural markets and uses. Meritorious as these appropriations are, they are in strong contrast with a total of \$628,000 now appropriated for scientific research to improve and develop new uses and markets for forest crops.

Certainly one \$1,000,000 laboratory to develop new uses and markets for forest crops is an exceedingly modest program in view of the values at stake in our national forest resources

WHY FEDERAL GOVERNMENT SHOULD PROVIDE FOR FOREST PRODUCTS RESEARCH

The wood-using industry represents, as does the agricultural industry, a tremendous aggregation of small competitive units. With the cutting out of most of the virgin timber, the trend in the lumbering industry is toward many small and scattered operations. Wood-conversion industries also are, on the average, relatively small establishments, often working on a handicraft basis. They are not sufficiently permanent or financially able to maintain extensive research facilities.

Nearly one-third of the forest land is in public ownership and over one-third is in farm woodlands owned by two and one-half million farmers. Millions of dollars are being spent annually by the Federal and State Governments for the growing of forest crops which will not find a market unless the present consumption of forest products is more than doubled.

The Government's obligation to the woodlot owner, the farmer, and to labor to develop markets and jobs resulting from the industrial use of our forest resources is clear.

HOW TO USE THE LABORATORY

All the information that the Forest Products Laboratory has ained through years of research is available to the public. Every gained through years of research is available to the public. Every year thousands of inquiries are answered by letter and problems are discussed with those who come to the laboratory seeking

are discussed with those who come to the laboratory seeking advice on problems of wood utilization.

In cases where the problem presented is of such scope and difficulty as to warrant a cooperative research project, the work will be undertaken if consistent with the laboratory's public objectives and subject to advance agreement as to methods and payment of costs. The laboratory's guiding purpose in such studies is to secure facts that will promote the best use of wood.

ECONOMY

While economy in Government expenditures is a policy to which

we can all subscribe, it should be selective in its action and not directed toward impairing such a constructive agency of Government as the Forest Products Laboratory.

The research program of this institution has in recent years been kept below a proper efficiency standard by appropriations far smaller than Congress itself has authorized. Savings and far smaller than Congress itself has authorized. Savings and economies resulting from its work aggregate annually many times more than its total expenditures for 30 years. Its objectives and its larger potentialities are vital to the proper use of our forest lands, the success of forest industries, and the support of millions of workers. The true economy policy, as proved over and over again in the industrial field, is to strengthen and build a research program such as that of the Forest Products Laboratory, not to handicap and limit it further.

Therefore, I respectfully urge that the amount provided by the

Therefore, I respectfully urge that the amount provided by the House (H. R. 5269, p. 45, line D), \$628,361, be increased to \$1,000,000, and I sincerely trust that it may be the pleasure of this subcommittee to so recommend to the full committee.

Junior Jackson Day Dinner

EXTENSION OF REMARKS

HON. JOHN H. BANKHEAD, 2D

OF ALABAMA IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

ADDRESS BY PITT TYSON MANER

Mr. BANKHEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address by Pitt Tyson Maner, president of the Young Democratic Clubs of America, at the Junior Jackson Day Dinner held by the Young Democrats of the District of Columbia on Wednesday, April 19, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, and fellow Young Democrats, it is a real pleasure to be with you tonight on this auspicious occasion. This fine gathering and the enthusiasm and interest demonstrated by it are conclusive proof to me that the Young Democrats are on their toes, wide awake, and prepared to carry

our party to victory in 1940.

At this time I want to pay particular tribute to our great national chairman, whose leadership has been inspiring to every Young Democrat throughout the length and breadth of the land,

Young Democrat throughout the length and breadth of the land, our dear friend and valued adviser, Hon. James A. Farley.

I would also like to pay tribute to a great treasurer of the Democratic National Committee, Oliver A. Quayle, Jr., and to Perry Colman, president of the Young Democratic Clubs of the District of Columbia, for their unselfish devotion of time and energy to the success of this occasion.

Young Democrats from all 48 States are hard at work on plans for what we believe will be our greatest biennial convention to be held in Pittsburgh, Pa., August 10, 11, and 12. I want everyone present to consider this a personal invitation to attend that convention and participate in it so that we may start off the 1940 campaign with the very best, the largest, and the most enthusiastic convention which the Young Democrats of America have ever held.

Tonight a very great pleasure and privilege has been bestowed

Tonight a very great pleasure and privilege has been bestowed upon me. I have in my hand a letter of greeting to this gathering from the truest friend and the greatest leader the young Democrats and the people of America have ever had. It gives me great pleasure to read you this letter from the President of the United States—the Honorable Franklin D. Roosevelt:

THE WHITE HOUSE,

Washington, April 19, 1939.

My Young Friends: It is to my great regret that I cannot be with you in this celebration in memory of the first President who demonstrated to the world that democracy was workable. On you

now depends the future of the Democratic Party. More important even than that, on you depends the future of our country.

even than that, on you depends the future of our country. Party organization is the vehicle by which the mobilized sentiment of the United States gets anywhere. If the chauffeurs of the organization are wise in picking the course, the going is good and the destination aimed at is reached. If, on the other hand, they are witless, the organization will find itself on a rocky road and the probabilities of flat tires and other break-downs are so great that the will of the people gets nowhere.

This means distress to the party, of course, and likewise distress to the Nation. For in the present political and economic situation the alternative in the event of a failure for our party to keep straight ahead, is for the country to find itself traveling in the direction exactly opposite to that it has in mind.

Incidentally, the progress of our political car is not helped by the clamor of the back-seat drivers who point out the apparent smoothness of the detours of compromise and subterfuge, and com-

the clamor of the back-seat drivers who point out the apparent smoothness of the detours of compromise and subterfuge, and complain of the speed of our going.

The Democratic Party of itself cannot elect a President. The Republican Party is in the same fix. This is fortunate for all of us, for it means that no party can continue in power unless its policies are such as to add to its basic strength the ten or more millions of votes that are cast for ideas and ideals, rather than because of the employ at the top of the ticket. of the emblem at the top of the ticket.

In the campaign we are now approaching there is just one agency potent enough to defeat the Democratic Party, and that is the Democratic Party itself. It can commit suicide by abandonment of the policies that brought it to power. There is no use fooling ourselves. If we are to have a reactionary regime—or if that the policies that brought it was a reactionary regime—or if that term is too horrific—call it a conservative regime, you may depend on it that it will be the other fellow's regime.

We shall forfeit the multitude of Republican liberals who voted

We shall forfeit the multitude of Republican liberals who voted with us in 1932 and 1936 if we shift our ground. Even those men and women with little or no affiliation with either party and who went with us because we voiced their principles, will quit us in disgust if we throw them down now.

We can also destroy our chances by fratricide. No victories are won by shooting at each other. There never was and never will be a political party whose policies absolutely fit the views of all its members. Where men are at variance with the course their party is taking, it seems to me there are only two honorable courses is taking, it seems to me there are only two honorable courses— to join a party that more accurately mirrors their ideas or to subordinate their prejudices and remain loyal.

I do not mean by this, of course, that they are not quite within their rights when they seek to change the program. It would be a poor sort of politician or statesman who did not fight for his sincere principles, but that is a different thing from allying themselves with their party's enemies and getting in a stab wherever

and whenever they can do so safely.

I have pointed out the ways in which our party can destroy itself; now may I suggest how victory, which is quite within our

self; now may I suggest how victory, which is quite within our reach, can be won next year?

Instead of suicide or fratricide, what is the matter with our own side? Whenever the party was Democratic it won. Whenever it offered the country an ersatz Republicanism the people spurned the imitation and sent our party to stand in a corner until it had learned its lesson. Unfortunately it sometimes takes from 10 to 20 years to accomplish the requisite reeducation.

Suppose, for a change—and you know I am frequently accused of being devoted to change—we learn our lesson this time without being sent to the corner to mediate?

This country of ours is democratic with a small "d". It is never

This country of ours is democratic with a small "d." It is never, and never will be Democratic with a big "D," except when the two words mean the same thing.

With the highest hopes and expectations that the young Demo-crats will continue with their youthful enthusiasm, and yet re-tain their old faith as enunciated by Thomas Jefferson and Andrew Jackson.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

YOUNG DEMOCRATIC CLUES OF AMERICA, Shoreham Hotel, Washington, D. C .:

Shoreham Hotel, Washington, D. C.:
Young Democrats throughout the United States are in a crucial and strategic position today. We have grown from small beginnings to our present membership of almost 5,000,000 members and have become a potent factor in the dominant party of our country. During the same 6 years there has been a tremendous change in our Government which has meant much to the people of these United States. After a long period of Republicanism, and rule by the few and for the few, our Government has been returned to the people, for the benefit of the many. This change has necessarily been accompanied and accomplished by many long-needed reforms.

We have made wonderful progress in the right direction, but we

We have made wonderful progress in the right direction, but we still have a long way to go before all of our objectives are fully accomplished. We must take no backward step, nor must we let differences in degree of enthusiasm for one or another of our major objectives deter us from a determination to accomplish the

major objectives deter us from a determination to accomplish the task which has been so well begun.

In the great work of consolidating the gains already made, and the greater task of solving the problems yet unanswered, the Young Democrats throughout this country can play an increasingly important part. The young people of America will reap the benefits that will accrue from the accomplishments of this Democratic administration. We must assume the burden here and now of carrying on the battle. No one in America is so deeply concerned. carrying on the battle. No one in America is so deeply concerned in the reforms instituted by this administration for the preservation of democracy, liberty, and human rights as are the young men and women of America. You and I know that we shall be the beneficiaries of the finer, cleaner, saner, fairer democracy with a more just and equitable distribution of prosperity which is the goal of our inspired President, Franklin D. Roosevelt.

You and I know that solving all the perplexing problems and difficulties found in our complex civilization is not a job to be accomplished in a month or in a year. We also know that the

accomplished in a month or in a year. We also know that the great majority of American people are looking to the Democratic Party to carry forward the work that has been begun. It will be your task and mine to see that the great humanitarian program, including workmen's-compensation acts, old-age pensions, the right

including workmen's-compensation acts, old-age pensions, the right of collective bargaining, the security of our banking system, regulation of the stock market, and prevention of security exploitation, as well as the many other permanent changes for the betterment of our Nation are carried through to completion.

The Republican Party talked much and did little or nothing in all the years of its power to accommodate and adjust our Federal Government to the increasingly complex problems developed in this country. Whenever the abuse of power in the hands of a few became intolerable, it remained for the Democratic Party to propose and put into effect the necessary remedies and reforms.

and reforms.

The beauty of our solution of these problems is that we have found a way within the framework of the Constitution, and have not had to sacrifice our form of government or our perhave not had to sacrince our form of government or our personal liberties as have peoples of many other countries in the world. The same problems we are solving have caused dictators to arise throughout the world, and their solutions of economic troubles have been accomplished at the cost of all individual liberty. But we have retained our freedom of speech, our freedom of the press, our freedom to worship as we please, our freedom to express our opinions at the polls, and we are well on our way to relieving all of the maladjustments which developed during the 12 years of Republican freedom to exploit the people.

to relieving all of the maladjustments which developed during the 12 years of Republican freedom to exploit the people.

I know that it is hardly necessary to add that the great strides we have made toward our goal and the remarkable success we have had in preserving our democratic form of government can be traced to the idealism, the patriotism, and the unselfish devotion to the principles of real Americanism, possessed by one of the greatest Americans of all time, Franklin D. Roosevelt.

While the New Deal has been making great strides forward in accomplishing these long-needed reforms, it has also been necessary for the Government to adopt many temporary means of relieving suffering and distress which followed the catastrophe of 1929. The policy of Government expenditure for the benefit of our citizens is not new nor was it begun by the Democratic Party of today. The practice is as old as the Government itself. The only difference now is that the expenditures are larger and

Party of today. The practice is as old as the Government itself. The only difference now is that the expenditures are larger and go to a greater number of people.

Previous depressions and financial panies were invariably relieved by distribution of free land. Public lands, comprising more than half of the area of the country, have in the past constituted the greatest relief fund that this or any other nation has ever dispensed. Large-scale Government relief is long established, but it has remained for this administration to broaden the basis of those eligible for relief to include all classes of people. There is an intrinsic difference between giving a financier who wants to build a railroad a free right-of-way, thousands of acres

wants to build a railroad, a free right-of-way, thousands of acres of free land, and a Government loan of a fortune in cash for each mile, and our present plan of furnishing work so that no one may starve. This difference symbolizes the difference between Republican devotion to big business and Democratic concern for

average man.

The Home Owners' Loan Act, the Farm Credit Act, the slumclearance and Federal housing program, have all played their part in relieving distress and suffering. The C. C. C. has taken thousands of young men off the streets and away from bad surroundings, built them up physically, and given them character training, and at the same time saved untold millions of dollars in fighting forest fires, in reforestation, in flood control, and other

In ingiting forest lifes, in reforestation, in flood control, and other equally useful work.

The results of the money spent in the last 5 years and that now being spent will be felt for many years to come. It actually saved our democratic institutions and our form of government.

Had it not been for this spending policy, I feel certain that our great country would have drifted into communism or fascism; for I believe that rather than suffer hunger and privation, people would sacrifice their personal and political freedom for enslavement by a dictator. ment by a dictator.

ment by a dictator.

America has had no riots, no bloody revolutions, and we have retained every bit of freedom for which our forefathers gave their lives. President Roosevelt has always had the courage to act when action was necessary. But that action has always been carefully considered so that the freedom of our people was not jeopardized. America has no dictator. We will never have one as long as we follow the paths of progress that have been made clear by the leaders of the New Deal.

Our task today, as young Democrats, is to carry forward the torch of progress, while preserving the principles of freedom upon which our country was founded. Our youth, our vigor, our enthusiasm, are urgently needed in the work begun by this Democratic administration. The success or failure of its program will mean everything to you and to me for we will reap the conse-

quences of failure or success. I call upon each of you, individually, to do your part in making it a success, so that the America our fathers fought for shall not perish from the earth.

We will succeed if we wholeheartedly support, encourage, and assist that great humanitarian, our inspiring leader Franklin D.

Roosevelt.

I thank you.

Fiscal Affairs of District and Federal Governments

EXTENSION OF REMARKS

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

ROUND-TABLE DISCUSSION

Mr. THOMAS of Oklahoma. Mr. President, during the past several years the issue over the amount of money which the Nation should contribute toward the expenses of the city of Washington has been a vexatious one to Congress and to the citizens of this District.

I ask unanimous consent to have printed in the Appendix of the Record the text of a recent broadcast on this subject led by Mr. Cam Campbell, and assisted by others, over a local

radio station.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

The Announces. On February 6 of this year a bill was introduced in the Senate by Senator Overton, of Louisiana, entitled "A bill to fix the amount of the annual payment by the United States toward defraying the expenses of the government of the District of Columbia."

Because most of our listeners are taxpayers either to the Federal Government or to the government of the District of Columor both—we know you have an interest in this legislation.

bia—or both—we know you have an interest in this legislation.

You are about to hear a round-table discussion of the bill by a group of Government employees and citizens residing in the District of Columbia. Their discussion will bring out what the enactment of this measure would mean to the Nation in general and the city of Washington in particular. The group is composed of Mrs. Eloise Lavrischeff, formerly a teacher in the public schools of Alaska, and now a Federal Housing Administration employee; Miss Dickey James, a student at Woodrow Wilson High School; Miss Ava Witt, an employee of the Office of Education, Department of the Interior; Mr. Martin Swensen, of the Reconstruction Finance Corporation; and Mr. Cam Campbell, who has been associated with the legislative branch of our Government on Capitol Hill for more than a dozen years. Mr. Campbell will lead the discussion. I present Mr. Campbell.

Mr. Campbell. Good evening, ladies and gentlemen, there is one

Mr. Campbell. Good evening, ladies and gentlemen, there is one big question involved in the Overton bill. The answer to that question concerns every patriotic American citizen. That answer has a direct bearing on the future destiny and greatness of our Nation's Capital. The question is this: "How little or how much will the Congress of the United States appropriate from year to year as a contribution toward the expenses of the District of Columbia?"

Miss James. It's always been a bone of contention, hasn't it, Mr. Campbell, between Congress and the taxpayers of the District as to how little or how much the National Government should provide

Mr. Campbell. Yes, Miss James, it has—for the simple reason that a proper plan of division hasn't been worked out in the past. In order to have a clear understanding of the issues involved in Senator Overron's bill, it's necessary that we review briefly the ways in which Congress in the past determined the amount of such appropriations.

Mrs. Lavrischeff. Hasn't the method always been the same as it

is today?
Mr. CAMPBELL. No; it hasn't. During the first 89 years of our Mr. Campbell. No; it hasn't. During the first 89 years of our Government there was no definite plan of allotments whatsoever. Literally the appropriations for the District were based on thin air—and I don't mean to allude to the "hot air" so often associated in the popular mind with legislative bodies. But there were years during that period when the Federal Government made no contribution at all to the local government. In 1878, however, Congress must have had its conscience pricked. Because in that year it enacted legislation putting the contribution on a 50-50 basis.

Miss Witt. What do you mean by a 50-50 basis, Mr. Campbell?

Mr. Campbell. I mean Congress agreed to match dollar for dollar with the Washington taxpayers in the defraying of Government

expenses for the District of Columbia. The 50-50 basis remained in force for 42 years—from 1879 until 1921, but this division wasn't really based on anything definite.

Mr. Swensen. You mean there was no logical reason for dividing

the expenses on a 50-50 basis?

Mr. Campbell. Exactly; but the plan was continued from year to year as an expedient, often amidst bickering and dickering.

Mr. Swensen. I take it from what you said that plan was repealed in 1921?

repealed in 1921?

Mr. CAMPBELL. Yes, Mr. Swensen; in 1921 Congress wrote into the law a new plan. In doing so it repealed the 50-50 plan by implication. In that year, 1921, Congress adopted a new basis of contribution—40 percent of the expenses to be paid by the Federal Government and 60 percent by the local taxpayers.

Mrs. Lavrischeff. Was this policy like the plans that preceded it—this 40-60 method? Was it based on any definite consideration of the standard country was the Destrict construction was the contribution of the standard country was the property of the standard country was the contribution of the standard country was the contribution of the standard country was the property of the standard country of the stand

of the actual amounts spent by the District government or was it

Mr. CAMPBELL. It was not a mutually satisfactory plan, Mrs. Lavrischeff, and didn't last long. Congress abandoned it in 1925. In that year there was adopted what is generally known as the

lump-sum basis.

lump-sum basis.

Miss Witt. Is the lump-sum plan in effect now, Mr. Campbell?

Mr. Campbell. Yes, Miss Witt; under this method Congress appropriates from year to year as a contribution toward District expenses any amount it can happen to agree upon. It's a hit-orniss plan. It all depends on what frame of mind Congress is in when the vote is taken whether the District gets much or little. Under the lump-sum plan the annual appropriation for the District—that is the Federal Government's part—has ranged from five to more than nine million dollars.

Mrs. LAMPISCHEET, I should think this lump-sum basis would be

Mrs. Laveischeff. I should think this lump-sum basis would be the least satisfactory method of all. It doesn't seem to be fair to the District nor to the Federal Government—if the amount of the

contribution under this method depends entirely on the whim of Congress from year to year.

Mr. Swensen. The plan proposed in the Overton bill now pending, Mr. Campbell, is supposed to rectify the mistakes of the past,

I presume?
Mr. Campbell. It should, Mr. Swensen. The Overton formula Mr. CAMPBELL. It should, Mr. Swensen. The Overton formula gained extended support almost overnight because of its simplicity. Year after year Congress and the District have been searching for a workable plan through which the expenses of the Nation's Capital can be equitably divided between the Federal and local taxpayers without a lot of confusion, arguments, misunderstanding. But it seemed impossible to find such a formula. Expensive investigations yielded nothing worth while—only complicated, unworkable, little-understood plans. Now, this Overton bill we're talking about offers a very simple grangement—one that should regulate automatically a very simple arrangement—one that should regulate automatically from year to year the payment between the two governments—District and Federal. Under the terms of this bill—and right here's the crux of the whole matter—the Overton plan would base the national obligation on the area of land owned by the Federal Government in Weshington. ernment in Washington.

Miss James. With all the land set aside for parks here, I should think the Federal Government would own a considerable amount,

Mr. Campbell.

Mr. Campbell.

Mr. Campbell. It does, Miss James. The Overton formula takes care of that in this way: 44 percent of the park area is counted as representing excess park area in the District of Columbia. This is because comparable cities have only about half the park area Washington has. At the present time this land-area yardstick would make the Federal share of contribution approximately 20 percent. Now when we apply that ratio to the general money requirements of the District for the coming year, the Federal payment should be between eight and nine million dollars for 1940, in place of the present \$5,000,000 lump sum.

Mr. Swensen. I presume the land-area formula was put forward in order to avoid controversy. Differences of opinion naturally

in order to avoid controversy. Differences of opinion naturally might follow if the national obligation were based on property

values here?

Mr. CAMPBELL. Yes, Mr. Swensen, one man's opinion about the value of a piece of property is as good as another's. Whereas the land area can be determined to the fraction of a square foot, and the payment can be automatically adjusted from one year to another—the amount depending on whether the Federal Govern-ment adds to or disposes of its land holdings.

Miss Wirr. I can't imagine any basis for disputes growing out of that plan. It's so simple the Federal Government and the District could readily calculate years in advance approximately what the Federal payment would amount to.

Mr. Swensen. Think of the great advantage this would be in long-range planning, and how helpful it would be in the continued development of the Nation's Capital.

Mr. CAMPBELL. Yes; and I must add another thought: In years Mr. Campbell. Yes; and I must add another thought: In years gone by there have been days and weeks and months of wrangling in Congress about the payment for the District. All this time was wasted, utterly wasted. This constant wrangling has resulted in friction between citizens of Washington and Members of Congress. This condition should not exist. There should be wholehearted cooperation between the two for the Nation's good. Many folk are of the opinion this Overton bill, if enacted, would end this source of ill-feeling, making it possible for patriotic citizens—both in and out of Congress—to pull together for the better development of the Capital of the finest, the richest, and the greatest Nation on the face of the earth.

The Announces. You have just been listening to a round-table discussion of a bill recently introduced in the Senate by Senator OVERTON, of Louisiana, chairman of the District of Columbia Ap-propriations Subcommittee, a bill "to fix the amount of the annual payment by the United States toward defraying the expenses of the government of the District of Columbia." Those taking part in the discussion were: Mrs. Eloise Lavrischeff, of the Federal Housing Administration; Miss Dickey James, a student at Woodrow Wilson High School; Miss Ava Witt, of the Office of Education, Department of the Interior; Mr. Martin Swensen, of the Reconstruction Finance Corporation; and Mr. Cam Campbell, Senate committee clerk on Capitol Hill.

Reciprocal-Trade Agreements and Their Relation to Agriculture

EXTENSION OF REMARKS

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

RADIO ADDRESS BY EDGAR W. SMITH

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address by Edgar W. Smith, of the General Motors Overseas Corporation, in defense of our reciprocal-trade agreements.

There being no objection, the address was ordered to be

printed in the RECORD, as follows:

I feel highly complimented at having been asked to speak tonight to a farm audience on a subject which is of great importance to the farmer and the industrialist alike.

You may well wonder why a representative of the automobile industry should feel called upon, as I do, to take a stand on the question of the benefits of the administration's reciprocal trade agreements program to American agriculture. There was a time, not so long ago, when all of us were supposed to stay in our own backyards and tend to our own knitting. The farmer, under this principle, thought exclusively in terms of his crops and his prices; the big manufacturer thought in terms of the goods he produced the big manufacturer thought in terms of the goods he produced and sold; the small merchant kept his eyes fixed very closely on what was going on in his own immediate neighborhood.

what was going on in his own immediate neighborhood.

That experiment in isolationism worked out very badly indeed, and I think we can safely say that the days of narrow self-interest which gave the idea birth are gone with the big wind of the depression. We recognize today that our economy is an economy which is woven and interwoven not only within our own national boundaries, but over the whole face of the globe; that America is prosperous when the world is prosperous; that industry and agriculture and labor, to say nothing of the consumer himself, are interrelated and interdependent threads in the great fabric of our national well-being. There is no more hopeful sign on the economic horizon today than the fact that this new recognition of our mutual dependence on each other has arisen.

economic horizon today than the fact that this new recognition of our mutual dependence on each other has arisen.

The automobile industry is deeply concerned, of course, with maintaining and expanding the market it has found for its product abroad. I can say to you quite sincerely, however, that we are even more deeply concerned in seeing the market maintained and expanded in foreign lands for the agricultural commodities that the farmer produces. If this statement sounds paradoxical, I have only to remind you that the number of motor vehicles sold in the agricultural areas of the United States is far vehicles sold in the agricultural areas of the United States is far greater than the number of vehicles sold in all of our export markets combined. We have no illusions, in the last analysis, as to where our greater interest lies. We want to see farm exports increased because we know that our domestic market for motor rars and other manufactured goods is definitely in jeopardy so long as a lack of foreign demand for American farm products keeps the American farmer from a full measure of prosperity.

There are some who will say that there are other solutions to the farmer's problem than an increase in his export sales. I say

that these other solutions have been tried and that they have falled, and I urge, therefore, that the farmer throw his whole weight behind the effort to expand his foreign markets as the one approach above all others that holds promise of success

without attendant danger.

If any of us are to set about the job of increasing our exports, whether of motor cars or of farm crops, we shall find that the first necessity is to provide a volume of dollar exchange abroad sufficient to enable us to get paid for the things we want to sell. We shall find that the only way this dollar exchange can be created is by a substantial increase in the volume of foreign goods imported into the United States, and we shall find furthermore, that such an increase can occur, from this point on, only if our American tariff structure is revised on a safe, sound, and intelligent basis.

The automobile industry, of all industries in the United States, has given the most consistent and the most vigorous support to the reciprocal trade agreements program sponsored by the Hon-orable Cordell Hull. We have given this support because we believe in the principle of a more abundant two-way flow of American trade with the rest of the world and because we believe that tariff making in the United States is a business problem which ought to be dealt with in a businesslike way. We have supported the Hull program because we believe that tariff making can be dealt with in a businesslike way only if it is taken out of reach of the log-rolling and the back-scratching that has always gone on in Con-gress and put instead into the hands of the executive department. We have supported it because we believe that the executive department can handle the problem, with finality and without risk of a senatorial vote, in the over-all economic interest of the Nation as a

The businesslike manner in which the State Department has dealt with the tariff problem has given us, to date, 19 trade agreements which have greatly expanded our exports without harming, in the instance of the reciprocal imports, a single efficient industry or a single producer of basic commodities in the United States. or a single producer of basic commodities in the United States. If these agreements had not been negotiated finally by the State Department, I think it is safe to say that we would have today, not 19 agreements but 1 or 2 or 3; and that these would have been emasculated by the logrolling and backscratching in the Senate to a point where they lacked any potency or real effect.

Exports of American automobiles have increased under the recurrent trade agreements program and that is one of the recurrent trade agreements program and that is one of the recurrent.

reciprocal trade agreements program, and that is one of the reasons we are enthusiastic about it; but I want to remind you again of what I said about our greater and more realistic interest in farm exports. If we really thought, in the automobile industry, that Mr. Hull had sold the American farmer down the river in the negotiating he has done, I assure you that we would not dare to stand for him as boldly as we do. The accusation that he has betrayed the farmer in the work he has done is incredible, but the accusation has been made, and its very shamelessness demands that it be answered.

I want to cite you, in this connection, three very pertinent questions and three very pertinent answers.

1. Has there been an unprecedented and ruinous flood of imports of farm products into the United States as a result of the

trade agreements program?

No. The value of competitive agricultural imports was greater in 7 out of the 12 years prior to 1932 than the value in 1937. Imports of two types of agricultural products were unusually high in 1937. One type included products such as rubber, silk, tea, coffee, and bananas, which are not produced in the United States

The other type included food and feed crops of which domestic production was severely curtailed by the drought of 1936 which cut our crops from one-fourth to one-half. Drought shortages of these crops cut down the production of livestock and livestock products such as meat and dairy products, and imports of these products made up the balance of our total agricultural imports but they never amounted to more than a small fraction of the losses caused by the drought itself.

2. Were the increased imports in 1937 due to the general lower

ing of tariffs on farm products under the trade-agreements program?

No. Tariff rates on practically all food and feed products are exactly where they were fixed in the Hawley-Smoot Tariff Act exactly of 1930.

3. How have the trade agreements benefited the American farmer?

Since 1934 our exports to countries with which we have trade agreements have increased, year by year, more rapidly than our exports to countries with which we do not have agreements.

In 1937 exports of American agricultural products to countries with which we had trade agreements were 42 percent greater than they were in 1935, when only one trade agreement was in effect, while exports of farm products to non-trade-agreement countries were 4 percent less than in 1935. In the 12 months ended June 30, 1938, our exports of farm products to tradeagreement countries increased in value \$81,000,000, or more than 39 percent, over the value for the preceding 12 months, while exports of these products to non-trade-agreement countries in the same period increased only a little more than 14 percent.

In 1932, before the Trade Agreements Act was passed, American farm cash income on domestic and export sales combined was only 4,328 million dollars. In 1937, when imports were higher, farm cash income was 8,600 million dollars.

As far as I can make out from that analysis, the only agriculturists in the United States who have been sold down the river by Mr. Hull are the banana growers of Idaho, the rubber planters of Vermont, the coffee planters of New York, and the producers of silk and tea and cocoa in Georgia and Kansas and New Jersey. All the rest of the agriculturists who have been critical of Mr. Hull, have, I am afraid, gotten the Department of State mixed up with the Westler Burgery.

have, I am arraid, gotten the Department the Weather Bureau.

As a last word, I want to express again my conviction that agriculture and industry have a common stake in foreign trade which springs from the stake they hold as one in the domestic welfare. We can help ourselves and help each other best, I think, by giving united support to the cultivation of that extra business we are seeking under the liberal principles of give and take for which our great Secretary of State has always stood, and which have served us both so well. Subsidies for Dictators?

EXTENSION OF REMARKS

HON. JOHN A. DANAHER

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

EDITORIAL FROM WASHINGTON POST

Mr. DANAHER. Mr. President, a few days ago the press reported that at one of his press conferences the President had asked to have included in the minutes of the conference, in order that posterity might know his attitude on foreign policy, an editorial from the Washington Post.

As an extension of my remarks today, I ask unanimous consent to include in the RECORD an editorial from this morning's Washington Post entitled "Subsidies for Dictators?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the Washington Post of April 24, 1939] SUBSIDIES FOR DICTATORS?

The agreement between President Roosevelt and southern Senators on a bounty of approximately 2 cents a pound on cotton exports ties another knot in one of the most tangled situations in the history of our foreign or domestic trade. Senator Bankhead's announcement of the subsidy plan came on the very day countervailing duties imposed by the United States became effective against subsidized German exports. So far as cotton and wheat are concerned, the administration is resorting to precisely the same policy that it condemns and penalizes when used by other nations. If this device were to be used to move into the world market come of the huge cotton surplus accumulated because of

some of the huge cotton surplus accumulated because of unwise Government loans on that commodity, it could be in some mea-sure defended as an expedient designed to meet an emergency. Indeed, that is what President Roosevelt had in mind when he first proposed cotton-export subsidies. But under the agreement out-lined by Senator Bankhead bounties are to be used chiefly as a means of selling this year's cotton crop. Loan cotton could not be sold until next January 1, and then only when suitable supplies were not available on the domestic market.

So the subsidization of some agricultural exports (bounties have long been paid in the case of wheat) seems to have been accepted by the administration as a routine policy. Having made it more difficult for American growers to sell their cotton abroad, the administration refuses to admit its mistake or to rationalize the policy. its policy. Apparently it is determined to clap on another subsidy to satisfy immediate demands of farmers without regard for the

to satisfy immediate demands of farmers without regard for the long-range consequences.

As recently as last September Secretary Wallace issued a warning against cotton subsidies. "If used on a large scale and over a period of time," he said, "export subsidies employed by competing countries are mutually self-defeating. They amount to an international price war that is bound to be destructive in the end * * . If consumption of American cotton is to be subsidized, the subsidies ought to be applied to domestic consumption rather than exports."

The Secretary's excuse for reversing his stand now seems to

The Secretary's excuse for reversing his stand now seems to be that the dictator nations are using public funds to force exports abroad and that the United States must fight fire with fire. That is an especially strange argument when applied to cotton. It happens that Japan, Germany, and Italy rank high among the foremost purchasers of cotton from this country. Instead of offsetting unfair competition on the part of totalitarian powers in the world cotton markets, Mr. Wallace's proposal would probably result in giving them changes the country.

probably result in giving them cheap cotton.

Congress ought to consider seriously the muddle in which this policy would involve the United States. The Department of State is trying to minimize trade barriers. The administration is using its influence to avert war by discouraging aggression. Yet it is proposed to subsidize the sale of cotton, an essential war material, in a way that would redound to the benefit of the totalitarian

states.

In effect, this scheme would tax the American people to give cheaper cotton to the dictator powers, along with other nations, while denying the same benefits to domestic consumers. Even if the Administration believes such export bounties to be essential, action should at least be delayed so that they might be used as a bargaining point in any economic conference that may result from the President's recent message to Hitler. Otherwise, we would act to subsidize the dictators without even getting assurance that they will preserve peace.

Moreover, subsidized cotton would give textile manufacturers abroad an unfair advantage over American mills that would necessarily call for increased tariff protection. It is impossible to see

how such an expedient can be reconciled with the trade-agreements program or with the Administration's general foreign

policy.

Undoubtedly the barter practices followed by totalitarian coun-Undoubtedly the barter practices followed by totalitarian countries have, as Mr. Wallace points out, minimized the effectiveness of Secretary Hull's trade negotiations. But that is only one factor in the dilemma confronting the A. A. A. Despite our trade agreement with Great Britain, cotton exports to that country have taken a terrific slump. In this and various other cases the production and loan policies followed by the A. A. A. appear to be more responsible than the restrictive trade methods of the dictators. Before asking Congress for funds to imitate those methods, the least the administration could do is to adjust its own policies, which have so extensively contributed to the loss of foreign agricultural markets and the piling up of unsalable surpluses. surpluses.

Columnists and Calumnists

EXTENSION OF REMARKS

HON. CHARLES KRAMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

ADDRESS BY HON. HAROLD L. ICKES, APRIL 11, 1939

Mr. KRAMER. Mr. Speaker, under leave to extend my remarks, I include an address of the Secretary of the Interior, Hon. Harold L. Ickes, delivered on April 11, at New York City before the Newspaper Guild of that city. Since a newspaper publisher's reply to the address was contained in the Congressional Record recently it is thought fitting and proper to insert the address which provoked the publisher's remarks.

The address is as follows:

Entirely as an avocation, I have been interested lately in two subjects—dictators and newspapers. I cannot say that to date I have had much success in coping with the dictators. I am gratified, however, at what seems to me to be an awakening sense on the part of the American people to the danger that would threaten even our institutions if we allowed the black plague of fascism to take root here.

Here in the United States we have felt that our democratic institutions were safeguarded by the system of checks and balances that our forefathers wrote into our Constitution. I do not take any credit to myself for the result, but I have noted that in some other countries a system of checks and balances has also been set the with the Czecke mying for the believes.

been set up—with the Czechs paying for the balances.

The jump from dictators to newspapers is not a violent one because they have many things in common. For instance, I have noticed that both the dictators and the newspapers have failed to credit me even with good intentions. Nevertheless, I am of such a hopeful temperament that I shall continue to offer my read offices to the preparation of the property of th good offices to the newspapers in an effort to help them to be factual in their news columns and fair in their editorializing. So tonight I shall discuss columnitis, that curious, endemic malady which, in these modern days, has infected one newspaper after

which, in these modern days, has infected one newspaper after another.

Since the word "chapel" belongs to newspaper lore, I am encouraged to announce a text for my discourse. So I turn to Revelations, chapter 13, verses 4 to 6, where I find the following:

"And they worshipped the beast, saying: 'Who is like unto the beast? Who is able to make war with him?' And there was given unto him a mouth speaking great things and blasphemies; and power was given unto him to continue forty and two months. And he opened his mouth in blasphemy."

What particularly strikes me in this is the expression, "And there was given unto him a mouth speaking great things."

What a perfect description of a columnist? It would seem, however, that a columnist of that period was a piker compared with his modern prototype; he would run down in "forty and two months." An American columnist is like Tennyson's brook—he babbles on forever. babbles on forever.

I was interested to read what Senator Arthur H. Vandenberg.

I was interested to read what Senator ARTHUR H. VANDENBERG, a lifelong newspaperman, wrote recently as a substitute columnist. "I have always wanted to 'do a column'—about columnists. That's probably just the natural revenge instinct. Some of them know so much about everything. Some of them know so much about nothing. Some of them care so little about facts—just so long as they can sock to the jaw."

May I say that even if Senator VANDENBERG has suffered at the pens of columnists to the extent that this language would indicate, he does not know the half of it. He ought to join the

cate, he does not know the half of it. He ought to join the

new dealers.

A hard-working public official, trying to carry out an assignment which involves decisions affecting thousands of people, hundreds

of millions of dollars, and vast public properties can only marvel at and admire those qualities of omniscience and infallibility that seem to descend upon a man the moment he casts off the habili-ments of the objective news writer, the sports writer, the police court reporter, or the soldier in order to tell a blundering world just what it should do, what it should think, and the manner in which it should behave.

which it should behave.

Westbrook Pegler, perhaps in a moment of self-revelation, summed up the case of the columnists in this language:

"Of all the fantastic fog shapes that have risen off the swamp of confusion since the big war, the most futile and at the same time the most pretentious, is the deep-thinking, hair-trigger columnist or commentator who knows all the answers just offhand and can settle great affairs with absolute finality 3 days or even 6 days a week."

Columnists are obese with knowledge. They even have the gift

of accurate prevision.

Would'st know what's right and what is wrong? Why birdies sing at break of dawn? Ask the columnists.

Does milk come from the milky way? Why do dogs bark and asses bray? Ask the columnists.

Who pronounce decrees of fate, And supervise affairs of State? Who? the columnists.

Who run the earth and sun and moon? Just Thompson, Lawrence, Franklin, Broun, Just the columnists.

Who, knowing their A B C, Rank doctors of philosophie? Who but columnists?

Would'st learn of art, of singing males? Of sharks and minnows, spouting whales, Ask the columnists.

Who expound the Constitution, Adding circum to locution? Why, the columnists! When F. D. R. you want to sock, Page, Lippman, Johnson, Kent, or Krock—Page a columnist.

Who, knowing all from zero plus, Right answers have to this or thus?

Only columnists. I'd like to strut and look profound, And order Presidents around, I'd like to be a columnist.

A columnist, according to the dictionary, is a journalist in charge of a daily column on a daily newspaper. The word "calumnist" has not yet reached the dictionary, but he may be described as an exreporter who wastes good white space to spread injurious gossip and disseminate prevarications and even unpunished libels. The "calumnist's" stock in trade is falsification and vilification. He is journalism's public enemy No. 1, and if the American press is to improve itself it must get rid of him.

Some newspapers print in the masthead pious declarations about

Some newspapers print in the masthead pious declarations about the high moral level on which the paper is edited, while disclaiming responsibility for the mental eliminations of a "calumnist." A ing responsibility for the mental eliminations of a "calumnist." A syndicated column may serve as an escape for a publisher who is willing to print under the name of a "calumnist" matter that he would not dare to publish in his respectable news columns. This is like a hypothetical church deacon testifying to the virtues of temperance at a prayer meeting while taking a pull at the bottle when no one is looking.

I recognize that there is as much difference between columnists.

when no one is looking.

I recognize that there is as much difference between columnists as there is between newspapers. Who, on rare occasions, can doubt my perspicacity when I detect evidences of virtue in the columnist who occasionally says a kind word about me?

Some columnists are fair and reputable and careful to keep within proper bounds; some are unfair and disreputable and recognize no restraints—not even the fear of a libel. It seems to me that a columnist should be entitled to the same rights and privi-leges as the editor of a newspaper, and no more. It might even be argued that he ought to keep well within the limitations of the old axiom that with great power goes great responsibility, because the columnists, according to an estimate made by Fortune, are read by 30 percent of the total adult population of the United

The Merry-go-Round column of Pearson and Allen, for example, is printed in more than 300 newspapers, with an estimated circulation of 12,000,000. Such commentators as Walter Lippmann, Dorothy Thompson, Frank Kent, David Lawrence, and Westbrook Pegler appear in more than 100 papers each and have a combined circulation of almost 35,000,000. So it can hardly be doubted that these modern knights of the typewriter exert a powerful influence on the public mind. As Heywood Broun says, "Three or four well-known syndicated columnists wield more influence than the average lawmaker in Washington." A lawmaker, however, is responsible to his electorate. To whom, I should like to know, are the columnists responsible?

What kind of men are these modern condottier of the Fourth Estate? Do they fight for the public weal or under the standard of The Merry-go-Round column of Pearson and Allen, for ex-

tate? Do they fight for the public weal or under the standard of private prejudice? Let us review some of them in parade. With a proper respect for rank, let us set at the head of our wooden

column a real, honest-to-goodness general, the redoubtable Hugh S. Johnson. Of him a fellow condottiere, the no less valorous Westbrook Pegler, said in Time on September 28, 1936:

"* * I like Old Ironpants' column for the wild, somewhat hilarious joy with which he sails into an argument. Sometimes it is a little cruel because he is such a tremendous puncher, and, like Dempsey, once that bell rings, he knows nothing but punch, punch until something drops * * *."

One cannot help but wonder whether "Old Ironpants," as Pegler affectionately calls him, should be given space in newspapers in order to throw out his chest, flex his muscles, and do "nothing but punch, punch until something drops."

There is something patriarchal about the valiant general. I would have you know that sometimes it hurts him more to chastise than to be chastised. Papa takes son out to the woodshed to switch him because he loves him. For instance, this stern, if tenderhearted, disciplinarian recently broke an unaccustomed silence to confess:

"Many of the men I criticize or praise are personal friends—for

"Many of the men I criticize or praise are personal friends—for example, Henry Wallace, Harry Hopkins, Harold Ickes, John Lewis, and, above all, the President himself."

Lesser men must stand in awe of an inflexible conscience that compels a man to do his duty, despite his deep love for those whom he disciplines—"above all, the President himself." "Whom the general loveth he chastiseth." I do not know how the others named by him in this burst of sentiment feel about it, but, for my part, I would that he loved me much, much less than he does.

Margaret Marshall, writing in the Nation, on March 12, 1938, among other things, said about General Johnson:
"He was born in Fort Scott, Kans., and he has been answering

he was both in Fort Scott, Kans., and he has been answering bugle calls ever since.

"His psychology is that of a top sergeant.

"His mind is a battlefield in which he rushes in all directions roaring at the enemy."

General's admirer and fellow marcher in the column is The General's admirer and fellow marcher in the column is Westbrook Pegler, he of the verbal whiplash, who is a graduate of the sports page of the Chicago Tribune. While Johnson is against only those numerous public officials who are bungling affairs that he could so competently manage, Pegler is against everything and everybody according to his whim. A collection of his essays in book form is characteristically entitled "T Aint Right."

It was of him that the Nation said on March 5, 1938:

"He is 'agin' everything, especially the Government and authority in general. Nothing is what it seems, and both sides in any con-

"He is 'agin' everything, especially the Government and authority in general. Nothing is what it seems, and both sides in any controversy are wrong.

"He brings every issue down to the level of a barroom argument between two 'mugs.'"

I will say for Pegler that, on occasion, he is amusing, a fact that distinguishes him from many other members of his fraternity. Another phenomenon that frequently distinguishes a columnist is that the more violently and indiscriminately he may attack the more sensitive he himself is, even to mild criticism. For instance, on March 10, last, Pegler wrote a column which was as bristling with such words as "lie" and "liar" as a porcupine is with quills. Two men had ventured to take issue with him on something that he had written. Even assuming that Pegler was right, which I am willing to do, it seems to me that the castigation was out of all proportion to the offense.

Mr. Pegler does not confine himself to being "agin everything, especially the Government." He ranges much further afield. On every subject he can speak pontifically—he is a columnist. Hark to his comment on the recent refusal by the D. A. R. of the use of its auditorium in Washington to Marian Anderson:

"Marian Anderson, the victim of a not-too-painful martyrdom in Washington, was excluded from one hall by a ruling which instantly defeated its purpose and made famous a hitherto obscure (sic) singer."

Here is omniscience in its fullest flower. The great sports writer

stantly defeated its purpose and made ramous a interest obscure (sic) singer."

Here is omniscience in its fullest flower. The great sports writer also knows all that can be known about music and musicians. The Marian Anderson who is "an obscure singer," according to Westbrook Pegler, is the Marian Anderson whom other, but doubtless less competent, critics have acclaimed as having the best voice in a generation or even in a century. Toscanini halls her as the greatest living singer. But, of course, Pegler knows better.

Just to show that Pegler's excursion into the field of musical critical critical stantage.

Just to show that Pegler's excursion into the field of musical criticism was not a temporary aberration, let me recall that on another occasion he lined out this home run:

"Singing, of course, should be women's business. * not a natural or happy art for males."

And on March 3 he wrote:

"It is hard to say whether or not a writer is an artist, but, for that matter, is singing ever art?"

You writers should rejoice that Pegler left open the door, even if only a little bit, after he had slammed it in the faces of Caruso and

Scotti and Marian Anderson and Kirsten Flagstad.

If Johnson and Pegler are expert at sniping, there are "calumnists" who specialize in guttersniping. These latter specialize in personal items that are intended to make one appear ridiculous or insincere or incompetent or untrustworthy. And the more shining the target the more poisonous the barb. "Calumnists" of this sort do not permit themselves to worry about the truth or falsity of any choice tidbit that their unpleasant imagination can invent or their shuffling

leg men bring in.

I had an interesting exchange of letters recently with one of the most notorious "calumnists" of Washington, a man whose name is a synonym for irresponsibility even to the point of prevarication. He flatters me by regarding me as one of his pet aversions, a cir-

cumstance which, considering the manner in which he practices his art, gives me great satisfaction. A few months ago he printed three art, gives me great satisfaction. A few months ago he printed three or four inventions about me, none of which contained a vestige of truth. I challenged his veracity. I asked for the source of his misinformation. You know the answer before I can give it. "The source was confidential and his informant must be protected."

I continued to press Mr. Paul Munchausen and I learned later that he tried desperately to find someone who would stand for the story. Then he asked for a personal interview, intending, I was told, to bring in a poor leg man to serve as whipping boy. The long and short of it was that Mr. Munchausen saw the futility of trying to gloss over his lies. He could not justify and neither he nor his syndicate manager, Mr. J. V. Connolly, felt that professional ethics called for a voluntary retraction. So the episode ended—at least for the time being.

It hardly needs to be pointed out that when any newspaper writer runs to cover and attempts to hide behind a punitive "confidential informant" when confronted with a misstatement that might either be an innocent mistake or a deliberate lie,

"confidential informant" when confronted with a misstatement that might either be an innocent mistake or a deliberate lie, then there can be no doubt that a lie has been uttered.

This particular "calumnist" is a practitioner of what is known in the trade as the "whispering technique." This consists of taking a bit of common knowledge based on a formal accredited announcement, preferably a couple of weeks old, and presenting it as a new discovery. It is decked out in language designed to mislead the reader that believing that the practicular head discovery. the reader into believing that the particular hors d'oeuvre was obtained by devious or occult means, the purpose being to deceive him into believing that he is being served a truffle that the trained pig had just surreptitiously rooted out of the earth.

Now, I may be wrong, but I believe that a grave responsibility

Now, I may be wrong, but I believe that a grave responsibility rests upon publishers and editors to deny the use of their columns to writers who take liberties with the truth. A disclaimer of responsibility printed in small type does not meet the situation. It happens that the Mr. Munchausen in question is paid by otherwise reputable journals for a frequently discreditable column that they print daily. Publishers ought to realize without being told that they cannot allow their paper to be "Mallonized."

To turn to more pleasant subjects, I will cite again the Book of Revelations, chapter 3, verses 15 and 16:

"I know thy works, that thou are neither cold nor hot; I would that thou wert cold or hot. So then because thou art lukewarm, and neither cold nor hot, I will spew thee out of my mouth."

Here we have convincing proof that the author of Revelations had the power of divination. What better description could there be of Walter Lippmann, the man who, according to Margaret Mar-

be of Walter Lippmann, the man who, according to Margaret Marshall in the Nation, "writes irrelevant or futile stuff in elegant

Mabel Dodge Luhan said of him, "Walter will never, never lose an eye in a fight." She might have added that he would never even break his wooden sword unless he should trip over it in a

minuet

On the other hand, Dorothy Thompson, the Cassandra of the columnists, has both conviction and vigor. Heywood Broun said of her in the New Republic:

"Miss Thompson's very vigor is a handicap to her emulating Henry Adams and getting an education. If all the speeches she has made in the past 12 months were laid end to end they would constitute a bridge of platitudes sufficient to reach from the Herald Tribune editorial rooms to the cold caverns of the moon."

I had a letter the other day from a correspondent in New York who referred to Dorothy Thompson as "that Florence Nightingale to sick economic royalists."

This may seem a little rough on a sincere and earnest lady who is trying to cover too much ground by setting herself up as a final authority on all social, economic, governmental, national, and international questions. Perhaps Heywood Broun would want to qualify his statement in view of what Dorothy Thompson has written and spoken lately on the subject of foreign dictatorships, which, however, I am bound to say, would be more convincing if it were not for her disposition to see an American dictatorship in every move that is made by the administration for the improvement of our social and economic conditions or in the direction of tightening up the administrative branch of the Government. However, much will be forgiven Dorothy Thompson in view of the really fine stand that she has with both courage and intelligence taken on the subject of dictatorships abroad.

"Pontifex Maximus" Sullivan, an ex-liberal, like Walter Lipp-

mann, would be missed for his personal dignity and charm, even if the world would still manage nicely without the pontifications that waddle through his worried columns. Frank R. Kent is more likely to forget than to forgive—and he has a good memory. He delights in cruel jibes and acidulous comment that he will direct at a straw man if one of flesh and blood is wanting. "Croak" Carter, with man if one of flesh and blood is wanting. "Croak" Carter, with complete self-assurance, could enter any intellectual goldfish-swallowing contest. Raymond Clapper is one of the fairest, most objective, and most intelligent of them all. My old comrade at arms, Frederic W. Wile, G. Gould Lincoln, Herbert W. Agar, Ernest K. Lindley, and Howard Vincent O'Brien are all able to write fairly and to see both sides. Arthur Krock, as well as a number of others, have columns that they fill capably, although Arthur Krock sometimes permits himself, without abating a whit of his stately authoritativeness, to hit too closely to the belt or lend too credulous an ear to backstairs gossip. (By the way, whatever became of Henry L. Mencken, the crusty "Old Baron of Baltimore"?)

Between this group of legitimate political commentators and

Between this group of legitimate political commentators and those others whom former Attorney General Homer S. Cummings,

as a pinch-hitter columnist, recently described as "buzzards soaring high over the country, indifferent to all that is verdant and living," there is a third group that both comments and reports. Here, too, is a fair field if it is fairly covered.

Drew Pearson and Robert S. Allen write a lively and, on the whole,

interesting column of dependable news and of legitimate comment that is both entertaining and timely. They hit many a bull's-eye. Joseph Alsop and Robert E. Kintner are newer comers in the same Joseph Alsop and Robert E. Kintner are newer comers in the same field. They, too, are outstanding and jointly present a wide range of worth-while news and lively comment. Jay Franklin confines himself largely to political news and comment upon political attitudes. He could be depended upon to ride forth for the liberal cause, even if he had to ride alone.

Heywood Broun belongs in a category by himself. Here is a genial philosopher who declines to take himself too seriously and yet one who never nulls his numbers even if he chuckles as he

yet one who never pulls his punches, even if he chuckles as he lands on an eagerly outstretched chin. Nor is his comment any less effective because it is well-tempered and humorous. He, too, like a few other columnists, is a liberal, but he does not have to

less effective because it is well-tempered and humorous. He, too, like a few other columnists, is a liberal, but he does not have to have a victim served up raw to him every day as do those who fight the battle of black reaction.

Whether the columnists are with us to stay or not, I cannot predict. But I suspect that if the vogue is to continue, they who offend good taste or are lacking in ethical standards will have to use their columns for purposes other than to give vent to personal spleen, or to traduce, to misrepresent, to smear. They must lay aside their airs of infallibility. They must at least disguise their deep personal conviction of omniscience. And they ought to be more objective, make some allowance for error, understandingly take into account human frailty and fallibility. They might even occasionally give a victim the benefit of the doubt, assume that all men in public office are not necessarily crooks or that leaders of the opposite party are blacklegs. As quasi public figures themselves, it is their duty to be factual and truthful. Columnists can conform to these standards and still be partisan, as they have the right to be; but if they are partisan, they should not operate as wolves in sheep's clothing, pretending to be detached and objective and nonpartisan, when they aren't anything of the sort.

I suspect that the people are already seeing through the hollow pretenses of certain of our columnists. They may enjoy the sniping of a Pegler or the roaring of a Johnson, but they are not so simple as to believe that these are anything else than sniping and roaring. Some may even self-consciously enjoy the personal gossip in which the keyhole peepers delight, but they know that certainly not the "calumnists" nor even the columnists are Sir Galahads; that none of them is saturated with pontifical wisdom; that they are not supermen and superwomen, immured on some Olympian height where they are able to see the present outlined against all that is past and all that is to come, and thus be able, as Pegl

However, reputable columnists might well do a little housedeaning on their own account, and editors and publishers might do a little fumigating of those columns that, irresponsibly, they have turned over to writers who are no credit to their profession and who do not add to the reputation of the papers that flaunt them.

Perhaps the Newspaper Guild can do something about the columnists. The Guild has already had a marked and beneficial influence not only upon public opinion but even upon the newspapers. There is much more that the Guild can do and will do, not the least of which might be to insist upon just and fair professional papers. There is much more that the Guild can do and will do, not the least of which might be to insist upon just and fair professional standards, particularly for the columnists. The Newspaper Guild has shown itself to be progressive and keenly aware of the need for social reform. I hope that it will continue to interest itself in and make its contributions to the vital problem of how to make our democracy more enlightened and successful. One thing that it can do is to see to it that the columnists, who wield so much influence on public opinion, shall not stray too far from the path of truth, which is the path of progress.

Rev. Francis X. Quinn

EXTENSION OF REMARKS

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1939

Mr. MICHAEL J. KENNEDY. Mr. Speaker, Members of the House, I have introduced a bill, H. R. 5564, authorizing President Roosevelt to present, in the name of the Congress. a medal of honor to a clergyman in my district, as a reward for a deed performed by him which is infinitely meritorious. So commendable was the act of the Reverend Francis X. Quinn, pastor of the Church of the Guardian Angel, New

York City, in saving the lives of two elderly persons, that I feel justified in encroaching upon the valuable time of this honorable body to acquaint you with the facts, and to urgently request your favorable consideration of this bill when it is presented to you for consideration.

On the early morning of April 2, 1939, three desperadoes invaded a Manhattan restaurant, and at gun point forced the proprietor and several patrons to surrender their jewelry and money. Fleeing from the scene, their automobile was disabled by a police bullet. The gunmen then engaged in a running gun fire with police, in which more than 40 shots were exchanged and the lives of many persons endangered. One of the gangsters was captured; a second made good his escape; the third, a desperate, hardened criminal, bearing the name of John Naumo, who supports a long criminal record, entered an apartment house in Eighth Avenue. Closely pursued, Naumo sought refuge in the apartment of Mr. and Mrs. Merton A. Nicholas, both beyond the age of . 60 years. A squad numbering 50 police surrounded the building, but, with the aged couple as hostages, the bandit had complete security. Tear gas was ineffective because they were in a sealed room.

Naumo turned a deaf ear to the pleas of police officials, and finally, after a 2-hour vigil, a Catholic priest, the Reverend Francis X. Quinn, was summoned. He made his way up a fire escape into the apartment and was confronted by the terror-stricken elderly couple, behind whom cowered the desperate bandit. Just consider the situation in which this priest found himself. Looking down the barrel of a very businesslike revolver, which endangered not only his own life but the lives of Mr. and Mrs. Nicholas also, Father Quinn pleaded for 1 hour with a crazed bandit to surrender. Because of his criminal record, police predicted that the bandit would not hesitate for one moment to snuff out the lives of this elderly couple, as well as that of the priest, had Father Quinn made one false move. Success was his reward when the bandit finally heeded his pleadings and surrendered himself and his revolver to the priest, who thereupon turned him over to the police. So trying and fraught with danger was the scene that it was necessary to remove the elderly couple to a hospital immediately for medical treatment.

In bringing this record to the attention of the House of Representatives today in support of my bill my only object is to render well-deserved tribute to the gallantry and heroism of Father Francis X. Quinn. I would only add that the ardor of this priest and the spirit which sustained him as he dutifully answered the call which might mean the supreme sacrifice of his life when the power of the State appealed for the help of the church in this emergency is an object lesson to the youth of our country today, regardless of race or creed. If properly comprehended, it signifies the dynamic of religion in a period of human experience which is supposed to have witnessed a decline in spiritual influences. The faith which is typified in this heroic act is available to every human being. It is the philosophy of reverence and love, fellowship and mercy, without which there can be no civilization, no justice. no progress, no peace on our bewildered planet.

What's Right With America?

EXTENSION OF REMARKS

HON. ORVILLE ZIMMERMAN OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1939

ADDRESS BY CHARLES M. HAY AT JEFFERSON DAY DINNER AT ST. LOUIS, APRIL 12, 1939

Mr. ZIMMERMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by Charles M. Hay at Jefferson Day dinner, St. Louis, April 12, 1939:

In this, the one hundred and fiftieth year since the beginning of our Government, much is being said about what's wrong with the country. In many circles that is a popular, indeed, a chronic

I deem it equally as patriotic and far more sound and helpful, particularly at this time, to say something about what's right with the country. Except for one of a Rupert Hughes or Mencken mind, which surveys the country past and present with buzzardlike propensities, seeking always for carrion, the task is not difficult. Much

can be said and truthfully so.

I shall mention only a few things, confining myself to the big basic things right with the country.

WE BELIEVE IN OUR GOVERNMENT The biggest thing right with the country is this: That in this, the one hundred and fiftieth year of our history, the "vastly preponderant sentiment of the American people favors our form of government" and the principles upon which it is founded. The American people believe today, as they have believed throughout our history, in individual liberty and equal rights. They believe in the rights guaranteed in the first 10 amendments, known as our Bill of Rights: Freedom of speech, freedom of the press, freedom of religion, freedom from unwarranted searches and seizures, the right of trial by jury, and the other great guaranties embodied therein.

Our devotion to these great principles was dramatically made known to the world in the great celebration held in the Halls of Congress on March 4. There assembled on that occasion the highest

Congress on March 4. There assembled on that occasion the highest officials of the Government—legislative, executive, and judicial—and through the President, the Chief Justice, a Senator, and the Speaker of the House of Representatives the faith and devotion of the people were declared in earnest and eloquent words.

It is significant to note that the officials who spoke were the direct constitutional successors of the legislative, executive, and judicial officials of 150 years ago. They and their associates were created as officials under the same Constitution and form of government, dedicated to the same principles, inspired by the same ideals.

created as officials under the same Constitution and form of government, dedicated to the same principles, inspired by the same ideals. The "faith of our fathers," of which we sing, was acknowledged by all of them as their faith and the faith of our people. If, therefore, the country was right 150 years ago, it is right today.

I go further than that. It is my conviction that the devotion of the people to our form of government and the principles embodied in our Bill of Rights is today deeper and more abiding than that of our fathers of a hundred and fifty years ago. We have greater reason for our faith. Then our form of government was untried. The principles embodied in the Constitution had not been put to the test. The faith of the people then rested upon considerations of reason and the teachings of theorists and doctrinaires. Today it rests upon the testing and experience of 150 years. In that period of reason and the teachings of theorists and doctrinaires. Today it rests upon the testing and experience of 150 years. In that period the country has come through quiet and storm, prosperity and adversity, peace and war; the Nation's territory has been expanded, its population has greatly increased, but the people throughout America enjoy freedom of speech, freedom of assembly, freedom of the press, freedom of religion, freedom from unwarranted searches and seizures, and all of the other rights guaranteed in the Bill of Rights. Why should they not believe in our form of government and the principles upon which it is founded with greater assurance and confidence than our fathers of an earlier day? and confidence than our fathers of an earlier day?

THINGS WRONG 150 YEARS AGO ARE RIGHT NOW

Another big thing right with the country today is this: That many things wrong in the country 150 years ago and at a much later date are right now. I mention a few outstanding things: One hundred and fifty years ago black men were slaves, women were denied the right to vote and had limited property rights; labor was denied the right to organize or bargain collectively and the wages of workers were fixed by the will of employers; the aged were left to shift for themselves or starve; and free education was unknown. unknown.

unknown.

To remind you of things wrong yesterday, but right today, I need but mention the constitutional provisions denouncing slavery; granting women equal rights; the Railway Labor Act and the National Labor Relations Act safeguarding the rights of workers to organize and bargain collectively; the Fair Labor Standards Act; the minimum-wage laws; the Social Security Act extending aid and succor to the aged, to mothers, and dependent children, to the unemployed and other distressed groups; our giant scheme of free education, our great conservation program.

LABOR YESTERDAY AND TODAY

As an evidence of the long road of progress we have traveled consider alongside the labor and wage laws of today the first wage law ever enacted in this continent—the maximum-wage law enacted by the Massachusetts Bay Colony in the seventeenth century fixing the maximum wage for free labor at 48 cents per day! In the latter part of the eighteenth and the early part of the nineteenth centuries men were prosecuted and convicted for organizing to increase their wages.

As you contemplate the great body of laws enacted to give effect to the social concept and conscience of the people of our day, who is there among us that pines for a return of the "good old days"? Who is there here who will deny that the endeavor of the American people to establish justice and achieve equality of rights and opportunities for all approximates fulfillment today to a greater degree today than ever before in the history of our country? There are more things right with the country today than at any period of our history. our history.

WRONGS DISTURB US

Another big thing right with our country is this: That whatever right whatever we recognize as wrongs and our faces are set toward righting them. We have problems, of course, but we recognize them as problems and are determined to solve them. If the wrongs we have we neither recognized as wrongs nor, if recognizing them, cared nothing about them, then, indeed, would there be something wrong, fatally wrong, with the country. We may disagree on measures to right the wrongs, but so long as we all recognize them as wrongs we may make equal claims to patriotism may make equal claims to patriotism.

UNEMPLOYMENT PROBLEM

We have, for instance, an unemployment problem, but we recognize it as a problem and are set upon the path of solution. We

nize it as a problem and are set upon the path of solution. We care about unemployment.

Since this problem became acute, following the business collapse of 1929, we have written a glorious record for the conscience of America. That conscience was given expression not only in the utterances of a great President in his inaugural address in 1933, but in the commitment of the people to the employment of men by the Government whom industry had cast out of their jobs, and to the feeding and clothing of those for whom employment could be found neither in industry nor in Government. Never in our history have the people acted through their Government in such striking demonstrations and exemplifications of their belief in the principle that all men are entitled to life, liberty, and the pursuit of happiness.

SPENDING

Giving effect to the social conscience of the people in the effort to care for the unemployed and other dependents has required the expenditure of vast sums of money, but I remind you that this expenditure has represented the conscience of the people, and not their greed and gambling instincts as in the spending carnival which led up to the crash of 1929.

CRIME PROBLEM

We have a crime problem—always have had and always will have. We have here and there a venal official, a corrupt political leader and dishonest, crooked businessman, but for every such there are hundreds of fearless, unpurchasable officials, clean, patriotic political leaders and straight, honest businessmen; and these determine the soul and conscience of the country. That's a big thing right with the country!

RIGHT LEADERSHIP NOW

Another thing right with the country at this hour is this: That we have at the head of this great Nation a leader dedicated to the proposition that all men are created free and equal and are entitled to life, liberty, and the pursuit of happiness. The greatest treasure a people can have is a leader consecrated to that belief and principle with the capacity to give his devotion effect in practical politics and statesmanship. Such a leader the people have today in the person of our great President Franklin D. Roosevelt.

SUPREME COURT RIGHT NOW

We also have at this hour a Supreme Court which has rediscovered and revitalized the Constitution of the United States. We have a Court now which reads the Constitution, not for the purpose of finding out what the people cannot do through the Government to serve themselves, but what they can do. The day of nullification by constricted and erroneous construction is at

Lawyers trained to study and give force and effect to the Constitution itself and not to what someone has said about the Constitution, lawyers trained to think in terms of the rights of the people rather than of the interests of private corporations, now constitute a majority of the Supreme Court. That's another and no little thing right with the country at this hour.

LET AMERICA FIND THE ROAD TO PEACE

Another thing right with the country is our devotion to peace as national policy. We hate war and do not propose to foment war

a national policy. We hate war and do not propose to foment war or be drawn into any war not involving our rights and vital interests.

In these days of stress and strife in the Old World, we have no greater task ahead of us than so to conduct our affairs—national and international—as to preserve peace for America and encourage

peace in other parts of the world.

The nations of the Old World seem helpless to avert war and a collapse of civilization. Is it possible that this greatest of nations is powerless to furnish the leadership for peace so desperately needed at this hour?

Let us pray that in this dark hour some word may be spokensome move made by this mighty Nation that will bring peace to a troubled world.

He who, in this tragic hour, would embarrass this Nation in its search for the road to peace is false to his country and to mankind.

The Constitution of the United States-The Charter of Our Fundamental Laws

EXTENSION OF REMARKS

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1939

ADDRESS BY HON. MARTIN F. SMITH, OF WASHINGTON, APRIL 22, 1939, AT CEREMONY HELD IN LINCOLN MEMORIAL CIRCLE TO COMMEMORATE THE SESQUICENTENNIAL OF THE CONSTITUTION OF THE UNITED STATES, UNDER THE AUSPICES OF THE AUXILIARIES OF THE UNITED SPANISH WAR VETERANS, DEPARTMENT OF THE DISTRICT OF COLUMBIA

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks, I insert the address delivered by me April 22, 1939, at the ceremony held in Lincoln Memorial Circle to commemorate the sesquicentennial of the Constitution of the United States, under the auspices of the Auxiliaries of the United Spanish War Veterans, Department of the District of Columbia.

The address is as follows:

Mme. President, members of the United Spanish War Veterans' Auxiliaries, Department of the District of Columbia, and ladies and gentlemen, we are met here in Lincoln Memorial Circle to commemorate the sesquicentennial of the Constitution of the United States. I shall on this historic occasion confine myself to a consideration of the broad outlines and dimensions of the Constitution as a whole, in order that we may catch something of its real spirit.

Its real spirit.

The Constitution of the United States emanated from the people. It is "of the people, by the people, and for the people."

As was said by Mr. Justice Matthews, speaking for the Court in Hurtago v. California (110 U. S. 516): "The Constitution of the United States was ordained, it is true, by descendants of Englishmen, who inherited the traditions of English law and history; but it was made for the undefined and expanding future and for a people gathered and to be gathered from many nations and of many tongues." many tongues.

"A constitution, from its nature, deals in generals, not in details. A constitution, from its fautie, deals in generals, not in details. Its framers cannot perceive minute distinctions which arise in the progress of the Nation, and therefore confine it to the establishments of broad and general principles." (Chief Justice Marshall in The Bank of the United States v. Deveaux et al., 5 Cr. 98.)

"Constitutions of government are not to be framed upon a calculation of existing exigencies; but on a combination of these with

"Constitutions of government are not to be framed upon a calculation of existing exigencies; but on a combination of these with the probable exigencies of ages, according to the natural and tried course of human affairs. They ought to be a capacity to provide for future contingencies as they may happen" (Federalist, No. 34).

The Government of the American Nation is, then, "emphatically and truly a government of the people. In form and in substance it emanates from them. Its powers are granted by them, and are to be exercised directly on them and for their benefit." Chief Justice Marshall in McCulloch v. Maryland (4 Wheat. 405), a statement, the grandeur of which was to be enhanced 44 years later, when standing on the battlefield of Gettysburg, Abraham Lincoln said that "a government of the people, by the people, for the people, shall not perish from the earth."

Beveridge says: "The nationalist ideas of Marshall and Lincoln are identical, and their language is so similar that it seems not unlikely that Lincoln paraphrased this noble passage of Marshall and thus made it immortal. This probability is increased by the fact that Lincoln was a profound student of Marshall's constitutional opinions and committed a great many of them to memory."

The famous sentence of Lincoln's Gettysburg address was, however, almost exactly given by Webster in his reply to Hayne. "It is * * * the people." But both Lincoln and Webster merely stated in condensed and simpler form Marshall's immortal utterance in McCulloch v. Maryland. (The life of John Marshall, by Albert J. Beveridge, vol. IV, p. 293. Note.)

The Constitution was written in the spirit of the Declaration of Independence, the greatest exposition of the rights of the people which has ever been given expression by the heart and mind of man. The Constitution is to be interpreted and construed in the light of its preamble: We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defen

It is worth while to recall the words of James Wilson, who said in reply to the objection that the Federal Constitution had no bill of rights (which was later met by the adoption of the first 10 amendments): "Here the fee-simple remains in the people, and by this Constitution they do not part with it. The preamble of the proposed Constitution, 'We, the people of the United States * * * do establish,' contains the essence of all the bills of rights that have been or can be devised."

The Constitution is not a creature of circumstances and in

The Constitution is not a creature of circumstances, and, in order to meet the necessities of the people, should always be treated as an enunciation of fundamental principles rather than as declaratory of cramped and cabin'd rules of law, which latter canon of interpretation would make it an instrument of oppression instead of one of beneficiaries.

sion instead of one of beneficence.

The Supreme Court of the United States has not lost sight of The Supreme Court of the United States has not lost sight of this fact. If there ever was a time when the truth of the words of Chief Justice Marshall in the celebrated case of Gibbons against Ogden was apparent, that time is now. Chief Justice Marshall said what we have again witnessed "Powerful and ingenious minds, taking, as postulates, that the powers expressly granted to the Government of the Union are to be contracted by construction into the narrowest possible compass, and that the original powers of the State are retained, if any possible construction will retain them, may, by a course of well-digested but refined and metaphysical reasoning founded on these premises, explain away the Constitution of our country and leave it a magnificent structure, indeed, to look at but totally unfit for use. They may so entangle and perplex the understanding as to obscure the principles which were before thought quite plain, and induce doubts where, if the mind were to pursue its own course, none would be perceived."

This is the very thing that eminent lawyers are doing by arguing

This is the very thing that eminent lawyers are doing by arguing that the Federal Government does not possess the power to save the commerce and lives and institutions of the people in what everyone, even they themselves, admit to be a serious crisis and

everyone, even they themselves, admit to be a serious crisis and national emergency.

What did Chief Justice Marshall mean when he said that "The Government proceeds directly from the people," and "Its powers are granted by them and are to be exercised on them and for their benefit." Are not the courts a part of the Government? If not, why not? Shall only the executive and legislative departments be responsive to the will of the people? Should the judicial department nullify the will of the people and render our republican government a sham and a pretense?

Is the Federal Government, helpless and imposent to act in a

Is the Federal Government helpless and impotent to act in a great national emergency? The Selective Service, Espionage, War Industries Board, Food Administration, Control of Railroads, Industrial Mobilization Acts passed by Congress during the World War and upheld by the United States Supreme Court furnish the negative answer. Justice Brandeis in the more recent case of the New State Ice Co. v. Leibmann (285 U. S. 262; 76 L. Ed. 769) has correctly said: "The people of the United States are now confronted with an

said: "The people of the United States are now confronted with an emergency more serious than war."

Henry Upson Sims, one of the leaders of the American bar, and president of the American Bar Association in 1929–30, has well said: "It is gratifying to realize that there have been statesmen enough among the judiciary of this country to prevent the legal framework of the Constitution, which the early political statesmen drew for us, from being laid aside like the garments of childhood. The courts of the early days of our history may not have foreseen the proportions of the present industrial and commercial age. Of course, Marshall did not see it. But they did see that the constitutional provisions are rules of social order rather than mere laws to be interpreted in the light of the limited environment of the be interpreted in the light of the limited environment of the draughtsman."

In its classical decision in Gibbons v. Ogden (1824), the Supreme Court inaugurated its interpretation of the so-called commerce clause of the Constitution and held that Congresses possess the right to regulate commerce and navigation, domestic and foreign—gave Congress exclusive power over interstate commerce—and yet almost 100 years elapsed before Congress passed the Interstate Commerce Act. Equally remarkable is it that the general welfare clause did not receive judicial construction until 1896

In a decision rendered by the Supreme Court more than 50 years later, 1877, Pensacola Telegraph Co. v. Western Telegraph Co., it is said that: "The powers thus granted are not confirmed to the instrumentalities of commerce or the Postal System known or in use when the Constitution was adopted but they keep pace with the progress of the country and adapt themselves to the new developments of times and circumstances. They extend from the horse with its rider to the stagecoach, from the sailing vessel to the steamboat, from the coach and the steamboat to the relivence of the reliv

boat to the railroad, and from the railroad to the telegraph."

And we may now add, to the airship, the radio, as well as to any future means of transportation and communication.

any future means of transportation and communication.

The meaning of the power to regulate commerce must keep pace with the development of modern conditions, for with changes in conditions the meaning of words change, and this also necessarily reflects itself in the process of interpretation.

Thus W. B. Munro, in The Government of the United States (Macmillan, New York, 1930, p. 311), speaking of the commerce clause, says that the elasticity of the written word finds more ample illustration here than in any other field of American constitutional development; that a definition of the commerce power today would

be out of date tomorrow, and an exact definition cannot be given of anything that changes its form and scope so frequently as the commerce power does.

Speaking of the Constitution, Mr. Justice Story said: "It is not

Speaking of the Constitution, Mr. Justice Story said: "It is not intended to provide merely for the emergencies of a few years, but was to endure through a long lapse of ages, the events of which were locked up in the inscrutable purposes of Providence."

In the case of South Carolina v. United States (199 U. S. 448) Mr. Justice Brewer said in delivering the opinion of the Court: "The Constitution is a written instrument. As such its meaning does not alter. That which it meant when adopted it means now. Being a grant of powers to a government, its language is general, and as changes come in social and political life it embraces in its grasp all new conditions which are within the scope of the powers in terms conferred. In other words, while its powers granted do not change, they apply from generation to generation to all things to which they are in their nature applicable."

Cooley says: "The principles of republican government are not a set of inflexible rules, vital and active in the Constitution, though unexpressed, but they are subject to variation and modification from

unexpressed, but they are subject to variation and modification from motives of policy and public necessity."

I believe that those who are inveighing against the constitutionality of the series of acts of Congress designed to aid the people and the country in the present national emergency would do people and the country in the present national emergency would do well to read and ponder the address of Hon. John J. Parker, judge of the United States Circuit Court of Appeals for the Fourth Circuit, delivered in 1933 before the annual convention of the American Bar Association at Grand Rapids, Mich. It should be noted that not so many years ago Judge Parker's nomination for appointment to the United States Supreme Court was rejected by the United States Senate on account of his alleged conservatism. I would like to read just two paragraphs from the masterful address of this learned turist and student of constitutional law. His logic and

like to read just two paragraphs from the masterful address of this learned jurist and student of constitutional law. His logic and reasoning seem to me to be unanswerable. Judge Parker said:

"It is no sign of the abandonment of our constitutional theory that the activities of the Federal Government should have increased greatly with the passage of time; for this increase has been in accord with the Constitution and not contrary to it. The Federal Government must necessarily control interstate and foreign commerce; and it is manifest that the scope of this control must have been enlarged as interstate and foreign commerce became more and more important with the development of transportation and interstate communication. The Sherman Act passed in 1890 was no more important with the development of transportation and interstate communication. The Sherman Act passed in 1890 was no departure from constitutional theory, but arose out of the necessity of curbing monopolies, which were growing up in interstate commerce and the realization that because of the control vested in Congress over such commerce, the States were powerless to deal with the problem. The same was true of the Clayton Act and the acts creating the Federal Trade Commission and the Interstate Commerce Commission. For this reason I am not excited over the passage of acts further regulating interstate commerce. Certainly, if Congress may legislate for the purpose of preserving free competition, it may, when this free competition is on the verge of destroying industry itself, legislate to eliminate its destructive features and in the interest of controlled cooperation.

"And I have the same feeling about increased activities of the Government under the general-welfare clause. The people of the United States constitute a great nation. There is no reason why their National Government should not foster the healthy growth and development of that National Development of the National Constitution. their National Government should not foster the healthy growth and development of that Nation by encouragement to agriculture, industry, education, road building, and other activities essential to the natural welfare; and in time of national distress, when the industry of the country is prostrate as a result in large measure of the collapse of interstate and foreign commerce, there is nothing in

the collapse of interstate and foreign commerce, there is nothing in our constitutional theory which prevents the National Government using its powers for the relief of suffering and to place industry again on its feet. It is the only agency which the people have of sufficient size and power to approach the problem presented with any hope of success, and I see no reason why it should be precluded from exercising the power."

Thus we find that the people possess plenary power under the Constitution and that such power was to be enjoyed by them for all time. The Constitution was made for the people, not the people for the Constitution. Further evidence of this is found in the fact that ours is a republican form of government.

Our forefathers discarded the old Articles of Confederation and adopted the Constitution during a time of extreme distress and emergency. The whole document, indeed, was not so much a declaration of faith as of fears, for it was put together in an atmosphere of restlessness—at a time when business conditions in the Thirteen States were about as bad as they could be. "Independence had been gained by war, but not prosperity," says W. B. Munro in the Makers of the Unwritten Constitution.

The conditions of the Colonies are hard to realize in our day.

The conditions of the Colonies are hard to realize in our day.

Mr. Lawson has referred to them in his exhaustive work on the
general welfare clause. I quote: "Dark as was the foreign outlook for America, her domestic situation was worse. Mutual jealousy and antagonism dictated the policy of the States toward each
other. Commercial rivalries and unfriendly imposts irritated the
feelings of all. They quarreled over their lands, over payment of
their debts, and over the apportionment of expense. All Government was threatened with dissolution."

It was imperative to adopt the Constitution to prevent national anarchy, Washington declared. He said, "We are descending into the vale of confusion and darkness. The confederation appears to me to be little more than a shadow and Congress a nugatory body. To me, it is a solecism in politics—that we should confederate as a Nation and yet be afraid to give the rulers of the Nation who are

the creatures of our own making-sufficient powers to order and

direct the affairs of same."

In a letter to Carter he wrote that it was his "decided opinion that there is no alternative between the adoption of it (the Con-

that there is no alternative between the adoption of it (the Concommerce power does.

The wings of Washington's wrath carried him far.

"Good God," cried he, "who, besides a Tory, could have foreseen, or a Briton predicted," the things that were going on. "The disorders which have arisen in these States, the present prospect of our affairs * * * seems to me to be like the vision of a dream. My mind can scarcely realize it as a thing in actual existence * * *. There are combustibles in every State, which a spark might set fire to." (Washington to Knox, December 26, 1786.)

In other words, the Constitution is not a fair-weather state

spark might set fire to." (Washington to Knox, December 26, 1786.)

In other words, the Constitution is not a fair-weather state paper, intended only for days of sunshine and calm. It came into being during the days of adversity and distress, of panic and storm, of darkness and despair, a period not at all unlike that in which we are living today. Yet there are those who would contend that that same Constitution is an absolute harrier to a that in which we are living today. Yet there are those who would contend that that same Constitution is an absolute barrier to a fulfillment of the people's needs and desires, that Congress is a "nugatory body" and does not possess "sufficient powers to order and direct the affairs of the Nation," and that we must look almost exclusively to the State governments to restore commerce, industry, and agriculture in these United States, and that the Constitution forbids the Federal Government to do so.

It is rather within the power of Congress to act in accordance with State Bank v. Haskell (219 U. S. 111) as "held by the prevailing morality or strong and preponderant opinion to be greatly and immediately necessary to the public welfare."

Let it be said to the everlasting credit and honor of the members of the United States Supreme Court, as again indicated in their recent decisions, that they have taken this latter view of the Constitution and have seldom nullified Federal legislation which was meritorious and needed to meet the demands of the national emergency. There are mirrored in their decisions the

which was meritorious and needed to meet the demands of the national emergency. There are mirrored in their decisions the ever-changing and progressing economic and social conditions of the American people. Our republican form of government would become a mere fiction today if the constitutional obstructionists had their way, but they will not. The Supreme Court has never construed the Constitution to consist merely of dead letters of faded ink upon a crumbling parchment. On the contrary, they have, by their decisions, rendered the charter of our fundamental laws a living, breathing, vital, growing document, with a soul and a spirit, expressing eloquently the hopes, the desires, the aspirations, the longings, the yearnings of the great heart of America for truth, for justice, for progress, for the welfare and the happiness of all her children.

The Economic Problem as I See It

EXTENSION OF REMARKS

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

ARTICLE BY THORWALD SIEGFRIED

Mr. VOORHIS of California. Mr. Speaker, the following analysis of our economic problem should prove as stimulating to other Members who will take the trouble to read it as it has to me. It is for that reason that I ask leave to insert it:

THE ECONOMIC PROBLEM AS I SEE IT (By Thorwald Siegfried)

The economic problem relates itself ultimately to useful goods and what they have to others who can supply something else in return. Balanced exchange is lacking. That is the end product, the result. Most economic discussion at this time consists merely in enumeratable. ing and describing particular instances where this general result appears actively.

Under the surface of experiences that illustrate unbalance, unem-

Order the surface of experiences that inustrate unbalance, unemployment, poverty, there are processes at work, erroneous processes of which bad effects are the symptoms. A major question in tracing the problem is whether the symptoms (effects) or the processes (causes) are the seat of the difficulty. A decision on this point will indicate the kind of effort we will make for reform and where it will be capited. be applied.

Plainly, most efforts to solve the economic dilemma have been pplied to the symptoms. That is why they fail, however well

intended.

In a population of great industry and technical skill, with an abundance of raw materials at hand, a dearth of goods may occur, but only through external or artificial means. Disasters, like earthquakes and droughts; foolishness, like war; ignorance, like that of the child who still thinks that twice 2 may make 9 or 11—these may frustrate the bounties of nature.

The dearth we now experience, however, arises not in the field of productive effort. The goods are produced but they cannot be distributed fully. More can be produced, but less and less of the increase can be distributed. That fact is also an effect, rather than a cause, although it also produces other effects. Even though

than a cause, although it also produces other enects. Even though it is but a symptom, it serves to localize the problem in the distribution and exchange field.

At this point students may agree easily that money is the pivotal factor in distribution and exchange and that monetary defects constitute the key to the problem, but they may and do differ widely on the next steps in the analysis.

differ widely on the next steps in the analysis.

We see now that during the 1928-29 boom, society was carrying perhaps 5,000,000 unemployed whom it had not discovered as a mass problem. During that time, while these people had too little money, there was too much money in Wall Street and in the banks. The banks had their own to lend, and also were lending "for the account of others"—private corporations. Moreover, figures show that a redistribution of the excesses of concentrated funds, by division among the poor, would have yielded too little to make much difference. The process of which concentrations are the result, rather than the concentrations themselves, is the problem. problem.

What is that process?

What is that process?
History, common sense, and science show that when a dollar is spent in making marketable goods, that dollar is available as purchasing power to buy other goods. Conversely, the dollar spent for making the other goods is in the market to buy the item first mentioned. Each can be sold for the other; money is the middle factor, through which the producers can trade their goods, even though they do not know one another and though the goods are valued in odd and different figures rather than in even dollars. When every dollar spent in making and marketing useful goods is matched by the existence of a dollar of money there is an obvious market balance, and all goods can be moved at some price, some making profits, some making losses. If there are fewer money dollars than goods offered for sale—the goods will have some difficult to match the goods offered for sale—the goods will have some diffi-

dollars than goods dollars in the market—that is, too few dollars to match the goods offered for sale—the goods will have some difficulty in finding customers; that difficulty will be roughly proportional to the degree of disparity, and the prices of goods will fall accordingly. Thus in a market with two units of goods for every unit of money we might reasonably expect to find it twice as hard to sell the goods and to see the prices of goods fall to one-half of their costs. Production would slow down and unemployment would follow. That was the process of the poverty and unemployment of the years prior to 1909. Wealth and miserliness were somewhat synonymous. synonymous.

A market that has in it more money dollars than goods dollars that is, too many dollars to match the goods offered for sale—has about the same result so far as poverty and unemployment are concerned. They arrive by slightly different channels. With two units of money for every unit of goods we might find it twice as easy to sell the goods for just a moment only, and prices might double. If the excess money were distributed evenly among producers—that is, if wages doubled—prices might double without injury to anyone. Whether wages are 1 cent or \$10 a day is important only when we know whether goods are priced at 1 cent or \$10 per unit. But if the excess money is issued only to a minority—and, worse still, to a minority who are not producers—prices will still rise, but the producers, who are the vast majority, will not be able to pay them. The goods will become even more difficult to sell than they were when dollars were too few; poverty will be more acute and more desperate; unemployment will engulf us. Extravagance will then be the earmark of wealth and of government. The extravagance will arise from necessity, as did the miserliness before 1909. that is, too many dollars to match the goods offered for sale—has

extravagance will arise from necessity, as did the miserliness before 1909.

If we can imagine a condition where every person had a chest full of gold and silver dollars which he could use only for the expense of making useful goods, and which would automatically disappear back into the chest when the goods had been traded for other goods, the blockage of exchange would not exist as it does. When the goods disappeared from the market, through consumption, the money would also disappear into the chest.

We have too little gold and silver to carry on the Nation's business, and bank credit has become the real money of commerce. In fact, we must overlook and forget metal and paper money before we can understand the functions of modern exchange. The ledgers of the banks are the equivalent of the chest we have imagined; figures written on these ledgers are the keys that unlock the chest for producers; when these figures are erased, crossed off, balanced, the credit dollars disappear into the vacuity from which they issued. All the checks issued today will be canceled tomorrow.

We all know that the credit chest exists in the banks. We know that it does not issue credit to producers in balance with their costs of production. To some it issues too little; it starves them. To others, mainly speculators, it issues too much. Before 1909 it issued too much to all. The excess that it issued, above the costs of producing goods, could not be redeemed, and it remained

issued too nuch to all; beginning then and culminating in 1928-29 it issued too much to all. The excess that it issued, above the costs of producing goods, could not be redeemed, and it remained over from year to year as debt. The accumulated debt of two decades of mistaken finance bore us down in 1929. The process of accumulation did not cease then, but goes steadily forward. This is the problem.

When the problem is clearly seen, its cure will also become apparent. By the law of common arithmetic we must see to it that the credit chest of banks issues its dollars only to producers for their expenses. If because of bad habits we have formed we find it impossible to stop issuing excessive credit dollars by banks or

Government, we can recapture them when they cease to buy goods. It is the same alphabet whether it is spelled from A to Z or from Z to A.

Neutrality

EXTENSION OF REMARKS

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

Mr. ANDERSON of Missouri. Mr. Speaker, just a little over 22 years ago in this very Chamber the United States was plunged into the World War. Few, indeed, are the men here today who were here then. But here today there are many of us who fought and bled on the fields of a foreign land in that war. We were not here when the last war was declaredwe were adventurous, patriotic youngsters standing in line waiting to enlist in the armed forces of our country, believing that our cause was holy and war a great adventure. Our minds matured with intoxicating swiftness when we lined up in the trenches of a foreign land.

In the Congress of 1917 there were few men who knew from experience the real meaning of war. True, some had seen service in the Spanish-American War, but modern war was yet unknown. In the Congress of today there are scores of us who have come face to face with all the forces of modern war and bear the scars of battle. We know—as no one else can know—what war really is. Our minds cannot expel the imprint of its fury; our ears cannot be closed to the dying prayers of our brothers in arms; and our eyes can never be dimmed to the sight of falling men and mangled flesh. That is why I believe that the Congress of today is our greatest guaranty of peace. That is why I believe that Congress will halt any attempt by overzealous statesmen to project this Nation into another foreign war.

Let not my remarks be taken to mean that the veterans are afraid or unwilling to shoulder arms in defense of our beloved country. We would be the first to strike the enemy if our Nation were attacked, but we will have no part in sending the youth of America to fight Europe's battles as

the Congress of 1917 sent us.

This is not just another patriotic or political "sound-off," but a deeply rooted and sincere presentation of my opinion as a war veteran, as a Member of Congress, as the father of a family, and as an American. Let me preface my remarks on neutrality by saying so that all can understand that I believe the United States should have the most efficient, the most powerful, and the most invincible machinery of defense in the world. We have the means, we have the ingenuity, and we have the greatest right on earth to make our Nation impregnable against all aggressors. No pricenot even life itself-is too high to pay for democracy and freedom, in America.

The situation that confronts us today is similar in many respects to our situation prior to the World War. The same cries are being raised; the same kind of propaganda is being poured out; and the same issues are being raised, namely that only by America's entry into another war can democracy be saved. But there is one difference in the situation today that every sane person, from the President down to the humblest laborer, should not forget, and that is the lesson of the World War. Are we expected to forget that we were goaded into that holocaust by propaganda establishing the belief that we were fighting "a war to end all wars" and a war to bring everlasting peace and democracy to Europe? What has been the result? There have been several great wars since that time, and the imminent danger of the greatest of all wars breaking loose at any moment is now upon us. Democracy is at a lower tide today than at any time in the last hundred years. The bill for our services in saving Europe in the last war stands unpaid and repudiated, and once more America is on the verge of being used as the tool of Britain and France in a predicament that is largely of their own making. Remember, England and France, who managed to survive the World War on the strength of our aid, have put forth no greater effort than the vanquished enemy, in repaying their debt to our Nation. And by debt let us not think only in terms of dollars, but let us remember the thousands upon thousands of American boys who died and are yet dying as a result of our determination to fight for Britain and France in 1917. The wounds of that war bleed still and besmirch our economic and social structure to this day with the gore and grime of war. How awkward; how ridiculous; how ashamed must Britain and France feel in pleading again for our help while their debt to us for past services stands in dishonor and repudiation.

While I have the greatest affection for Great Britain and France as great democratic nations, and while I realize that the strength of our arms might insure them victory on the battlefield, yet my affection and my love for America is greater. Ours is a task of self-preservation. Ours is the battle to retain democracy here in America. Our entrance into a foreign war might save what they are wont to call democracy in Europe, but it would augur the end of democracy as we know it and cherish it here. There are several reasons why this is true.

The first is we cannot afford a war. Our national debt approaches \$45,000,000,000. When we entered the World War our debt was less than \$5,000,000,000. That war cost us in the neighborhood of forty billions and a war today would cost twice that figure. In 1917 we had no serious problem of unemployment; we did not have 12,000,000 people living on the bounty of the Federal Government by means of various forms of relief; every channel of taxation had not then been explored and put to use; and we did not have thousands upon thousands of maimed and crippled veterans to be hospitalized and pensioned as we do today.

Our financial problem is already of the gravest concern. Perhaps we might manage somehow to finance a war, but the pay-off would come at the expense of our liberty and freedom. The great masses of our people would face as never before the impoverishment of unbearable taxation. Our standards of living would soon give way before the flood and you can believe me, the American people are unwilling to make this sacrifice unless it be necessary to protect and defend their own nation and their own homes.

Whether this Nation can remain free of the impending struggle in Europe depends largely upon our ability to think clearly as a nation and upon our capacity to properly evaluate and check the vast surge of propaganda that is being loosened from every side. We must be careful not to be taunted into the arena of combat, for already the old but well-oiled propaganda mills are beginning to roll. Much space and comment was given to a Canadian member of Parliament who recently said that the United States ought to be willing to go to the front for England without hesitation, because, he says, we have been able to build up our democracy and retain it on the strength of Britain's mighty Navy and prowess in arms. About the same time there comes a story of an Englishman in Commons who holds United States responsible for the victory marches of the dictators because we have thus far indicated our unwillingness to fight another war in Europe. Such utterances can be little more than well-planned propaganda calculated to arouse public spirit to a point where we will be taunted into saying, "Who's afraid of the dictators? We'll show them."

This type of subtle propaganda is augmented by overemphasizing certain incidents that transpire in the so-called dictator nations, by sensational and fantastic but unreal stories of European threats to America, and by falsely coloring the effects of American commerce and trade with the undemocratic nations.

As Americans, we should be the first to accord to other peoples the right to govern themselves as they see fit. We first exercised our belief in this right in the Revolution that gave birth to our Nation, and we have been vigilant always in our insistance upon respect for that right. Naturally,

we who love and cherish democracy and who are willing to die for its preservation, can neither accept nor approve fascism, nazi-ism, communism, or any other form of dictatorship. But we must accept and recognize the right of other nations to espouse such types of government if they so desire. We who represent democracy at its best are bound by its creed to recognize in other nations their right to whatever form of government they choose to follow or tolerate. On the other hand, we owe it to ourselves and to the world to show our positive unwillingness to permit the spread of un-American propaganda and activities in the United States. We cannot but feel a righteous resentment of such things as the Nazi bund and Fascist societies here in America. There is no place for them here and thanks to the Dies committee, they are being exposed to public gaze in which they cannot long survive. Let it be said here that the Communist is and ought to be held in the same degree of disfavor as the Nazi and the Fascist; as an enemy of democracy he is just as deadly. I know not what line of thought produces an appreciation of the Communist as a democrat; or Russia, the cradle of communism, a democracy. But for myself, I prefer to class the Communist along with the Nazi and the Fascist as a real enemy of democracy. Therefore, it is clear that our relationships with all nations will be more conducive to lasting and permanent peace if we recognize the right of other nations to governments of their own choosing, but at the same time letting them know that their beliefs have no place in America and that any attempt to force them upon us can meet only with the most drastic consequences.

Let it always be remembered that we have every desire to remain at peace with all nations. We have every reason to desire friendly relations with Germany and Italy as with any other nation. But let them remember that the price of our friendship and good will is full and complete respect for our rights and ideals and what we as a nation stand for. Let it be forever known that any attempt to make inroads upon this Nation or in the Western Hemisphere can mean just one thing—war.

There is another safeguard against our entry into a foreign war that is worthy of our attention. The people generally are aware of the vast profits that accrued to certain classes from the last war and they are aware that nothing has been done to prevent a recurrence of such outrages in the event of another war. Taking a cross section of American thought today, I believe we are correct in concluding that the overwhelming sentiment of the people is not only against our entry into a foreign war, but equally opposed to the entanglement of the United States in foreign disturbances through alliances or promises. In other words, America today has been educated to know and realize the utter futility of our participation in the eternal strife of Europe. Those who doubt that this is true will soon reap the harvest of their folly if, by their lack of respect for public opinion, we become embroiled in the wranglings of foreign nations.

Having in mind our firm desire to remain free of both foreign wars and foreign entanglements of all kinds let us ask ourselves what can best be done to protect our continued neutrality.

I am convinced that we must not scrap our Neutrality Act as some suggest. I am convinced that this act has done much to keep our hands out of the fire and should not only be retained but broadened in scope. Some contend that our Neutrality Act works to the advantage of dictators. But let us remember that our concern is, How can the United States stay out of war? One good way is to mind our own business in every war that does not concern us just as we were able to do in Spain because we had the Neutrality Act. That war has come to an end and we have no quarrel with anyone and there is no ill feeling against us from any quarter and we can look forward to our relationship with the new Spanish Government with confidence because we maintained an absolute neutrality. What could we have gained by selling arms and munitions to the participants in the Spanish struggle? A few dollars perhaps for the munitions makers at the cost of a decade of ill feeling and misunderstanding. Because we had the Neutrality Act we were able to maintain a hands-off

policy for which we can be thankful.

At this juncture I should like to consider for a moment the much-talked-of cash-and-carry policy with regard to the sale of munitions and implements of war. Offhand it sounds plausible, but let us realize that it can work just as well for the aggressor as it can for the defender. I ask you, How would it affect Japan, and do we look upon her as an aggressor? In these days when machines of war travel from continent to continent and ocean to ocean in a few hours it is possible that our sale of munitions to belligerent nations, even though they transport their own purchases, might make our factories the target of attack from the air as military objectives and involve us thereby in a war that wisdom and foresight might well have averted. Let us use American arms and American munitions to defend America only. The profit that might accrue to the munitions makers from sales to belligerents is certainly not worth the risk of war. path of neutrality opens out into the broad highway of peace.

Another primary consideration is America's policy with regard to our investments abroad. How far will we, or how far should we go, to protect these investments? To me the answer is plain. We ought to accord every protection to our foreign investments that is consistent with our firm resolution to remain free of all foreign war. All the billions of American dollars that might be invested abroad are not worth the blood of one single American boy. I have always believed that those who elect to invest their money or efforts abroad should be willing to accept the risks of the venture. They have no right to expect such investments to be protected to the extent of asking the Nation to make the supreme sacrifice of war. The Nation's neutrality and the lives of hundreds of thousands of its citizens are far more important than the foreign investments of a few individuals and corporations.

The concluding consideration is our national defense. I repeat again, let us spend our money in making this Nation absolutely impregnable. Let us put our money into the most powerful defensive Army and Navy in the world. But let us not reduce the efficiency of our defense and the worth of our dollars by building an Army and Navy to operate throughout the world. We have no right, and our people have no desire, to police the world. But they do demand, and have a right to insist upon, a defense machine that is invincible. It is within our power and within the duty of our office to follow such a program.

Seven-Year Report, Reconstruction Finance Corporation

EXTENSION OF REMARKS OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES Monday, April 24, 1939

REPORT FROM FEBRUARY 2, 1932, TO FEBRUARY 2, 1939

Mr. SHEPPARD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the complete 7-year report of the Reconstruction Finance Corporation.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

RECONSTRUCTION FINANCE CORPORATION 7-YEAR REPORT TO THE PRESIDENT AND THE CONGRESS OF THE UNITED STATES RECONSTRUCTION FINANCE CORPORATION,

Washington, February 2, 1939.

Washington, February 2, 1939.

To the President and the Congress:

I give you a summary of R. F. C. activities since its organization February 2, 1932, 7 years ago.

In addition to the original purposes of the Corporation and the many amendments to the act from time to time which have expanded the scope of its direct operations, our activities have also been carried on through: Commodity Credit Corporation, organized October 17, 1933; The RFC Mortgage Company,

organized March 14, 1935; Federal National Mortgage Association, organized February 10, 1938; Electric Home and Farm Authority, organized August 1, 1935; Disaster Loan Corporation, organized February 15, 1937.

Total R. F. C. authorizations have been \$13,206,639,807. Of this

amount, \$2,900,601,066 was by direction of Congress in which our directors had no discretion.

February 1938 we asked Congress to direct the Secretary Treasury to cancel our notes given to the Treasury for disbursements which were in effect appropriations by Congress made through the R. F. C. and for which the R. F. C. received no benefit The act was approved February 24, 1938, and our notes aggregating \$2,699,236,946 have been canceled. This includes \$282,825,767 of The act was approved February 24, 1938, and our notes aggregating \$2,699,236,946 have been canceled. This includes \$282,825,767 of the \$299,984,999 advanced to States, political subdivisions, and Puerto Rico for relief under the Emergency Relief and Construction Act of 1932, \$17,159,232 of these advances having been repaid; \$1,499,999,010 advanced for relief in 1933, 1934, and 1935 by direction of Congress; \$863,234,749 in connection with advances to and purchase of stock of other governmental agencies; and \$33,-177,420 interest paid the Treasury on money borrowed to make these disbursements. Approximately \$850,000,000 of this amount, exclusive of the interest paid the Treasury, is now carried by the Treasury and other agencies in the form of capital stock of governmental corporations, or other obligations, or has been converted into cash. No debt due the R. F. C. was canceled.

Authorizations for which our Directors have responsibility aggregate \$10,306,038,741. Of this amount, \$2,293,568,866 was withdrawn or canceled, either the purposes for which the authorizations were made were not carried into effect or the applicants found they did not need the money; \$7,243,873,197 has been disbursed and \$5,-372,565,029, or 74 percent, repaid; \$768,596,678 remains available to the borrowers or for the purposes for which the authorizations were made.

Attached is a breakdown of R. F. C. authorizations, cancelations, disbursements, repayments, and other credits, and balances outstanding; also financial statements of the several agencies. A condensed summary follows:

Loans and other aid to agriculture Loans to banks Preferred stock, capital notes, and debentures of banks Closed bank loans Drainage, levee, and irrigation loans Self-liquidating loans Railroad loans Loans to business and industry Mortgage loans Loans to insurance companies Loans to building and loan associations
Loans to banks Preferred stock, capital notes, and debentures of banks Closed bank loans Drainage, levee, and irrigation loans Self-liquidating loans Railroad loans Loans to business and industry Mortgage loans Loans to insurance companies Loans to building and loan associations

LOANS AND OTHER AID TO AGRICULTURE

Agriculture in one way or another has been accorded loan author-

Agriculture in one way or another has been accorded loan authorizations and allocations of \$3,101,673,840.

Of this, \$399,636,000 was to Federal land banks, \$29,035,359 to joint-stock land banks, \$9,250,000 to Federal intermediate credit banks, and \$199,072,648 to livestock and agricultural credit corporations to provide funds to meet the needs of farmers and stockmen. Twenty-three million five hundred thousands dollars was authorized to the Secretary of Agriculture to acquire cotton pursuant to the Agricultural Adjustment Act, but only \$3,300,000 of this was used. of this was used.

One billion eight hundred forty million seven hundred seventy-four thousand one hundred and seventy-eight dollars was for loans four thousand one hundred and seventy-eight dollars was for loans through Commodity Credit Corporation and other agricultural agencies to producers of cotton, corn, wheat, tobacco, turpentine, resin, wool, mohair, hops, figs, dates, raisins, prunes, peanuts, butter, and pecans in 39 States.

Cotton loans were made in Alabama, Arizona, Arkansas, California, Florida, Georgia, Louisiana, Mississippi, Missouri, New Mexico, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia.

Corn loans were made in Colorado, Illinois, Indiana, Iowa, Kansas,

Corn loans were made in Colorado, Illinois, Indiana, Iowa, Kansas, Kentucky, Minnesota, Missouri, Nebraska, Ohio, Pennsylvania, South Dakota, and Wisconsin.

Wheat loans were made in Arkansas, California, Colorado, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Montana, Nebraska, New York, New Mexico, North Dakota, Ohio, Oklahoma, Oregon, South Dakota, Tennessee, Texas, Utah, Virginia, Washington, Wisconsin, and Wyoming.

Tobacco loans were made in Kentucky, Tennessee, Virginia, and

Wisconsin.

Turpentine and resin loans were made in Alabama, Georgia, Florida, Louisiana, Mississippi, and South Carolina.

Wool and mohair loans were made in California, Colorado, Idaho,

Indiana, Iowa, Kentucky, Massachusetts, Minnesota, Missouri, New Mexico, North Dakota, Oregon, Pennsylvania, Texas, Utah, Wiscon-

sin, and Wyoming.

Loans on figs, dates, raisins and prunes were made in California; on hops in Washington; and on pecans in Georgia.

Peanut loans were made in Alabama, Florida, Georgia, North Carolina, South Carolina, Texas, and Virginia.

Loans were made to cooperative associations on butter produced in California, Illinois, Michigan, Minnesota, Missouri, Nebraska, New Jersey, New York, Ohio, Oregon, Pennsylvania, and Washington; \$83,370,955 was authorized to finance the exportation of some of these commodities; \$115,000,000 was allocated to the Secretary of Agriculture for crop loans; \$40,500,000 was allocated to the Governor of the Farm Credit Administration and used in part to provide capital of the Production Credit Corporations; \$61,934,700 was allocated for the capital and expenses of the Regional Agricultural Credit Corporations and \$97,000,000 for the capital of the Commodity Credit Corporation. Of \$202,600,000 originally allocated to the Farm Credit Administration for loans to farmers and to Joint-stock land banks, \$200,000,000 was reallocated and used to provide the capital of the Federal Farm Mortgage Corporation. These items were by direction of Congress and their outstanding balitems were by direction of Congress and their outstanding bal-ances were included in the items for which our notes were canceled in accordance with the act of Congress approved February 24. 1938.

LOANS TO BANKS

Loans were authorized in the aggregate amount of \$1,334,744,454 to 5,816 going banks, principally in 1932 and 1933; \$196,378,317 of this amount was not used; \$1,138,217,337 was used; and 39 percent has been repaid. The purpose of these loans was to enable banks to meet the abnormal demands of depositors, occasioned by the Nation-wide depression and consequent fear by depositors for the safety of their funds. Notwithstanding these loans, made to aid these banks, 2,128 of them failed after receiving the loans, but 3,688 were enabled to continue, thereby saving millions of depositors and stockholders from loss and inconvenience.

Because of the widespread interest in the \$90,000,000 loan to the Central Republic Bank & Trust Co., Chicago, in June 1932, I give the following information regarding its present status:

Repayments, including interest, have been \$62,383,207, and the receiver of the bank has on hand \$7,300,000 collected from stockholders' assessments. This will be paid over when the judgment of the lower court fixing the assessments has been confirmed. (Since the date of this report the circuit court of appeals handed down an opinion confirming the judgment of the lower court.)

The estimated value of the unliquidated collateral appears to be about \$15,000,000. So, assuming that the stockholders' assessments are effective and the remaining collateral is worth this estimated figure, our loss will be in the neighborhood of \$5,000,000, in addition to interest and the expense of handling the loan.

PREFERRED STOCK, CAPITAL NOTES, AND DEBENTURES OF BANKS

Banks needed capital more than loans in 1932 and 1933. Loans had the effect of preferring depositors, because as long as banks were able to they paid their depositors, first come, first served. They borrowed as long as they could hoping to avoid failure.

By the R. F. C. furnishing banks with capital, depositors were, in large measure, insured, no depositor being preferred over another. In many cases depositors voluntarily permitted a part of their deposits to be used in recapitalizing or reestablishing banks after they were closed. In some instances large depositors took more of the burden on themselves by permitting their deposits to be used for that purpose, so that the smaller depositors might be naid first. paid first.

Our bank capital program was in operation prior to the creation of the Federal Deposit Insurance Corporation, and the announcement that the R. F. C. had agreed to supply banks with

nouncement that the R. F. C. had agreed to supply banks with capital stopped or prevented many bank runs.

We were given authority to buy preferred stock, capital notes, and debentures in banks, and to make loans upon preferred stock in banks, by an act of Congress, approved March 9, 1933. We agreed to put capital in 6,853 banks in the aggregate amount of \$1,349,234,714. Seven hundred and fourteen of these banks did not take the capital, finding they could get along without it, but our agreement to furnish the capital enabled them to carry on with confidence. Our actual investments in bank capital, except for \$47,500,000 invested in the preferred stock of export-import banks, have been \$1,099,090,662. Approximately 51 percent has been retired. retired

have been \$1,099,090,662. Approximately 51 percent has been retired.

The terms on which this capital is invested contemplate that it will be retired out of approximately, but something less than, one-half of the net earnings of the bank after dividends or interest on our capital, but not more than 5½ percent of the original investment is required to be placed in the retirement fund in any one year. This will be increased to 5¾ percent for the year 1940 and 6 percent thereafter, provided the percentage of the bank's earnings, on the basis above indicated, is sufficient for these amounts to be placed in the retirement fund. However, at the option of the bank, R. F. C. capital may be retired earlier if permission is obtained from the supervising authorities. Twelve hundred and eighty banks have retired all of their R. F. C. capital and 3,088 banks a part of it. Eighty-four percent of all banks in which we still have capital are current in interest or dividend payments. To save so many banks in such a short period through putting new capital in them, in the manner authorized by law, required not only extraordinary effort, but necessarily some risk to the capital invested. We were greatly aided in this work by the various bank supervising authorities. Of the 6,120 banks in which we have invested capital, only 206 have since been closed. We will probably recover our entire investment in 49 of these and the loss in the remaining 157 will not be relatively large. Other losses may occur, but, treated as a class, our bank capital investments

should entail no net loss. Dividends and interest collected in excess of the cost of money to the Corporation should cover the individual losses. During the year ending February 1, 1939, we authorized \$29,448,625 new capital in 60 banks.

Assisting banks through providing them with capital was reassuring to depositors. Without this assistance a great many more

would have closed.

CLOSED-BANK LOANS

In the original R. F. C. Act, we were limited to \$200,000,000 for loans to closed banks or banks in process of liquidation, but, because of the great number of banks that had failed, our law was

because of the great number of banks that had falled, our law was further amended June 14, 1933, removing the limit.

Loans have been authorized for distribution to depositors in 2,773 closed banks in the aggregate amount of \$1,331,814,759; \$327,511,981 of this was not used; \$983,701,788 has been used and 93 percent repaid. A good many million depositors benefited from these loans. Depositors upon the average have received approximately \$5 percent of their deposits in closed banks.

mately 65 percent of their deposits in closed banks.

Stockholders in closed banks suffered much worse in proportion to their investment; usually they lost their entire investment, and in many cases were subject to assessments for an equal

amount.

DRAINAGE, LEVEE, AND IRRIGATION LOANS

During the decade prior to the depression, laws were passed in many States providing for the creation of drainage, levee, and irrigation districts with authority to issue bonds. Many such projects were promoted that found the taxes and water charges much greater than the farmers could pay. On May 12, 1933, Congress authorized us to make loans to these districts to enable

Congress authorized us to make loans to these districts to enable them to reduce and refinance their outstanding indebtedness.

We have authorized loans to 632 such districts in the amount of \$142,845,995, of which \$20,480,759 was not used. Eighty-five million six hundred thousand four hundred and thirty-three dollars has been disbursed and the balance remains available to the

borrowers

borrowers.

The holders of the old bonds have received an average of 48 percent for their bonds. By this reduction of 52 percent in the amount of the bonded indebtedness of the districts, and by our giving longer time, usually 30 to 33 years, and a lower interest rate, 4 percent, the water and bond service assessments to landowners have been reduced to approximately one-third of what they previously were.

Before their reorganization, the districts were badly in default due to the fact that the charges were so heavy the landowners could not pay them. Now 99 percent of the reorganized districts are current in interest and principal payments due the Reconstruction Finance Corporation.

SELF-LIQUIDATING LOANS

Our authorizations for self-liquidating loans, including security purchases from P. W. A., have been \$954,058,325. Of this amount, \$741,744,404 has been disbursed and securities aggregating \$457,826,219 have been retired or sold at a premium of \$21,016,493 over cost. We feel there will be no net loss from the aggregate of those not yet sold.

The self-liquidating loans made by the R. F. C. made possible

the construction of many useful projects throughout the country, including a highway and railroad bridge across the Mississippi River at New Orleans for which there had long been a need; the River at New Orleans for which there had long been a need; the San Francisco-Oakland Bay Bridge (a highway and interurban railway bridge), costing \$73,000,000; and a 240-mile aqueduct, costing \$208,500,000, to carry water from the Colorado River in Arizona to southern California. This aqueduct will insure an adequate supply of water for all purposes to Los Angeles and a dozen other smaller cities in southern California, including some irrigation; \$75,056,000 of these bonds have already been sold at a substantial premium. The project was begun the early part of 1933 and will be completed in about another year. Our first authorization of \$40,000,000 was made September 13, 1932. These bonds are supported by general taxing authority, but should be retired from water charges.

We financed the construction of a power line from Boulder Dam

ater charges. We financed the construction of a power line from Boulder Dam Los Angeles, costing \$22,800,000. This line carries electric curto Los Angeles, costing \$22,800,000. This line carries electric current generated by Boulder Dam to Los Angeles, providing a market for the power and revenue for the Boulder Dam investment, also insuring fair rates to the users of electricity. These bonds have

been sold.

We authorized \$8,075,000 for the Knickerbocker Village, N. Y. we authorized \$8,075,000 for the Knickerbocker Village, N. Y., low-cost housing development; \$6,090,600 to the Middle Rio Grande Conservancy District, N. Mex., for the completion of an \$8,500,000 irrigation project; \$1,300,000 for an airport at New Orleans; \$3,400,000 for the Rip Van Winkle Bridge across the Hudson at Catskill, N. Y.; \$2,815,000 for the Niagara Frontier bridges near Buffalo; \$5,050,000 for the construction of causeways, bridges and other improvements in connection with Jones Baselo. bridges near Buffalo; \$5,050,000 for the construction of causeways, bridges, and other improvements in connection with Jones Beach State Park, Long Island, N. Y.; \$3,200,000 for the Saratoga Springs Spa, Saratoga Springs, N. Y.; \$2,430,000 to the State of Georgia for the repair of public buildings; \$3,520,000 to the State of Washington for the construction of a vehicular bridge at Puget Sound; \$2,181,000 to the city of Greenville, Miss., for a bridge across the Mississippi River; \$2,500,000 for a vehicular tunnel under the Mobile River on the Spanish Trail Highway; \$1,983,500 for a vehicular bridge over the Mississippi River at Natchez, Miss.; \$35,000,000 for the construction of a highway from Pittsburgh to Harrisburg, Pa.; \$3,000,000 to the Tennessee Valley Authority; \$5,000,000 to the Lower Colorado River Authority for the purchase of light and power plants in the vicinity of this project (the Authority expects to sell some of the units to the cities and towns in which they operate); \$6,000,000 to the cit of Knoxville to buy the Knoxville power plant from the Tennessee Public Service Co. (with our commitment it was able to get the money from private sources); \$7,900,000 to the city of Utica, N. Y., to buy its waterworks system; \$1,800,000 to Westchester County, N. Y., for a bridge; and many other smaller loans to cities and towns for the construction of bridges, waterworks, sewer systems, State and city college dormitories and other nublic projects of equal importance construction of bridges, waterworks, sewer systems, State and city college dormitories, and other public projects of equal importance to their respective communities. In addition to our loans, some of the borrowers received grants from P. W. A. It is contemplated that the revenue from the projects will liquidate the loans. Many of the bonds have already been sold at some premium.

These self-liquidating loans have provided useful public facilities and have been a great stimulus to business and employment.

RAILROAD LOANS

Of the \$1,248,348,560 loan commitments to railroads (\$200,460,500 representing securities purchased from P. W. A.), \$307,561,724 was not used, either because the purposes for which the authorizations were made were not carried into effect or because the roads, having an R. F. C. commitment, were able to get the money from private sources; \$326,773,161 has been disbursed to 82 roads; \$346,509,316 of this has been repaid, leaving a balance outstanding of \$480,-263,845 due from 50 railroads; 32 roads have repaid their loans in 263,845 due from 50 railroads; 32 roads have repaid their loans in full; 19 were placed in receivership or trusteeship after receiving loans; 3 of these are no longer indebted to the Corporation. The balance due from the remaining 16 roads in the custody of the courts aggregates \$168,565,837. Interest is being paid currently on two of these loans which aggregate \$25,825,227.

We shall have losses on some individual railroad loans, as in other classes of borrowers, but, treated as a class, there should be little, if any, net loss on railroad loans.

To be more specific in view of your interest, and that of the country generally, in the railroad situation, we have collected \$86,335,352 interest from railroad loans, and in addition to this have approximately \$15,000,000 interest accrued that we believe will be paid. The margin in interest received over the cost of money to the Government will, in our opinion, cover the individual

LOANS TO BUSINESS AND INDUSTRY

Seven thousand three hundred and seventy-nine loans have been authorized to business enterprises, aggregating \$447,324,578. Banks have agreed to take participations in the amount of \$61,492,756 in 1,661 of these loans, their participations ranging from 10 percent to 75 percent of a loan. The banks and R. F. C. share proportionately in security and repayments. Of the R. F. C. part of these loans \$86,027,903 was not used and \$144,192,699 remains available to the banks and borrowers when called for. Two thousand seven hundred and twenty of these loans, or 37 percent of the total number, have been for \$5,000 or less. (During the past 12 months 49 percent have been for \$5,000 or less.) Fifty-three percent of the loans have been for \$10,000 or less, 83 percent for \$50,000 or less.

In addition to the participations taken for their own account. Seven thousand three hundred and seventy-nine loans have been

for \$50,000 or less.

In addition to the participations taken for their own account, banks hold \$57,552,558 of these loans with a take-out agreement from the R. F. C. For the take-out agreements the R. F. C. gets a part of the interest paid by the borrower. This is 2 percent per annum where the bank's participation is less than 25 percent of the loan; 1½ percent where the bank's participation is from 25 percent or more.

Participation agreements and take-out commitments are executed.

Participation agreements and take-out commitments are executed when the loan is made, and the take-out commitment insures the bank against loss on that part of the loan covered by the agreement. It is necessary to exercise the same care in insuring part of a loan as in making the entire loan. The same investigation is required and the same expenses incurred.

In April and May 1938 we made commitments to lend apple growers in the State of Washington up to \$2,000,000. Under these commitments we authorized 960 loans to 716 applicants in the amount of \$1,025,120, of which \$991,506 was disbursed.

In addition to the foregoing loans to business, the Electric Home and Farm Authority buys installment contracts from dealers in electrical appliances. These are small loans to business. To date, 2,573 dealers have been furnished with capital for their credit sales in this manner. The contracts carry the unconditional endorsein this manner. I ment of the dealer.

We shall probably have a substantially larger percentage of losses from industrial loans than from any other class. Forty-six of these (representing loans in the aggregate amount of \$3,009,092) these (representing loans in the aggregate amount of \$3,009,092) have already been foreclosed and the security reduced to possession. Properties securing three of these loans, which amounted to \$234,905, have been sold at a net loss to the Corporation of \$31,003. Five hundred and forty-three loans to business, aggregating \$21,-427,000, are in default and 60, aggregating \$3,588,000, are in process of foreclosure, usually after several extensions and supplemental loans. In addition to these, the loans to apple growers are in default.

We have authorized two loans at the request of the Maritime Commission, one to the American President Lines, Ltd., \$2,500,000, secured by a first mortgage on 13 ships, and another for building ships at Tampa, Fla., \$300,000. Local banks took an additional \$200,000 participation in this loan.

When the President authorized us to resume lending, about a resume lending, about a resume lending, about a resume lending, about a resume lending.

year ago, we wrote the banks of the country—every bank in the United States—asking them to cooperate with us in meeting what-ever legitimate demand there was for business and industrial

We asked them to consider originating and taking parloans. ticipations in leans; and where leans were of such a character that they felt they should not take any participation in them, we asked them to accept applications for the R. F. C. and forward them to our agency serving their district, with such information about the applications as the banks could furnish. We sent our loan application blanks to the banks and have continually urged their cooperation. I am glad to be able to report that since bank supervising authorities have adopted a uniform and more considerate attitude toward longer-time business loans, the banks are more inclined to make them and to cooperate with us in this character of lending.

Within the past year our Board has authorized approximately two out of every three applications presented. Each application receives the most sympathetic consideration, and when it cannot be approved as submitted, every reasonable effort is made to find a basis upon which a loan can be approved.

MORTGAGE LOANS

The total amount authorized, \$608,597,899, includes the capital stock of the RFC Mortgage Co., \$25,000,000, and loan authorizations to the RFC Mortgage Co. of \$160,021,276. It also includes the capital stock of the Federal National Mortgage Association, \$11,000,000, and loans to it of \$50,000,000. It includes \$362,576,623 in loans to privately owned mortgage loan companies made printered. cipally in 1932, 1933, and 1934 to prevent the companies from ing, and to enable them to grant extensions to their borrowers. Of the total amount authorized, \$418,662,964 has been disbursed and \$298,016,329 repaid.

of all loans to privately owned mortgage companies, we shall have only one loss of any consequence, a loan to the Prudence Co. of New York City. This loan was for \$20,000,000 made in March and June 1932 on sundry collateral, in an effort to prevent failure of this large mortgage guaranty company. Mortgage guaranty companies leasted to the bands of increase of the contraction of of the con panies located in New York had outstanding in the hands of investors guaranteed mortgages in the approximate amount of \$2,000,000,000. Notwithstanding our efforts and assistance, prac-

tically all of these companies failed.

Mutual savings banks

November 1933 we aided the savings banks of New York State by authorizing the investment of \$50,000,000 in the capital notes of the Savings Banks Trust Co., which company the savings banks of New York organized to assist any of their banks that might need to realize on their mortgages. None of this money was used. We authorized \$86,000,000 to the Institutional Securities Corporation, also organized by the savings banks for the same purpose. Only \$14,312,567 of the amount was used, and it has all been repaid. November 1933 we aided the savings banks of New York State by

Publication of this procedure by the R. F. C. and the savings banks was so reassuring to depositors that the banks were soon able to remove the restriction on withdrawals allowed under the law.

We aided individual mutual savings banks principally in the New England States, New York State, and Ohio, through buying their notes containing provisions of subordination in favor of depositors, in this manner giving to the savings banks the same assistance provided for National and State commercial banks.

LOANS TO INSURANCE COMPANIES

Loans were authorized to 133 insurance companies, principally in 1932 and 1933, in the aggregate amount of \$104,439,750 to enable these particular companies to meet the demands of policyholders and other creditors; \$13,331,442 of this was not used; \$90,693,210 has been disbursed and over 95 percent repaid. Loans were authorized and disbursed on the preferred stock of six casualty and three fire insurance companies in the amount of \$34.425,000; \$7,655,-955 of this has been repaid. The majority of insurance companies were able to meet their obligations without borrowing from the Government.

LOANS TO BUILDING AND LOAN ASSOCIATIONS

We have authorized loans to 1,023 building and loan associations and receivers of building and loan associations aggregating \$154,-240,454. Of this amount, \$29,028,416 was not used; \$118.221,763 has been disbursed, and over 98 percent repaid. Loans to the open institutions made funds available to meet withdrawals of shareholders and depositors without foreclosing on the property of borrowers. The loans to closed building and loan associations enabled the receivers to make distribution to depositors and other creditors.

LOANS TO PUBLIC-SCHOOL AUTHORITIES

Because of the great amount of delinquent taxes in the city of Chicago from 1928 to 1934, public-school teachers were forced to go without pay from November 15, 1933, to May 31, 1934. August 1934 we loaned \$22,300,000 to the Chicago Board of Education to pay back salaries to 15,000 school teachers. The loan was secured by valuable income-bearing real estate belonging to the public-school system of Chicago. The real estate is situated in the Loop school system of Chicago. The real estate is situated in the Loop district and was ceded by the United States Government to Illinois for public schools when that State entered the Union in 1818. In order to mortgage the property it was necessary for the State Legislature of Illinois to pass an act permitting it to be mortgaged. Legislature of Illinois to pass an act permitting it to be mortgaged. This act was approved by the Governor February 28, 1934, and by the court under a test case July 31, 1934. The act provided that the property could only be mortgaged to an agency of the United States Government. We made the loan August 27, 1934, and sold it to Chicago banks a few months later, at a substantial premium. We authorized \$2,086,800 to other school districts for refinancing indebtedness. One million, sixty-seven thousand and three hundred dollars of this was canceled and \$150,000 disbursed.

LOANS TO STATE FUNDS CREATED TO INSURE DEPOSITS OF PUBLIC MONEYS Due to the great amount of public funds tied up in closed banks in 1933, belonging to cities, towns, and counties in the State of Wisconsin, we loaned \$13,064,631 to the "Board of Deposits of Wisconsin" to free these funds. It was all soon repaid.

MINING LOANS

One hundred and forty-four loans in the amount of \$12,655,500 have been authorized to 126 borrowers for mining, milling, and smelting ores and development of ore bodies. Of this, \$7,392,-000 has been canceled and \$4,179,700 disbursed; \$1,531,252 has been repaid; 87 of these loans aggregating \$1,440,500 have been approved under the section of the act which authorizes loans up to \$20,000 to one borrower for development; \$716,000 of this has been withdrawn or canceled. These development loans will entail a large percentage of loss.

RURAL ELECTRIFICATION LOANS

Loans to the Rural Electrification Administrator are made by Loans to the Rural Electrification Administrator are made by direction of Congress upon the request of the Administrator and the approval of the President; \$146,500,000 has been authorized and \$47,700,000 disbursed. These loans are made on collateral consisting of notes evidencing loans made by the Administrator, which in turn are secured by mortgages on the projects he finances. We lend up to 85 percent of the face of the collateral. These loans bring electricity and the use of electrical facilities to great many people living in rural districts who otherwise would a great many people living in rural districts who otherwise would not have them.

COMMODITY CREDIT CORPORATION

Commodity Credit Corporation was organized October 17, 1933, pursuant to Executive order, with capital stock of \$3,000,000 provided from funds made available by the National Industrial Recovery Act. In April 1936 Congress directed the R. F. C. to increase this capital to \$100,000,000 by buying \$97,000,000 of the Corporation's stock.

Commodity Credit Corporation's principal purpose is to make loans to producers to finance the carrying and orderly marketing of cotton, corn, wheat, and other agricultural commodities. It has done this principally with R. F. C. loans and credits. In an act approved March 8, 1938, Congress authorized Commodity Credit Corporation to borrow directly with Government guaranty, instead of depending entirely upon the R. F. C. This act also directed the Secretary of the Treasury to appraise the assets of Commodity Credit Corporation at the end of March each year and to maintain its capital unimpaired at \$100,000,000, and authorized appropriations for that purpose. This was to bring to Congress each year the loss, if any, in commodity loans.

R. F. C. commitments to Commodity Credit Corporation have been \$1,754,712,665 and disbursements \$767,716,962, all of which has been repaid to R. F. C. commodity Credit Corporation's disbursements have been \$897,779,520, of which \$522,093,139 has been repaid. Loans now outstanding are \$360,296,170 and loans held Commodity Credit Corporation's principal purpose is to make

bursements have been \$897,779,520, of which \$522,093,139 has been repaid. Loans now outstanding are \$360,296,170 and loans held by banks which Commodity Credit Corporation has agreed to purchase, if tendered, aggregate \$387,152,033.

The capital of Commodity Credit Corporation and the amount it may borrow with Government guaranty aggregate \$600,000,000, of which \$316,174,000 is outstanding. To enable Commodity Credit Corporation to comply with the mandatory provisions of the Agricultural Adjustment Act of 1938 and make wheat and corn loans in the summer and fall of 1938, the R. F. C. agreed to buy producers' notes from Commodity Credit Corporation, without recourse on notes from Commodity Credit Corporation, without recourse on Commodity Credit Corporation, should it become necessary for that Corporation to obtain additional funds to carry out its commitments to take up notes for loans on such commodities as might be tendered to it by banks.

Commodity Credit Corporation is managed by a board of directors composed of representatives of the Department of Agriculture, Farm Credit Administration, Export-Import Bank, and the R. F. C. The agencies and facilities of the R. F. C. are used in making and

administering the loans.

The Corporation's policy has been to lend only on such commodities as are recommended by the Secretary of Agriculture and approved by the President. The Agricultural Adjustment Act of 1938 directed that loans be made on cotton, corn, and wheat of not less than 52 percent of parity and not more than 75 percent of parity, the loans to become mandatory when the price of these commodities is less than 52 percent.

Parity, generally speaking, represents the price that would give the commodity a purchasing power to the farmer equivalent to its purchasing power in a base period, which for tobacco is the 10-year period from 1919 to 1929, and for other commodities the 5-year period 1909 to 1914, taking into consideration the size of the crop

and other factors.

The 1938 loan on cotton was approximately 52 percent of parity; on corn, 70 percent of parity; and wheat, 52 percent of parity. The loans were authorized after the commodities reached these

levels.

Loans are made to individual producers and associations of producers. Approximately 3,500,000 individual loans have been made. When loans are authorized at a fixed rate per unit on basic commodities such as cotton, corn, wheat, or wool, the producer may obtain them from banks and other local lending agencies, on forms which are provided by Commodity Credit Corporation, under an arrangement whereby such loans as are in acceptable form will be purchased by the Corporation at face value plus accrued interest at 2½ percent, the producer's note bearing a 4-percent rate. The difference in interest accrues to Commodity

Credit Corporation for its expense and undertaking. The producer may also obtain a loan directly from Commodity Credit Corporation through R. F. C. loan agencies.

At the time such loans are authorized it is impossible to determine accurately the amount of the commodity which will be borrowed on. This depends upon the ultimate volume of the commodity produced and the market. It is necessary in such cases to provide funds in the maximum amount that may be needed.

THE RFC MORTGAGE CO.

Because there was practically no mortgage money available to deserving borrowers to protect their business properties from foreclosure, and to aid in the reorganization of properties covered by excessive mortgages and mortgage bond issues, Congress, at our request, authorized the R. F. C. in January 1935 to invest in the capital stock of mortgage companies up to \$100,000,000 when any such investment was approved by the President.

Following the approval of this act, we endeavored to interest private capital to organize mortgage companies, offering to take preferred stock in the companies. Meeting with no success in this effort, we, with the approval of the President, organized the RFC Mortgage Co., March 14, 1935, with a capital of \$10,000,000, later increased to \$25,000,000. The stock is all owned by the R. F. C. The company has authorized \$137,969,839 loans on income-producing business properties, borrowing its requirements come-producing business properties, borrowing its requirements from the R. F. C.

F. H. A. insured mortgages

Because banks, insurance companies, and other private investors were reluctant to buy F. H. A. insured mortgages, we announced August 27, 1935, that the RFC Mortgage Co. would buy these mortgages at a discount of one-half to 1 percent and sell them at some premium, sufficient to cover the cost of operation. The mortgage company has authorized the purchase of 23,020 F. H. A. insured mortgages aggregating \$96,955,222, and has completed the purchase of 18,433 of these, totaling \$73,083,604. It has sold 3,956, aggregating \$16,604,899, to private investors at a modest premium. Eight thousand nine hundred and fifty-four, totaling \$34,108,848, have been transferred to the Federal National Mortgage Association. Of the total number of F. H. A. insured mortgages bought. 102

Of the total number of F. H. A. insured mortgages bought, 102 loans, aggregating \$400.845, have been foreclosed, for which the mortgage company holds or will receive F. H. A. 2¾- or 3-percent debentures carrying Government guaranty, dated as of the date of institution of foreclosure proceedings, for the unpaid balance of the mortgages. The loss arising from foreclosure has been less than 10 percent on the mortgages foreclosed, and to date less than one-tenth of 1 percent of the total amount of mortgages purchased.

FEDERAL NATIONAL MORTGAGE ASSOCIATION

The National Housing Act, approved June 27, 1934, provided for the organization of national mortgage associations, and to aid in the establishment of these, we offered, at the request of the Federal Housing Administrator, to match dollars with private capital by taking preferred stock in national mortgage associations. Even on this basis the Administrator received no applications, and, with the approval of the President, we organized the Federal National Mortgage Association February 10, 1938, with a capital of \$10,000,000 and a surplus of \$1,000,000. It is owned and operated by the R. F. C. and deals exclusively with mortgages insured by the Federal Housing Administrator.

It has authorized the purchase of 26,276 mortgages aggregating \$111,470,381. Purchases have been completed on 22,684 of these aggregating \$92,083,405. It has been necessary to start fore-

It has authorized the purchase of 26,276 mortgages aggregating \$111,470,381. Purchases have been completed on 22,684 of these aggregating \$92,083,405. It has been necessary to start fore-closure on only 25 of these aggregating \$105,288. The Federal National Mortgage Association is financed through the sale of its notes to the public; \$85,240,000 of these notes have been sold; \$29,748,000 bear 2 percent and mature May 16, 1943; \$55,492,000 bear 1% percent and mature January 3, 1944. They are not guaranteed by the Government or by the R. F. C., but constitute a sound investment, enjoying certain income-tax exemptions. The Federal National Mortgage Association offers to buy at par and accrued interest any mortgages insured by the Federal Housing Administrator on new homes, including large-size housing projects. The RFC Mortgage Co. buys insured mortgages on old homes at par and accrued interest.

old homes at par and accrued interest.

ELECTRIC HOME AND FARM AUTHORITY

Electric Home and Farm Authority was incorporated under the laws of the District of Columbia August 1, 1935, to aid in the distribution and sale of electrical equipment in homes and on farms at low financing cost. It has a capital of \$850,000, provided from funds made available by the National Industrial Recovery Act, and held by its trustees for the United States. It borrows its requirements at low rates with R. F. C. backing and manage-

It has purchased from 2,573 dealers in 32 States 101,953 installment contracts, covering installment sales for home electrical appliances, aggregating \$15,573,318, of which \$7,703,924 has been retired. These contracts usually run from a few months to 3 years,

retired. These contracts usually run from a few months to 3 years, the average being about 2 years.

Electric Home and Farm Authority operates in cooperation with utility companies and with dealers who sell the equipment. The dealers guarantee the notes and the utility company makes collections with its monthly bills. It is helpful to householders who find it necessary to buy on installment.

Buying these contracts is making loans to business enterprises, to dealers upon the security of the equipment sold and the obligation of the purchaser of the equipment. Payments are made promptly and there are no losses to speak of.

APPENDIX TO THE CONGRESSIONAL RECORD

The R. F. C. extends these small loans to business through Electric Home and Farm Authority.

DISASTER LOANS

By special direction of Congress, the R. F. C. from 1933 to 1936 made loans for rehabilitation of property damaged by floods, earthquakes, or other catastrophes; \$16,784,521 was authorized for this purpose, \$12,003,055 disbursed; \$4,278,027 of this has been repaid. Following the Ohio River flood in January 1937, Congress directed us to organize the Disaster Loan Corporation and provide it with capital up to \$20,000,000 to make loans to those who suffered losses from the flood or other catastrophes in the year 1937. This act was later amended to include catastrophe losses that

This act was later amended to include catastrophe losses that occurred in the years 1936 and 1938.

Immediately following creation of this Corporation, we established offices for making disaster loans at Cairo, Galena, Harrisburg, and Metropolis, Ill.; Evansville, Jeffersonville, and New Albany, Ind.; Ashland, Frankfort, Louisville, Paducah, and Smithland, Ky.; New Orleans, La.; Cincinnat, Cleveland, Ironton, and Portsmouth. New Orleans, La.; Cincinnati, Cleveland, Ironton, and Portsmouth, Chio; Dyersburg and Memphis, Tenn.; and Huntington, W. Va. Loan committees composed of local citizens were set up to recommend loans. These committees served on a voluntary basis and were of great assistance to the Corporation in meeting the emer-

gency.

Seven thousand five hundred and fifty-five loans aggregating \$8,805,051 were authorized as a result of the Ohio River flood; \$1,574,504 of this was not used; \$6,785,729 has been disbursed and \$1,752,542 repaid. It is significant of the character and integrity of the American people that 80 percent of these loans are current

in their payments.

in their payments.

We are now making disaster loans as a result of the hurricane in September 1938, principally in the New England States. Immediately after the hurricane we established offices at Hartford, New London, and Norwich, Conn.; Athol, Boston, Fitchburg, Gardner, Lowell, New Bedford, Orange, Springfield, Winchendon, and Worcester, Mass.; Concord and Keene, N. H.; New York City, Montauk, and Quogue, Long Island, N. Y.; Newport, Providence, and Westerly, R. I.; and later at Charleston, S. C.; with loan committees composed of local citizens to recommend loans. These mittees composed of local citizens to recommend loans. These committee members also served on a voluntary basis and have been most helpful.

committee members also served on a voluntary basis and have been most helpful.

Loans aggregating \$3,764,625 have been authorized to 1,526 applicants who suffered losses from the hurricane. We are lending to salvage the very large amount of blown-down timber. It is estimated that 3,000,000,000 feet of timber is down in New England as a result of the hurricane, and effort is being made to salvage as much of it as possible. Probably 25,000 farmers and landowners lost their timber. The facilities of the Forestry Service and the Federal Surplus Commodities Corporation are being used to salvage the timber.

Disaster and catastrophe loans have been made in 33 States, Arkansas, California, Connecticut, Florida, Georgia, Idaho, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Minnesota, Mississippi, Missouri, Montana, New Hampshire, New Jersey, New Mexico, New York, North Carolina, Ohio, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Vermont, and West Virginia.

The beneficiaries of R. F. C. activities have been almost entirely people of relatively small means or business interests. It is estimated that loans to closed banks benefited 20,000,000 depositors in these institutions. Putting capital in banks probably saved another 20,000,000 depositors from loss or inconvenience. More than 3,000,000 commodity loans have been made to 1,500,000 farmers averaging less than \$400 per loan. Probably 150,000 stockmen received loans averaging \$1,600. More than 130,000 farmers and landowners in 26 States have benefited by loans to drainage, levee,

and irrigation districts. More than 10,000 borrowers have received disaster loans averaging approximately \$1,300, and 102,000 house-holders have received loans averaging less than \$150 for the purchase of electrical appliances

chase of electrical appliances.

Two thousand seven hundred and twenty of the 7,371 loans to business enterprises have been for \$5,000 or less, and 1,150 between \$5,000 and \$10,000. Six thousand and eighty-eight of all loans to business have been for \$50,000 or less. These loans to business have maintained employment for more than 400,000 people and have provided additional jobs for 225,000. Employment has been increased and business stimulated through the purchase of more than 32,000 home mortgages averaging approximately \$4,000. Loans for the construction of business buildings and large-size housing projects have likewise increased employment and stimulated business.

Mining loans have created 1,500,000 days work. Self-liquidating loans, exclusive of security purchases from P. W. A., have produced 181,000,000 man-hours of work, not counting the additional employment made necessary in the fabrication of materials for the construction involved and the employment of all classes of workers serving the business concerns which furnished the materials.

serving the business concerns which furnished the materials.

Loans to railroads for maintenance and for the purchase of equipment have been translated immediately into work for hundreds of thousands of workers, both skilled and unskilled—probably 20,000,000 days' work. Loans for payment of interest on railroad obligations went largely to savings banks, insurance companies, and other trust funds.

With the exception of loans on commodities, which are made largely by direction of Congress, both as to amount and basis, and upon which there will be some loss, this vast contribution to the business and economic life of our country during the past 7 years has been without any loss or cost to the Government.

In addition to R. F. C. loans authorized, and credit actually used, we have assisted a great many borrowers in getting loans from private sources by bringing borrower and lender together when, in our opinion, the loan applicant could properly be taken care of by banks or other private lending institutions, and by indicating that if necessary, to protect the applicant from failure or unnecessary loss, we would make the loan.

The R. F. C. has a capital stock of \$500,000,000 appropriated by Congress January 27, 1932. In addition, the Corporation has been given authority, from time to time, to borrow, with Government guaranty, the funds necessary to do the things that Congress has authorized and directed it to do. Prior to July 1938 we borrowed from the Treasury, except that in buying preferred stock, capital notes, and debentures in banks that needed capital but did not need cash, we sometimes sold them our notes. These notes have been paid.

We now have outstanding in the hands of the public our notes aggregating \$211,460,000 maturing July 20, 1941, and \$297,439,000 maturing November 1, 1941. We are selling another issue of approximately \$300,000,000 maturing January 15, 1942. All of these notes bear seven-eighths-percent interest per annum. After paying notes bear seven-eighths-percent interest per annum. After paying the Treasury the proceeds of this last issue we shall only owe the Treasury approximately \$400,000,000.

We have paid the Treasury \$194,801,847 interest on borrowed money and \$24,507,637 interest to others. Our operating expenses have been slightly less than 1 percent.

In addition to the foregoing we have accumulated operating reserves in excess of \$200,000,000, which in the opinion of our Reard is sufficient to cover all probable lesses

Board is sufficient to cover all probable losses.

In conclusion, I should like to say that our Directors are ever mindful of their responsibility to the President and the Congress in

administering the affairs of the Corporation.

JESSE H. JONES, Chairman.

Come to Work

EXTENSION OF REMARKS

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1939

REVIEW OF BOOK WRITTEN BY VICTOR E. WILSON

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks I am pleased to include the following account of a challenging book recently written by one of my fellow citizens of southern California, Mr. Victor E. Wilson. Whether or not one fully agrees with Mr. Wilson, he certainly makes you think; and it will be difficult to refute his fundamental thesis.

COME TO WORK (By Victor E. Wilson)

A book that promises to become a national sensation is newly A DOOK that promises to become a national sensation is newly off the press in New York (House of Field, Inc.). It is entitled "Come to Work," and the author is Victor E. Wilson, a former railroad commissioner and legislator in Nebraska. Dr. Edwin F. Bowers says in the introduction that the treatise "is perhaps the most competent and adequate diagnosis that has yet been made relating to the economic and social ills of the world today."

The first part of the work is devoted to establishing the cause

relating to the economic and social ills of the world today."

The first part of the work is devoted to establishing the cause of depression. "It is obvious," says the writer, that this cause must be found "isolated, as the doctors say of disease. Otherwise, there can be no treatment of it." The professional economists say that this cause is a "mystery," that they are unable to determine the reason for the many break-downs in the industrial order. Yet here, apparently, in a study made by a layman, the cause of every depression in history is laid bare in convincing fashion.

fashion.

The author finds his answer to the problem in the fundamental nature of our system of private enterprise. He goes to the "grass roots" and shows that where goods and services are converted into money, in place of being bartered as in primitive times, all of the money must, in turn, be used to buy goods and services for the system to function successfully. Hoarding, or the withholding of incomes from the market in any considerable amount, for any reason, is bound to result in an unsold surplus and, hence, in

reason, is bound to result in an unsold surplus and, hence, in depression.

This is not a new discovery, says Mr. Wilson, and he quotes Adam Smith, Ricardo, John Stuart Mill, and nearly all of the earlier economists as recognizing this natural law of a division of labor economy, and as holding that the depressions of their time were due to failure to spend the whole of incomes in the market. Modern economists, however, lost sight of this law and during the last half century have been floundering about among surface symptoms in their search for the cause and with complete surface symptoms in their search for the cause and with complete

failure as they admit.

Facts are marshaled which support the law—facts as to every depression in the last 100 years. Beginning with the 1929 collapse he shows that from ten to eleven billion dollars of individual and corporate incomes were not spent for the articles of commerce in that year and lesser amounts annually back to 1923. Mr. Wilson says that had it not been for the large increases in bank loans and installment sales in the twenties the depression would have come

much earlier, and that the break came when those spending substitutes reached the saturation point. The idle money of the period was being speculated with largely in the stock market and in real estate, and over \$9,000,000,000 went into foreign loans and

in real estate, and over \$9,000,000,000 went into foreign loans and investments, over and above the balance of foreign trade in the country's favor, says the author.

Then follows a review of the business situation prior to the many previous depressions, beginning with the 1837 panic. Some of them were preceded by large advances in the price of iron and steel and other building costs, resulting in "strikes of capital" until prices came down. Others had to do with monetary and tariff troubles, and with war or fear of war, which led to the hoarding of incomes generally. Stock-market and real-estate booms were also in evidence prior to the crash in many cases, with their illegitimate use of incomes. use of incomes.

High authority is given for all statements of fact. As Dr. Bowers says, the work "bristles with carefully sifted evidence" and is "replete with informative material of the most impressive character."

REASON FOR NONSPENDING IN RECENT DEPRESSIONS

Mr. Wilson goes a step further before offering his remedy. says that there is only one reason for this nonspending in recent years, namely, the concentration of wealth and incomes in the hands of the few. The Brookings Institution of Washington, D. C., is his authority for the concentration in incomes—taken from a report of that body as to the cause of the present depression. He quotes President Moulton as saying in Income and Eco-

from a report of that body as to the cause of the present depression. He quotes President Moulton as saying in Income and Economic Progress that the way the national income "is distributed among the various groups which comprise our society lies at the root of our difficulties. * * The rich (prior to the depression) received incomes too large for consumption and the Nation did not need all these excess incomes for new capital. * * In 1929 as much as 25 percent of the national income (went) to 1 percent of the people."

Also, from the Brookings report, that total savings in the Nation in 1929 amounted to between fifteen and sixteen billions dollars, of which persons and families with incomes over \$10,000 numbering 747,000, and corporations, failed to spend over fourteen billions of their incomes, and that the remainder of the people saved from one to two billion dollars only. Further, that only about \$5,000,000,000 of these savings were used to buy goods and labor—by way of loans and investments used in that manner, and it was the failure to use the whole savings that brought on the depression.

As to the concentration in wealth, the author shows by other good authority that approximately 3 percent of the people of adult age, in 1929, owned 71 percent of all wealth in the country, and still higher percentages with the coming and progress of the depression. This is an appalling situation, says Mr. Wilson, and presages revolution and the downfall of the present system unless remedied in some manner.

Looking still further, the author shows that the main sources of

some manner

Looking still further, the author shows that the main sources of these high incomes and savings is our monopolies, both natural and artificial, and that their profits in normal times range from 10 to as high as 40 percent on their capitalizations. Specific instances are given of such profits. Another of these "golden geese" is city real estate, the ownership of which is highly centralized. And still another is our interest-paying public debt.

MR. WILSON'S REMEDY

The author's first line of attack is monopoly profits, and he takes as his measure of what should be permitted "the lowest possible figure required to secure the services of capital." That figure is given as the Government's credit rating—the interest it pays on its given as the Government's credit rating—the interest it pays on its bonds—and he proposes that the Government guarantee that rate of profit to our monopolies, based on the value of their necessary facilities. He argues that this would enable the public utilities and large manufacturing and mining concerns, which comprise these monopolies, to secure the additional capital required from time to time at a cost of from 2 to 2½ percent per annum—the amount of the viarranty.

Then, sensing that concerns under the guaranty might lie back in the cellar and depend on the Government for any deficit in the guaranteed profit, Mr. Wilson proposes an additional profit of 1 to 1½ percent, if earned. All profits above the combined rate to go to the Government.

Mr. Wilson also shows that profits above the combined rate to

Mr. Wilson also shows that practically all of our basic commodities in consumable form are controlled by monopolies, and he argues that obviously under the high earning power of monopoly the guaranty would not cost the Government anything except administrative expenses, and that the resulting reduction in the incomes of the rich would be enormous.

In addition, he maintains that concerns thus protected as to In addition, he maintains that concerns thus protected as to profit would doubtless be willing to operate their plants to capacity, and thus put everybody at work. Also, that with profits greatly reduced, either wages would rise or prices would fall, and labor could buy its proper share of the output. There would be no object in maintaining the present high earning power of monopoly, with surplus profits going to the Government.

The author's next line of attack is the high profits of chain and department stores, which he says are about the same as with the monopolies. He shows that they arise out of the extra discounts and bonuses demanded and received by big buyers, and he would cure this evil, first, by separating production from discounts.

he would cure this evil, first, by separating production from distribution, and, secondly, by requiring producers to sell at the

same price to everybody regardless of the quantity purchased. The independent merchant would then come back in large force, says the author, and the resulting competition would not only greatly reduce the volume of profit in this field but would distribute it widely, thus operating to bring it into the market.

As to the excess incomes derived from Government securities

As to the excess incomes derived from Government securities and city real estate, Mr. Wilson recommends that the income tax be adjusted so as to absorb unspent surpluses whatever the source. He says that Government revenues of all kinds are spent rather quickly except payments on the public debt to people already burdened with large incomes.

The author goes even further with the idea of a Government guaranty of profit. He shows the practicability of its application to agriculture. The additional profit would have to be larger than with the monopolies, he says, in order to secure a proper measure of efficiency and management, but the administrative details would amount merely to an extension of the work of the

ADDITIONAL FEATURES

Mr. Wilson's plan has several additional features, chief of which are liberal old-age and disability pensions, and child benefits, to encourage general spending and the gradual nationalization of all natural resources by confining future sales to the Government. This to prevent the dumping of incomes into idle investments of this nature, and to forestall future accumulations of large fortunes through increases in value. Land thus acquired, which would not include improvements, to be leased to users in the customary manner, with the rental going to the Government. He uses the term "national dividend" in preference to "pensions" and "benefits," arguing that, as a matter of right, the people as a whole have a substantial equity in our highly mechanized system of production, since it is largely the result of the labor of previous generations.

generations.

The remaining items of the plan arise out of the loss of revenue to the States resulting from the proposed land nationalization. Mr. Wilson would offset this loss by transferring the support of the public schools, and the enforcement of felony laws, to the Federal Government. He says these changes are decidedly in the public interest of themselves. One chapter is devoted to showing the constitutionality of the plan, and insofar as the Government guarantee of profit is concerned, the author says that it is merely an improvement and extension of the principles of railroad and public-utility regulation.

ANDREW G. BRICE.

A Permanent Public Works Administration

EXTENSION OF REMARKS

HON. ELMER J. RYAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1939

Mr. RYAN. Mr. Speaker, today from our constituents on every side, each of us is receiving demands for the stabilization and coordination of the gains we have made in the past 6 years. We here have talked of giving business an increased opportunity to go ahead unmolested, and to see with certainty into the administration's program for the future.

To stabilize our gains we must look closely to those agencies of the Government which were created for an emergency period but which are now an integral part of the Nation's economic structure. I submit to this House that the Public Works Administration is and has been for 6 years a great stabilizing force in our fluctuating economic system. Theoretically and actually public works have proved to be the program which can level off the peaks and valleys of the economic cycle. In the P. W. A. region of which my State is a part—the fourth region, made up of Iowa, Minnesota, Missouri, Nebraska, North and South Dakota, Montana, and Wyoming—the strengthening effects of these public-works programs have been noticeably felt. Although this region is primarily an agricultural area, such important industries as brick and tile, cement, steel, coal mining, transportation, woodworking, stone cutting, and equipment manufacturing have increased their production to meet demands for materials for P. W. A. projects. And, of course, increasing the purchasing power of industrial workers, and spreading employment automatically speeds up the demand for the farmers' products. We see, therefore, that the public-works program has its telling good effects in the heart of the Corn and Wheat Belt as well as in the Nation's industrial centers.

Smoothly and quietly this agency has gone forward with With no major scandals and scant its appointed task. criticism, it has revived the heavy industries. I need not recall to your minds how the P. W. A. program literally lifted industry out of the 1937 recession. Reliable graphs and indices show clearly that the P. W. A. program gradually and firmly resuscitated our major industries after the depths of 1932 up to 1937; how industrial production hurtled downward simultaneously with the let-up of P. W. A. construction in the summer and fall of 1937. Now, once again, we see industry slowly regaining its feet as the 1938 public works get under way. All industrial and commodity production have followed closely the life-giving progress of the public-works program. Every business and every community has gained new strength and new hope from this lift that business needed. Manpower unused is manpower lost forever. The maintenance of industrial production means the conservation of human energy, the preservation of morale, and the framework of national security. The Public Works Administration has shown itself capable of controlling, on a Nation-wide scale, the fluctuations in production.

To successfully cope with the ebb and flow of economic tides, any governmental agency must be well-organized, flexible, and capable of great speed as it goes into action. During the past 6 years the Public Works Administration has conclusively demonstrated that it has competent personnel and an experienced organization which, with the backlog of applications that have been examined and are ready to go in time of emergency, can put a program of public works into full swing without loss of time or effort. We here in Washington know this, and the people in my part of the country have seen it work. For example, I want to quote from a newspaper which shows clearly the opinion of those who have watched with particular interest our establishment of national-recovery agencies. The Virginia (Minn.) Enterprise said, in part, on August 9, 1938:

On July 23 the city council's application was submitted to the P. W. A. regional office in Omaha, and received almost immediate approval. On July 27 the application was forwarded to Washington, D. C., and on August 6 the final approval was gained. In a week the City Council of International Falls will be advertising for bids. If this is a sample of the manner in which P. W. A. now functions, it must be agreed that there is very little red tape involved.

Gentlemen, it is only this immediate response of the central government to needs of far-flung communities which can hold together a democracy such as ours. The Federal Government must be alive to the wants of the smallest and most isolated group of citizens. Fortunately in these past 6 years the great public-works organization has had its finger on the pulse of the Nation, as this case in point will show. Out in South Dakota last summer a tornado struck a sparsely settled section of the State and totally destroyed a small township school. On July 16 the school board of that little rural school applied for a grant that would aid them replace their ravaged educational facilities in time for the opening of the fall semester. On the 21st the application had cleared the Omaha regional office, on the 23d the Washington office approved the application, a week later the allotment was made, and in just 5 days the P. W. A. had offered a grant to that small country-school board. In other words, just 19 days elapsed between the application date and the offer from the P. W. A. That kind of action proves the presence of an alert organization, experience, and flexibility.

Last June President Roosevelt signed the act creating a 1938 public-works program. The Congress set dead lines for applications, beginning construction, and completion which were almost unreasonable. And yet the Public Works Administration successfully met all three of those dead lines, and on January 1 had 7,853 projects costing \$1,574,769,686 in construction. In the fourth region 2,613 projects costing an estimated \$407,038,013 have been or are being built with

P. W. A. aid. These projects have been much-needed and fully appreciated schools, college buildings, streets, highways, bridges, hospitals, waterworks, sewer systems, light and power projects, and many other structures that contribute to the health, morale, and education of our people in the Middle West. The celerity with which the present program went into action was possible because of the reservoir of accumulated applications which were already examined and approved. With a continuous backlog of worth-while applications on hand, the P. W. A. can plan a sound program for the future, a program which can go into high gear at a day's notice, placing immediate profits and extended credit in the hands of producers, manufacturers, transporters, and contractors.

As this House analyzes plans for establishing a fundamental economic structure, our criteria must be: Will results of the proposed plan be material, productive, and permanent? Building schools for our children, developing health and recreational facilities for our people, constructing roads-of vital importance in rural areas-increasing power production and adding substantial and efficient public buildings to community assets, compose the plan which meets every test of a sane national economic program. Our people back home, also, are aware of the value of the P. W. A. program which is attaining material, productive, and permanent results. I have here a letter which will interest you because it was voluntarily written by a representative school superintendent. Mr. L. S. Graves, superintendent of the Morton, Minn., schools wrote to the regional P. W. A. office in Omaha:

As a schoolman I believe that the foundation of every community is formulated in the schools, the homes, and the churches of the community, and that from the school, the homes, the business enterprises, and the welfare of the whole Nation have their beginnings. I also believe that assisting of communities to build better school buildings is one of the finest and best projects of the Public Works Administration. In our case we would not have been able to finance a building program equal to our needs without help. As it is we have a fine plant that should be adequate for a numbers of years. * * * I hope that P. W. A. may continue to help communities get more adequate schools.

And do not let anyone tell you that communities in the Middle West do not want these projects, or that they do not need them. The press recognizes these interests of the people as the Des Moines (Iowa) Tribune, of January 18, 1939, stated in its lead editorial, which read, in part:

Iowa's share in this program represents a widely diversified and a geographically well-distributed range of projects, so genuinely wanted by the Iowa communities that they were willing to assess themselves for 55 percent of the total cost.

The Public Works Administration is providing these critically needed projects and has reestablished the Nation's business structure along purely American lines. Even those who are the most bitter critics of the administration and almost the entire New Deal program, wholeheartedly support this business-like Federal agency. A splendid example of this hearty approbation comes from Mayor Charles A. Shaw, a typical Republican mayor, of Clayton, Mo., a typical Republican town. Mr. Shaw was quoted in the Maplewood (Mo.) Observer of July 28, 1938, to this effect:

I make this appeal in no sense as a New Dealer. I was born a Republican; I have lived a Republican, and I expect to die a Republican. I do not subscribe to the political philosophy of the W. P. A., but the P. W. A. is vastly different. P. W. A. funds are judiciously spent, and there are no politics in any of its operations * * * I have heard, from round about sources, that some tions " I have heard, from round about sources, that some court house people have promised jobs in return for votes and support for the bond issue. I want you to say that Charles Shaw says that is a damnable lie Nobody can give jobs on a P. W. A. project. If reconstruction of the courthouse was being planned, and it was being handled by W. P. A., then jobs could be promised, and contractors could be favored, but anything like that is wholly and utterly impossible under the P. W. A.

That is a good example of how those who, to say the least, are nonpartisan in their attitude toward the administration's recovery program feel about the Public Works Administration.

I submit to this House that the present Public Works program is the American way to combat depressions and recessions. Local governments are given the opportunity to initiate a partnership with the Federal Government for the construction of earnestly desired public works in their communities. The fact that they must bear the larger share of the cost assures that they build only those facilities which they need. Once requested and approved, the work gets under way with practically no so-called governmental redtape and delay. All jobs are carried out in the normal progress of the owner-contractor relationship with which American business is at home and in harmonious agreement. Through scientific planning there is the guarantee of national security, only possible with this kind of a public-works program. And finally, American workmen are given honest work, on honest jobs of which they can be proud, and they get honest wages for an honest day's work. That is all any American workman asks of his Government.

This highly successful national agency has, down through the past 6 years, done the job with which it was charged. Today the Public Works Administration is better equipped and better manned than ever before to carry on as the balance wheel of the Nation's economic machinery.

War-Overproduction-Unemployment

EXTENSION OF REMARKS

HON, JAMES E. VAN ZANDT OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

EDITORIAL FROM THE IRON AGE OF MARCH 16, 1939

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Iron Age of March 16, 1939:

> [From the Iron Age of March 16, 1939] WAR—OVERPRODUCTION—UNEMPLOYMENT

Following along the lines of thought expressed last week on this page, namely, that invention and improvement are not to blame for present unemployment, let's think about what war—and the preparation for war—does to a nation's industry. First, it develops

an unnatural and abnormal expansion of productive capacity.

Those of you who are old enough to remember what went on in 1917 and 1918 may remember the mushroom growth of plants,

in 1917 and 1918 may remember the mushroom growth of plants, financed by Uncle Sam, that occurred during this period.

What happened to these plants after the war? What happened to the new machinery with which they were equipped? Were the plants burned down and the machinery thrown on the scrap pile? No, indeed. Uncle Sam, with characteristic liberality, sold these buildings and their equipment to private industry.

And private industry, no longer facing a market and a demand for war material, turned these plants over to the production of preacetime products.

peacetime products.

There was plenty of labor then to man these plants. To man and to woman them. For you may also remember how, to make up for the boys who went abroad to fight for democracy, we combed the Nation for able-bodied housewives who were willing to swap aprons for overalls in return for \$6 a day.

And so what happened? Just this. Whereas under normal conditions industrial plant capacity and the number of people engaged in industry increase in accordance with the normal increase in consuming power of the Nation, the abnormal demands of war and armament production induced a sudden and unwar-ranted jump in both that normally might have been justified 10 years later.

And again, what happened? Spurred by the false impetus of huge Government spending, we entered the golden 1920's 10 years too big for our breeches. The golden era when half of the servant girls in America had a credit balance at some stockbroker's office. The silk-shirt, crap-shooting era with two cars in every garage and two chickens in every pot.

Then came the deluge. And now we hear people say that invention and improvement are to blame for it.

When a man climbs to the top of a 20-story building and then jumps off, you can hardly blame the architect or the builder.

A product—almost any product—can be used constructively or destructively. Should we condemn the chemical industry, which produces so many remedies to save and lengthen life, for the relatively few cases of accidental or intentional poisoning which take place?

So it is with the machine and mechanization. In view of what these have done for this country, should we condemn them be-cause of mistaken judgment in their use?

Senator Taft on Ballyhoo

EXTENSION OF REMARKS

HON. W. O. BURGIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

ARTICLE BY WALTER LIPPMANN

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann, which appeared in the Washington Post of Saturday last:

> TODAY AND TOMORROW-SENATOR TAFT ON BALLYHOO (By Walter Lippmann)

According to Senator Taft the concern shown by the President

According to Senator Taff the concern shown by the President over the danger of a world war is "ballyhoo" to divert the attention of the people from the failures of the New Deal. The Senator, who is a leading candidate for the Republican nomination, made this charge at an official dinner of his party. It is really a very serious accusation. Made by a Senator with Mr. Taff's responsibility, it is just about the most serious accusation that it would be possible to make at this time.

If it is true that the President of the United States is playing politics with the question of war and peace, if he is inventing, imagining, or exaggerating the seriousness of the danger, then he is guilty of an unpardonable thing. If Mr. Taff is right that the danger is just ballyhoo, he ought to do something more about the situation than talk casually about it at a partisan dinner. He ought to produce the evidence which causes him to say what he is saying. He will have a receptive audience. Anyone who he is saying. He will have a receptive audience. Anyone who can prove, or even make a good case, that there is no need to take very seriously what seems to be happening abroad will help millions to sleep better at night.

PRESIDENT'S OFFICE DESERVES RESPECT

But if Mr. TAFT cannot do that, then he should consider whether it is fitting for a Senator of the United States to impugn the honor

It is fitting for a Senator of the United States to impugn the honor and to seek to destroy the influence of the President of the United States. There is a respect due to the office of the President, and a proper respect for that office requires that an accusation like Mr. Taft's should not be made unless it can be su'stantiated.

Mr. Taft might, perhaps, occupy the office of President some day. If he does, he will expect his political opponents to measure their words when they are talking about issues that are of vital concern to the Nation as a whole. He will expect his opponents to assume, however much they differ with him on specific measures, that he will not prostitute the office of President.

For he will realize that if the people cannot rely upon the good

that he will not prostitute the office of President.

For he will realize that if the people cannot rely upon the good faith of the President, even when they disagree with his policies, orderly government becomes impossible. Mr. Taft must know that. He must know that if everyone in public life is going to go about casually accusing everyone else of acting on the basest motive, then public discussion will become sheer bedlam. If a man whose father has been President and Chief Justice, who is himself a Senator, is to set an example of this sort, to what level will political debate be dragged by men who have had none of Mr. Taft's opportunities for learning the rules of fair debate?

ROOSEVELT NOT ALONE IN FEARS OF WAR

On the merits of the question of how great is the danger which is threatening there is, of course, ground for legitimate difference of opinion. It is arguable that the world war will not take place. It is arguable that, if it does, it will not have vital consequences for the United States. But Mr. Taft cannot argue that the President and Mr. Hull and his other advisers stand alone in thinking that there may be a world war, and that it would affect greatly the United States. Too many people who are not new dealers share this opinion to justify Mr. Taft in saying that the danger is being bally-hooed to cover up the failure of the New Deal.

If the danger is not a real one, what on earth are we to make, for example, of the whole behavior of Mr. Chamberlain? Are we to suppose that all this feverish arming in Great Britain, this intense diplomatic activity, these movements of fleets and mobilization of armies are all imaginary or are not to be taken very seriously? If the danger is not real, if the condition of the outer world is something that we can complacently disregard, why did the Congress of the United States, with almost no dissent, vote our own great armament program?

armament program?

Is it all ballyhoo? Is everyone mad? Is everyone having a hallucination? Does Mr. Taff have any knowledge not now available to almost all the rest of mankind which enables him to suggest so confidently that the whole situation is a manufactured scare?

Rehabilitation of Great Lakes Cut-Over Area

EXTENSION OF REMARKS

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

CONCURRENT RESOLUTION BY LEGISLATURE OF MINNESOTA

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution recently adopted by the Legislature of the State of Minnesota:

Concurrent resolution memorializing the President and the Congress of the United States to enact legislation to rehabilitate the Great Lakes cut-over area

Whereas the problems of unemployment and relief in Minnesota

are especially acute in the sparsely settled areas of the north central and northeastern portions of the State, where the forests were formerly the great natural resource; and Whereas the economic situation of this region has steadily become less favorable since the lumber industry passed its peak early in the century, culminating with the depression years since 1929; and

Whereas the relief measures undertaken during this depression period, though timely and effective for relief, are not designed to achieve substantial and permanent rehabilitation of the region, which will make it self-supporting to the same degree as other portions of the State; and

Whereas such rehabilitation is in the interest of the Nation as

a whole, as well as the State and the region itself; and
Whereas the President of the United States, through the National Resources Committee, has directed that an "economic survey

flonal Resources Committee, has directed that an "economic survey for the Great Lakes cut-over area" be made, such area consisting of large areas in the northern portions of the States of Michigan, Wisconsin, as well as Minnesota; and

Whereas, through such direction, the Northern Great Lakes Regional Committee of Sixteen has been set up, consisting of four members from each State and four Federal representatives, and such committee has been working diligently for 8 months in making plans for the rehabilitation of the region, in collaboration with more than a hundred associates selected for their special knowledge. more than a hundred associates selected for their special knowledge of conditions in the region, such associates being in part scientists connected with the universities of the three States, in part Federal, State, and local officials, and in part leading citizens from the three States; and

three States; and

Whereas the report of the Northern Lakes States Regional Committee, outlining a plan for such rehabilitation, which is nearing completion and about to be published and issued by the National Resources Committee, recommends a program for rehabilitation based on the encouragement of agriculture in the region through aids and measures which will tend to stimulate individual self-help and initiative, the restoration of the original great forest resource both for its own sake and as a means of providing useful employment within the region during the period of rehabilitation, the more extensive development of the recreational possibilities, and the utilization of all industrial opportunities; and

Whereas it appears that such a program embodies the considered opinion of those who have been most intimately concerned with the problems of the region with many years of experience, and is capable of making progress toward the complete rehabilitation which is necessary, and will be effective if persevered in; and

whereas the report recommending such a program is the direct result of the expressed direction of the President of the United States; Now, therefore, be it

Resolved by the Senate of Minnesota (the house of representatives concurring), That this Legislature of Minnesota memorialize the President and Congress of the United States to take cognizance of the report of the Northern Lakes States Regional Comzance of the report of the Northern Lakes States Regional Committee, and to enact such legislation supported by adequate financial provisions as may be necessary to aid the State and local governments and the people of the region in rehabilitating the Great Lakes cut-over area; be it further Resolved, That attested copies of this resolution be sent to the President of the United States, to both Houses of Congress, to each Member in Congress from the States of Michigan, Wisconsin, and Minnesota, to the Governors of such States, and to each House of the Legislatures of Michigan and Wisconsin.

The Past and Future of the Catholic Hospital in the Growing Health Service of the Pacific North-

EXTENSION OF REMARKS

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

ADDRESS BY MOST REV. EDWIN V. O'HARA, D. D., BISHOP OF GREAT FALLS

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD I include herein a notable address by a great Roman Catholic Church leader on the subject of Catholic contributions to hospitalization and public health in the Pacific Northwest. The address, in my judgment, is worthy of widespread distribution and careful scrutiny by all thoughtful citizens.

It is as follows:

Certainly an ample topic! Since Mother Joseph and her intrepid companions arrived in the Northwest on December 8, 1856, and 2 years later fitted up as a hospital at Vancouver, Wash., a log cabin 16 by 20 feet in size, no decade has passed without witnessing the 16 by 20 feet in size, no decade has passed without witnessing the amazing growth and extension of hospital service under the direction of the devoted sisterhoods. In the pioneer settlements, the Sisters took care of the sick, not only in their own institutions but it was no unusual thing to see them visiting the sick poor in their homes. The health needs of the entire community were provided for, but the poorer and less fortunate could always depend upon the special solicitude of the Sisters.

The care of the indigent—before the expression "medically indigent" had been coined—of the aged, of the chronic sick, of surviced and medical cases of the accident case before and since

surgical and medical cases, of the accident case before and since its multiplication and by the advent of the automobile, maternity hospitalization, provision for babes deprived of their parents, kindly hospitalization, provision for babes deprived of their parents, kindly responsibility for the health of the native Indian population, cooperation with the growing industries—logging and sawmills—in the care of their men and of their employees' families, a large sharing in the health problems of the growing towns and cities, making available laboratories for health offices, providing both hospitalization and nursing facilities in times of epidemics, establishing bread lines at the hospital door when unemployment deprived multitudes of the means of support, these are a few of the services rendered to the public by the early Sisters' hospitals. Nor should there be forgotten their share in the growth of orthopedic hospitalization, of clinics, out-patient departments, and hospital social service. social service.

Other services, however, though indirect, were not less real. There is no responsible physician who is not willing to admit the debt which the medical profession of the Northwest owe to the Sisters' hospitals, by making provision for medication and surgery which would otherwise have been impossible in the days before which would otherwise have been impossible in the days before the governmental agencies began to pour their funds into such services. Nor was the Sisters' hospital less serviceable in furnishing nurses; the Sisters themselves and the hundreds of young women trained in their nursing schools. The Sisters' hospitals have been identified with the growing provision for health care in the North-west during the past 80 years. Their records are woven into every stage of its development. For a long period in great sections of the Northwest, they were exclusively responsible for the health care and in every decade the Sisters' hospital has cooperated with every agency of government in promoting public health and has played

agency of government in promoting public health and has played a major part in that development of program.

For the future. We are passing through a time of profound reorganization of health service due to the vastly enlarged participation of Government funds in provision for public health. There are some who see in this development the end of private initiative, are some who see in this development the end of private initiative, the swallowing up of all private social institutions by mammoth superagencies set up by the city, State, and Federal Government. That such a view is entirely unwarranted may be seen from many considerations. First of all the President of the United States has had the clearness of vision to point out that no such eventuality is either desirable or practicable.

In his address on Mobilization for Human Needs, President Roosevelt observes: "There are some persons who say that the need for voluntary private agencies has decreased. They say that the Government—Federal, State, and local—has moved in and taken over part of the jurisdiction of the private agencies. Such persons talk as if the scope of voluntary action and of mutual aid

over part of the jurisdiction of the private agencies. Such persons talk as if the scope of voluntary action and of mutual aid had been limited, or even eliminated.

"Private community effort is not contradictory in principle to Government effort, whether local, State, or National. All of these are needed to make up the partnership upon which our Nation is founded. The scope of voluntary action cannot be limited be-cause the very desire to help the less fortunate is a basic and spontaneous human urge that knows no boundary lines. It is an urge that advances civilization. I like to think it is a national characteristic." characteristic.

That is, indeed, a statesmanlike pronouncement.

That is, indeed, a statesmanlike pronouncement.

The most important statement on this subject in the face of the new emergence of public agencies in the health field, is the memorandum handed on November 21, 1938, to the Federal Interdepartmental Committee to Coordinate Health and Welfare Activities by a joint representation of the American Hospital Association, the Protestant Hospital Association, and the Catholic Hospital Association. The emphasis in this document is not a demand for governmental subsidies, but an expressed desire on the part of the private hospitals to be allowed to continue in the care of the poor. They ask not to be prevented by governmental action from continuing their participation, which has resulted in the present excellent standard of public health in this country. The private hospitals demand recognition of their right to care for the poor and indigent as an act of Christian charity. Catholic hospitals are not merely business institutions. The Sisterhoods have been created to care for the poor and underprivileged. It is by fidelity to this basic responsibility that vocations to the religious life are fostered and the spirit of self-sacrifice and Christian charity is kept alive. tivities by a joint representation of the American Hospital Associakept alive.

kept alive.

It was pointed out that for many decades the responsibilities for safeguarding the public health was maintained by private hospitals without any governmental aid at all. Consequently, the wise program for the future is "to alter to the least possible extent the existing plan of cooperative understanding between public and private agencies."

Certainly there should be no intrusion of governmental agencies into work which private agencies are perform more effectively.

Certainly there should be no intrusion of governmental agencies into work which private agencies can perform more effectively. We welcome the increased interest of the Federal Government in the health problems of the Nation, and we are anxious that this interest "should stimulate insight into the proper relations between private and public health agencies."

We look with favor on the enlargement of grants under the Social Security Act for the care of the sick unemployed, child welfare, maternity welfare, and the care of crippled children. In regard to the extension of public-health services, however, as for example in the erection of new hospitals, such action should only regard to the extension of public-health services, however, as for example in the erection of new hospitals, such action should only be taken after a survey of the local need has been conducted and recommendations made, based on such a survey. It is absurd to build hospitals where there is no prospect of having either medical or nursing professional facilities adequately provided. Political considerations have often dictated the erection of governmental institutions "which, once they have been erected, have not only consumed enormous sums in their operation but also have tended toward weekening the effective constitution of existing institutions" toward weakening the effective operation of existing institutions." It must also be remembered that in the development of outpatient departments and clinics, vast progress has been made by private agencies which should not be destroyed but should be aided to make further development possible. To destroy these agencies by governmental competition would be to throw an unwarranted burden on Government finances, since large funds have already been invested by these institutions in the service of public beautiful.

The care of the indigent is, indeed, a responsibility of society, but society is something far wider than the State and it includes all private philanthropic associations. It is only when these varied social agencies are unable to care for the poor that the State has an obligation to intervene. The statement of the three great hospital associations to which we have referred, devotes a pregnant paragraph to this subject. They say, "We should like to emphasize the development of cooperative plans by the public and private agencies. * * If the cooperative plan is to be intensified, there may be an opportunity for the wise and profitable expenditure of public funds to remunerate in part the private institutions for the public service which they are rendering and able expenditure of public funds to remunerate in part the private institutions for the public service which they are rendering, and thus increase their effectiveness for the promotion of the public welfare. The allocation of tax support for these public services would stimulate the private institutions toward still greater efforts and would, we hope, place at the disposal of the medically indigent and the indigent facilities which the Government would undoubtedly find it extremely difficult to duplicate."

In the future care of public health, it may be expected that private institutions will be greatly helped by the extension of bosnital insurance plans which on a nonprofit and voluntary

hospital insurance plans which, on a nonprofit and voluntary basis, will provide prepayment for hospital care. These group plans which have already achieved success, will go far to provide for adequate hospitalization for the great body of the middle class

and wage earners.

We look back then upon a most creditable record of public service in the Pacific Northwest rendered by private hospitals during the past century of our growth. On the basis of that record and of the traditions of American cooperation between public and private agencies, we look forward with hope to an extension and an intensification of the labors of Catholic and of other private agencies in the great program for the improvement of the public health which lies ahead.

Practical Patriotism

EXTENSION OF REMARKS

HON. RENÉ L. DEROUEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

ADDRESS BY HON. ROBERT L. MOUTON, OF LOUISIANA

Mr. DEROUEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. ROBERT L. MOUTON, representing the Third Congressional District of Louisiana, before the members of the Constitution Chapter of the Daughters of the American Revolution, Washington, D. C., at their annual regents' luncheon held in the Garbo Room of the Shoreham Hotel, April 18, 1939:

Mme. Toastmaster, Worthy Regent, distinguished guests, members of the Constitution Chapter of the D. A. R., I am very happy to be here with you all, here today, for many reasons. As a Southerner, and a lonely bachelor, I am more than just duly a Southerner, and a lonely bachelor, I am more than just duly appreciative of feminine pulchritude, and especially so when it is massed in such a gorgeous, springtime array, as here now. You know, there is something about this spring finery that women wear, something in the lovely color effects and styles, that brings out, shall I say, the finer points of feminine loveliness, that causes a flutter in the heart of even a most hopeless, and most abandoned bachelor; and far be it from me to prove the exception.

I have always entertained a deep, abiding, and genuine admira-

doned bachelor; and far be it from me to prove the exception.

I have always entertained a deep, abiding, and genuine admiration for you women who comprise the Daughters of the American Revolution; you women who guard so jealously and vigilantly, and labor so diligently and conscientiously, to keep alive the sacred and hallowed traditions of our glorious Revolution. To me, your splendid organization will always symbolize the ne plus ultra, the ultimate in patriotism, because it is composed of sacred and hallowed traditions of our glorious Revolution. To me, your splendid organization will always symbolize the ne plus ultra, the ultimate in patriotism, because it is composed of unselfish women who are determined that all of the institutions of liberty and freedom wrought by the blood and sacrifice of our glorious forefathers will live eternally. I have applauded your efforts to stamp out the noxious isms that would substitute alien and undemocratic forms of government. I have noted with satisfaction that your body always has adopted a sane, common-sense, realistic attitude toward national preparedness against war, and has advocated consistently preparedness that will insure adequate security against aggression; and that, my friends, is more than can be said for some members of my own sex, who, apparently, still believe that in a national emergency an army of "pitchfork soldiers," organized overnight, could withstand an aggressor, as one of our statesmen once declared while on an emotional flight into the stratosphere of pacifist oratory.

There never was a time in the history of our great Nation more fraught with uncertainty; never a period in our national existence that called for more clear thinking or more courageous, resolute action. And there never was a greater need for organizations like the Daughters of the Revolution, and others whose efforts are

action. And there never was a greater need for organizations like the Daughters of the Revolution, and others whose efforts are directed toward unselfish patriotism. Events in Europe and Asia have progressed to the point where Old World institutions are hovering dangerously on the brink of chaos; where civilization itself faces what may mean oblivion. To those who regard the past with realism, to those who choose to view the existing situation honestly and not through rose-colored glasses, it should be apparent faces what may mean oblivion. To those who regard the past with realism, to those who choose to view the existing situation honestly, and not through rose-colored glasses, it should be apparent that there will be no peace, there will be no security, there will be no brotherhood among nations, so long as international banditry is on the loose, so long as the stronger nations are allowed to throttle the weaker ones, and so long as might is permitted to gain the ascendancy over right. This is the era of international terror. Selfish men, drunk with power, have erected military frankensteins, they can no longer control. Conquest, pillage, rape, and plunder are the rule. Humanitarianism, honor, chivalry, and decency the exception. Time and space have been overcome and made to serve the purpose of the militarists. The war of today, though several thousand miles removed, may be curs of tomorrow. Bombing planes that shower death and destruction in Europe and China can well duplicate the inhuman slaughter within our territory. No boundaries are secure against madmen who thirst for power and glory; no nation is secure against madmen who thirst for power and glory; no nation is secure against leaders who respect neither pledges, treaties, nor international law. And if any here present have any doubt, consider the fate of Manchuria, of Ethiopia, of Austria, of Czechoslovakia, of Memel, and now of poor little Albania.

Most of you ladies are familiar with what has been transpiring in Latin America. All of you know, I am sure, that German, Italian, and Japanese agents are swarming the gospel of totali-

Italian, and Japanese agents are swarming the gospel of totali-

tarianism, fomenting dissatisfaction and distrust against the United States, and trying, by fair means and foul (mostly foul) to ruin our profitable export markets there. Agents of the totalitarian powers have expended millions of dollars in Latin America propaganda, in gifts of munitions, in staffing universities with their own professors, in lecture tours, and in vast radio projects. South America is a vast storehouse of treasures; rich in fertile lands, in mineral wealth, and colony sites, it holds forth the very things, the raw materials, they need desperately. And though the Latin-American republics have resisted valiantly this

the very things, the raw materials, they need desperately. And though the Latin-American republics have resisted valiantly this political propaganda campaign, tremendous inroads have been made. The Nazis have virtual colonies that well dominate two of the most fertile states in Brazil; the Japanese have large agricultural holdings in the rich Amazon Valley and are leading cotton producers; and the Italians, not only in Brazil, but in the Argentine, in Peru, and elsewhere, have enrolled millions in their "Latin Cultural League." And now, with Spain their ally—Spain, the mother country of all the Latin-American republics—their prestige and power is bound to be enhanced.

The campaign for Latin America—a campaign that, if successful, will bring bombing bases virtually to our borders' edge—the campaign for Latin America now is limited to political maneuvering and propaganda. What will it be if the totalitarian powers become masters of Europe and Asia? What form will it take when they no longer have to consider formidable democracies like France and England? Isn't the answer obvious? German, Italian, and, perhaps, Japanese minorities in the various Latin-American countries will complain of oppression, just as they did in Austria, in the Sudetenland, in Memel, and are doing now in Danzig. And the mother countries will take a hand, will supply munitions at first, and then large bombing planes, and planes that will find bases a few hours' distance from the Panama Canal, even from our eastern and western seaboard cities. And if we are not prepared, and have an umbrella man, there may, Heaven forbid, be an American Munich, with all of the gall, all of the humiliation, and all of the shame that went with the original tragedy enacted in that quaint German city. And if such a horrible event were to come to pass, if the American people were caught unprepared, and were credulous enough to adopt the defensive tactics of the ostrich, as advocated by some of our leading pacifists, who right now are appearing under other colors a of our leading pacifists, who right now are appearing under other colors and other auspices, if the American people should follow these misguided prophets of appeasement or whatever it may be then, it will be interesting to hear the explanations of our present-day isolationists.

I am not an advocate of so-called entangling alliances; I believe in letting European and Asiatic nations wash their own very dirty linen. And I do not believe that another American expeditionary linen. And I do not believe that another American expeditionary force should be sent beyond our confines of the Western Hemisphere. But I do believe, and favor, open, avowed, and generous assistance to England and France, in the form only of planes, munitions, and war materials. And I advocate this for a practical reason. France and England are the only formidable barriers in the Old World. The effort they are now making is directed toward preparation for a job that will be ours if they fall. If the totalitarian powers destroy them, if they are reduced to vassalage, then will our own troubles begin; then will the real, the formidable effort against Latin America begin. And that effort my friends. effort against Latin America begin. And that effort, my friends, whether you choose to believe it or not, will involve the Monroe whether you choose to believe it or not, will involve the Monroe Doctrine, for that policy means today exactly what it meant at the time of its formulation. It is a warning to nations beyond the hemisphere to keep out, let us and our democratic neighbors live in peace, as democracies. And if an effort is made to acquire territory in the Western Hemisphere—in whatever guise or form, directly or indirectly—it means, so far as we are concerned, fight! Isn't it more prudent then, for a selfish reason if for none other, that we assist the nations in Europe that are girding for the task of stonying totalitarian powers before they can reach out to our of stopping totalitarian powers before they can reach out to our

of stopping totalitarian powers before they can reach out to our shores?

All of this adds up to the fact that we here in the hemisphere are not, by any means, immune to the totalitarian horror; that bombing planes have a way of shattering the smug complacency of peoples that luxuriate in the tragic assumption that their nation, because of what was once a protection—remoteness—will deter invasion, and that those nations that make up the totalitarian unholy alliance will heed solemn pledges.

It means, too, that you who are members of a great patriotic body, and others who are affiliated with like organizations, should make your convictions known in no uncertain language; should come out clearly for the national-defense program; and should see to it that the Congress should give to the people of that nation every form of defensive factor that will insure security from attack. Our Navy should be second to none in numbers and efficiency. Our armadas of the air should be large and powerful enough to make those who enforce their will on totalitarian peoples think several times before starting anything against us; our antiaircraft defense, our tanks, our machine guns, our motorized equipment—everything necessary to build up our national security—should be made available promptly and without diminution.

necessary to build up our national security—should be made available promptly and without diminution.

The language of the dictators is a language of guns and munitions, of planes and battleships. They understand no other when it comes to an emergency. Diplomacy to the totalitarians is just "talk" unless it has the backing of guns; they must be able to speak with assurance, to convey the inescapable impression that acts

most assuredly can be brought into the picture where words fail. The dictators by their own acts have transformed this age into one of force; and our only alternative, if they would have it that way, is to meet force with force—and a little extra to boot. If that is the manner in which the international game must be played, and if they have made the rules, let's prepare to give them all they desire of the game in their own way and under their own rules. And let's discourage this "Casper Milquetoast" policy of avoiding any inter-course with France and England, lest the bad, bad, totalitarians get mad at us and have Herr Goebels, their propagandist extraordinary,

mad at us and have Herr Goebels, their propagandist extraordinary, call us a lot of naughty names.

I should like to see initiated a vigorous program for the elimination of organizations that mask as American, but, in reality, are fronts for the most dangerous type of anti-American and anti-Democratic propaganda. Among these organizations are the various German bunds, the Communist organizations, and others. There are thousands of aliens here who have enjoyed the security and hospitality of these shores for years, without making the effort to become American citizens. It is my conviction and my sincere hope that your great body will sponsor and push legislation by the Congress requiring an alien, after 5 years of residence here, to become a citizen or take his departure. After all, this is America—a great democracy—offering to humans more, in the way of living, than any nation under the sun; freedom of speech, of asliving, than any nation under the sun; freedom of speech, of assembly, of worship, and other privileges and rights, long since throttled in the homeland of most of the aliens living here without citizenship. Why should these aliens be permitted to enjoy these privileges and still retain allegiance to their homeland? If American citizenship isn't good enough for them, then America is in the same category and they should be sent on their way with Godspeed for happiness in lands where it is "verboten" even to breathe God's air without permission.

And now, my dear ladies of the D. A. R., I wish you to know that it was a happy privilege to address you all here today; and that leaving you, brings to mind the French proverb, "De dire adieu, c'est de mourir—un petit pau." "To say farewell is to die—a little bit."

Spanish Embargo

EXTENSION OF REMARKS

HON, CHARLES A. PLUMLEY OF VERMONT

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

A MESSAGE FROM HOME TO A YOUNG REPORTER

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a short article on the Spanish embargo, written by Miss Betty Barton; in itself a comprehensive picture of the situation. Incidentally it might be suggested that the distinguished father of the young lady never said more in as few words than has his daughter in the following dramatically written exposure of the paradox which she so colorfully illustrates in words:

When President Roosevelt lifted the embargo on Spain the day

When President Roosevelt lifted the embargo on Spain the day after that war was over, I had to laugh. And my laughter was not happy or relieved laughter—it was sad and full of tears.

For I had known a young soldier in Spain, a young American who went to fight and did not return.

He was about 23. He was not very tall, but he was slim and his eyes looked steadily at you and he rarely spoke. He was a shy boy and no one really knew him for he never showed himself to anyone. He worked on a newspaper in New York for a while and then they sent him to their Paris office. He worked hard in Paris and covered small stories which didn't interest him much.

and then they sent him to their Paris office. He worked hard in Paris and covered small stories which didn't interest him much. He wanted to do something bigger.

When the war in Spain started he was only mildly interested in it. He thought, as everyone did, that it would soon be over and that it did not matter who won, anyway. Spain was always having wars. So when the paper he worked for sent him down to cover the Loyalist side of the Spanish war for them he went off with a newspaperman's curiosity—nothing more.

He walked through the trenches and the battle lines armed with his curiosity and a notebook. He watched the fighting and listened to the soldiers talk. And his curiosity slowly changed into the belief that these men were fighting the greatest battle that had ever been waged for civilization. They were stamping out fascism. They were crusading. And as he watched and listened some more this belief strengthened itself and the young man lay down the reporter's notebook and took up real arms this time to fight.

They tell tales of his heroism still. It seems impossible that any man can be a hero in a modern war, but here was one. Nothing could stop him now that he was convinced that his cause was right. He was fanatical in his untiring vigilance and desire to fight. He would not be stopped. He rarely slept. He ate little. And the men did not know him well, for he showed himself to no one.

But the war seemed to be drawing to a close and the Loyalists were losing. The volunteer brigade was called home. It was to be disbanded. The night before they were to go home there was a call for men to go out and locate an insurgent machine-gun nest. call for men to go out and locate an insurgent machine-gun nest. The young man was the first to volunteer, and with two other men he walked across "no man's land" toward the nest. When they almost reached it the young man stopped his companions and said he would go on alone, and the others consented, for they knew it was no use to try and stop him. They stood back and watched him advance slowly upon the nest. Then there was a sudden flash of flame and a great explosion. There was a cry torn from the throat of a man and all was still.

It took them a long time to convince us that he was dead. We

It took them a long time to convince us that he was dead.

It took them a long time to convince us that he was dead. We thought he might be a prisoner. We thought he might have been lost and not reported. We could not believe that he was dead. Then one night in a college auditorium many months later a young man gave a speech. He was a Spanish war veteran. And he spoke of the young reporter who had given his life in the war he thought was a big war, in the war which seemed great to him and yet was only a small one. And he told of his bravery. And after he was through a girl went back stage and talked to him. How well had he known the reporter? Very well. Was he sure he was dead? Yes; he was sure. Why? she asked, why?

Well, the veteran said, when it was safe we walked out to the place where it had happened and there could be no mistake about it. We saw it and we got a piece of the shell. You did? the girl said, and her eyes were bright with tears. Yes; we did. We picked up a fragment of it and we turned it over and on the side it was marked plainly there on the back "Pittsburgh, Pa." What a laugh that was. Right from his own country; made over here.

Right from his own country; made over here.

So the Spanish embargo made me laugh when I thought of this—

laugh until my eyes were wet.

Lard Under Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

Mr. REED of New York. Mr. Speaker, since lard has been one of the most important of our many farm exports it was logical to expect the State Department to ask for concessions on lard in negotiations under the Reciprocal Trade Agreements Act of 1934. In fact, concessions were made in the first three agreements-Cuba, Belgium, and Haiti. During 1936, 6 additional concessions were received, 1 more in 1937, and 1 in 1938. Thus we find that this country has received 11 concessions on lard through the trade agreements.

With these concessions it is apparent we should have had increases in exports, especially from the concession countries. However, our total exports of lard in 1937 were but 16.4 percent of the 1929 level, to concession countries but 12.1 percent, and to all other countries but 19.7 percent of the 1929 level. Exports of lard have decreased each year from 1929 through 1934, with the exception of the year 1933, due to the decreased volume of world trade from 1929 to 1932, to the continuous growth of trade barriers, and to the increases in domestic production in important importing countries. Exports dropped 77.6 percent between 1934 and 1935 due to the above causes-to the drought of 1934 and to the Roosevelt farm program.

However, in 1934 the first trade agreement granting the United States concessions on lard was made with Cuba. This agreement became effective in September 1934 and did not have a great deal of effect on our exports to Cuba in that year. Our exports to Cuba in 1935, the first year of the agreement, were less than in 1934. In both 1936 and 1937 there has been an increase over the previous year, but economic and social conditions have been much better in both of these years, too. The Cuban concession probably has been helpful in bringing about this increase, but in 10 con-

cessions, all of which have been effective during this period, surely one should be of some value. Since exports to countries other than Cuba have decreased throughout the period from 1929, and especially so after 1934 when the trade agreement became effective, it is evident that the trade agreements other than the Cuban have been of absolutely no value in

advancing this country's foreign trade in lard.

Business Recovery

EXTENSION OF REMARKS

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

Mr. MARTIN of Massachusetts. Mr. Speaker, 2 months now have passed since Secretary of Commerce Harry L. Hopkins in a speech at Des Moines announced to the country that the New Deal was ready to take positive steps toward a business appearement program to restore economic recovery. Assumed to be speaking for the Roosevelt administration, Mr. Hopkins' announcement aroused widespread enthusiasm and raised high hopes in all parts of the country and among adherents of all political faiths.

Since that speech, however, the only specific action taken by the administration to encourage recovery was the recommendation of the Secretary of the Treasury for cancelation

of the increased pay-roll taxes.

Correction of defects in the Social Security Act, however, is but one step in a necessary business recovery program. Other steps must be taken-and taken now-if a solid foundation is to be laid for business revival. The expected spring

improvement in business failed to materialize.

An increasing flood of mail to Congress from all parts of the country complains of conditions. Factory and shop workers write me they are footsore and weary seeking employment. Farmers tell me their condition is desperate. Young men and women, unable to get jobs, beg for a chance to make a start in life. All want to know why their Congress and their Government are doing nothing to restore normal conditions

The Roosevelt administration is torn by conflicting opinions of what should be done and is unable to act because of indecision. Therefore Congress must assume the lead in taking steps necessary to guide the country back to economic recovery and restore our millions of unemployed to jobs in

private industry at decent wages.

Republicans are ready to support all steps necessary to promote business revival and reemployment. We call on all Members of House and Senate to join with us in working earnestly and unceasingly to bring about the following

First. Keep the United States out of war.

Second. Move immediately to curb unnecessary, wasteful, and reckless spending.

Third. Repeal the repressive tax on undistributed corporate earnings, which has proved so harassing and dangerous to business, large and small.

Fourth. Revise the remainder of the Federal tax structure to eliminate or modify provisions retarding business recovery.

Fifth. Repeal the dangerous discretionary authority which the President now has over the Nation's monetary system.

Sixth. Amend the National Labor Relations Act by clarifying the mutual obligations of worker and employer and the duties of both toward the public in order to end present paralyzing discord.

Seventh. Define specifically the area of Government competition with private enterprise so that business may be able to create jobs with some certainty as to the future.

Eighth. Restore American markets to the American farmer and wage earner and develop new markets for agricultural products.

Ninth. Adopt immediate legislation to rehabilitate the railroads to make secure the jobs of many hundreds of thousands of workers and the investments of savings banks and life-insurance companies.

Tenth. Create a special committee of Congress to inquire into the effect of the reciprocal trade-agreement policy on American industry and agriculture.

Eleventh. Clarify Federal rules and regulations so industry and business may know what to expect.

Twelfth. Reject all experimental legislation not clearly helpful in promoting recovery, or which would subject agriculture, labor, or industry to compulsory decrees of a Federal bureaucracy.

We are convinced that no progress can be made toward restoring this country to a sound and permanent prosperity until a program along these lines is adopted and put into

effect.

We are convinced if this program in its entirety is adopted by Congress and accepted by the President, our country will immediately take on new life and vigor and will presently begin again to enjoy economic stability and a higher standard of living. Panaceas and short-cut methods have been tried and found wanting. The time has come to go forward to fundamentally sound principles.

Words are not sufficient; action is imperative now!

War Debts and Coastal Islands

EXTENSION OF REMARKS

HON. ROBERT F. RICH

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

RESOLUTION OF GARRETT COCHRAN POST, NO. 1, AMERICAN LEGION

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by Garrett Cochran Post, No. 1, of the American Legion, Department of Pennsylvania:

Whereas the Government of the United States of America is contemplating large expenditures to provide an adequate national defense, the cost of which will impose an excessive burden of tax-

ation upon the citizens thereof; and

Whereas the Allied Powers, and especially Great Britain and France, during and after the World War borrowed large sums of money from the United States, which, since 1932, they have failed to pay, and which default approximates \$13,000,000,000 and repre-

to pay, and which default approximates \$13,000,000,000,000 and represents borrowings by the United States upon its bonds sold to and held by the citizens thereof; and

Whereas it is apparent that the Government of the United States, through taxation of its citizens, will ultimately be required to pay said bonds, not only because of the failure of said allies to pay their said war debts, but because it has become impracticable for them to do so through the ordinary and normal methods employed to settle international obligations, to wit, by money, goods, and/or services, and at the same time increase their own

employed to settle international obligations, to wit, by money, goods, and/or services, and at the same time increase their own armaments as they are now doing; and

Whereas said allies, especially Great Britain and France, are the owners of a number of islands off the eastern coast of the United States of America, namely, Bermuda, the Bahamas, Windward and Leeward Islands, Barbados, Trinidad, Tobago, Jamaica, Martinique, and others, together with British Honduras in Central

America; and

Whereas it would seem desirable for the United States to acquire the same as a total or partial liquidation of said war debts for the

following reasons:

1. In order to salvage something on account, or in full payment, of said indebtedness due to the United States from Great Britain and France; 2. In order to extend the eastern outposts of the United States

beyond its shores on the Atlantic Ocean.

3. In order to secure better control of and protection for its Atlantic coast line and to control the Gulf of Mexico and the Caribbean Sea, thereby providing additional protection for the Panana Canal, better enabling the United States to enforce the Monroe Doctrine;

4. In order to reduce thereby the number of ships necssary for such coastal protection and first line of defense for its eastern shores, which should result in a substantial saving to the taxpayers of the United States; and

Whereas believing the acquisition of said islands by the United States to be vitally necessary and essential for the reasons hereinbefore set forth, it is hereby

Resolved by Garrett Cochran Post, No. 1, the American Legion, Department of Pennsylvania, at a regular meeting of its members held Tuesday, April 18, 1939, That the substance of the foregoing

preamble be, and it is hereby, recommended to the Federal Government as part of its present policy of national defense, and that said Federal Government, through its proper representatives, nesaid Federal Government, through its proper representatives, negotiate with said defaulting allies to the end that their said coastal islands and possessions be ceded to, and become vested in, the United States of America as full or partial payment of their said war debts; and that the Federal Government, if the same are so acquired, develop thereon the necessary naval, military, and air bases for the purpose not only of protecting our own eastern shores from foreign attack but, as well, to strengthen the ability of the United States to enforce the Monroe Doctrine; and it is further

it is further

it is further

Resolved, That in order that the foregoing preamble and resolution may be submitted to the Congress of the United States under the united sponsorship of this post, the department of Pennsylvania, and the national convention, a copy of said preamble and resolution be forwarded to the department of Pennsylvania for its approval, and if by said department approved, that it then be submitted to the national convention for its approval and submitted to the national convention for the States Convention of the Control of the States Convention of the States mission to the proper authorities of the United States Govern-ment for final action in accordance therewith; and that in the meant for final action in accordance therewith; and that in the meantime copies hereof be certified by the adjutant of this post and forwarded by the post solicitor to the national organization of the American Legion and the United States Senators from Pennsylvania, the Congressman from this district, and to United States Senators Borah and Pittman of the United States Senators Foreign Relations Committee.

Approved April 18, 1939.

RESOLUTIONS COMMITTEE OF GARRETT COCHRAN POST. No. 1. THE AMERICAN LEGION, DEPARTMENT OF PENNSYLVANIA, By CARL W. HERDIC, Chairman.

And now, April 18, 1939, the undersigned hereby certifies that the foregoing preamble and resolution were unanimously adopted by the members of Garrett Cochran Post, No. 1, at its regular monthly meeting duly called and held this day at its post home in the city of Williamsport, Lycoming County, Pa.

CHARLES E. MAHAFFIE, Adjutant.

Keep America Out of Foreign Wars

EXTENSION OF REMARKS

HON, HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, April 24, 1939

RADIO ADDRESS BY HON. HAMILTON FISH, OF NEW YORK. APRIL 21, 1939

Mr. FISH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio speech I delivered over the blue network of the National Broadcasting Co. on Friday evening, April 21, 1939:

America faces another international crisis. Are we drifting into another world war and toward a dictatorship of our own? The issue is so vital and urgent that it demands the serious and immediate consideration of all the American people regardless of party affiliations

The time to wage war on war is in time of peace. The time to wage war on war is in time of peace. If we do not speak out now, it will be too late after war is declared. I call on all American citizens to participate in a campaign to keep us out of all foreign wars, unless we are attacked. We are willing to spend billions for national defense but not a single dollar to send American soldiers to foreign lands to fight other people's battles or repeat the folly of trying to make the world safe for democracy. If we do, we will lose our own free institutions and come out a Fascist or Communist nation.

I call upon all would-be Republican and Democratic candidates for President in 1940 to make their position known, without evasion or reservation, on this issue of keeping out of foreign wars. The people have a right to know how every candidate stands on collective security, entangling alliances, military and naval pacts,

collective security, entangling alliances, military and naval pacts, armed intervention, secret diplomacy, war commitments, and delegating to the President discretionary war-making powers. delegating to the President discretionary war-making powers. There should be no compromise or quibbling on this greatest of issues, and the people should have an opportunity of a clear-cut referendum on this question in the general election in 1940, as they did on the League of Nations in 1920.

We know where the New Deal administration stands. It stands for internationalism, intervention, collective security, secret diplomacy, military alliances, and against our traditional American foreign policy of neutrality, nonintervention, peace, and no entangling alliances.

New Deal spokesmen, have stirred to the property of the property

New Deal spokesmen have stirred up war hysteria into a verit-ble frenzy. The New Deal propaganda machine is working overable frenzy.

time to prepare the minds of our people for war, and to send our youth to be killed on foreign battlefields.

What is behind this far reaching and continuous campaign of hate, emanating from New Deal sources, that discovers daily a new crisis? One word from the White House would stop the hysnew crisis? One word from the White House would stop the hysteria and talk of war; not only is there no such word but instead there is a steady flow of alarming and provocative statements that add fuel to the war flames. On April 11, President Roosevelt endorsed as his own views an editorial in the Washington Post that stated if war broke out in Europe our participation in it would be a "virtual necessity."

While I commend President Roosevelt for his belated peace move, and sincerely hope that it will have some effect toward averting war in Europe, I do not believe, being sponsored by the President, it will amount to more than a sensational and dramatic gesture. I am afraid that the President's references, and those of his Cabinet, to totalitarian states as vandal, gangster, and diseased

President, it will amount to more than a sensational and dramatic gesture. I am afraid that the President's references, and those of his Cabinet, to totalitarian states as vandal, gangster, and diseased nations precludes any acceptance of peace overtures from him. If he had not engaged in name calling and hymns of hate his plea to avert war would have stood a far better chance of success.

For the first time in our history our foreign policy has been based upon hatred, threats, and attacks on the forms of government and rulers of foreign nations. It is the most amazing departure from American traditions and has created war hysteria at home and hatred abroad.

Over 2 years ago I urged the President to call a peace and economic conference for the purpose of assuring foodstuff and raw materials for Germany and Italy with their growing population in order to head off another armed conflict. It is self-evident that both Germany and Italy must have an assured supply of grain for their people and raw material for their factories to survive. Instead of cooperating we have denounced their barter system, which is their only means of trade, as they have no gold or foreign exchange, and placed a 25-percent additional duty on their exports to America.

I am convinced that if President Roosevelt had refrained from meddling in the European situation by encouraging England and France to believe that we would fight their battles they would have long ago reached an agreement by peaceful means to protect their own colonial interests.

Unfortunately, President Roosevelt is largely responsible for the fear that pervades the Nation and that has given the stock mer-

tect their own colonial interests.

Unfortunately, President Roosevelt is largely responsible for the fear that pervades the Nation and that has given the stock market and the American people a bad case of jitters.

It is the duty of all those Americans who desire to keep out of foreign entanglements and the rotten mess and war madness of Europe and Asia to openly expose the war hysteria and propaganda that is impelling us to armed conflict. We are still a free eople and have as much right to criticize the dangerous foreign

people and have as much right to criticize the dangerous foreign policies of the New Deal as we have any of its disasterous domestic policies. Actually, I believe it is far more important to oppose our entrance into any secret naval or military alliances or war commitments than any other issue before the people.

I believe the American people, regardless of their antipathy to nazi-ism, are opposed to sending their sons to fight over the possession of Memel or Danzig or any other territories seized under the Versailles treaty, or to be slaughtered in defense of communism and Soviet Russia, or to defend the French and British colonial empires. With Soviet Russia, the most despotic and dictatorial nation in existence, allied with Great Britain and France, a European world war would not be over ideologies and democratic forms of government but for world power and to maintain vast colonial empires.

It would be well for the European nations, before it is too late, to understand that President Roosevelt not only has no power to declare war, but has no power to determine the aggressor nations, or to quarantine them by economic sanctions or armed force.

The Congress has no intention of surrendering its constitutional authority to declare war or to give President Roosevelt the power to select and punish the agressor nation, which would be equivalent to delegating to the President its war-making powers. The Congress still is the final arbiter of war and peace, in spite of all war mongering from the White House.

I do not believe that one-third of Congress has any sympathy for the provocative and inflammatory propaganda that has been emanating daily from the White House or its spokesmen. I doubt if there would be a corporal's guard in Congress who would vote for war on orders from the White House, if the people back home

make their views known in time.

It is the duty of all American citizens who want to stay out of foreign wars to write their Representatives and Senators and express their sentiments in no uncertain language. It is very apparent that there is a great difference between the foreign policies of former President Woodrow Wilson and President Franklin Roosevelt; President Wilson tried to keep us out of war until repeated attacks of German submarines on our ships without warning forced us in, whereas President Roosevelt is an interventionist; and believes thet he has been evolved by represident to

warning forced us in, whereas President Roosevelt is an interventionist and believes that he has been anointed by providence to quarantine and police the world with American blood and treasure.

What are the underlying motives behind the New Deal hymns of hate and threats of war against the totalitarian states?

I accuse the administration of instigating war propaganda and hysteria to cover up the failure and collapse of the New Deal policies, with 12,000,000 unemployed and business confidence destroyed.

I accuse the administration of deliberately scrapping our traditional foreign policies for internationalism, collective security, economic sanctions, naval alliances, and war commitments without the consent of the Congress or of the American people.

I accuse the administration of conducting a childish and un-American campaign of name calling, hatred, and abuse that inflames the war passions of foreign nations and our own people. I accuse the administration of leading the American people to a rendezvous with war, death, and bankruptcy. The American people want no rendezvous with that kind of destiny.

What we need in America is a stop war crusade, before we are forced into a foreign war by internationalists and interventionists

forced into a foreign war by internationalists and interventionists at Washington, who seem to be more interested in solving world problems rather than our own.

The answer to the dictatorships is not force, compulsion, threats, abuse, and hatred, but to make democracy work in our own country, by keeping out of the eternal wars of Europe and Asia, putting our own house in order, restoring confidence, and putting

our own wage earners back to work.

The facilities of the President and the New Deal administration to disseminate war propaganda and hysteria and to prepare the to disseminate war propaganda and hysteria and to prepare the youth of America for another blood bath in Europe are so enormous that it is essential to form a national organization to counteract these un-American, provocative, and dangerous policies with every resource available and to conduct an open and militant campaign of education through organization, the press and the radio, to keep America out of foreign wars.

With this in view, 50 Members and former Members of the House of Representatives have formed a National Committee to Keep America out of Foreign Wars. Its main purpose is to provide a national nonpartisan, nonprofit, and nonsectarian organization through which the American people can express their determination to keep out of European and Asiatic conflicts and to promote peaceful relations throughout the world.

It is likewise proposed to combat the spread of nazi-ism, fascism,

It is likewise proposed to combat the spread of nazi-ism, fascism, and communism throughout our Nation, and to safeguard America for Americans, regardless of race, color, creed, or politics.

A permanent organization has already been formed, of which I was elected chairman. Representative Harold Knutson, of Minnesota, who voted against war 22 years ago, first vice chairman; former Representative John J. O'Connor, of New York, and Democratic chairman of the Rules Committee, second vice chairman; former Representative Samuel B. Pettengill, of Indiana, a distinguished Democratic Member of the House for many years, third vice chairman. Former Representative Royal C. Johnson, of South Dekots, who yedd against war but who served in our armed forces.

guished Democratic Member of the House for many years, third vice chairman. Former Representative Royal C. Johnson, of South Dakota, who voted against war but who served in our armed forces overseas and was severely wounded in battle, was elected secretary. Walter L. Reynolds was elected treasurer.

An executive committee, including the officers, consisting of 50 Representatives and former Representatives was appointed, as follows:

Representatives: Allen T. Treadway, Massachusetts; J. Will Taylor, Tennessee; Roy O. Woodruff, Michigan; John M. Robsion, Kentucky; Albert E. Carter, California; Pehr G. Holmes, Massachusetts; Martin L. Sweeney, Ohio; Jesse P. Wolcott, Michigan; Leo E. Allen, Illinois; J. William Ditter, Pennsylvania; Charles A. Plumley, Vermont; Dewey Short, Missouri, Ralph O. Brewster, Maine; Usher L. Burdick, North Dakota; Frank Carlson, Kansas; Francis H. Case, South Dakota; Edward H. Rees, Kansas; Paul W. Shafer, Michigan; John C. Schafer, Wisconsin; Homer D. Angell, Oregon; Robert B. Chiperfield, Illinois; Robert J. Corbett, Pennsylvania; Carl T. Curtis, Nebraska; Henry C. Dworshak, Idaho; Leland M. Ford, California; Robert A. Grant, Indiana; Forest A. Harness, Indiana; Frank O. Horton, Wyoming; Ben F. Jensen, Iowa; Robert W. Kean, New Jersey; Frank B. Keefe, Wisconsin; Earl R. Lewis, Ohio; William J. Miller, Connecticut; Harry Sandager, Rhode Leland, Andrew C. Schiffer, West Virginia, Levis See William J. Miller, Connecticut; Harry Sandager, Rhode Island; Andrew C. Schiffler, West Virginia; James Sec-combe, Ohio; Henry O. Talle, Iowa; Oscar Youngdahl, Minnesota.

Former Representatives: Carl G. Bachmann, West Virginia; John M. Baer, North Dakota; Edward Keating, Colorado; Ralph A. Horr, Washington; Fred S. Purnell, Indiana; James Simpson, Jr., Illinois; Bertrand H. Snell, New York.

The chairman was authorized to appoint an advisory committee

The chairman was authorized to appoint an advisory committee of 50, outside of Congress, composed of prominent men and women in all sections of the country, which is now being organized. It was unanimously decided to proceed at once to set up a national organization, including a women's division, with units in every State, to combat the war propaganda and hysteria and to keep us out of foreign wars. All interested groups and individuals are invited to cooperate or affiliate with the aims and purposes of the committee. the committee.

the committee.

The treasurer, Walter L. Reynolds, room 1424, House Office Building, Washington, D. C., was authorized to accept contributions to carry out the keep out of war program.

None of the officers will receive any compensation, but funds will be necessary for paid organizers, traveling expenses, and for an adequate office staff to handle the mail, which is growing into huge proportions. If sufficient contributions are raised, it will be used to carry on a radio campaign to combat war propaganda with peace propaganda.

peace propaganda.

However, it must be clearly understood that this is not a pacifist organization. We stand squarely for adequate national defense and for the Monroe Doctrine.

There are no membership dues, but funds are needed to carry out this program, and contributions of whatever amount will be welcomed.

welcomed.

Our committee believes that the American people are in sympathy with and want such an organization to be established throughout the Nation. It is intended that this will be the people's organization, and will be used by them to express their sentiments against being eased into war without their consent.

I urge all American citizens who want to cooperate to write or send me or the committee a postal card to Washington, and we will see that detailed information and speeches are sent to them. The extent of the activities of the national organization will depend largely on the support of the people themselves.

The Committee to Keep America Out of Foreign Wars is opposed to delegating the constitutional power vested in the Congress to the President, whether a Democrat or Republican, to declare war, or its equivalent; to select and punish the aggressor nation. It is opposed to granting unwarranted discretionary power to the President in any neutrality bill that might involve us in foreign wars. foreign wars.

Let's have an end to all this war talk and hysteria, provocation, gambling, and flirting with war, and try to solve some of our own problems back home for the best interest and welfare of our unemployed and all the American people.

As for me, I do not propose to give or ask any quarter in my efforts to keep our country out of war. I shall continue the fight both in the Congress and elsewhere, to oppose all war mongers and to keep America out of foreign entanglements, military alliances, and foreign wars. and foreign wars.

If you want to stop the internationalists and interventionists in

their efforts to compel our participation in the eternal European blood feuds, our committee offers you that opportunity by uniting in a Nation-wide organization to keep America out of foreign wars.

Southward the Course of Empire

EXTENSION OF REMARKS

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

Mr. RANKIN. Mr. Speaker, there appeared in the Washington Post this morning an article by Roger W. Babson, one of the world's greatest business analysts, headed Fastest Growing States Are in the South.

In that statement, extracts from which I am inserting as part of these remarks, Mr. Babson gives his reasons why he regards the South as the coming section of this country, which means the coming section of the world. In the course of that statement, he says:

After a winter spent in the South it is hard to be pessimistic on this section even though cotton is selling for only 8 cents a pound. Far from being economic problem No. 1, I think the South is possibility No. 1 of the United States. Eliminate freight-rate differentials, speed up the diversification of the farms, utilize the waterpower developments, and Dixle can lift the United States into a revised of hydroges property. period of business prosperity.

The South is making huge progress each year. The growing States in the Union are nearly all in the South. growing States in the Union are nearly all in the South. Texas, Florida, Louisiana, the Carolinas are boosting their populations about three times as fast as the North. Literally hundreds of communities that were unheard of 10 years ago are thriving towns today. Every one of the chief cities in the United States whose populations have doubled since 1920 is below Mason and Dixon's line.

The story of the South's industrial growth is even more sensational. More than half the new factory development of the entire country in recent years has been down there. Today Dixie has over 25 percent of the manufacturing establishments of the United

over 25 percent of the manufacturing establishments of the United States. And they keep mushrooming up everywhere. Northern concerns continue to flow toward the Gulf, while entirely new industries are springing up all across the South. Reasonable labor costs, savings in fuel, nearness to raw materials, cheap power, low taxes, and water transportation are among the big sales points in the South's spectacular growth.

Latest new industry is newsprint. The first mill is under construction in Texas. It may be the forerunner of a southward trek of northern and Canadian newsprint mills. Slash pine is the raw material. It grows three times as fast as northern spruce. Other branches of the paper industry—particularly kraft—are going strong in Dixle. The southern chemical business is growing by leaps and bounds. Textile mills continue to multiply. Seventy percent of our rayon output comes from the South. The center of the booming petroleum business is in the Southwest. percent of our rayon output comes from the South. The of the booming petroleum business is in the Southwest.

The end of the so-called basing-point price system for steel should help all southern industry. Once it was just as cheap to buy a ton of Pittsburgh-made steel delivered at Birmingham as it was to buy a ton of Birmingham-made steel. Now the ton of southern steel is cheaper. Hence, foundries, forges, stamping mills, southern steel is cheaper. Hence, foundries, forges, stamping milis, and other metal fabricators that have concentrated around northern steel towns will find it advantageous to have branch factories near the southern steel industry. All winter Birmingham steel mills were much busier than those in the North.

Present freight rates are unfair to the South. Smash up these rates and the products of southern factories and farms can be laid down at northern doors at a real saving to consumers. If we believe the gradual lowester of world trade burriers we sught to

believe in a gradual lowering of world trade barriers, we ought to eliminate such barriers within our own borders. Present freight rate differentials amount to a tariff on southern products. The biggest boon to the South now would be the changing of these

rates.

The problem which has plagued Dixle for years—dependence on one crop—is on its way to solution. Diversification of farms is speeding up. Low feed costs are stimulating livestock raising and dairy farming. Meanwhile, the chemists are finding industrial uses for new crops, such as soybeans, tung trees, and sweetpotatoes and for older crops, such as cotton, tobacco, and peanuts. Hence, while King Cotton is a mighty sick man, the southern agricul-

while King Cotton is a mighty sick man, the southern agricultural outlook is very bright.

Among the South's greatest assets are her water-power resources. The T. V. A. development is a great thing. If it is administered wisely and fairly, the huge power surplus should be completely utilized. Air conditioning has played a big part in recent southern growth, and stimulated by cheap power, will continue to do so. We hear much about low wages in Dixie. People overlook the fact, however, that living costs in the South are very cheap. A house costing \$5,000 to build in New England can be put up in the South for about \$3,500, and can be heated for about \$50 per year less. Food—particularly farm produce—sells for a song. After lower living costs are considered, southern wages are not too far out of line. Certainly if I were a young man, I would come down here in the South to "seek my fortune." We need more trained men here. Why stay in New York, Philadelphia, or Boston and starve when you can come down here where you can live comfortably and where you are really needed? Today, for instance, 9 out of 18 States which are rated as excellent business territories on my sales map are in the South. Get in on the ground floor of this southern growth just as your forefathers got in on the ground floor of the industrial growth of the West. Decentralization of industry through the industrial use of farm products is on the way. What better spot in the world for it than bere in the "south".

use of farm products is on the way. What better spot in the world for it than here in the "sunny" South.

You will note Mr. Babson says that instead of the South being the Nation's economic problem No. 1 it should be placed as No. 1 from the standpoint of the Nation's possibilities.

That is true. With its gentle climate and its fertile soil, which Henry Grady once said "yields to the husbandman every product of the Temperate Zone," with her monopoly on cotton and cottonseed and with the world's reserve supply of timber, coal, iron, oil, gas, and water power, the South is bound to lead the world's march of progress in the years to come.

She would have been doing so for the last 50 years if she had not been ravaged by civil war, outraged by reconstruction, robbed by tariffs and other indirect taxes, discriminated against in transportation rates, plundered by utility rates, as well as interest rates, and subjected to a constant barrage of abuse and misrepresentations at the hands of the very interests that were profiteering at her expense.

Every conceivable falsehood that could be manufactured about a section or its people has been paraded throughout the North for the last 75 years concerning the South and the southern people-not about the Civil War but about the South itself and everything that pertains to the South.

It is written into their schoolbooks and taught to their children, with the result that they grow up not only in utter ignorance of the South but so badly misinformed on the subject that if and when they go South they carry their ignorance and their prejudices with them and invariably make themselves so ridiculous to the people with whom they come in contact that they learn little or nothing about the South and come away confirmed in their own erroneous opinions or have to stay there for years before they come to realize the error of their ways.

Histories taught in northern schools are literally reeking with misrepresentations about the South, about southern people, and southern conditions. These misrepresentations have been echoed by the press, heralded from the platform, and even from the pulpit, and over the radio to crystallize and perpetuate anti-southern sentiment, of which the average person afflicted with it is, unfortunately, wholly unconscious, with the result that even today every communistic attack made on the South is taken up and blazoned in screaming headlines, or heralded in radio broadcasts, as confirmations strong as proofs of Holy Writ.

Mr. Babson suggests three things that should be done to enable the South to "lift the United States into a period of

business prosperity":

First. He would eliminate freight rate differentials. other words, he would put a stop to penalizing the South by charging them higher freight rates than are paid by other sections of the country, and especially in the Northeastern States. The one-way freight rates by which the South and

West are penalized must be terminated.

Unless that is done the South and West are going to have to take care of themselves, which they can do by patronizing home industries and home enterprises. That would build up southern and western industries and would be a terrific blow to the industrial East. But if the East persists in attempting to cut our throats with these discriminatory freight rates, she will have no right to complain if she loses the trade of the South and West, upon which she now has to depend for markets for her manufactured articles. The South can live without using a single thing produced in the East. She can become self-sustaining, and will do so if necessary, and the same thing is true of the West.

For these discriminatory freight rates are also penalizing the West, and the West is joining with the South in this fight for common justice, common honesty, and common decency in transportation charges. We are bound to win.

As Abraham Lincoln once said:

A house divided against itself cannot stand. This Nation cannot remain half slave and half free.

If the influences of these selfish interests in the East are strong enough to prevent Congress from correcting these injustices that are penalizing the South and West in freightrate discriminations, then they may look for the South and the West to fight back with retaliations that may forever spell the doom of eastern industries. For without the markets of the South and the West the grass would grow in the streets of eastern industrial cities. The South and West can manufacture their own goods and keep their money circulating in their own localities, and in that way enrich their own people and make them independent.

The next suggestion of Mr. Babson is that the South speed up diversification of its agriculture. That is being done now. The South is getting away from the one-crop system and building up its dairy industry, its fruit and vegetable industries, and its poultry and livestock industries, while manufacturing enterprises of all kinds are seeking locations in

the Southern States.

The next suggestion Mr. Babson makes is that the South develop its waterpower resources, and he calls attention to the advantages that section derives from cheap T. V. A. power.

Taken for all in all the T. V. A. is unquestionably the greatest development of ancient or modern times. Its influence on the progress of the South, in supplying cheap electricity for all purposes, promoting rural electrification, and developing cold-storage facilities simply cannot be estimated.

But Mr. Babson overlooks the fact that the South has other sources of electric power in the form of coal, gas, and oil. Electricity can be generated with natural gas and distributed to the ultimate consumers at the T. V. A. yardstick rates. The same thing can be done with electricity produced from coal or oil. There is enough natural gas going to waste in the States of Louisiana, Arkansas, and Texas to generate a sufficient amount of electric power to supply all the Southern States and all the border States, and probably have enough left to supply all the States of the Middle West, at rates equal to, if not lower than, the T. V. A. rates.

For instance, electricity generated with natural gas in Louisiana last year was transmitted into the State of Arkansas and delivered to the private power company wholesale at 3.5 mills a kilowatt-hour, which is about one-third less than T. V. A. sells power wholesale to municipalities throughout the T. V. A. area.

Power generated by gas in Louisiana was transmitted into Mississippi, and sold to a private power company wholesale at 5.35 mills a kilowatt-hour, which is below the average rate at which T. V. A. sells power wholesale to municipalities and cooperative associations.

Power generated by coal in Alabama was transmitted into Mississippi last year and sold to a private power company wholesale at 4.22 mills a kilowatt-hour, which is far below the average wholesale price at which T. V. A. power is sold to municipalities and cooperative associations.

All this power could have been distributed to the ultimate consumers throughout the States of Arkansas, Louisiana, Mississippi, and Alabama at the standard T. V. A. yardstick rates with profit to the power companies. The same thing could be done in Texas, Oklahoma, Georgia, South Carolina, North Carolina, Virginia, and every other Southern State.

Electricity can be generated with coal or oil and laid down, wholesale, in any municipality in the South at the rates the T. V. A. now charges for wholesale power delivered to municipalities throughout the T. V. A. area, and could be delivered to the ultimate consumers at the T. V. A. yardstick rates if the State government or the State utilities commissions would only exercise their powers and force reductions of these rates down to the proper levels.

Verily the South is the richest domain of this Republic. It is the coming section of the world. Horace Greeley once said, "Young man go West." That advice was good then, and in many respects it is good today. For the West, like the South, is gradually declaring her economic independence. The wonderful possibilities of the West are slowly unfolding to the world as the American people come to realize that man does not live by stocks and bonds alone.

But if the spirit of Horace Greeley could now push back the veil that hides us from that "mysterious realm" where he has taken his place "in the silent halls of death" and dictate a new slogan for the press over which he once presided, undoubtedly his paean would be:

"Southward the course of empire takes its way!"

National Parole Conference

EXTENSION OF REMARKS

HON. ROBERT M. LA FOLLETTE, JR. OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, April 25, 1939

ADDRESS BY HON. FRANKLIN D. ROOSEVELT APRIL 17, 1939

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by President Roosevelt to the National Parole Conference at the White House on April 17, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends, I am happy to welcome you to the National Parole

Conference and to have an opportunity to talk with you and our radio neighbors throughout the country about parole and some of the broad questions of law enforcement as a national problem. As many of you know, the control of crime is a problem which I began studying many years ago as a member of the executive committee of the National Crime Commission. Later, during my administration as Governor of New York the improvement of the administration as Governor of New York, the improvement of the State penal and correctional system became one of my first important responsibilities. Many of you, and especially my old friend, Sam Lewisohn, were of invaluable assistance in that task, which included the establishment of a modern parole system.

All of us have come to realize that while the responsibility for the control of crime falls primarily in the States and their sub-divisions, the activities of criminals are not limited by local and State boundaries. The consequences of lax law enforcement and crime-breeding conditions in one part of the country may be felt

in cities and villages across the continent. For instance, I think of the operations of a criminal gang which had its origin in the slum section of a small southwestern city. Before the members of this gang were rounded up, successfully prosecuted, and put in prison by the Federal Government, they had left a trail of robbery and violence in seven Midwestern States. This illustrates the essentially Nation-wide character of the crime problem.

Crime cannot be held in check by a good police system alone.

Crime cannot be held in check by a good police system alone. Occasional brilliant prosecutions may arouse our admiration, but they do not solve the crime problem. Long prison sentences for notorious criminals have not rid us of thousands who escape undetected or unpunished because our defenses break down at one point or another.

Public protection against lawbreakers demands efficient police work, able and fearless prosecutions, prompt, fair trials, and the intelligent and constructive treatment of the guilty—not just here and there, not only when well-known characters are involved, but in all cases in all jurisdictions throughout the land.

With this in mind, this administration initiated early in 1933 a definite program of crime control which had three major objectives.

First we sought to broaden and strengthen Federal law enforcement. Secondly we took steps to promote more effective coopera-tion among the States and between the States and the Federal Government. Finally, through a broad program of social welfare,

We struck at the very roots of crime.

As a first step the Attorney General outlined a 12-point legislative program which resulted in the enactment of 21 new Federal lative program which resulted in the enactment of 21 new Federal Government lative program which resulted in the enactment of 21 new Federal crime statutes. Two of those laws gave the Federal Government drastic powers in kidnaping cases, with the result that the back of the kidnaping racket has been broken. Every home in the country has shared in the sense of relief that has come from the vigorous enforcement of the antikidnaping laws.

Other new laws empowered the National Government to bring its resources into action against robbers of banks. There have been 245 convictions since this national bank-robbery law was enacted.

enacted.

Here are some figures on daylight hold-ups of banks, compiled by the American Bankers' Association. In 1933 there were 516 daylight hold-ups. In 1934, the year the new law became effective, the number fell to 364. In 1935 it was down to 258; in 1936 it was down still further to 148; and in 1937 it dropped to 120. Last year there were only 110 bank hold-ups—only about one-fifth as many as there were in 1933. A good record.

Another new law made it a Federal crime to transport stolen goods, in excess of \$5,000 in value, across State lines. Still another made it unlawful for any person to fiee from one State to

other made it unlawful for any person to flee from one State to another to avoid prosecution or appearance as a material witness in a criminal case

These and the other new Federal anticrime laws do not supplant State laws but plug the gaps between the authority of one State and that of its neighbors. They permit the forces of law and order to occupy what was formerly a no-man's land in which roamed some of our most desperate criminals.

But, of course, laws do not enforce themselves. And so we set about systematically to enlarge and improve the equipment and personnel of the Federal agencies of detection and prosecution. The agents of the Federal Bureau of Investigation of the Justice Department—the G-men—have justly become world famous. Likewise, the agents of the several investigating units in the Treasury Department, the postal inspectors, and their coworkers in other branches of the Government have made enviable records in the apprehension of offenders against Federal laws. The efforts of these investigators have been ably supported by a fine corps of United States attorneys and special prosecutors. Many of these United States attorneys are here today, and I am glad to welcome them as they assemble to canvass with Attorney General Murphy

the ways in which their campaign against crime may be waged even more effectively.

A new spirit and a new energy have been breathed into our Federal court system also. Thirty-eight new district judgeships have been authorized, which will accelerate the splendid progress made in bringing the business of the courts more nearly up to date. Archaic forms of civil procedure have been east acide for a date. Archaic forms of civil procedure have been cast aside for a uniform and simple set of rules which will help to speed the wheels of justice. A way of avoiding long delays in determining the constitutionality of Federal laws has been opened by permitting appeal directly from the lower courts to the Supreme

mitting appear unreally from Court.

With the authorization of Congress we have also instituted an important change of method in the handling of juvenile offenders against Federal laws. The courts and the Attorney General are now given wide latitude in determining how best to protect the safety of society by trying to prevent a young delinquent from becoming an habitual criminal. Charges against an offender under the age of 18 may now be heard informally, and if probation is not desirable, the Attorney General is authorized to place him in any suitable nublic or private educational or correctional institution.

suitable public or private educational or correctional institution.

Another important part of our program has been the improvement of the Federal penal and correctional system in all of its branches. We have built different kinds of institutions for different kinds of prisoners, ranging from the now famous penitentiary for the most hardened offenders, on Alcatraz Island, to unwalled reformatories and camps for the offenders who are less dangerous and who seem to offer real hope of becoming lawabiding citizens.

In the administration of our Federal penal institutions we use every known aid to rehabilitation according to the needs of the

prisoner. After all, the primary purpose of the prison is to protect the public by releasing men at the end of their sentences better and not worse than when they were received. For that reason we have enlarged and improved the opportunities for education and vocational training in the Federal prison system. Moreover, we have provided useful work for those who need to learn how to earn an honest living—and we have done it without selling a dollar's worth of speed to the open merket in competition with private investment. of goods on the open market in competition with private industry or free labor. We can, I think, look for still further improvement in the administration of the Federal prisons as the years go by, because we have put the personnel of the prison service on a merit basis with training courses for employees of all grades.

Feel year for coveral years we have increased the number of

basis with training courses for employees of all grades.

Each year for several years we have increased the number of Federal probation and parole officers and last year we raised the standards governing their appointment. Today the field staff of the Bureau of Prisons is supervising nearly 30,000 men and women on probation or on parole. No finer tribute could be paid to the work of these officials and to the United States Board of Parole than to mention the fact that about 95 percent of those under their control complete their sentences without further violations of the law.

But our efforts to suppress wrongdoing have not been confined to the field of violent crimes. Through the securities and exchange legislation we have sought to protect the average investor from the

the field of violent crimes. Through the securities and exchange legislation we have sought to protect the average investor from the depredations of unprincipled financial manipulators. In the administration of this legislation we have struck hard at those gangsters in high places who differ from the ordinary robbers only in the fact that they use the tricky weapons of high finance instead of sawed-off shotguns.

And let us not forget the repeal of the eighteenth amendment. You know and I know what a toll that took from this country through the flouting of law by thousands of otherwise respectable people as well as through the activities of bootleggers and racketeers who flourished during the prohibition years. It was undoubtedly the greatest source of revenue for organized crime that this Nation has every known.

ever known.

While we have been tightening up on Federal law enforcement, we have also been making headway toward the second of our broad objectives—the development of closer cooperation between the agencies of the several States and those of the Federal Government. The Federal Bureau of Investigation in the Department of Justice The Federal Bureau of Investigation in the Department of Justice has organized the National Police Academy, where carefully chosen local peace officers are given training in modern police work. Expert and technical services have been made available to State prison and parole authorities by the Bureau of Prisons. The Works Progress Administration, in addition to cooperating with the Justice Department in making the first Nation-wide survey of the methods by which prisoners are released into society, has furnished muchneeded personnel for educational and other programs in the institutions of 32 States. It has installed police-signal systems and fingerprint files in cities which could not otherwise afford them. It has also furnished the labor for the construction or repair of jails and police stations throughout the country. Through the Public and police stations throughout the country. Through the Public Works Administration over \$26,000,000 has been made available for the construction, improvement, and repair of prisons and jails, with the result that many old, unhealthy, and overcrowded centers of crime infection have been replaced by modern facilities. Of this amount over \$11,000,000 has been for State and local projects.

All of these direct attacks on crime which we have made through extending and strengthening Federal activities and in helping to improve State and local agencies of law enforcement are important. But I like to think that the most far-reaching results have come from our broad program of social welfare—from our work-relief projects, the Civilian Conservation Corps, the National Youth felier projects, the divinan conservation coins, the Machail Total Administration, and the related measures for providing useful work for those of our citizens who are unemployed by private industry. Our citizens who have been out of work in the last 6 years have not needed to steal in order to keep from starving. Of course, when we instituted these activities we did not have in mind merely when we instituted these activities we did not have in mind merely the narrow purposes of preventing crime. However, nobody who knows how demoralizing the effects of enforced idleness may be will be inclined to doubt that crime prevention has been an important byproduct of our effort to provide our needy unemployed citizens with the opportunity to earn by honest work at least the bare necessities of life. And a considerable part of that honest work has been devoted to the construction and supervision of such social assets as playgrounds, athletic fields, municipal swimming pools, gymnasiums, workshops, traveling libraries, schools, and other educational and recreational facilities which are of particular benefit to youth

benefit to youth.

Throughout the depression approximately one-third of all our unemployed have been youth under the age of 25. Not long ago I read a report from a small city which had a reputation for juvenile delinquency. In collaboration with local agencies the National Youth Administration started a work project which provided part-time jobs for the idle youth of this community. When the project was first started there was considerable "soldiering" on the job but gradually the interest and pride of these boys was aroused. For the 5 months since this N. Y. A. project had been started there had not been a single complaint of delinquency to the local peace officers. That is a concrete contribution to our common security—not only now but for the years to come.

As I review our achievements in this coordinated drive against

As I review our achievements in this coordinated drive against rime, it seems to me that we have made the least progress in the very important matter of getting people from prison back into society. This conclusion, I am told, is confirmed by the findings of the Attorney General's Survey of Release Procedures now being published by the Department of Justice. This is an unfortunate

state of affairs. Let us not forget for one moment that 97 out of every 100 of the men and women we send to prison must some day come out again. Between 60,000 and 70,000 persons are released from Federal and State prisons and reformatories every year. What they do when they come out is a matter of great importance to all of us. It is a Nation-wide problem and at the same time a local problem. We make little permanent gain by the arrest, prosecution, and punishment of prisoners if they go back to criminal activities. More than one-half of the persons in prison today have had to be locked up at least once before for a violation of the law. We have bungled in the manner and the method of their release. method of their release.

method of their release.

After the necessarily strict routine of prison life it is difficult for a discharged prisoner to stand on his own feet in the swift-running currents of a free man's world. Often, if he has been in prison very long, he will have lost the habit of making his own decisions. He usually faces tremendous difficulties in finding a job. In many cases his prison record cuts him off from the friendship of law-abiding people. These circumstances tend to push a man back to a life of crime unless we make it our business to help him overcome them. That is the reason why I have long heap of the opinion that parely is the most premising method. long been of the opinion that parole is the most promising method

long been of the opinion that parole is the most promising include of terminating a prison sentence.

Parole is the conditional release of an offender under expert supervision while the State still has control over him. It is an integral part of the treatment begun the moment the man enters a correctional institution.

Parole is not pardon. When a man is pardoned, his crime is

forgiven.

Parole is not a shortening of the sentence because of good behavior in prison. This is called "good time allowance," or commutation for good behavior, and it is given by law as an aid to prison discipline.

Parole is not probation. A person on probation has never been sent to prison for his offense.

And, of course, parole differs from outright discharge on the final day of the offender's sentence. When a man is paroled he is still subject to the control of the authorities, and he can be put back in prison without a formal trial if he does not live up to the conditions of his release.

The true purpose of parole is to protect society—all of us—by supervising and assisting released prisoners until they have a chance to get on their feet and show that they intend to live law-

chance to get on their feet and show that they intend to live lawabiding, self-supporting lives.

Now, naturally, I am speaking of real, honest, well-administered parole, parole granted only after a prisoner has shown improvement during a period of constructive treatment and training in prison, and only after a thorough and searching study of his case—parole under the supervision of qualified parole officers.

Much of the criticism which we have heard directed at parole is due to the fact that while 46 of our States have parole laws, less than a dozen have provided the money and the personnel which are necessary to operate a real parole system. Some of the criticism is due, too, to the fact that the parole power sometimes has been used to grant political or personal favors. This combination of neglect and abuse in the administration of the parole power is a matter of serious national concern. How well or how poorly a parole system operates in one section of the country may affect the lives of citizens throughout the Nation.

On the other hand, we know from experience that parole, when

On the other hand, we know from experience that parole, when

On the other hand, we know from experience that parole, when it is honestly and expertly managed, provides better protection for society than does any other method of release from prison. That has been shown by the operation of the Federal parole system and in those States which have applied modern parole methods.

These are the reasons why I asked Attorney General Murphy to call this national parole conference. As I wrote to him on January 25, 1939, I hope that this conference will serve to acquaint our people with the facts concerning parole and clear up widespread misconceptions about it. Parole will never succeed if it is merely a government function and does not have the understanding and help of the individual citizens in every community.

a government function and does not have the understanding and help of the individual citizens in every community.

It is especially important that people should not be deceived by violent attacks on properly run parole administrations if one parolee goes wrong and commits another crime. The fact is that while a properly run parole system gives no guaranty of perfection, the percentages of parolees who go straight for the rest of their lives are infinitely higher than where there is no parole system at all.

I hope you will let us know the ways in which the Federal Government can best cooperate with the governments of the several States in strengthening this important sector of our Nation-wide attack on crime. I felt that these objectives could not be reached unless this conference included representatives of all branches of

unless this conference included representatives of all branches of law enforcement, public welfare administration, and the general public. A technical job necessarily, it is one which must be geared into the work of other branches of law enforcement.

That is why Attorney General Murphy invited governors, judges,

legislators, State attorney General Murphy Invited governors, Judges, legislators, State attorneys general, prosecutors, police and prison officials, public-welfare administrators, social workers, educators, and representative citizens as well as those directly engaged in parole work to take part in this conference.

Democracy succeeds through the thoughtful public service of its citizens. A conference of this kind is in accord with the American

democratic way.

Well-administered parole is an instrument of tested value in the control of crime. Its proper use in all jurisdictions will promote our national security. If your deliberations serve that end, as I am sure they will, you will have rendered a very important public

Our Dual System of Government

EXTENSION OF REMARKS

HON, EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES Tuesday, April 25, 1939

RADIO ADDRESS BY FRED BRENCKMAN, APRIL 15, 1939

Mr. BURKE. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting address on the subject Our Dual System of Government, delivered over the stations of the National Broadcasting Co. from Washington, D. C., on April 15, 1939, by Mr. Fred Brenckman, Washington representative of the National Grange.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For years friends of popular government in the United States have manifested growing concern over the tendency to centralize authority at the Nation's Capital. The tide that has been sweeping in this direction for more than a generation has during recent years attained the speed of a mountain torrent. In the light of this phenomenon, there is ample justification for saying that if this tendency is not halted it will in a short time spell the destruction

tendency is not halted it will in a short time spell the destruction of our dual system of government.

It must not be forgotten that there are two sovereignties in this country, the sovereignty of the Nation and the sovereignty of the States. It was not the intention of the founding fathers of the Republic that the Federal Government should meddle in any unwarranted manner in the concerns and the activities of the States and their minor subdivisions. If it had been otherwise, the Constitution of the United States could not have been adopted, because the people of that time were passionately attached to the freedom and the blessings that flow from local self-government.

The Federal Government is one of limited powers; its authority is well defined, and while it is supreme in its own sphere, it has no right to invade the jurisdiction of the States. The first 10 amendments to the Constitution were written and adopted expressly to protect the people against the encroachments of government. The aim of the founders was to create an inseparable union of indestructible States.

structible States.

I have always been a strong believer in the idea that we will get the best results if each unit of government, National, State, and local, will stay within its proper sphere, each faithfully and efficiently performing the functions devolving upon it, and with none encroaching upon the rights and prerogatives of the rest.

A DESTRUCTIVE DOCTRINE

It is often pleaded in attempting to justify the tendency toward centralization which has been so strongly in evidence during the recent years, that with our improved facilities of transportation and communication State lines and State rights no longer have any particular significance and should therefore be disregarded, leaving it to the Federal Government to look after things in a big

leaving it to the Federal Government to look after things in a big way in the interest of efficiency and economy.

This is a doctrine that is both delusive and destructive. While it is true that science and invention have annihilated time and space, human nature is still the same as it was 150 years ago. It is fatal to the workings of our free institutions to make the governmental unit so large as to destroy the individual and local sense of responsibility. This is particularly true in the expenditure of rubble roners.

sense of responsibility. This is particularly true in the expenditure of public moneys.

Many instances could be cited to show how the Federal Government is undermining the authority of the States to the detriment of the people and at great expense to the taxpayers. For example, the preceding speaker on today's program, Congressman Barden, of North Carolina, has made reference to the need of amending the Wage Hour Act, passed at the last session. In the opinion of the National Grange, this measure is economically unsound and it should never have been enacted. While the Constitution gives Congress the right to regulate interstate and foreign commerce, it is an open question whether the commerce clause can be stretched to the point where the Federal Government undertakes to tell an employer in private industry what wages he must pay, regardless of the economic conditions with which he may be confronted. confronted.

In saying this, I do not want to be misunderstood. The Grange believes that all workers should be properly compensated. But it must not be forgotten that those who are engaged in agriculture are also workers, and they are among the poorest paid in the entire country. Agriculture is entitled to parity with other industries, and the effect of such legislation as the Wage-Hour Act is to increase the existing disparity.

This act contains another provision or section which even a layman has the right to conclude is undoubtedly unconstitutional, because it exceeds the powers of the Federal Government. I refer to the child-labor section. In 1924, 15 years ago, Congress

submitted an amendment to the States conferring upon the Federal Government the right to regulate, control, and prohibit child labor. Thus far, only 28 States have ratified this amendment, and labor. Thus far, only 28 States have ratified this amendment, and the affirmative vote of eight additional States is needed to make it effective. However, in spite of this, Congress, under the lash of the administration, usurped this authority in passing the Wage-Hour Act. The question is not whether child labor should be regulated, controlled, or prohibited, but whether the Federal Government should be allowed to exceed the authority with which the vected under the fundamental law. it is vested under the fundamental law.

STRANGLING MOTOR TRANSPORTATION

To give another example among the many that will readily occur to thinking people, in 1935 the Federal Motor Carriers' Act was passed. There was no particular demand for this legislation among the rank and file of the people. Every State in the Union already had legislation governing the size, weight, and speed of motor vehicles moving over the highways, together with a multiplicity of rules and regulations intended to promote public safety. While this legislation was intended primarily for the regulation and control of common and contract carriers engaged in interstate commerce, it also contained a provision giving the Interstate Commerce, it also contained a provision giving the Interstate Com-

commerce, it also contained a provision giving the Interstate Com-merce Commission the right to take steps to promote safety of operation in the case of privately owned motor vehicles, if the

need therefor should appear.

With common and contract motor carriers already encased in a With common and contract motor carriers already encased in a governmental strait jacket, the Interstate Commerce Commission is now conducting hearings throughout the country with a view to extending its rules and regulations to privately owned trucks, including the 1,000,000 motortrucks found on our farms. These trucks are now subjected to the most stringent State regulations; a survey discloses the fact that probably less than 10 percent of them ever cross State lines, and there is every reason to believe that these trucks are just as carefully operated under present conditions as would be the case under Federal control. This being true, why should Federal regulation and control be superimposed upon State regulation and control, creating a condition that would make it increasingly difficult for the people to use their own highways for the most legitimate purposes, without mentioning the duplication of expense that would be involved?

Common sense dictates that the owners of private motortrucks

Common sense dictates that the owners of private motortrucks should register an emphatic protest against this encroachment upon their rights on the part of the Federal Government.

OUR PUBLIC-SCHOOL SYSTEM

With numerous examples of overcentralization of Government, such as have been cited, before our eyes, there are certain groups that are urging projects calling for further meddling and interference on the part of the Federal Government in State and local affairs. One of these plans calls for Federal participation in the conduct of our public schools.

conduct of our public schools.

Commenting on the viciousness of this proposal, Dr. Nicholas Murray Butler, president of Columbia University, years ago, said:

"So far as education is concerned, there has been overcentralization for a long time past. Too many persons are engaged in supervising, in inspecting, and in recording the work of other persons. There is too much machinery, and in consequence, a steady temptation to lay more stress upon the form of education than upon its content. Statistics displace scholarship. There are, in addition, too many laws, and too precise laws, and not enough opportunity for those mistakes and failures due to individual initiative and experiment which are the foundations of great and lasting success. lasting success

"There is not enough money in the United States, even if every dollar were expended on education, to produce, through Federal authority, or through what is naively called cooperation between the Federal Government and the States, educational results that would be at all comparable with those that have already been reached under the free and natural system that has grown up among us."

Continuing, Dr. Butler said:

"Bureaucrats and experts will speedily take the life out of even the best of schools and reduce them to dried and mounted specimens of pedagogic fatuity.'

The plan to impose socialized medicine on the country, with the Federal Government assuming dictatorial control in the whole field of medical care, is among those that are now pending. Judging from the experience of certain European countries, notably France, Germany, and Great Britain, where state medicine has been tried, the people of the United States would do well to

BLIGHT OF EXCESSIVE TAXATION

Let us now see what effect our top-heavy governmental structure has had on taxation. In the year 1903, when our population was 80,983,000, the total tax burden, national, State, and local was \$1,882,000,000. At that time the per capita of taxation, the theoretical amount which each man, woman, and child pays toward the support of government, was \$17.07.

Ten years later, in 1913, the population had increased to 96,-612,000. At that time the taxes levied by all units of government amounted to \$2,187,000,000, giving us a per capita figure of \$22.66. In 1938 the population was estimated at 130,000,000. Total taxes amounted to \$13,214,000,000, with a per capita rate of \$101.65.

Devastating as these figures are, they do not tell the whole story, because they do not take into account the amount borrowed and spent by the various units of government. These debts should

LXXXIV-App-104

properly be regarded as deferred taxation. In due time they must be paid with interest.

As is known of all men, the Federal Government is the chief offender in this orgy of spending, waste, and extravagance. In 1903 the taxes levied by the Federal Government amounted to only \$521,000,000. In 1938, Federal taxes aggregated \$6,114,000,000. But Federal expenditures amounted to nearly \$10,000,000,000, or

roughly 20 times as much as in 1903.

Last year the total taxes collected by all units of government were equal to 23.6 percent of the national income. This figure, again, does not include the money we borrowed and spent, and which future generations of Americans will be called upon to

In view of all these facts, is it any wonder that our American system of private enterprise is not functioning as it should, and that after 10 years of depression we still have more than 10,000,000

unemployed in the United States?

While no one disputes that government within reasonable limits is absolutely necessary, there can be such a thing as too much government; and the saturation point in this connection has long since been passed in the United States.

since been passed in the United States.

According to the records of the Civil Service Commission, last December there were more than 917,000 civil employees in the executive branch of the Federal Government, which was equal to the number of civil employees on November 11, 1918, the day the Armistice was signed. Taking Washington alone, the number of Federal employees is greater now than during the peak of wartimes. On a memorable occasion, more than 100 years ago, when the integrity of the Union was threatened, Andrew Jackson said, with that grim determination that was characteristic of the man, "Our Federal Union; it must be preserved!"

The time has come, under the changed conditions with which

The time has come, under the changed conditions with which we are confronted today, when those who believe in popular government should rise in their might and proclaim in thunderous tones, "Our dual system of government; it must be preserved!"

Conditions in Europe

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 25, 1939

ON. ROBERT R. REYNOLDS, OF NORTH CAROLINA, APRIL 21, 1939 ADDRESS BY HON.

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD a talk that I delivered on last Friday night, April 21, at Princeton University at a conference of Harvard, Yale, and Princeton students at their annual gathering, in which I merely made factual statements as to the situation in Europe at the present time, and made some personal observations as to my opinion of the chaotic conditions in continental and eastern Europe as a result of my visit to 15 countries of that section of the world during the months of November and December of the past year.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FOREIGN SITUATION THE INTERNATIONAL TENSION

The world is in a state of unrest. In all countries of Europe precautionary military measures are being taken. In Germany, Italy, and France millions of men are under arms. In the Netherlands preparations are being made to flood the country in order to check the advance of an invading army. The Swiss are prepared to blow up all bridges and roads leading to the German frontier. Great Britain has doubled its territorial army and can enact conscription on 48 hours' notice. Gas masks have been issued to the inhabitants of Vatican City. Even Iceland is worried about German activities allegedly to establish a submarine and air base on that independent island.

Events move swiftly nowadays. Wars are not declared. Heads of governments make momentous decisions without consulting the representatives of the people to whom they are responsible. Chamberlain and the Prime Minister of France did not consult their Parliaments when they abandoned Czechoslovakia to Germany. Now Chamberlain is extending pledges of military assistance to the small European countries without consulting Parliament. In our own country the President makes indirect pledges to South America and European democracies. Various proposals have been put forand European democracies. Various proposals have been put forward in this country to curb the President's "powers to declare

war," completely disregarding the fact that it is no longer customary to declare war. Japan is not officially at war with China; Italy conquered Ethiopia, and more recently Albania, without a declaration of war; Germany annexed Austria and Czechoslovakia merely by intimidation.

Merely by intimidation.

Previously treaties meant nothing, being frequently repudiated by succeeding and even the same governments which had signed them. Now international morals have sunk so low that even personal pledges by heads of states are broken without compunction. Hitler broke his personal pledge to Chamberlain with regard to Czechoslovakia, while Mussolini violated the pact guaranteeing the

status quo in the Mediterranean.

The result is intensified armaments throughout the world. While the large democracies are unquestionably in a better financial position to engage in this mad armaments race, the huge expenditures tend to upset our equilibrium. Private business, too, suffers from increasing instability, and businessmen in this country are in constant fear that developments in Europe may upset their calculations.

THE LEAGUE OF NATIONS

That collective security was a failure is evidenced by the fate of the League of Nations. Even for Switzerland the presence of the League offices at Geneva was a doubtful blessing. As a member of the League Switzerland was obligated to participate in military, economic, and financial sanctions against aggressor countries. This militated seriously against its traditional, century-old neutrality, and this little country was anxious to be released at least from its obligation to furnish military assistance in the event of sanctions against aggressor states. A concession to Switzerland on this point was made by the Declaration of London of February 13, 1920. While this declaration affirmed Switzerland's military neutrality as being in the interest of universal peace and therefore compatible with the League Covenant, it had to give assurances at the time that it would participate in economic and financial sanctions. That collective security was a failure is evidenced by the fate financial sanctions.

assurances at the time that it would participate in economic and financial sanctions.

The acid test came during the war in Ethiopia. The League sanctions against Italy, in which many nations participated, showed that in modern warfare a clear separation between military and economic neutrality was not possible; that such qualified neutrality was fraught with dangers, especially in view of the fact that these sanctions were directed against a large and warlike neighboring country; and so, despite its assumed obligations, Switzerland refused to cooperate in certain sanctions which it felt might invite retaliation by Italy. Three years later, frightened by the annexation of neighboring Austria, Switzerland finally succeeded in being formally relieved by the League Council from all obligation to take part in any sanctions, political and economic, as well as military. Switzerland's anxieties are easily comprehensible when one considers the central position in Europe of this small multilingual country. There are two and a half million German Swiss in this country of slightly more than 4,000,000 population. According to Nazi leaders, this constitutes at present the largest "German minority" outside the German Reich. In addition, 150,000 German subjects live permanently in Switzerland.

The Swiss realize that a slight pretext would suffice to invite

The Swiss realize that a slight pretext would suffice to invite a German invasion or even a joint invasion by Germany from the north and by Italy from the south, through the Italian-speaking section of the country. They feel that only complete neutrality affords a measure of safety against dismemberment, and so the Swiss Government has now gone a step further. According to recent news reports, it has actually notified the League that in the event of a European war the League offices must be moved out of the country, presumably into France. Can there be a more strik-ing illustration of the impotence of the League?

THE PRESENT POLITICAL ALINEMENT OF THE NATIONS

Regardless of our individual attitude, prejudices, and wishful Regardless of our individual attitude, prejudices, and wishful thinking, it is an indisputable fact that Europe is at present divided into two opposing military coalitions or groups of countries. The close cooperation of the axis powers is matched by the equally close cooperation between Great Britain and France. Both groups are endeavoring to attract into their sphere of influence other, smaller, countries. In this respect Great Britain and France have developed a lively activity of late which is beginning to show definite results. In addition to offers of aid to Belgium, Netherlands, and Switzerland, the democracies have pledged military support to Rumania, Poland, and Greece, while negotiations with Turkey are still pending.

Poland, and Greece, while negotiations with Turkey are still pending. Poland and Rumania, allied after the World War to protect their frontiers against Soviet Russia, have now exchanged pledges for military cooperation against aggression by Germany or one of its allies. The shifting of Poland into the anti-German front, which is doubtless a result of the annexation of the Czech country, is highly significant. Germany's 10-year nonaggression pact with Poland soon after Hitler's accession to power was considered a major success of the Nazi foreign policy. The importance which Hitler attached to friendship with Poland is eloquently illustrated by the fact that in recent months and weeks Berlin declined to take official cognizance of frequent anti-German demonstrations in that country and took special pains to respect the Polish corridor. Yet the try and took special pains to respect the Polish corridor. Yet the creation of that corridor—a glance at the map will show you that it is many miles wide—was one of the greatest injustices of the Versailles Treaty.

Soviet Russia, completely ignored at the Munich Conference, has apparently been induced to the join the democracies in a "stop Hitler" move. Moscow is expected to send aid in the form of plane squadrons and munitions of war but not troops because Poland

and Rumania are afraid of Communist propaganda and fear the presence of Russian troops on their soil. Strange bedfellows.

It is clear that the present alinement of countries has nothing to do with political ideology; that it is merely a matter of expediency. Germany, ostensibly the sworn enemy of bolshevism, maintains diplomatic and commercial relations with Moscow, the Government financing exports to that country. On the other hand, Switzerland, the oldest democracy in Europe, has consistently refused to accord diplomatic recognition to the Soviets. It is an open secret that Moscow cherishes the hope that the next world war will make the capitalist system in other countries ripe for destruction. The thought of cooperating with Russia must be very distasteful to Chamberlain, a man of pronounced conservative views who had unsuccessfully tried to win Hitler's cooperation which he would decidedly prefer. On the other hand, seasoned political observers long ago predicted that Hitler might try to win the support of Moscow in order to crush Great Britain and France.

It is generally believed that these two groups of countries are of approximately equal military strength. Opinions are freely expressed as to the effectiveness and fighting qualities of the armies of these various countries. But who actually knows? We do know that Fascist Italy is not the Italy of the World War. Nor is the Germany of today comparable to the Prussian-dominated empire. And Soviet Russia certainly bears no resemblance to the Russia of the czars.

We can only judge the present potential military strength of these countries, but it would not be safe, especially for laymen.

Russia of the czars.

We can only judge the present potential military strength of these countries, but it would not be safe, especially for laymen, to risk an opinion as to the fighting quality of their troops or the ability of their military strategists. The strategy of Italian generals against the Abyssinians is no gage of what they could achieve when opposed by European army generals. In Germany, Hindenburg and Ludendorff, who succeeded in carrying the fighting to foreign soil and in keeping out foreign troops during 4½ years of bitter fighting against a world of enemies, are dead. The Russians * * have shot their best generals.

What we do know is that these three countries have at least three things in common: (1) Hure war machines, especially a

what we do know is that these three countries have at least three things in common: (1) Huge war machines, especially a strong air force; (2) an enthusiastic youth permeated with a new political philosophy; (3) a nationalistic, chauvinistic spirit. In any attempt to evaluate the strength of these two opposing groups of countries in Europe, we must not overlook Japan, which opposed Germany in the last war but is now closely allied with the axis powers the axis powers.

THE ANTI-COMINTERN PACT

The anti-Comintern pact of the axis powers, Japan and their satellites, to which Franco Spain has now also adhered, is ostensatellites, to which Franco Spain has now also adhered, is ostensibly directed against communism and Moscow. In effect, however, it is an alliance against the democracies and nonaggression states. Political ideology has little to do with it. Berlin, Rome, and Tokyo still maintain diplomatic relations with Moscow, whereas democratic Switzerland which has not adhered to this pact refuses to accept a Soviet diplomatic representative.

As a matter of fact, Soviet diplomatic representative.

As a matter of fact, Soviet Russia was the first totalitarian country in modern history. It is still more totalitarian than any of the other three so-called totalitarians. One thing which it does not have in common with the others is the German military goose step which Mussolini adopted for his Black Shirts about a year ago under the label "Passo Romano" (Roman step). Incidentally, many years previously Hitler had adopted for the Nazi movement the Fascist salute, which he called "der deutsche Grüss" (German salute). A fair exchange is no robbervi. salute). A fair exchange is no robbery!

The cohesive force that holds the anti-Comintern countries together under this spurious label is the desire for territorial aggrandizement. Germany, Italy, and Japan demand nothing less than a redistribution of the world. That they have actually proceeded with their plans is evidenced by the invasion of China, the converted of Alberta and A quest of Ethiopia, the annexation of Albania, and the disappearance

of Austria and Czechoslovakia.

The map of the world is changing rapidly and may undergo still further changes, with or without a major war. One result of this development is that numerous schools and colleges in this country constitute a potential market for new, revised maps.

HOW FAR CAN THE DICTATORS GO?

The widespread belief fostered by the Nazis themselves that they would not accept a national minority within their borders even if it were forced upon them met disaster with the subjugation of the Czechs. The world now knows that Hitler's foreign policy means territorial aggrandizement based on Machtpolitik (power politics), not the union of all German-speaking peoples.

If Hitler had adhered to his original policy of pan-Germanism and, having achieved this, had stopped to concentrate his energies on building a strong German Reich composed of German-speaking peoples, political balance in Europe might have been gradually restored. Instead Hitler, and also Mussolini, encouraged by the weakness and mistakes of the Democracies—Great Britain and France—are determined to take what they can. This makes it necessary to keep their national economy on a wartime basis and to maintain huge armies which constitute a serious basis and to maintain huge armies which constitute a serious threat to the safety of other countries.

HOPES OF AVERTING WAR

However, the present gloomy situation in Europe is not hopeless. The prospects that Hitler and Mussolini will continue to achieve successes by swift rapid moves against inferior forces are decidedly less favorable than in the past. The indications are

that their superiority in the air may be checked by an air pact among the nonaggression countries and Soviet Russia. Moreover, the totalitarian states lack the economic and financial resources which are of vital importance for a long war. Unless Hitler succeeds in obtaining access to the wheat fields and oil wells of eastern Europe, Germany could not last out another war of four

and a half years.

According to informed sources, present German stocks of essential materials are at best sufficient for 1 year. Furthermore, it should not be overlooked that in 1914 Germany had no lack of gold and that it continued to pay for foreign purchases in gold up to the very end of the World War. Germany seeks to overcome its present shortage of gold by barter trade with other countries. This will become more difficult in the event of a major conflict.

One of Germany's principal difficulties is the shortage of fats. While wheat can be stored for 18 months, fats cannot be stored for any length of time. In addition, the fact that the sources of financial credit are closed to the totalitarian states is a weighty factor in discouraging them from provoking a war of long duration. CONCLUSION

An encouraging factor in all this chaos in Europe is the deep horror of war among the people of this country; the widespread realization of the futility of a policy to settle differences among nations by the sword. The strong group of isolationists in Congress endeavors to put teeth into the neutrality law; the Ludlow referendum bill and the popular support received by this measure are indisputable evidence that we are a war-hating Nation.

European economists and statesmen are extremely optimistic as to the future of the United States and equally pessimistic as to the fate of their own continent, which is being weakened by huge expenditures for excessive armaments and the retarding influences of economic self-sufficiency. It requires no gift of vision to predict that with or without war the countries of Europe are heading for economic and financial ruin. It is difficult to are heading for economic and financial ruin. It is difficult to write an effective insurance policy against war. But if we succeed in staying out of all this mess, I am convinced that the United States will emerge as the greatest world power. I fervently hope and pray that we may succeed.

Repeal of Silver Purchase Act of 1934

EXTENSION OF REMARKS

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES Tuesday, April 25, 1939

EDITORIAL COMMENT ON REPEAL OF SILVER PURCHASE ACT OF 1934

Mr. TOWNSEND. Mr. President, the repeal of the silverpurchase program is now the subject of special hearings by a subcommittee of the Senate Committee on Banking and Currency. I ask unanimous consent to have printed in the RECORD several editorials which have come to my attention dealing with the subject of repeal of the Silver Purchase Act

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Boston, Mass.] SILVER FANTASIA

When Chairman Eccles of the Federal Reserve Board declared that the "foreign-silver-purchase program does more to ultimately destroy the domestic-silver industry than anything else I know" he said no more than critics of the silver buying warned in 1934.

Mr. Eccles, however, ought to have put his statement in the past tense. The foreign-silver-purchase scheme has already destroyed much of the market for silver upon which the American industry used to depend. The process came about as a result of the boosting of the price. Uncle Sam's unlimited buying sent the price from 45 cents to 81 cents an ounce. At this higher price China was forced to dispense with the metal as the basis for its currency. At one stroke, therefore, the China market, formerly the main prop for silver, was closed to the purchase of silver. Indeed,

the Chinese, having no further use for silver for monetary standard purposes, are actually selling silver to Uncle Sam.

The decline in the foreign demand for silver may be traced in the fall in its price. Silver is now back at around 45 cents an ounce. It would be lower than that if the Treasury were to stop the purchases. And yet the object of this buying was to boost the price. the price.

The domestic interests do not yet realize the extent to which the silver market has been destroyed because the Treasury buys

the domestic production at the subsidized price of $64\frac{1}{2}$ cents. But subsidies must come to an end sconer or later. Then the force of Mr. Eccles' remark will be brought home to the industry.

[From the Tuscon (Ariz.) Star] REWARD TO A "GOOD NEIGHBOR"

Coincident with the announcement of the good-neighbor policy the government of President Cardenas revived with evident de-termination the policy of expropriation not only of lands but of industries. The expropriation has amounted to confiscation, because not a peso has been paid for what has been taken. Yet while Mexico has thus avoided payment, President Roosevelt has directed the Treasury to continue to buy \$6,000,000 worth of Mexican silver each month.

[From the Fargo (N. Dak.) Evening Forum] MEXICO AGAIN

Mexico has the right to take over the lands, but international law holds that the owners must be reimbursed. But Mexico confiscates, and does nothing about reimbursement.

Perhaps Mr. Hull should use stronger language. And another thing, while these expropriations have been going on, the United States Government has had a silver policy from which Mexico has received more benefit than anyone else.

[From the Zanesville (Ohio) Times Recorder] BARTER WITH GERMANY

Announcement that Germany is offering farm machinery, barbwire, and poultry netting in exchange for large quantities of wheat and lard in extensive pure barter deals with midwestern farmers' and packers' cooperative organizations seems to call for careful investigation.

The millions which this country has invested in Mexico's silver, which is not needed here and cannot be used, has not purchased the good will of Mexico and most assuredly has not brought any benefits to this country.

[From the New York Sun] LOOKING OUT FOR THE SILVER BOYS

"There is no justification for the silver-purchase program from either a monetary or a credit standpoint," Chairman Eccles of the Federal Reserve Board told a senatorial committee. Secretary of the Treasury Morgenthau already has practically said as much and he has refused to recommend extension of the life of the Silver Purchase Act.

Purchase Act.

It is unfortunate that Mr. Eccles could not bring himself to advocacy of outright repeal of the act. Instead he suggested that foreign silver be stopped, but that the Treasury continue to buy domestic output, or the bulk of it, at a price well above the market value. Granted that from Mr. Eccles' home State of Utah and the neighboring silver-producing States there is tremendous pressure for continuance of the silver subsidy, which benefits a few mine owners at the expense of the taxpayers, Mr. Eccles hasn't added to his stature in thus protecting one of the many special interests feeding out of the public trough.

[From the Houston Post, Houston, Tex.] AMEND SILVER ACT

If the Government of the United States is to continue buying silver at a premium over world prices for the metal, ordinary common sense suggests that it limit its purchases to silver produced in this country. There can be no point in buying up silver produced in other countries at a premium and piling it up in the United States.

United States.

The Silver Act of 1934 was passed for a dual purpose. One was to stimulate mining of silver in our Western States, thus increasing employment and expanding business, and the other was to broaden the metallic monetary base of the national currency. The administration harked back to the theory of William Jennings Bryan, apostle of the doctrine of free and unlimited coinage of silver at the ratio of 16 to 1, to provide a larger circulation of money and a wider base for credit.

There has always been a considerable segment of the population

There has always been a considerable segment of the population that believed that a lot of cheap money was a help to the poor man. It has never worked out that way in practice. The most prosperous time the country has enjoyed was when the country was on the gold standard. And so President Roosevelt yielded reluctantly to the silver bloc in Congress and eventually signed the Silver Purchase Act.

the Silver Purchase Act.

The measure did for a time stimulate mining of silver in the West. In Colorado, for instance, ghost towns in silver mining districts began to take on new life. Business in general in the mining States was helped, as men went back to work and a new source of income for the people of those States had been provided.

When the Government included silver mined in other countries and bought supplies at higher than market prices, the surplus of silver held in this country began to be piled higher and higher. Now we have an enormous supply, bought at better than world prices, for which we have no use.

Marriner Eccles, Chairman of the Federal Reserve System, a former banker of Utah, who ought to be an authority on silver, is demanding a revision of the Silver Act, because, he says, it is threatening to destroy the domestic silver industry. Having attracted the bulk of the silver supply of the world to our shores, the question is asked, Why continue to mine domestic silver? Anybody with any sense knows this cannot go on permanently.

[From the New York Times] MR. ECCLES ON SILVER

Chairman Eccles of the Federal Reserve Board made an impressive Chairman Eccles of the Federal Reserve Board made an impressive witness in his testimony on Monday before the Senate's "silver committee" on the existing silver-purchase law. His view of that mischievous statute was bluntly and forcibly stated; it was not the less impressive from the fact, as he pointed out, that he himself came from an important silver-producing State. The law of 1934 has resulted, by estimates of the bullion trade, in purchase of foreign bullion six times as large as purchase of domestic silver. Mr. Eccles told the committee:

"The foreign silver-purchase program does more, in my opinion, to ultimately destroy the domestic silver industry than anything

to ultimately destroy the domestic silver industry than anything else I know."

"When you buy the world's silver," Mr. Eccles continued, "you tend to destroy the use of silver elsewhere in the world. That has been the effect."

The law, which has failed in every one of its avowed purposes, ought promptly to go to the legislative scrap heap. A far less costly and less vicious governmental silver-purchase experiment, in the nineties, played its part in wrecking the Harrison administration, and the law was repealed within 3 years of its enactment.

[From the Massillon (Ohio) Independent] SEVEN HUNDRED AND FIFTY MILLION WASTED

At the present moment it has cost the taxpayers of this country \$750,000,000 to make prosperous the silver-mining companies and their employees throughout the world.

Acting Budget Director Bell, Wednesday, disclosed the fact that

Acting Sudget Director Bell, Wednesday, disclosed the fact that since Mr. Roosevelt's silver-purchase plan had gone into effect the Treasury had bought in the open markets of the world between \$1,500,000,000 and \$1,750,000,000 worth of silver, and said that if the metal were sold today it would bring only about \$1,000,000,000. This loss was the result of Mr. Roosevelt's desire to help the silver-mining States in which only a small but important group of voters reside. But he went further afield. He undertook to help the world. Silver miners in South Africa, Canada, Mexico sent their bullion here in exchange for American dollars. The curposeds their bullion here in exchange for American dollars. The cupboards and vaults of China were emptied and the contents rushed to these and vaults of China were emptied and the contents rushed to these shores for conversion into American dollars. China's silver stock soon was so depleted that the nation was forced off the silver standard. So great was the rush of silver out of Mexico that the Government was forced to interfere. Instead of promoting trade with silver-standard countries, as Mr. Roosevelt had hoped and believed, the Silver Purchase Act actually curtailed trade.

Despite the loss inflicted upon the American people by this legislative and economic atrocity of the President, and despite its obvious failure to quicken the return of prosperity, such an exalted person as Secretary of the Treasury Morgenthau claims that it

person as Secretary of the Treasury Morgenthau claims that it benefited America.

benefited America.

Testifying before a Senate committee regarding the silver-purchase program, Mr. Morgenthau stated that it had been instrumental in increasing the purchasing power of half a dozen countries and that if the purchases should be stopped it would tend to reduce exports from the United States. Among the countries mentioned was Mexico, famous for expropriation without compensation of American oil companies.

Evidently the Senators colored exting the Secretary for proof of

Evidently the Senators delayed asking the Secretary for proof of his contention.

In this case figures evidently spoke louder than claims, for little if any correlation exists between our heavy silver purchases from beyond the Rio Grande and Mexican purchases of American prod-

Nor do other available figures reveal any correlation between heavy silver purchases and prosperity. We have the silver but not the prosperity.

[From the Boston (Mass.) Post] GOOD MONEY AFTER BAD?

Secretary Morgenthau says he is going ahead with the announced policy of lending money to the Latin-American countries without regard to their failure to pay on debts already owing to citizens of the United States.

Brazil, for example, owes our citizens \$350,000,000 and is making no effort to pay on interest or principal, although it is believed she is well able to make some payment. Brazil is one of the countries Mr. Morgenthau has picked out to extend credits to in order that she may buy our airplanes.

Last week Mr. Morgenthau quite readily testified before a Senate committee regarding our purchases of silver from Mexico at prices well above fair market value. He said these purchases helped Mexico to buy our goods. But, as a matter of fact, over the last 10 years the official Department of Commerce figures show that

Mexico bought more goods from us in the years before the New Deal silver-buying program was initiated than she has since.

It would seem that our good-neighbor policy in this respect has gone to about the limit of patience. Mexico seized oil properties belonging to American citizens a year ago and has made no pretense of paying for them. From these properties she is now selling oil to Germany and Italy in exchange for goods she formerly bought from us. Now she has seized American-owned sugar lands.

Mr. Morgenthau may be on good ground when he says it is not his business to help collect private debts owed to our citizens. But at least he might refrain from using our taxpayers' money to help countries that deliberately cheat our citizens.

Fear and Force-or Facts?

EXTENSION OF REMARKS

HON, GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES Tuesday, April 25, 1939

ARTICLE BY HON. JOSEPH C. O'MAHONEY, OF WYOMING

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD an unusually instructive article appearing in Dun's Review for April 1939 by the senior Senator from Wyoming [Mr. O'MAHONEY], entitled "Fear and Force-or Facts?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEAR AND FORCE-OR FACTS?

(By Joseph C. O'Mahoney, of Wyoming, chairman, Temporary National Economic Committee)

A little over 10 years ago Americans everywhere, particularly in Wall Street and in Washington, were talking about the new era—and believing in it. That was one of the reasons why we had the "crash" and why, after 6 years of the New Deal, we are now groping for "recovery" by some ill-defined, obscure program of 'appeasement."

As a people we are readers of headlines. We are slaves of slogans and of catchwords. We don't seem to want to take time to learn what is beneath the headline or behind the slogan. We're so impatient to get results now that we don't bother to examine or to test the methods by which the results are to be achieved. And yet Americans are supposed to be a very hard-headed people. The Yankee trader is supposed to have stamped a cautious, prudent character upon the whole population. But the history of the last 15 or 20 years of public action has been the history of headlong and impulsive experimentation with all sorts of economic and political nostrums. And, to use a popular phrase, our condition is getting no better fast!

Isn't it about time for us to realize that there is something

Isn't it about time for us to realize that there is something fundamentally wrong and that we can't cure it by mere palliatives nor by treating only the symptoms? What is the use of shouting "Stop spending!" "Cut taxes!" "Give business a breathing spell!" when we know that there's nothing local about this economic epidemic, that it's a world-wide disaster, and that men in every nation and on every continent, stricken with the fear that rises out of ignorance, are turning desperately to force?

Isn't it about time for us to steel our hearts against both fear and force and by intelligently searching after facts use our brains.

and force, and by intelligently searching after facts use our brains in a patient, tolerant, democratic way to discover how all the people of America and of the whole world may live on the high plane of plenty and prosperity, the materials for which are scat-tered all about us?

Of course, I wouldn't pretend to assert that the Temporary National Economics Committee is going to settle the ills of the world. But I will say that it can become a helpful guide to recovery by developing the actual facts about the commercial and political roads along which we have been traveling at such a headlong, helter-skelter rate for the past generation.

skelter rate for the past generation.

Indeed, our situation may very well be compared to that of a reckless youth in a high-powered automobile on a curving road. We haven't learned to use the vehicle that science and invention have placed at our disposal and, though we are trying to get every bit of power out of the new car, it isn't geared to the road on which we're traveling. That's why we're having a screeching skid or a wreck at almost every turn.

The statutory laws by which we try to govern our economic life were designed primarily for an era when business was local and individual. Our habits of thought are such, and the force of custom is so great, that we act in complete disregard of the fact that modern commerce is national and even international in scope and that it is carried on, not by natural persons, but by corporations which, though created by men, have tremendous advantages over men in all commercial relations. In the world of trade, a man is no match for a corporation, though men, without the corporation, could not begin to accomplish the material results which have characterized this century. The truth of the matter is that we are living in a new era but we persist in acting as though we were not.

The purpose of the Temporary National Economic Committee is to apply the scientific method to the economic dilemma. There

is to apply the scientific method to the economic dilemma. There is no single phase of our whole economic life that is not out of joint, and there is no possibility of making the machine work again except by studying it as a whole.

Agriculture, the basic industry by which men have lived since before the first histories were written, is, next to the railroads, the major economic casualty of our time. We have too much wheat, too much cotton, too much corn, too much of all the things that men use for food. The farmer cannot exchange them for the things he needs and wants, though there are urban millions who need and who want the farmers' products but cannot ext them because the industrial system is also unable to function get them because the industrial system is also unable to function.

get them because the industrial system is also unable to function. For our present powers of consumption there is too much coal, too much gas, too much electric power. The development of oil throws the coal miner out of work. The pipe line cuts down the number of coal cars transported by the railroads. Gas makes war on both coal and oil, while electric power invades the field of all three, and all want to exclude the others from the field.

For 20 years the farmer has been knocking at the gates of Congress for national legislation to enable him to sell his goods at a profit. Right beside him stand the coal operator, the coal miner, the oil producer, the oil worker, the railroads, and the railroad workers, while manufacturing industrialists of all kinds have from time to time during a century and a half sought and received tariff Consumers and unemployed also turn to Congress for laws

Remedies and reforms are proposed to Congress in the same steady stream that brings the complaints. One group insists that changes in the money system will provide the answer; another demands social legislation; another has a new plan to dispose of farm surpluses; another would fix prices; another proposes government subsidies of this, that, or the other kind; another, in bland disregard of the fact that the ratification of the Constitution itself was brought about by the business community because it wanted a stable central government to aid business, and that business could not possibly survive without government, cries "Let business alone." We confuse the means proposed with the objective sought, and, if the pressure gets strong enough, we adopt the means without sufficient scrutiny, lest we be accused of being opposed to the objective.

The advocates of each new proposal and the representatives of each separate industry or trade clamor for the adoption of each special remedy without regard to its effect upon the other factors special remedy without regard to its effect upon the other factors of our economy. Yet the most obvious fact of all is that all factors are interdependent and that no one group can prosper unless all the others prosper likewise. It is the whole economic system of the modern world that must be reexamined in order that it may be made to function in a way that will preserve economic freedom and political liberty. Surely no one can doubt that democracy is being overthrown in Europe precisely because the economic system has not been constituted in such a surely because

that democracy is being overthrown in Europe precisely because the economic system has not been operating in such a manner as to protect individual rights and individual security.

What we have failed to realize is that in the modern world we operate on a collective basis. It is fashionable to denounce "collectivism" as something inherently bad and as though we were still living in an individualistic society. Frequently the businessman whose every energy is devoted to the management of some collective enterprise is most emphatic in denouncing collectivism. Such a person is doubtless thinking of the so-called collectivism. Such a person is doubtless thinking of the so-called collectivist governments, but we shall fail to see our problem in its full perspective until we realize that the large modern corporations which dominate the economic scene in our time are in fact collectivist economic states. The citizens of such a state are the investors who own it and the workers who make it function, while the management which guides its policy is its government, owing a responsibility not only to investors and workers,

ment, owing a responsibility not only to investors and workers, but to the public also.

That these economic states have become increasingly efficient no one can reasonably deny, nor that they make available to the whole population commodities, conveniences, luxuries, and services that would otherwise be impossible of enjoyment.

While it is true that a big country needs big business and that size of itself is not to be condemned, it must be admitted that big business, by and large, has grown at the expense of both natural persons and of little business. As a few units gain control of the major portion of any industry, trade, or business, the free independent enterpriser is driven out and more people become employees. Big business finds it easier to finance itself than little business, because it is in a position of authority, while little business is in the position of a suppliant. The fewer the units, the easier to control prices and suppress competition. Thus organization becomes more powerful than the citizen.

Generalizations, of course, are extremely dangerous, just as oversimplification of the problem is dangerous; so it must be asserted and reasserted that corporations are essential and beneficial instruments of our existence. We do know, however, that the

growth of big business has been accompanied by increasing unemployment. It is, of course, true that new industries make new opportunities for labor, but there is much ground for the belief that each year develops a net surplus of labor. be acknowledged that unemployment was a problem before the "crash" and that even then it was becoming constantly more diffi-

cult for the individual producer of raw materials to survive.

It is here, it seems to me, that the heart of the problem presents itself. The individual worker and the individual producer sents itself. The individual worker and the individual producer have been becoming more dependent for their economic life on the huge organizations which handle the bulk of all commerce and industry. As they become less economically free, the market for industry and commerce tends to get more narrow and that, in turn, produces more unemployment, which again reacts upon the whole system, and the situation tends to get progressively worse.

SOLUTION IN DOUBT

It is easy to blame the politicians, as many businessmen do, or big business, as many politicians do, but the symptoms of the disease are found in every country, and no country has as yet found the solution. Some countries have resorted to force with astonishingly repressive effects upon both business and citizen. The concentration camp and the firing squad reduce unemployment, but they don't set business free and they don't raise the standards of living. standards of living.

Man was not made for the state, nor was he made for any economic system. Both the state and the economic systems were made to serve the needs and the conveniences of man. Ours,

then, is a problem of adjusting the modern economic system to meet the requirements of men.

Business will best serve itself and Government will best serve the people when both cooperate to devise the rule that will keep opportunity free, provide employment, stabilize income, and abolish all arbitrary restrictions on free private enterprise, whether such restrictions originate in private or public power. Only thus can we justify democracy. And the first step is to get the facts.

I have a profound faith that, given the facts, the American people will know the answer. It is an answer for which the world is waiting.

Washington Jitters

EXTENSION OF REMARKS

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Tuesday, April 25, 1939

EDITORIAL FROM THE NEW YORK POST OF APRIL 20, 1939

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the New York Post of Thursday, April 20, 1939, entitled "Washington Jitters."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the New York Post of April 20, 1939] WASHINGTON JITTERS

We can almost hear Bill Smith, plain American, remarking to his wife: "Awful lot of war talk in the papers, isn't there?" We can almost see Mr. and Mrs. Smith, in living rooms throughout the land, pausing for that moment of worried thought which

can almost see Mr. and Mrs. Smith, in living rooms throughout the land, pausing for that moment of worried thought which the mental image of war always evokes.

There has been a lot of war talk in the papers and we are sorry for it. We must add that this talk comes from high quarters and cannot be ignored or omitted. But we agree with Bill Smith that there has been an awful lot—too much—of it.

There are two parties in this country, one which declares we can keep the peace by keeping out of other people's troubles, and the second which thinks that joining hands with Britain and France in their current war danger is the way to preserve peace. The second party has the ascendancy in the Nation's Capital.

As a result there have been many more signs, more portents for war than for peace in the last 11 days. We say 11 days because these portents started on April 9. We list some of them.

April 9: "I'll be back in the fall if we don't have a war," remarks the President on a Georgia railway platform, a remark that sent a chill around the country. Does he mean that "we" will be in the war, or only that there will be a war in Europe?

April 12: It turns out the President means that a war in Europe would "from the outset" involve our destinies. An editorial writer for the Washington Post makes this interpretation and the President in press conference endorses the editorial.

April 14: The President, in a speech before the Pan American Union, declares that "we have an interest wider than mere defense of our sea-ringed continent." Again a cold chill. Are we to be embroiled in Europe's quarrels?

April 15: The President sends identical notes to Hitler and Mussolini, asking for 10-year nonaggression pledges. Though the text of the note was mild enough, it was interpreted as an effort to put the two dictators on the spot—and it was also interpreted in some European countries as an open American offer of support to Britain and France.

April 15: (How steadily the shocks come!) The fleet is given hasty orders to go to the Pacific, abandoning plans for a spring stay in the Atlantic. Whispers arise that "France and England will take care of the Atlantic while we take care of the Pacific" in the "coming war."

"coming war."

April 18: There is a meeting of fiscal agents to discuss plans for safeguarding the prices of stocks in event of war. War—war—war. April 19: Col. Charles A. Lindbergh, to the accompaniment of official statements, is called suddenly to "active duty" with the Army to make a survey of aviation research facilities. Why this press-agent approach? If it had to be done, why not quietly?

April 19: So critical is the danger of war in the Mediterranean, with French, British, and German fleets maneuvering near Gibraltar, that families of officers on the British island of Melta ere ordered that families of officers on the British island of Melta ere ordered

that families of officers on the British island of Malta are ordered home. So what? So we send our U. S. cruiser Omaha to visit Malta from April 23 to May 2. Why?

We would like to hear a little talk about peace just for a change. What are we doing to keep out of war, if there is so much danger? Or are we welcoming entanglement in a war to pull some imperial electric out of the free for Spritching.

Or are we welcoming entanglement in a war to pull some imperial chestnut out of the fire for Britain?

Washington buzzes with rumors. Over the last week end correspondents learned of a plan for an immediate lightning attack by Germany on the Netherlands while the German Navy engaged the British fleet in the Mediterranean and Japan grabbed the Dutch East Indies. When this story was cabled to London, the London papers turned it down. It was a rumor they had heard 2 weeks before and which the British Government unofficially said had been traced to the German Nazi Propaganda Ministry.

Washington took it seriously. Washington has more jitters and talks more about war than even the European capitals.

Can't we, in the name of common sense, stop it? The President could reassure the country by one single broad statement to this effect: "I intend to keep America out of any European war." He has not yet made that statement.

has not yet made that statement.

On Social Security-Why and How-From the Republican and Democratic Viewpoints

EXTENSION OF REMARKS

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

RADIO DISCUSSION BY HON. ROBERT A. TAFT, OF OHIO, AND HON. T. V. SMITH, OF ILLINOIS, APRIL 11, 1939

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely and important discussion on social security disclosing the Democratic and Republican points of view on the subject as presented by Senator Robert A. Taft, of Ohio, and Representative T. V. Smith, of Illinois, Tuesday, April 11, over the Columbia Broadcasting System:

Announcer. First, from a Republican point of view, as presented

by Senator Robert A. TAFT.

Senator Taff. Citizens of the United States of America, what is Senator TAFT. Citizens of the United States of America, what is social security? It is a term of which we heard very little before the beginning of the depression in 1929. It was not an American concern before that time, whether the administration was Republican or Democratic. Neither liberals like Woodrow Wilson nor conservatives like Warren Harding concerned themselves greatly with any national action for social security, although here and there therefore the security the States everyments were heard. with any national action for social security, although here and there throughout the States experiments were being attempted. Social security is a system designed to give every man and woman assurance that they and their families will not be thrown onto the streets, and left without food, clothing, and other necessities, either by reason of old age or physical infirmity or inability to get a job. It was not much discussed before 1929, because we thought we had developed a system in America which would provide social security without Government action. We thought we had developed a system under which every man could secure emvide social security without Government action. We thought we had developed a system under which every man could secure employment. We thought we had developed a system under which a man who was willing to work during his active years could save enough money to provide for himself in his old age, or educate his children so that they could earn enough to take care of him. If we had been right, the United States would have had the best form of social security—one dependent on a man's own efforts instead of the Government's, one providing an American standard of living, and not a relief standard of living. And let us remember that social security for most of the people still depends much more on this superior American system of individual effort and reward for thrift and intelligence and hard work than it does on legislation.

Of course, even in pre-1929 days, there was plenty of poverty and misfortune. But they were handled by various private agencies and local government institutions which looked toward assuring social security. Old people's homes, orphan asylums, hospitals organized by private charity or local government took care of cases of misfortune, and in times of prolonged unemployment, charity work was extended to the homes of the unemployed.

cases of misfortune, and in times of prolonged unemployment, charity work was extended to the homes of the unemployed.

But in 1929 we found that we did not have the economic system we thought we had. Thousands of people lost their life savings, Millions were thrown out of work. The immense financial burden broke down the solvency even of local governments. And so the people turned to the attractive plans for social security, particularly for old-age pensions and unemployment insurance, which had been developed in various European countries.

Today every party and every sincere student of social conditions is in favor of relief, adequate old-age pensions, mothers' pensions, and unemployment insurance, and all feel that the Federal Government must take the lead, and provide the financial resources necessary to make the plan effective. The broad term "social security" embraces work relief and direct relief, but it is more often applied to the forms of assistance provided by the Social Security Act, namely, pensions for the aged, unemployment insurance, and pensions for mothers with dependent children.

When it comes to the Social Security Act itself, and particularly the exact method in which old-age pensions shall be paid and the money raised to pay them, there is a substantial difference of opinion in this country today. Most people do not realize that nearly all the old-age pensions paid today are still paid under State laws by State governments, and the only assistance from the Federal Government is a grant of half the money required. The States pay the other half out of State taxes. The Federal money comes out of the general fund of the Treasury, and does not even come from the pay-roll tax. In Ohio, for instance, our old-age pension system, from which 120,000 people are drawing pensions, was enacted by State law, initiated by the Ohio Federation of Labor and the Fraternal Order of Eagles. It was adopted before the New Deal began, and it was a universal plan to reach all of the needy aged, and not contributo and not contributory or limited to certain groups.

On top of this system the Federal Social Security Act provides

On top of this system the Federal Social Security Act provides for a reserve plan of old-age pensions, each man to build up a reserve from a pay-roll tax on the wages he receives, paid one-half by the employer and one-half by the employee. This tax is now 2 percent, and is to increase to 6 percent. Unfortunately, it will be many years before anyone gets as large an old-age pension under this plan as he can get now from the State without making any contribution at all. Incidentally, the reserve plan only reaches certain classes of employees, and omits entirely large groups like agricultural laborers, household servants, itinerant workmen, and others. It is extremely complicated to keep lifelong records for everyone who is covered, and there will be countless errors in these records.

others. It is extremely complicated to keep lifelong records for everyone who is covered, and there will be countless errors in these records.

One difficulty with the present plan is that it has two systems of old-age pensions which overlap, and no provision is made for their ultimate reconciliation. The theory of the plan is that a man accumulates a reserve to pay his own pension in his old age, but for many years he will not get as much of a pension under this plan as the State is paying under the State plan without any contribution from the recipient at all.

The present Social Security Act has been tremendously burdensome upon industry. Even now the 2-percent pay-roll tax is raising approximately \$600,000,000 a year from the people of the United States, while paying out only about \$12,000,000 in pensions. The unemployment insurance tax of 3 percent on pay rolls, all paid by the employer, raises about \$900,000,000 a year. Ultimately this tax will all be passed on to the consumer, or passed back to the workman, increasing the price of every product that the average workman buys. But in the meantime it puts a heavy premium on cutting down labor, and there is a constant incentive to employers to cut down the number of workmen through the increase of machinery or otherwise. The pay-roll tax tends to increase unemployment just at a time when unemployment is the most serious menace in the entire country.

Increase unemployment just at a time when unemployment is the most serious menace in the entire country.

The so-called reserve plan in the Social Security Act contemplates the building up of a huge reserve, amounting to \$50,-000,000,000 by 1980. In the coming fiscal year the Government will take away from the people in pay-roll taxes \$1,600,000,000. About three-fifths of the unemployment-insurance money will be paid out, the rest used to increase the unemployment-insurance reserve. More than half the old-age tax will be used to increase the reserve, even if the grants to States for pensions are deducted, so that unless some change is made, the Government will take in over \$700,000,000 more than it nave out, including railroad pay-roll

so that unless some change is made, the Government will take in over \$700,000,000 more than it pays out, including railroad pay-roll taxes, depriving the people of just that much purchasing power at a time when it is vitally needed.

The law provides that this reserve must be invested in Government bonds. That means that when the money comes into the reserve fund it is paid over into the Treasury, and the Treasury prints and puts into the reserve fund the same amount of Government bonds. In other words, the Government invests its money in its own I O U's. After the money gets into the General Treasury, it is used to pay the current deficits of the New Deal administration. The reserve is supposed to provide pensions in the future, but what happens in 1980, when the Government wants

to get money with which to pay the pensions? There is no cash in the reserve fund, so it has to go out and tax the people a second time to pay the interest on the bonds so that there may be money in the fund to pay the pensions. People have to pay taxes a second time because the first payment of taxes has been

taxes a second time because the first payment of taxes has been used for the payment of deficits.

Of course, the truth is the whole reserve plan is unsound. It is sound enough for a private insurance company, dealing with a limited number of policyholders, but an entire people cannot have a reserve. The people cannot live on machinery or buildings or property. They are interested in food and clothing, and no nation ever has had a reserve of more than a year's supply of food and clothing. In substance, the only way we can feed and clother and clothing. In substance, the only way we can feed and clothe people who are not working is to tax the people who are working at or about the same time, or are receiving a return on past savings at or about the same time, a sufficient part of their earnings to take care of those who are not working. Under a Nation wide classe remember when the same time, a sufficient part of their earnings to take care of those who are not working. Under a Nation-wide old-age pension system, we might as well recognize that these pensions must be paid substantially out of current taxes. The whole plan should be on a pay-as-you-go basis. If we do that, we can reduce the pay-roll tax for the present, because 1 percent instead of 2 percent will take care of all the money now paid out by the Federal Government to assist in the payment of pensions.

After protecting for years that the New Peal sected country also

After protesting for years that the New Deal social-security plan was the last word in perfection, Secretary Morgenthau last month suddenly admitted that it was fundamentally wrong and that the reserve should be cut down to a much smaller sum, sufficient only to take care of minor variations in probable tax receipts. The Secretary and the President both seem to have finally come around to Senator Vandenberg's proposal that the pay-roll tax increase, which was supposed to go into effect the 1st of January 1940, should be deferred, but no action has yet been proposed by the Democratic leaders in Congress. Even if this preliminary step is taken, however, the Federal Government is still going to tax the taken, however, the Federal Government is still going to tax the people during the next fiscal year \$1,600,000,000 and turn back, in the form of unemployment insurance benefits, aid to States for pensions, and expenses of operation only about \$860,000,000, so that more than \$700,000,000 will go into reserves at a time when we need all the purchasing power possible in the United States. With Secretary Morgenthau's change of front, the whole future of old-age pensions is in complete confusion, and a new start much be made. must be made.

Personally, I see no sense in a contributory reserve system as long as we are granting pensions anyway to all of the needy old, unless that contributory reserve plan be supplementary and optional. And there can be no doubt in my mind that the American tional. And there can be no doubt in my mind that the American people demand a universal system of pensions regardless of past earnings. If the reserve plan were made optional so that any man dissatisfied with the amount of the standard pension could build up, with the assistance of his employer, an additional reserve for himself, and receive a supplemental pension, the reserve plan could be fitted into a universal pension plan. The natural method of establishing a universal pension plan is

to rely on the present State pensions, with assistance from the Federal Government as at present, or perhaps in a slightly increased percentage, provided through a sales tax or a general transactions tax rather than through a pay-roll tax. But no additional tax should be adopted unless the pay-roll tax for old-age pensions

were repealed.

The unemployment-insurance plan is being extended to additional States, and there is reason to hope that it will prove to be satisfactory and acceptable. It is important that the tax be lightened on those industries which provide stable employment, so that there may be a strong incentive to other industries to stabilize their own employment. After all, our main purpose should be to prevent unemployment rather than to provide insurance against it, for unemployment insurance will only take care of comparatively short periods of unemployment, and after it is exhausted the employee again faces the relief rolls. employee again faces the relief rolls.

Unemployment, relief, and social security are different parts of the same problem. They should be administered by the same department, under the local or State government, with financing and supervision from the Social Security Board in Washington. When a man first loses his job he will be taken care of for some When a man first loses his job he will be taken care of for some time through unemployment insurance benefits based on the contributions of his employer. When these are exhausted, if the employment bureau cannot yet find a job, the State can provide direct relief for a certain number of additional weeks. After that, to prevent demoralization and improve his income, he should be put on work relief. When he reaches the age of retirement, if he is still in need, he receives an old-age pension.

Today the whole relief and social-security field is in complete confusion. Few men understand what they are entitled to receive. All of them are being taught to lean on the Government. The appropriations for relief create a tremendous deficit, while taxes for social security pile up in the Treasury. Certainly the time has come to deal with the whole problem of social security as one problem, on simple, logical lines, with as little confusion between different agencies of government as possible.

Of course the principal difficulty in any system of social security

Of course the principal difficulty in any system of social security is the tremendous cost on the majority of the people who still provide their own social security. No one should be more interested than the recipient of social-security payments to see that that cost is reasonable, for if the burden becomes too heavy, the entire system may be destroyed by those who have to bear that

burden, namely, the average workman with a steady job. Social security should not deprive any man of incentive to improve his own condition and save his own money for his old age and for his family. Payments made by the Government to millions of men will never be much more than enough to provide food and clothing and other necessities, because the cost is so tremendous that it may destroy the incentive of all others to do the very work which is necessary to provide even thest experiences.

that it may destroy the incentive of all others to do the very work which is necessary to provide even that subsistence allowance.

If a man wishes a home to live in in his old age he must still save the money to own that home. If he wishes an income to enable him to live comfortably, with an occasional winter trip to Florida, he had better save enough money in the bank or building and loan association to provide his own pension. We owe to every man a reasonable allowance to protect him and his family against the inequalities of our economic system. But the scope of any plan to accomplish this purpose is so tremendous, its cost is so great, that we may destroy the whole basis of the very economic system to which we are looking to provide social security itself. No one should have any pride of opinion in his particular pet theories, and certainly I have none in mine, but I am convinced that the system must be more simple, more efficient, and more coordinated than the welter of confusion which we see in

this country today.

Announcer. That was a Republican point of view on Social Security—Why and How, as presented by Senator Robert A. Taft, of Ohio. Now Representative T. V. Smith, of Illinois, presents a Democratic point of view.

Representative SMITH. Kinsmen in Texas, neighbors in Illinois, friends in North Carolina, men and women of America, greetings from Washington. The Senator's speech fits discordantly into our from Washington. The Senator's speech fits discordantly into our Easter meditations upon the passions and the pilgrimage of mankind. The social-security law is probably the greatest single effort yet made in America to bury the fears and to resurrect the hopes of our citizens. Great as it is already, it bids fair to extend and to perfect itself with the years. The legislation was born of a time when desire for work and lack of work were both conspicuous. But the social-security movement is much deeper than the work-relief program, which the Senator and I discussed last week. Though this act is made up of 10 different programs, we may simplify it thus act is made up of 10 different programs, we may simplify it thus around the problem of work: It seeks to smooth the path of life for as many as possible of those who are too dependent to work (both children and their mothers), those too old to work (both the indigent and the retired), those too weak to work (the crippled and the sick), and those temporarily unwanted for work (the unemployed).

This social-security program has been nonpartisan in idea and in plan. It was proposed by the President months in advance of enactment. It was debated by everybody and worked over by nonpolitical experts. It was not a party matter in Congress. Only 33 voted against it out of 435 in the House and only 6 out of 96 in the Senate. The almost superhuman job of organizing the work was put into the hands of a Board which, so far as I can learn, has done an unusual job of keeping books for millions and millions of people. For, mark you, what has been done in so short a time. Already 3,500,000 of the aged, the blind, and the dependent children are receiving Federal-State allowances. Already all the States have unemployment compensation laws and more than 27,500,000 wage earners have earned credits toward out-of-work relief under these laws. Already 43,000,000 workers have applied for accounts under the Federal old-age insurance plan. This is clearly the most farreaching thing Americans have ever undertaken cooperatively. It is so far-reaching that critics might have been forgiven the advance they what that it would not be done. thought that it could not be done. I find it more difficult to understand those who now complain of it after it has been done.

stand those who now complain of it after it has been done. Its amazing how many things, however, you can complain at if you just sit down and try. You can make anything look like 30 cents, including yourself. Try it on your lodge, and tell me how your lodge looks after you are through. Try it on your school. Try it on your church. Try it on your friends. Don't try it on yourself. Have you been trying it on the social-security program, or have you only been listening to them that try it on the program? Well, what's left? Why, the social-security program is left, that's what. With all the tone of complaining tonight, did you catch a single one of the 10 distinct aspects of this great act our critic would repeal? I did not. Did you catch a single benefit he would relinquish? I did not. Did you catch a single included group he would exclude? I did not.

quish? I did not. : exclude? I did not.

No wonder that we did not catch these fruits of his complaining. He's for this security business, you see, lock, stock, and barrel. He's for the idea and even for the act, since he does not propose to do for the idea and even for the act, since he does not propose to do any repealing. Let's assume that he's for security—he says that he is—and try fairly, then, to see what he's complaining at. They also serve who only stand and criticize. He complains at the pay-roll taxes. Now, he may be right about them, but he proposes in their stead something like a sales tax, which certainly, as far as it goes, outrages every principle of just taxation by making the poor poorer and leaving the rich richer. I'm certainly not impressed by that complaint. Perhaps what he doesn't like is any tax at all. Well, most of us are with him there; but it won't help much, since we all agree with him also in wanting the benefits.

He complains at the reserve feature of the old-age insurance.

agree with him also in wanting the benefits.

He complains at the reserve feature of the old-age insurance. Well, he may be right about that, too. But how much will you bet that, if we had adopted a plan without the reserve, he wouldn't have complained even louder that the plan was not fully financed? The matter is debatable, but complaining gets to be a habit also. I know this matter is debatable, because there have been important experts, not to mention sincere politicians, on both sides. I wonder whether one reason the reserve was kept was not

the fear that if chronic complainers came into power they would repudiate the benefits promised unless there were reserves to pay them. But that danger no longer holds. Mr. Taft, who can speak for the conservatives, assures us that now such benefits ought to be paid out of direct taxation as the benefits come due. If these powerful complainers, who want to come back into power, really feel that way about the matter, then we can safely drop the reserves or cut them to a small amount. Such a reduction is reserves or cut them to a small amount. Such a reduction is exactly what's being proposed now by the administration, ever alert to improve. Instead of complaining at the Secretary of the Treasury and the President for changing with this change of the conservatives, Mr. Taff ought to congratulate the administration on having an open mind and on keeping up with the times. Maybe that's the reason the reserves were put in, I now further suggest, to bring substantial conservatives round to the reasonable position of lending their confidence to the credit of the Nation. At any rate, now that they've done it, we can deal reasonably with the reserves in the light of their change of attitude.

the reserves in the light of their change of attitude.

I do not profess myself to know much about these matters, and I certainly do not wish to take one iota of credit from Senator Vandenberg, or Huey Long, or Dr. Townsend, or Mr. Taft, or anybody else for their part in bettering this great legislation. It was unpartisan in conception and ought to be kept so in execution and in improvement. Indeed, all such technical matters are, in my opinion, best left to cautious students who know the subject and have no political interest in the changes. Such groups correct honest mistakes without heat and can prick the bubble of prejudice without the necessity of face saving. The latter's exactly what such a distinguished group has already and recently done in connection with a bogey about as scary as the one last national election, you remember, when they tried to make the social-security registration a badge of bondage if not indeed a passport to prison. That bogey only scared voters away from prevaricators. I refer now to the bogey of reserves, empty save as filled with Government I O U's. I hoped the Senator would have been above such innuendoes. If we are to have reserves, they cannot lie idle; they must be invested. Does anybody propose

cannot lie idle; they must be invested. Does anybody propose anything better than Government securities guaranteed to yield the fund 3 percent. The Senator did not, and I hear no such proposal. A distinguished nonpartisan group recently advised the Senate subcommittee studying this question to exactly this effect: "the present provisions regarding the investment of the moneys in the old-age reserve account do not involve any misuse of these moneys or endanger the safety of these funds." It may be unwise to have a reserve, as Mr. Taff argues, but as long as we have one, whether it be large or small, we shall and must invest it in this prudent manner.

So much for prevailing murmurings. I have touched upon all the Senator's important complaints, I think, save one. In treating such details seriously, I have assumed that the critic is in favor of social security. The Senator says that he is, says so tonight. But I cannot forget another night and what he said then. It was the first night we met before the microphone, and then he said: "While social security may be a desirable adjunct, it is no American ideal." How does an American favor social security who does not favor it as, or believe it to be, an American ideal? Well, he might favor it as a political expediency, as some have favored the Townsend plan. I do not know that this is Mr. Taft's position with reference to social security, though he has apparently left an impression on the Townsend people that he favors their plan. All for economy as Democratic critic, all for extravagance as Republican friend.

I mention this not to be personal with the Senator, as he will understand; but to illustrate what puzzles me about all such conservatives. I clearly got the impression tonight—didn't you?—that the Senator doesn't want the Government in all this expensive business of security. That's his great and steady underlying complaint. Still tonight he pushes away not a single benefit from a single group. He wants the Government out, but he wants what cannot be had without the Government's being fully in. Just as details seriously, I have assumed that the critic is in favor of social

single group. He wants the Government out, but he wants what cannot be had without the Government's being fully in. Just as some say that they are in favor of work relief—page Mr. Taft from last week—but deny what they say by throwing it back to States that simply cannot provide the work, so many are in favor of security—so they say—but want it provided by individualism that cannot provide it, or want it handled by States that cannot handle it. This is an old trick, a trick which I honestly believe conservatives use to fool themselves and allay their sense of guilt at the woe of the world, a guilt which Mr. Taft boasted last that he did not feel. It is as if to say with Hamlet:

"The time is out of joint:—O cursed spite, That ever I was born to set it right!"

That ever I was born to set it right!"

I think I understand this divided personality, partly because of what I, the son of a pioneer, feel in myself about this expansion of governmental machinery and partly because of what I met in Illinois last election. Senator Taft's group in my State not only firted with the Townsend plan but they actually promised if elected to office in the State an old-age pension out of State funds that would have bankrupted Illinois, and at the same time they swore they'd reduce taxes. We Democrats had to carry the banner of a balanced budget to save the credit of the State. Napping too long in the sleepy hollow of "normalcy" the conservatives now find themselves in a world too much for them. They themselves feel insecure and grab at every passing straw. Anything that they can do of what they must do is so unideal that the worst they can do seems to them hardly more bad than the best they can do—or at least what they promise to do in politics.

Politics can be a moral matter only when what we must do in politics still seems to belong to our ideals. Then we can will both the end and the means. To me, I confess, social security, seems not only an American ideal; but, as I have said before, the Amernot only an American ideal; but, as I have said before, the American ideal. Mr. Tart has gone out of his way to deny that it is an American ideal. No wonder, then, that his very acceptance of social security as a present necessity is shot through with a constant undercurrent of complaining. He's not going to be happy whatever we, or even he, may do about it. He accepts the mathematics of it, but he rejects the morals of it.

ш

This attitude toward security is understandable for the conservative well-to-do who can get security individually. It might even be understandable for my own group that can provide security for themselves professionally. As a school teacher I have for years paid 5 percent of my salary and my school has paid another 5 percent so that I may give all my mind to my work, and not have to worry about old age. It makes more difference than one might think

Mr. Taff, a distinguished corporation lawyer, can provide this security personally and I, a school teacher, can get it professionally. But the great majority of citizens cannot get it either way. We want them to have it, at least I do, as the deepest demand of the greatest American ideal. We want it not merely demand of the greatest American ideal. We want it not merely as a matter of sympathy for them; we also want it for them as a matter of safety for ourselves. Even the well-to-do cannot maintain their security in a heaving ocean of mass insecurity. But to make this class possession into a mass gain, there is only But to make this class possession into a mass gain, there is only one way and that is through government. Indeed, that is exactly what democratic government is for, to enable men to get cooperatively what they need, when they cannot get it either individually or professionally. To see how imperative this security matter is for mankind and to see that governmental cooperation is the only way to get it is to dismiss constitutional cult words against a people's government and is to accept the democratic centralism which I have been proclaiming as the new federalism. The only other thing necessary to get over the notion that security is not an American ideal, is to see that it has always been and is now the driving motivation among us of all classes

security is not an American ideal, is to see that it has always been and is now the driving motivation among us of all classes alike. Now this is so easy for me to see that I think I can even show it to Senator Taft. My earliest memory indeed is that of sitting in the "spring seat," as we called it, of a "prairle schooner," as you movie-goers call it, with my father driving west, ever west, young man, growing up with the country, about a hundred miles farther on each year or so. It was toward the end of the long trek of the pioneers—in that last frontier, the Lone Star Stafe. Lone Star State

Now, well-to-do corporation lawyers and comfortable movie-goers may think that the trek was due to restlessness. And it was the restlessness of the poor. You may think it was due to adventure. And it was, adventure after security. I do not recall, however, that my father thought it adventure, and I am sure that my mother did not. They both, I believe, and all their honest hard-working kind, took it as a risk and hardship, endured, how-ever, in hope of greater security for themselves toward the evening of life and of more secure opportunity for their children through of life and of more secure opportunity for their children through the morning and noonday of life. The romance of adventure woven around the heads of pioneers is largely spun from the in-experience of youth or from the comfortable security of the

well-to-do. So also the illusion that the individualism of the wealthy was a personal virtue and quite independent of governmental aid, as the Senator from Ohio constantly seems to imply. When in the past three individualists ventured to build railroads, they expected the Government to "secure" them with a right-of-way, not to the Government to "secure" them with a right-of-way, not to mention the added security of every other section of land along the way. When they chanced new lines of manufacture, they expected the Government to "secure" them with appropriate tariffs against outside competition. They were just like us, only they were seeking security as a privilege because they already owned it as a property right. And today the telltale cry of "confidence" (which is but the name for their security) is directed to what they name derisively "the providential state," when and because they saw the poor beseech it for their own security. Is rugged individualism to be reserved for ragged individuals alone? individualism to be reserved for ragged individuals alone?

they saw the poor besech it for their own security. Is rugged individuals alone?

To get all this clear is to know at last what Jefferson tried to tell us long ago. Since day after tomorrow is his birthday, I may invoke his aid, and close. Jefferson, too, you remember, "deserted his class," said and say those who also say that there is no class society in America. When all the conservatives said the sacred trinity was "life, liberty, and property," Jefferson said "life, liberty, and the pursuit of happiness." He said it in our Declaration and later said it in Paris to Lafayette for the French Declaration of the Rights of Man. He dared to make it the business of government to give to men without property the security which rightly belongs to persons, as well as accidentally belongs to property. By doing so, this Jefferson radical to his day became for our day the patron saint of all conservatives. They appreciate having done what they will not do and what they complain about when we do it. Our social-security program today has all the marks of Jefferson upon it: It's bold in conception, conservative in execution, and growing all the while. It guarantees to the many as a right what the few have always had as a privilege. Who says this practice is not an American ideal? Not the workers. They're even willing to increase their half of the payroll tax next year. Who, then, says it's not an American ideal? And why?

And why?

Work Relief-Public Buildings

EXTENSION OF REMARKS

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1939

Mr. HARE. Mr. Speaker, I regret I was unable to complete my remarks on yesterday in the time allotted to discuss H. R. 3799, a bill providing for the use of W. P. A. workers in the construction of public buildings to be used in accommodating second- and third-class post offices, county agents, home-demonstration agents, and other governmental agencies. I am glad, therefore, to have opportunity to supplement and extend my remarks by quoting extracts from communications I have received from a number of constituents who seem to be interested in the policy suggested by this hill

In the absence of definite permission, I shall not take the liberty to give the names of the parties, but will give their title or name of position they hold. I quote first from the president of one of the Rotary Clubs in my district, who says:

We are pleased to note your activity recently and in the right direction in connection with the relief program, in trying to get buildings or something tangible out of it all. The post office here is not even fireproof. There being a number of tenants upstairs, is not even fireproof. There being a number of tenants upstairs, and yet the rental is \$75 per month. We wish you every success in this undertaking.

A well-known and substantial merchant writes:

We fully agree with you in your efforts to place the relief work on a sound basis and provide for post-office buildings. This is certainly better than just scattering the money to the four winds.

A postmaster in one of the third-class offices says:

I was glad to note in the Congressional Record of your efforts of a few days ago providing for an appropriation to build third-class post offices through the W. P. A. While your efforts were not successful this time, I am pleased to know that you will continue same, and this is to express the hope you will succeed. So far as I know you are the first Representative to make a real effort to rectify the injustice and discrimination in the small towns against the post offices in the matter of buildings and equipment. The people in this community are very anxious to secure better mail facilities and requested me to write you in connection with the program you have suggested. suggested.

A cotton-mill president writes:

I have noticed in the press dispatches reference to a bill for the erection of post-office buildings in the cities where there are second-and third-class post offices. If the Government is going to spend money for relief, this bill would not only provide work and relief but give something permanent for the Post Office Department instead of paying so much rent. I hope you will be able to get favorable action on it. able action on it.

The president of a county bank writes:

I have been interested to notice press accounts of the substantial relief bill you have introduced providing that funds appropriated should be used for the purpose of constructing second- and third-class post-office buildings, and I am taking the liberty of writing to say that I heartly approve of your proposed measure. This to say that I heartily approve of your proposed measure. This would afford well-distributed employment to W. P. A. workers and would, no doubt, be a good investment for the Government, as it would provide much-needed quarters for post offices and at the same time effect quite a saving of rental.

A letter from another postmaster says:

I note that you have before the House a bill asking that a certain I note that you have before the House a bill asking that a certain amount of money be appropriated for building second- and third-class post offices under the W. P. A. program. I heartily congratulate you upon this wise deed. It will not only give employment to those needing it, but the fruits of their labor will fully compensate for something that we have long needed. If the Government has money to invest, think of the return it will receive yearly on its investment, a good rate of interest in lieu of the millions it is paying out per year for rentals. Wishing you every success in an effort of the this bill through to get this bill through.

The mayor of a small town says in part:

I note with interest your efforts to provide better post-office facilities for second- and third-class offices.

I further note this is to come under W. P. A., and in this connection I firmly believe you have hit on an idea that comes right to

the point and will provide something for the public they have long wanted and needed.

first, this program will provide work for that class that now comes under the W. P. A., and, while they are working, will not only receive a maintenance but will be doing something construc-

tive.

We have paid out enough here by way of rent to construct a substantial building. If we take, say, 4 percent interest on what we have paid out in the last 12 years, we would have a nice enough building for any town. The Lord only knows we have near as nothing for a post office in this town, and there is no possible excuse the Government can give why we could not have a better one. As a matter of fact, we practically have nothing that we can call a post office, just a little, inadequate building with no conveniences, and, I can emphatically state, a post office I am actually ashamed to point out to a stranger. In looking over the great improvements that our Government has made with mail facilities all over the United States, it certainly looks as if the Government would the United States, it certainly looks as if the Government would naturally want to make some improvement of the sources of the

The letter last above noted comes from a town where they have a third-class office but approaching near that of a second class, and I heartily concur in the idea that there is little or no reason why we should discriminate in providing quarters for postal facilities where there is conclusive evidence that the offices are permanent and will gradually increase in business from time to time. Undoubtedly, this is a sane, safe, and dignified program for taking care of those who are in actual need of work relief. Of course, some of the money appropriated would be used in the purchase of materials, but I take the position that this is an added reason why the suggested program should be adopted, because it will stimulate those industries engaged in providing building materials and to that extent will give opportunity for some people now on relief work to find employment in private industry. That is, it will be necessary for someone to fell the trees and convert them into lumber to be used in the construction of these buildings. It will be necessary for somebody to make the brick, manufacture the nails, lime, cement, and other materials that would enter into their construction. It is elementary to say that the number of unemployed cannot be decreased unless there is an increase in industrial or agricultural activity. We cannot decrease the number of unemployed by decreasing our agricultural or industrial activities.

Let me say in conclusion that many of these buildings will be of the same size and identical design and would, therefore, eliminate a considerable amount of what is usually referred to as overhead costs in preparing plans, blueprints, specifications, and so forth, and I do not know of a better time, condition, or circumstance for inaugurating such a program than that which now exists.

Certainly, the program I have suggested will not completely solve the problem of unemployment, but it will be at least one drop in the bucket toward that end. I am, therefore, hopeful that we will be able to pass this bill, or provide in the next work-relief appropriation a policy that will effectuate

or accomplish the same purposes.

At the expense of repetition I should probably say that the bill provides for \$150,000,000 to be used for the purposes named and, according to estimates furnished by the Procurement Division, it will take about 4 years to complete the program without increasing the present set-up.

Acquisition of Stocks of Strategic and Critical Materials

EXTENSION OF REMARKS

HON. VINCENT F. HARRINGTON OF IOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

RADIO ADDRESS BY O. L. BROWNLEE, MARCH 30, 1939

Mr. HARRINGTON. Mr. Speaker, on the subject of the Faddis bill and the injurious effect of this legislation in its present form on the infant domestic manganese industry, I ask unanimous consent to revise and extend my remarks and include therein an address given on March 30, 1939, by Mr. O. L. Brownlee, chief editorial writer of the Sioux City (Iowa) Tribune.

Mr. Brownlee has made an extensive study of the manganese situation and is very expertly informed on conditions now existing in the domestic field. This matter is of very great interest and importance to the Middle West, particularly South Dakota and western Iowa, where manganese deposits exist in commercial quantities. In view of the imminent opening of Missouri River navigation to Sioux City, Iowa, making water transportation available to these domestic mines, it is extremely important that this Congress lend every aid and encouragement to the development of this latent and essential American industry.

The address is as follows:

Thank you, Mr. Announcer, and good evening, ladies and gentlemen, I wish briefly and as forcibly as I can to bring your attention to the facts concerning what I consider one of the trickiest bills pending in the Seventy-sixth Congress, a bill which forcibly illustrates how certain vested interests operate to prevent the development of Americal's natural recovery.

ment of America's natural resources.

The bill is known as H. R. 5191, by Congressman Faddis, of Pennsylvania, and it bears a favorable report by the House Com-

mittee on Military Affairs.

This bill would appropriate \$100,000,000 to be expended over the next 4 years for the acquisition by Government of reserve stocks of the so-called strategic and critical minerals, such as manganese, chrome ore, tungsten, vanadium, tin, etc., of which this country produces a deficiency. We should have such reserves as a measure produces a deficiency. of safety in wartime.

We have adequate supplies of these minerals, except perhaps in the case of tin, in this country, but they never have been developed because American enterprise cannot produce these minerals and pay an American wage scale in competition with foreign ores produced by peon or slave labor.

Up to this time American steel interests have succeeded in

persuading Congress not to put adequate tariffs on these minerals so that our American producers could meet foreign competition. Their attitude is explained by the fact that the steel companies own manganese mines in Africa and Brazil and where they do not actually own competitive mines abroad they prefer to acquire these raw materials by exchanging finished goods for them—in other words by barter.

other words, by barter.

That makes the American steel industry dependent upon sources of supply 4,000 to 7,000 miles away for ores without which it cannot operate at all. That is dangerous business under war conditions and imposes an unnecessary burden on the American Navy. We lost one manganese-laden ship, the Cyclops, with 229 officers and men during the World War and the blood of those men is on the hands of the industrialists and politicians who have been responsible for preventing the development of our domestic deposits of these minerals.

Faddis bill is an ingenuous piece of legislation. vides that the American Government may acquire reserve stocks of these minerals in one or all of three ways, to wit: (1) by granting debtor nations credit on their war debts, (2) by exchanging surplus farm commodities for minerals, and (3) by outright purchase. It further provides for future "scientific, technological and economic investigations" to be made by certain bureaus of Government to determine the quantities and grades of these cres that may exist in the United States.

Now let me show you the trickery in this bill. In the first place the principal foreign suppliers of these minerals, except Russia, dc not owe us anything on war account, and certainly Russia will never pay us anything. In the second place, the principal suppliers, Russia, Brazil, India, and the African Gold Coast, do not need our surplus farm products—granting that we have any, which I seriously doubt.

The Government bureaus charged with making the proposed investigations already have all the information they need or they can readily obtain it from private enterprise. This proposal is only designed to delay further the development of American mines and to perpetuate the steel industry's international control of minerals.

There remains, then, under this bill, just one way to acquire reserve stocks of these precious minerals which we need, and that is by outright purchase and, under the Faddis bill, we would have to

purchase them abroad.

There is a very clever joker in this bill. Let me tell you about it. Section 3 of the bill provides "for the storage and maintenance, and, where necessary to prevent deterioration, for the rotation of such materials." That word "rotation" is the peg upon which this joker hangs. It would make possible the immediate sale to the Government of all stocks of these imported ores now held in bond or in the yards of the big steel companies.

The reference to the deterioration of these minerals is a joke, because when properly sheltered, they do not suffer material.

because when properly sheltered they do not suffer material deterioration.

Here is the kernel of the thing. Testimeny given before the committee which acted on this bill revealed that United States steel companies now have in bonded yards in this country 851,879

tons of manganese which they have imported and about 150,000 tons, also imported, on which they have paid the small duty of one-half cent per pound. This is the largest peacetime reserve of these ores we have ever had—maybe the steel companies have been

forehanded and have been anticipating war.

In other words, the steel companies now have on hand practically enough manganese to operate for a year, even under stress of war, without importing any. There is no emergency that warrants the United States rushing into the world markets to buy more manganese. If war were declared tomorrow we'd have plenty of time in which to develop our own mines. Under the stimulus of war prices domestic production was pushed up to 345,000 tons yearly capacity in 1917–18.

The steel companies have a good many millions of dollars in-

rested in this huge stock of manganese. Under this "rotation" clause they would be enabled immediately to unload it on the Government, which, of course, would purchase it with borrowed money, thereby freeing their own capital and enabling them to go into the world markets and purchase outright or barter finished steel for more manganese. Meantime domestic development would languish.

The steel industry and the Federal bureaucrats continue to repeat their claim that American deposits of these ores are low-grade. They are low-grade in the sense that the conglomerate in which they are found contains a smaller percentage of manganese, tungsten, chrome, etc., than some foreign deposits, but manganese is manganese and tungsten is tungsten and chrome is chrome, and the conditions under which they are found do not change their character.

In the case of manganese I know of no American deposit that shows less than 18 percent of that mineral. The Cuban-American Manganese Co. operates a Cuban deposit containing only 13 percent, and has been selling the ore in the United States for years-

presumably at a profit.

All this is important to Sioux City and to the 23 States in which manganese and these other strategic minerals are found, and especially to South Dakota, for just 200 miles upstream along the Missouri River there is a deposit of manganiferous bearing ore which private and Government engineers state contains 100,000,000 tons of manganese. This is the great Chamberlain

deposit.

Development of that one deposit alone would render the United States militarily secure with respect to manganese. It would justify extension of the Missouri River navigation channel from Sloux City to Chamberlain, S. Dak., which would give eastern and central South Dakota and northern Nebraska the benefit of materially reduced freight rates on such items as grain, coal, gasoline, salt, sulphur, lime, etc., amounting to several million dollars

annually.

Thus it will be seen that our farmers and every line of business enterprise hereabouts has a stake in the development of South Dakota minerals and we want the steel industry to know that we resent their policies which tend to prevent development of our natural resources. Mr. Faddis, who hails from a Pennsylvania steel district, is not competent to legislate for the Middle West and we resent the action of the House Committee on Military Affairs in recommending for passage a bill that is clearly a subversion of the interests of this section of the Nation and of the Nation itself.

We resent as presumptuous and un-American any action looking

to the suppression of industry and the development of resources which the Lord has placed at our disposal, our streams and forests and our deposits of ores such as are found in the Black Hills. We condemn as unsound the policy of giving pay rolls to Asiatic, Brazilian, and African coolies which properly belong to American

workingmen.

Nor are we unmindful of our own relations with these same steel companies which have taken from the American people in the form of tariff benefits more than \$8,000,000,000 within the past 15 years—\$731,000,000 in 1937 alone. We paid our part of that tariff. It doesn't increase their popularity in this territory when we realize they, like the dog in the manger that couldn't eat hay but wouldn't let the cattle go near it, are fostering policles which interfere with our growth and our development and even our ability to buy more steel products.

These strategic ores industries make no unreasonable-demands upon Congress. All that they ask is equal treatment with steel in the matter of tariffs. An increase in the tariff on manganese of only one-half cent per pound, for instance, would make possible the opening of mines which could turn out at least 200,000 tons of product per year and which directly and indirectly would employ approximately 25,000 heads of families.

Such an increase in the tariff would add only 7 cents to the price of a ton of steel, since it requires only 14 pounds of manganese to make a ton of steel. Think of it! The steel industry won't absorb that little 7 cents per ton when its own benefits in 1937 amounted to \$14.47 per ton.

Acting on the advice of the War and Navy Departments, Congress has enacted legislation authorizing them to place "educational orders" with manufacturers for other items of war equipment. That is dox'e to enable manufacturers to develop machinery and have it in reserve for the making of such items in the event of Nor are we unmindful of our own relations with these same steel

orders' with manufacturers for other items of war equipment. That is doke to enable manufacturers to develop machinery and have it in reserve for the making of such items in the event of wartime demand. Why cannot Congress give our domestic mining interests the same kind of treatment? Is it more vital that we have a reserve of machinery to manufacture shells, for instance, than it is that we have a reserve of mines to produce the metal sector. For these shells? jackets for those shells?

The Senate Committee on Military Affairs, thank goodness, is not so narrow-minded as that of the lower House. The Senate committee has reported out and passed the Thomas bill, which appro-

priates the same amount of money, \$25,000,000, to buy stock piles of strategic ores, but it specifies that these materials shall be purchased abroad only in amounts that cannot be supplied by American domestic enterprise.

We live in a period of great stress and anxiety, in which orthodox principles and practices of government and business are being challenged by a new set of facts which clearly indicate the importance of changing some of our long-established policies. Many practices which until recently were regarded as sound economically and good business today are actually subversive of the national welfare. Subversion is not confined to a handful of misgui..ed Nazis and

Communists. Any policy that contributes to the mass impoverishment of our people is subversive. The businessman or politician who contributes anything to the advancement of such a policy may be a greater public enemy than any nitwit Fascist or Bolshevik spewing political venom from a soap box.

spewing political venom from a soap box.

I am only a humble citizen of this great Republic. I do not own a single mineral lease nor a dollar's worth of stock in any mining or steel corporation. But I want to see my country made militarily secure, and I want to see all of our people happily and usefully employed producing and utilizing the natural resources with which God has endowed this Nation.

And I know that I speak the sentiments of the people of the Middle West, and I think those of all patriotic Americans, when I make bold to challenge the wisdom, if not the principles, of any man who would support the Faddis bill, and of the heads of an industry that knowingly would profit by that subversive measure.

Tuition Too High in the School of Smoot-Hawlevism

EXTENSION OF REMARKS

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

Mr. KITCHENS. Mr. Speaker, there is an old school of thought, originated years ago for political purposes, now being resurrected and reorganized by the leaders of the opposition to this administration. Once upon a time that school thrived upon political perquisites and otherwise by the creation of prejudice, using and appealing to a spirit of sefishness as a basis, regardless of consequences to the people in general. Hopes still linger to revive the opportunities.

The result is a concerted effort now to prejudice the farmer and other workers against the effort to trade with foreign people. The information and intelligence of the American farmer today are being underestimated if not undermined by those who seek again to exploit his suffrage and obtain his future political support. The American farmer knows his welfare, in great part, depends upon the welfare of all American farmers. A larger American market for Americans is the real object of our trade treaties. The cotton farmer wishes the hay, corn, wheat, rye, rice, barley, tobacco, sugar, poultry, dairy, fruit, vegetable, and other farmers to prosper, and this desire is reciprocal. The farmer wishes the industrial worker to prosper, and the industrial worker should have the same interest in the farmer. He knows there are about 100,000,000 of Americans who do not farm, and that the bigger the pay check of the industrial worker the better market for his products. The American farmer likewise knows that he is dependent for prosperity upon foreigners to buy a considerable part of what he produces; that is, the surplus of his products. He knows also that the American industrial worker and the owner of industrial plants are dependent for prosperity upon foreigners to buy a considerable part of industrial products-that is, the surplus of industrial products.

Mr. Speaker, unfortunately there are those who would delude him into ignoring these facts. They would have him believe he can have his own market exclusively and also the foreign market. This is the school taught by the leaders of the party in power before the present administration came into office and is the school for which pupils are now being solicited. To be perfectly frank, if I were a foreigner and the American farmer and American industrial worker permitted their political leaders to legislate so as to cut me off from the American market, I would support leaders who

would negotiate and cultivate the friendship of other farmers and other people in other parts of the world for my trade. Of course, that is just what foreigners have been doing.

This administration in 1933 found the country in utter collapse. Those in charge at the time were helpless. The banks with the savings of the people were breaking by the thousands, and the losses were appalling and incalculable. The doors of industry were closed and the people in great anxiety were walking the streets and highways. Wheat was selling for 25 cents per bushel, corn for about 15 cents per bushel, cotton for 5 or 6 cents per pound, and other things in proportion. Mind you, this was under the Smoot-Hawley Act of 1929-30. The damage to our foreign trade, caused by such high tariffs, was so incalculable and so enormous that it cannot be repaired in a short time. Five or six years certainly are insufficient to recover such losses and restore friendly trade relationships. Yet those responsible for the enormous calamity and losses of the people object now to everything suggested or being tried by this administration. It would be amusing, if the situation a short time ago, and even now, were not so tragic, to hear the unrepenting opposition criticize, denounce, find fault with, object, obstruct, and pull back at every attempt and effort of this administration to alleviate and remedy the appalling situation created by that same Smoot-Hawley school of political opportunists.

Mr. Speaker, as stated, I am convinced there is a wellorganized political cabal to blind the American farmer and American people in general as to the advantages of mutual trade treaties negotiated, and now being negotiated, by Hon. Cordell Hull under the authority and direction of the American Congress. Sniping attacks in isolated places, constantly

recurring, justify the conclusion.

On March 22 I made some remarks on the question of State trade barriers. On April 3 and April 11 I made further observations upon national and international trade barriers that strangle and interfere with American trade, American welfare, and general prosperity. We know favorable results from these trade treaties are now accruing, but sufficient time has not elapsed. The opposition to these trade treaties cannot lead the American people to believe that the destruction to trade wrought by it can be remedied, or the country in collapse can recover economically in a day. What remedy does it offer other than a return to Smoot-Hawleyism?

We had practically lost up to 1933 our foreign trade outlets for agricultural and industrial products. This lessened materially our home market. Those outlets this administration is attempting to restore to the American people. Some of our large industrial concerns even jumped our tariff walls, moved their plants or built new ones in foreign countries. All industrial plants cannot do that, nor can the farmer nor the industrial laborer. In order to get foreign business some American plants moved a portion of their plants to where the business was. There was Massey-Harris Machinery Co., of Chicago, President's Suspender Co., Ford, and others. What was the result? Less pay rolls in America, less and smaller pay checks, less jobs, less home market for our own people, and more jobs and better pay rolls for the foreigner. Further, thousands upon thousands of our laborers lost their jobs, and the competition for jobs affected adversely all labor. Does the American farmer or industrial worker desire to return to such an economic condition? If so, join the school of Smoot-Hawleyism and pay the price.

Mr. Speaker, I know that it would be a paradise on earth, or appear to be so, if it were possible for us to have all our own market and the foreigners' market also without the foreigners having any part of ours. The other people of the world are not so silly or so constituted that they will permit such a thing. Any attempt at such selfishness, restriction, and prevention of trade by our country with another, always causes friction, retaliation, discontent, contraction of busi-

ness, economic war, and depression.

The opposition, as just stated, selects isolated items of imports upon which they build their case. Unverified and not the latest statistics are used. To illustrate, let us take the American hay farmer for example. It is argued the imports of hay for farmers are destroying the American hay farmer. Let us see.

On April 6 the gentleman from New York [Mr. Reed] placed in the Congressional Record an incomplete and inadequate statement relative to imports of hay and trade agreements. Now, complaining about the small, piffling imports of hay from Canada comes in the same category as objections a few years ago to small imports of ice from Mexico. Both are examples of local border trade which is carried on with our neighbors to the north and south, the extent of which is insignificant.

In this complaint it is noted that the figures for 1938 were not used. Were the latest available figures deliberately avoided, or could it have been a mere oversight in view of the fact that imports of hay in 1938 were so much lower than in 1937? Or was it because we exported several times as much hay in 1938 as we imported? The figures for imports of hay in 1938 are 18,954 short tons valued at \$142,365, while exports amounted to 61,297 short tons valued at \$537,209. These are the preliminary figures published by the Department of Commerce and were available to Mr. Reed when he made his statement. The importation of hay in 1938 amounted to about half of the amount imported in 1929.

In the trade agreement with Canada the United States reduced the duty on hay from \$5 to \$2.50 per short ton, or by 50 percent, while Canada reduced her duty on hay from \$5 to \$1.75 per short ton, or by 65 percent. Now, by the gentleman's partial statement, we are led to believe our increased exports, primarily to Canada, were temporary and the result of a drought in Canada, while our increased imports in 1937 resulted from reduced duties.

It is true there was no serious drought in the United States during 1937. But, surely the gentleman who expresses so much concern for his farmers must have known that the feed shortage, resulting from the 1936 drought, continued through part of 1937, or until feed from the crops of that year were harvested. The quantity of hay imported amounted to something like two-tenths of 1 percent of the production of tame hay. The percentage would be still more inconsequential if compared to total production of hay in the United States.

Does the gentleman not realize that this hay was imported primarily for the benefit of dairy and other farmers at a time when there was a domestic shortage? Did not some of the dairy farmers of the gentleman's district use some of this imported hay? Who else could benefit from the importation of hay into the United States except farmers?

The figures given above show that the exports of hay for 1938 were more than three times as large as imports. Does the gentleman claim that drought conditions in Canada in 1938 account for these exports, or would he agree that possibly the 65-percent reduction in duty by Canada was a contributing factor which aids our hay producers to sell across the line? As Al Smith would say, "Let us look at the record and keep it straight."

Toward Sound Money

EXTENSION OF REMARKS

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1939

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE OF APRIL 20, 1939

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of April 20, 1939:

[From the New York Herald Tribune of April 20, 1939]

The Republicans of the House have decided to seek repeal or modification of the extraordinary monetary powers conferred upon the President in the early days of his administration. Whether

they can procure a sufficient number of Democratic votes to put their program into effect seems to be a matter of some doubt; but even if they fail in this, they will have done something well worth doing. They will have demonstrated that the long-established tradition of the Republican Party as a defender of sound money has not become a dead letter.

Among the measures which the Republicans seek to rescind are the President's authority to alter the gold value of the dollar; the authority bestowed upon the Treasury, under the Agricultural Adjustment Act of 1933, to sell \$3,000,000,000 of its securities directly to the Federal Reserve System; the power of the Treasury, under the so-called Thomas amendment to the same act, to issue \$3,000,000,000 in "greenbacks," and the Silver Purchase Act, under which the Treasury is authorized to buy silver bullion at a price of 40 to 45 cents in the world market and issue certificates against it at the arbitrary figure of \$1.29 an ounce. As to the stabilization fund, the report of the Republican conference proposes that this be maintained, but that its activities be limited in at least two ways: Those charged with the operation of the fund would be forbidden to use it as a weapon of foreign policy, in the political sense of the term, and its operations would be made

subject to a semiannual audit by an outside agency.

Of all these measures, the only one at all debatable is that continuing the President's power to alter the value of the dollar. Secretary Morgenthau has made a fairly plausible plea for extending this power for another 2 years, but it is not convicing. His chief argument is that this country should be able quickly to readjust the gold value of the dollar in case one or more of the other important world currencies should decide to take advantage of us by currency depreciation. There are two replies to this argument, it seems to us. One is that the countries which might embarrass this Nation by such action are the countries which are parties to the tripartite currency agreement. Not only are these countries pledged to maintain their currencies in general alinement with the dollar, but they have a very definite stake of the present time in keepings their currencies can be such as the present that it has been the countries and the countries the countries are the countries and the countries are considered. at the present time in keeping their currencies at a premium. One of the notable features of the foreign exchanges during the One of the hotable reatures of the foreign exchanges during the recent crisis has been the determined effort of the British, particularly, to maintain a "strong" pound. There is no mystery about this. A country which is threatened with war, and which might have to depend heavily on purchases from another country in the event of hostilities, is not likely to go in for currency depreciation. Furthermore, the President may devaluate the dollar under the existing authority only by an additional 17 percent. In the event of any general collapse of other currencies this would afford the dollar very limited protection. Since, in that event, the President would have to go to Congress if he wished further power to devaluate, why not, it is suggested, restore the power over the dollar now to Congress, where it righly belongs?

As to the other measures there is not the slightest where of

As to the other measures, there is not the slightest shred of reason for extending them again. There was some excuse for Republican Members of Congress to permit these laws to be enacted 6 years ago, when the President felt that, because of the emergency, he was entitled to a free hand in such matters. The duty of this group today, however, is to assess these measures for what they are, and take them off the books.

Legislation to Keep America Out of War

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

STATEMENT OF EUGENE I. VAN ANTWERP BEFORE THE HOUSE COMMITTEE ON FOREIGN AFFAIRS, APRIL 17, 1939

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Eugene I. Van Antwerp, commander in chief, Veterans of Foreign Wars of the United States, before the House Committee on Foreign Affairs on Monday, April 17, 1939, concerning legislation to keep America out of war:

Mr. Chairman and gentlemen of the Committee on Foreign Affairs, our organization, the Veterans of Foreign Wars of the United States, has always been interested in the foreign affairs of the

The Veterans of Foreign Wars came into being 40 years ago. The foreign affairs of the United States resulted in 1898, in the Spanish-American War. Thousands of American citizens were then sent overseas to serve in the front lines in Cuba, Puerto Rico, and the Philippine Islands.

Among those who returned from Cuba and the Philippine Islands in 1899, three associations were formed in various parts of the country, which were afterward consolidated into the Veterans of country, which were afterward co Foreign Wars of the United States.

Inasmuch as the V. F. W., as it is commonly called, includes within its membership only those American citizens who have had overseas combat-badge service, in some foreign country or in hostile waters during some war, campaign, or expedition in which the

United States has been engaged, it follows that its members, individually and collectively, cannot help but be interested in the future foreign affairs of our Nation.

We, who are members of the V. F. W., have served in the front lines of our country's various wars, campaigns, and expeditions. By personal experience and observation, we, of the V. F. W., know shout the mud and vermine front line transfers the long. about the mud and vermin of front-line trenches, the long marches with heavy packs, the exposure to the raw elements, the monotony of eating "slumgullion" day after day, the whining of screaming shells, the terrifying zing-zing of passing bullets, the rat-tat-tat of distant machine guns, the terrific concussion and terrible roar of exploding shells, the fear of sudden death, the constant high tension, the terrible stress and strain, the horrible mangling of human bodies, the horror of seeing old friends and buddies wounded or killed, and the philosophy of fatalism. buddles wounded or killed, and the philosophy of fatalism, adopted as a protective cloak for our own sanity. We know about the futility of war, the disheartening human aftermath of war, the disillusionment upon finding our promised old jobs filled by others and upon noting the economic maladjustments visited upon ourselves and upon the entire country by reason of its participation in war.

who have had the experience of front-line service, want no more of it, for ourselves or for our sons, or for the sons of our fellow citizens, if future war can be honorably avoided. We are therefore intensely interested in the adoption and application of such policies as are honestly designed to keep America out of

war.

If history can teach us to learn lessons from the experiences of the past, then we must realize that there is no one formula for keeping America out of war. Rather, it would appear that there are several formulas which ought to be adopted to help to

there are several formulas which ought to be adopted to help to keep America out of war.

There can be no doubt that we live in a period of human history where peoples and nations are more interdependent than perhaps ever before. Technological developments have brought us closer and closer together. Even if we would do so, we cannot entirely ignore what is happening in other parts of the world, for all such events will inevitably have more or less effect upon our Nation and its nearly.

During this age of ever-increasing specialization of industry—with many important natural resources, raw materials, and products obtainable only in certain countries—complete isolation for the United States, from the affairs of all other nations other than those in the Western Hemisphere, would be impracticable, if not absolutely impossible

solutely impossible.

We must face the world as it now is. The ever-speedier technological developments, in our country, and in other countries, have caused, and will, in the future, cause economic maladjustments and displacements among the people within our own country, as well as among the various nations in their relationships with each other.

By the enactment of additional laws in our various States, and by our Federal Government, and by the application of new indus-trial methods and principles, from time to time, our own country has been striving to effect such readjustments as will provide increased employment with resulting purchasing power, by which again to speed up the wheels of industry, so that all of our own citizens may be enabled to purchase the necessities and comforts of life which our productive ability and natural resources can make available.

Satisfying the needs of our own citizens and their desires for some of the comforts and luxuries of life is the real basis for our international trade. If a favorable balance of trade for our country does not enable a greater number of citizens to continue to secure such necessities and comforts of life, then it is of little

value to the Nation itself.

A favorable balance of trade is secured only by the exportation of raw materials, commodities, machinery, and other products produced by the labor of our country—its real resources—in exchange for foreign gold or credits, with which to purchase other commodities which our country may need in the future. In this exchange of our country's resources for the gold, money, and credits of other nations we run the danger of converting our Nation into one of the "have not" nations.

History discloses that frequently in the past it has been the fundamental economic maladjustments as between various nations which have been the real causes for war, without which all other differences could probably have been peacefully negotiated.

negotiated.

negotiated.

It is not within our province to pose as economic experts, but it would seem that every feasible step ought to be taken, by peaceful negotiations, to effectuate the settlement of the most irritating economic maladjustments between nations, with the hope that their peaceful settlement might remove some of the most irritating differences between nations.

Perhaps the very most important factor of all is the personal attitude of the citizens of the United States, individually and collectively, caused by our various points of contact and our diverse relationships with foreign countries.

Our own citizens must learn to be temperate and tolerant and

Our own citizens must learn to be temperate and tolerant and must restrain their emotions so that sensational newspaper head-lines will not so easily infiame their fervor for a war against some offending nation. A thorough realization as to the heavy costs of war, and of the aftermath of war, would cause citizens generally to be less responsive to jingoistic newspaper headlines, magazine

articles, and radio broadcasts

Surely it is not unpatriotic to remind the Nation that becoming involved in war will inevitably result in snuffing out the lives of thousands of young American citizens, will rob other thousands of their youth, and will leave thousands of dependent parents, and widows and orphans, unprovided for, because of those who die by the shot and shell, the gas and disease incident to war.

Surely it is not unpatriotic to remind the people of our Nation, and the Members of our Congress, that our country's participation in any future war will result in hundreds of thousands of totally and partially disabled war veterans, whose ailments must be treated in Government hospitals, and for whom compensation must be provided, to make up for the vocational loss of handicapping

disabilities

Surely it is not unpatriotic to remind the people of our Nation that the cost of war, during its progress, goes into the scores of billions of dollars, and after its termination accumulates additional hundreds of millions of dollars each year to provide for the interest on the increased indebtedness, and to provide for the

human aftermath of war.

The last World War was supposedly fought to end all wars, to The last World War was supposedly fought to end all wars, to preserve democracy. It has done neither. More wars have been fought since then than during the 20 years preceding that time. There is less democracy among the various countries which participated in that war than there was prior to that time.

By a fuller realization of these various factors the people of our Nation, will be less and to be accused by some resounding phrase.

Nation will be less apt to be aroused by some resounding phrase, slogan, or shibboleth equally as empty of real fulfillment as were the slogan, or sinduletin equally as empty of real fulfillment as were the slogans used by the United States to arouse the patriotic fervor of its own citizens during the World War.

To bring about a greater realization of these factors, we of the Veterans of Foreign Wars believe that several steps ought to be taken by this session of Congress:

(1) The Federal Government should immediately assume the sole responsibility of providing for the human aftermath of the last war by adequate pensions for all disabled and unemployable veterans, and for the dependents of all deceased war, campaign, and expedition veterans. This burden should no longer in part be shifted to the various States through matched State and Federal social-security funds but should be assumed solely by the Federal Government, just as it has previously assumed such responsibility as to the veterans and the dependents of deceased veterans of all previous wars in which the United States has been engaged. Too long has the Federal Government delayed the assumption of this responsibility.

Lest the United States be too easily tempted to become involved in another foreign war, it should first voluntarily assume the sole responsibility of providing adequately for the human aftermath of

the last war.

(2) Congress ought now to enact a law, such as embodied in S. 1497, now before the Senate Committee on Military Affairs, in effect to provide that the laws providing certain benefits to veterans of the World War suffering from disabilities incurred or aggravated in service, and to the dependents of veterans who die in or by reason of such service, should be equally applicable to the veterans who may become disabled by reason of service in any future war, and for the dependents of those who may die as the result of disabilities suffered in the armed forces of the United States in any such future war.

Our Nation should be no less anxious about providing adequately for the human aftermath of any future war in which we may become engaged than it has been about providing for the equipment and matériel, the guns and ammunition, the planes and ships, in preparation for any such future war. The morale of the man behind the gun is even more important than matériel and munitions. gravated in service, and to the dependents of veterans who die in

and munitions.

(3) Congress ought now to enact into law, while this country is still at peace, the bill recently introduced by some 13 or 14 Members of the House individually, and by 50 Senators jointly, "to tax the profits out of war by steeply graduated income and other taxes in order to provide for effective national defense, to promote peace, to encourage actual neutrality, to discourage war profiteering, to distribute the burdens of war, to keep democracy alive, and for

other purposes.

We firmly believe that the enactment of such proposed war-profits taxation legislation at this time would do much to make all American citizens realize that the costs of war must be paid for out of its profits, that the costs of the next war will be more evenly distributed, among all citizens, than was so as to the last war, that those behind the lines will have to make sacrifices to pay for the costs of maintaining others in the front lines, that the "pay" will have been completely taken out of patriotism, and will thus instill in all citizens a desire for the perpetuation of peace and a determination that the Nation shall follow a policy of actual neutrality and do everything possible to keep out of other nations'

Without the enactment of such drastic war-profits taxation Without the enactment of such drastic war-profits taxation legislation, it is quite probable that the Nation would have to become so regimented during time of war as would in effect result in some form of state socialism, very possibly followed up, after the conclusion of any such future war, by a dictatership similar to either fascism, nazi-ism, or communism. The civil liberties now guaranteed by our National Constitution would be forfeited under any such totalitarian state.

The present enactment of legislation to tax the profits out of war would perhaps do more to instill an attitude of actual neutrality in the minds of all citizens than would any other proposed legislation.

There are also other steps which we believe should be taken

toward the objective of keeping America out of war.
Although the Monroe Doctrine has been the policy of our Although the Monroe Doctrine has been the policy of our Nation, it has not yet been enunciated in any resolution or law adopted by Congress. Our Nation should declare by a joint resolution adopted by Congress that it will not engage in any foreign war for the acquisition of any additional territory, for the support or defense of any country not in the Western Hemisphere, and nor will it permit any non-American country to conduct any war against any country in the Western Hemisphere for the acquisition of additional territory, or executed privileges. of additional territory, or special privileges.

The enunciation of such principles, not only by our State Depart-

ment, and our President, as in the past, but by our Congress, would do much to make our position clear not only to the nations in the Western Hemisphere but particularly to the nations in Europe

and Asia.

Such a policy must necessarily be backed up by an adequate national defense. Effective steps have been taken during the last several years, with the vigorous support of the Veterans of Foreign Wars, to this end. Our policy of maintaining an effective national wars, to this end. Our points of maintaining an elective national defense, by a comparatively small standing Army, backed up by trained citizen reserves, with provisions for a quickly expandable citizen army, with adequate materiel, munitions, motorized and mechanized equipment, antiaircraft guns and airplanes, and with a first-class Navy as our first line of defense, must be continued in the future.

An adequate national defense, which is feasible without complete militarization, is the best preparation against war, as well as for

any unwanted war, if it should come, and at the same time is the best guaranty for the continued preservation of peace.

Our country should continue its policy of not permitting its citizens to extend any loans to any nation which is at present in default in its indebtedness to the United States, in accordance

with the provisions of the so-called Johnson Act.

No loans or credit, moreover, by this country or its citizens, should be permitted as to any country, or its citizens, which is

engaged in war.
We should not repeat the mistake of loaning out eleven or twelve billion dollars to other countries at war, in order to enable them to purchase various commodities from this country, thus creating a false prosperity, accompanied by inflation, and followed by a disastrous deflation, with the extended credit probably destined never to be repaid.

Increased foreign trade, and increased favorable balances of trade, thus acquired, may, it is true, result in profits to a few of our citizens, but only at the expense of the gradual exhaustion of the actual resources of our country. Never again should our

Nation go into the business of guaranteeing, underwriting, assuming, or arranging for foreign credit to any un-American country for the purchase of American goods during time of war.

The citizens of our country should be taken out of any country which is at war just as soon as possible, and, after the expiration of reasonable warnings, the United States should no longer assume any responsibility for their welfare, if they choose to remain or to travel in countries at war or in zones of danger. Our country should also withdraw its armed forces from all foreign country should also withdraw its armed forces from all foreign

soil, except such as needed to protect Government property.

The United States should not enter into any secret agreement or any foreign entanglement which might result in sending any armed forces to fight in some other country.

The United States should permit the sale of supplies to a nation

at war only if paid for, and only if ownership thereof is transferred at our shore lines, without any protection or responsibility by the United States Government thereafter.

If actual neutrality will keep America out of war-as we believe it will—then our neutrality policy must be so designed as not purposely to give an advantage either to an aggressor nation or to

The developments during the last 2 years have taught us that neither mandatory nor discretionary neutrality will necessarily result in actual neutrality.

I think it is pretty well acknowledged that the President did not see fit to find that a state of war has been existing between the countries involved in "the conflict in the Far East," and thus to

countries involved in "the conflict in the Far East," and thus to invoke the provisions of the present neutrality law, because he did not thereby wish to extend an added advantage to the aggressor nation, and a corresponding disadvantage to the defending nation. To have invoked the provisions of the present Neutrality Act as to the conflict in the Far East, would not have resulted in actual neutrality. An embargo on the further shipment of munitions would then immediately have been put into effect, to the decided disadvantage of the aggressee as compared with the aggressor nation. The stronger nation could continue to process its own munitions out of the raw materials which would still be available to it by importation from the United States under the provisions of such neutrality law. The weaker nations, already possessing most of the essential raw materials, could continue to import same, if desired, but would be denied the right to import needed munitions which it is not so well prepared itself to manufacture. On the other hand, the stronger nation which is well facture. On the other hand, the stronger nation which is well equipped to process its own munitions, would be denied such munitions, but could continue to import badly needed raw materials out of which to make such munitions.

Thus, we of the Veterans of Foreign Wars, who were previously

very insistent in our advocacy for mandatory neutrality, have had

to admit that if a mandatory neutrality law had been in effect as to the conflict in the Far East, it would not have worked out as actual neutrality, but would have given an added advantage to the aggressor nation, and an added disadvantage for the de-

fending nation.

So-called discretionary neutrality could also be applied so as to have other than an actual neutral effect. To give authority to the President, or to the State Department, to decide which nation is an aggressor nation, and then to deny the further shipment of raw materials, commodities, or munitions to such aggressor nation. would immediately be thrusting our Nation into the cause against the aggressor nation, on the same basis as though we were a member of the League of Nations, but without assurance that all other nations were acting in unison with such a sanctions policy.

To adopt such a policy of extending economic aid primarily to

the so-called democratic countries, would be, in effect, to give our approval to the status quo among all nations and would encourage such democratic nations to discontinue further negotiations to try to settle the irritating economic deficiences and maladjustments which now exist within most nations, which are the real basis and the excuse for the fanaticisms of certain aggressor "have not" nations.

Neutrality policies should be so applicable as not to give cause

to any nation to allege that they were purposely designed to give added advantages, or disadvantages, to certain classifications of nations, according to certain predetermined formulas or according to some designated person's discretionary judgment.

Actual neutrality would seem to imply a determination not to

interfere, not to intervene, not to take sides, not to give advantages or disadvantages, purposely to one side or the other, in any war between other nations.

During the recent civil war in Spain, England followed a policy of nonintervention and continued to do so even though more than 100 ships of her vast merchant marine were sunk by the airplanes and guns of the forces fighting in Spain.

and guns of the forces lighting in Spain.

During the World War, the little country of Norway, which then had next to the largest merchant marine in the world, determined to follow the policy of actual neutrality, and continued to do so, even though almost exactly 50 percent of its merchant marine, together with hundreds of sailors, were sunk, by the contestants in

such war.

Sweden and Denmark and Holland, located close to the chief belligerents during the World War, were nevertheless able to follow a policy of actual neutrality.

All of these countries continued to sell goods to any country which was in a position to buy them. Each such country gave its shipowners to understand that if they wished to engage in hauling goods through zones of danger they did so at their own risks, and that the government would not follow up such loss by declaring year against the country whose pany or airplanes may have been war against the country whose navy or airplanes may have been responsible therefor.

To insist upon the freedom of the seas, within war zones, when two or more nations are engaged in a life struggle against each other, is not being practical.

To advise the shipowners and merchant-marine operators of our Nation that they may continue to engage in the traffic of hauling goods to other countries at war, strictly at their own vided that they have adequate insurance on the lives of their sailors, and on the ships owned by others, would be to adopt the same policy successfully followed recently by Great Britain during the civil war in Spain, and by Norway, Sweden, Denmark, and Holland during the World War, with considerable loss of property and of lives, it is true, but at infinitely less cost of and lives than would have been the case if each country had decided to become involved in war because of its insistence upon maintaining the freedom of the seas in war zones.

The enunciation of such a policy of actual neutrality, by a suitable amendment to the present Neutrality Act, without any provision to make any distinction between an aggressor and a defending nation, or without any provision to make distinctions between munitions and other material needed by countries at war, coupled up with the adoption of the other policies which we have previously cutilized would in my enjayon be the prevented of the provision.

tween munitions and other material needed by countries at war, coupled up with the adoption of the other policies which we have previously outlined, would, in my opinion, be the nearest approach to actual neutrality which can be devised.

If such a policy were calmly and coolly entered into by this country, with a thorough understanding of same by all citizens, then we do not believe that they would be so easily inflamed by propaganda designed to persuade the United States to pull hot chestnuts out of the consuming flames for some so-called democratic, but imperialistic, country, as against some totalitarian country, or for some "have" nation as against some "have not" nation, or for some weak defending nation as against some highly organized strong aggressive country, or vice versa.

Our country should not attempt to become the policeman for the other countries of the world. It can properly use the "big stick" to protect itself and other American countries, but to attempt to use the "big stick" to control the morals, ethics, and actions of other nations will almost certainly involve us in the wars of other nations, with probably no net gain to civilization, but only devastating losses for humanity and all nations.

To enact a neutrality law which would necessarily result in the loss of trade for certain industries, or in the cessation of the shipping of our merchant marine, would invite the interested financial groups to do their utmost to prevent the invocation of any law which might detrimentally affect them. Such economic interests, impelled by the profit motive, would probably secretly work in devious ways, to try to exercise influence, directly and indirectly, to

secure different interpretations and applications of any attempted partial neutrality, depending on their respective conflicting interests.

If, on the other hand, the citizens of our country come to the full realization that their investments or credits abroad, or their risks of carrying on trade between other nations, will not become the responsibility of the United States, to the point of leading it into war, then a policy of actual neutrality could be more feasibly adhered to.

Because these proposed policies are not contained in any neutrality bill, I have refrained from making reference to any of the

neutrality bills before this committee.

trality bill, I have refrained from making reference to any of the neutrality bills before this committee.

Strange as it may seem, the Veterans of Foreign Wars—whose future eligibles, if any, must come out of some future foreign war participated in by the United States—is honestly striving to do away with the possibility for its continued existence beyond the present generation of war veterans, by its advocacy of policies to avoid the necessity for any "veterans of future wars."

Much could be accomplished, in my opinion, to avoid the eventuality of any devastating war for America by—

(1) The Federal Government's assumption of the full responsibility of providing adequately for the human aftermath of the last war and of any future war; (2) taxing the profits out of war by steeply graduated income taxes; (3) providing an effective national defense; (4) denying any credit, or loans, by this country or its citizens, to any country, or its citizens, which is engaged in war, or which is in default in its indebtedness to the United States; (5) withdrawing protection from American citizens who continue to remain in, or travel in, belligerent countries, in their ships, or in war zones; (6) enunciating the policy that the United States will not permit the invasion of, or any aggressive war against, any country in the Western Hemisphere for the acquisition of territory or special privileges, and that it will not conduct any war against any other country for the acquisition of territory, or to defend or support any non-American country; (7) following a policy of actual neutrality as to our foreign trade, during time of peace, as well as during time of war between other nations; and (8) by encouraging international conferences to bring about better adjustments of economic difficulties among all nations, to remove the most irritating fundamental causes for war.

Democracy for our country, and the guaranteed personal and civil liberties under our Constitution, as well as civilization itself, can best be preserved by keepin

can best be preserved by keeping America out of war.

Adoption by the United States of the several policies which we have here submitted for your consideration would, we most earnestly believe, make it less possible for the United States to become involved in any foreign war.

The Stabilization Fund

EXTENSION OF REMARKS

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

Mr. SMITH of Ohio. Mr. Speaker, I am unalterably opposed to the continuation of the power of the Executive over the stabilization fund as provided in the Gold Reserve Act of 1934. To vest such extraordinary power, to be operated secretly, in the hands of the Chief Executive, whether he be a Democrat or a Republican, is a major national wrong. One needs but to reflect how few people there are in the world who can properly and judiciously manage even a few millions to be convinced of this. No human being with sufficient wisdom has lived to properly use such an enormous amount of gold. No one in the world was ever vested with such power. The British fund is not operated secretly, as is ours. At least several persons in England know how the fund is operated. This is not at all said with any idea of condoning the British equalization fund. It is just as wrong in England as it is in our own country, and the world will in due time find out they are both wrong.

The bill, as is known, provides for a \$2,000,000,000 stabilization fund which is secretly operated by the Secretary of the Treasury with the approval of the President. Once a year an audit is to be made by the Secretary to the President. However, the President need make no report to anyone.

The stabilization fund consists of \$2,000,000,000 and is supposed to be "for the purpose of stabilizing the exchange value

of the dollar."

The law authorizes that the fund is to be used "to deal in gold and foreign exchange and such other instruments of credit and securities as the Secretary of the Treasury may deem necessary to carry out the purpose of" the law.

It is further provided-

The fund shall be available for expenditure, under the direction of the Secretary of the Treasury and in his discretion, for any purpose in connection with carrying out the provisions of this section, including the investment and reinvestment in direct obligations of the United States.

The statute also specifically provides-

The fund shall be available for expenditures * * * for any purpose in connection with carrying out the provisions of this section, including the investment and reinvestment in direct obligations of the United States. * * *

Thus it is clear that the fund may be used to deal in every conceivable kind of credit instrument and security, including all Government and private obligations. It can be invested in Government bonds, drafts, and acceptances.

It is inconceivable that democracy could possiby coexist with such extraord nary powers vested in the Chief Executive. There cannot exist any exigency which possibly could reconcile the two.

What is meant by stabilizing the exchange value of the dollar? It can have reference to the gold dollar only, which functions only outside the United States. The effect of the gold dollar on our domestic economy is so imperceptible that

It is important to recall the original stated purpose of the stabilization fund. The law specifically provides that the fund shall be used "to stabilize the exchange value of the dollar." After the suspension of specie payment and our going off the gold standard, which virtually took place March 6, 1933, the dollar in foreign countries began to depreciate. The fund, therefore, was set up specifically to bolster our own depreciated dollar. What it really amounted to was that the fund reestablished convertibility of the dollar used in foreign exchange. Our currency, having depreciated, affected seriously our credit with other nations.

At the same time that the stabilization fund was instituted the dollar was fixed at a new value and made convertible into foreign currencies, which, with the stabilization fund, placed the United States definitely on an international gold standard. Since the fund was established, conditions have changed so materially that the original need, if there was one, no longer exists. When the fund was set up we had only about \$7,000,000,000—of the 59-cent dollars. Since that time we have acquired more than \$3,000,000,000. We, therefore, now have more than an ample amount of gold to assure full convertibility of the dollar used in foreign exchange. Therefore there is no real need for the stabilization fund.

The gold dollar consists of $15\%_{21}$ grains of gold, 0.9 fine. The question immediately arises as to the meaning of the phrase "stabilizing the exchange value of the dollar." The presumption certainly is that the term "dollar" here refers ultimately to the gold dollar. How can the gold dollar stabilize the gold dollar? How can $15\%_{21}$ grains of gold be used to stabilize $15\%_{21}$ grains of gold?

Is the gold dollar unstable? I asked this question of Mr. Morgenthau before the committee, which he either could not or simply refused to answer.

The value of the gold dollar, so long as it remains at its present weight and fineness, and so long as the United States has sufficient gold, cannot fluctuate in its exchange value, with reference to foreign currencies, and should the time come when the gold of the United States is insufficient, the stabilization fund would be powerless for the purpose supposedly intended. The point is, it is the other foreign currencies that are fluctuating with reference to the gold dollar. The Secretary of the Treasury stated as much to the committee when he said all the other currencies but ours are "floating." He also stated, "Any businessman who has had to deal in foreign currency knows that the dollar is the most stable and the soundest currency in the world today."

Therefore the stabilization fund can be used only to support foreign currencies to keep them from fluctuating, which is precisely what it is being used for. There is no secret about this and it certainly should be no secret to anyone that, insofar as the fund's dealings in foreign exchange are concerned, it can do nothing else. It can be used only to support a foreign currency or to depress it. Put into realistic terms, this simply means that the stabilization fund is being used to support the economies of foreign nations or depress them.

Secretary Morgenthau before the committee said that the only persons in the United States who possibly can be injured by the operation of the stabilization fund are speculators in foreign exchange. That statement certainly needs to be qualified.

In the stabilization fund balance sheet as of June 30, 1938, submitted by him, there is an item "Profits on sale of sliver bullion to Treasury, nationalized \$3,473,362.20."

It is not the profit indicated here that is of any concern whatever, but it is the fact that this fund was permitted to be anywhere near the silver-purchase program, because this has been the speculators' heaven. Also what possibly could be the purpose of buying United States securities, as the Secretary admitted was done, and as is shown in the balance sheet submitted to us by him, other than to peg or support bond prices?

Our statutes consider it to be a criminal offense when private corporations engage in such a procedure.

Secretary Morgenthau stated in his testimony before us "that the businessman needs stability in exchange." That, of course, is true, but I am certain that the businessman of this country also needs to have restored to him confidence in our money.

When Mr. Morgenthau admitted to the committee that the operation of the fund entails a "risk," he perhaps admitted far more than he intended. It must be realized that the risk does not involve a minor procedure. Any amount of risk connected with the use of so huge a sum of gold as this is most dangerous. The word "risk" implies the possibility of loss. The question is not the amount of possible loss. It is the fact that there is a danger of any loss, because if there is risk of losing a small part, there can be risk of losing all of it. The loss of this gold could easily be disastrous to our Nation. It should not be overlooked that France did experience a complete loss of her stabilization fund, perhaps several times, and there is nothing to indicate that the financial authorities of the French Government are less wise and able than those of our Government.

It is noteworthy also to observe the statement of Mr. Morgenthau to our committee:

There was strong pressure against the dollar-yuan exchange and China needed dollars in order to strengthen the dollar-yuan exchange rate, thus avoiding additional obstacles to our trade.

After the silver-purchase program had drained China of her silver money and forced her people into a depression of no less severity than ours, and, after the Chinese Government prayed to our Government on at least three occasions for relief from our silver policy, and after England came to China's aid, the knowledge conveyed to us by the Secretary of the Treasury that the stabilization fund was used to support the Chinese currency cannot help but arouse in us some unpleasant feelings.

With the silver-purchase program the Chinese money was knocked prostrate. Then the stabilization fund was used to try to lift it up.

Mr. Morgenthau also mentioned "we purchased Mexican pesos and in exchange made dollars available." Here, too, after our silver-purchase program had drained out of Mexico its silver money to the extent of seriously damaging her currency, the stabilization fund was used to support the peso.

With the hand of silver the Secretary of the Treasury knocks down one nation after another. With the hand of gold he tries to pick them up again.

The gold-buying policy at the artificially high price is unquestionably depleting the gold stocks of many of the other nations. Undoubtedly this has the effect of disordering their currencies, of depreciating their value. Now note that the

fund is being used to support those currencies. Again the gold-buying program knocks foreign exchange down, while the stabilization fund lifts it up again. But what is even more arresting is the claim Mr. Morgenthau made before the committee when he said, "what is even more important is the presence of a \$2,000,000,000 fund, set aside to be used for exchange purposes when necessary, effectively discourages the initiation of currency depreciation wars which would, of course, be disruptive to world trade."

It is asked that we continue the power of the Executive to drain the other nations of their gold, which must have the effect of depreciating their currencies, while at the same time the Secretary of the Treasury uses the \$2,000,000,000 stabilization fund as a club over the heads of foreign nations against depreciating their currencies. This, of course, is an unheard of situation but is what may be expected after the major tinkering with our money that has taken place.

It is important to note that our stabilization fund is used exclusively to support foreign currencies, whereas the funds of the other nations are not used to help us, but only them-England and France use their funds to stabilize the pound and the franc, not the American dollar.

Furthermore, just a moment's reflection should reveal the fact that what those nations are really engaged in is the simple manipulation of the amount of their note issues. Being in desperate financial circumstances, and seeing their currencies on the road to depreciation, they have frantically set up this stabilizing device, hoping against hope that in some miraculous way they can avert ultimate complete

financial and monetary ruin.

The truth is that the monetary troubles of nearly all Europe are becoming a veritable Vesuvius, which, when it breaks loose, cannot be put out with a hundred stabilization

Just a word more about the secret operation of this fund. What possible meaning can the report that was given our committee of the operation of this fund have? Who would accept any report from a bank or any other institution, knowing that it did not reveal all the facts? So long as there is the least bit of secrecy about the operation of the fund, there can be nothing intelligible in such reports. This certainly should not require any argument to prove its truth.

Is it not somewhat discomfiting to be told in this report that the fund has a profit of some \$10,000,000? Here is a fund of \$2,000,000,000, all but about \$200,000,000 of which has been lying in the coffers of the Treasury entirely idle for more than 5 years. The Government is in debt more than \$40,000,000,000 and going in deeper at an increasing pace.

If the \$2,000,000,000 stabilization fund had been used to retire some of our Government obligations, there could have been saved between two and three hundred million dollars in interest charges. Still the Secretary of the Treasury talks

about the fund having earned a profit?

The argument of those who favor the continuation of this extraordinary power in the hands of the President, that some emergency might arise, that world conditions have so changed that the new situation requires this, and so forth, are merely evils which they conjure up in their own minds. They are imagining a ferccious monster ready to attack us from the outside. It is the very monetary chaos that we are now in that is the evil, the all-devouring octopus. It is this handing over to one man all of the gold of our Nation, destroying our standard unit of value, and forcing upon us irredeemable paper money that is the real evil we are confronting.

Perhaps the most distressing thing is the argument that this gold dictatorship must be maintained to keep ourselves in a position to match the money debasements of other nations. We have already dishonored ourselves by repudiating our solemn contractual obligations. Many of the other nations have done likewise. Now we should stand ready to dishonor ourselves still further, to repudiate our contractual obligations still more if other nations should do the same. Is this not a spectacle to behold?

LXXXIV-App-105

Congress can and must solve this problem, but we must first take back these powers to be in the proper position to do so. Upon our shoulders rests this responsibility. American people are trusting we will assume it.

The Administration's Foreign Policy

EXTENSION OF REMARKS

HON. JAMES C. OLIVER OF MAINE

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

RADIO ADDRESS BY HON. JAMES C. OLIVER, OF MAINE

Mr. OLIVER. Mr. Speaker, under permission granted to me today by unanimous consent, I am pleased to incorporate in the Congressional Record herewith a copy of a radio broadcast recently delivered by me over station WCSH, of Portland, Maine:

Citizens of the First District, these past 2 weeks in Washington have emphasized quite definitely the fact that new dealism has stepped from its domestic and national role of planned economy to the foreign and international picture of planned chaos.

the foreign and international picture of planned chaos.

In spite of domestic problems of an aggravated importance such as have never before been faced by our people, we find this administration turning its face and taking on the character of the great international intermediary. How reminiscent of 1916 and 1917 this political position is. Once again Uncle Sam is being built up as the prize sucker of the world. Once again war hysteria and the "savior of democracy" psychosis are being implanted in the public opinion of America. In this connection I am pleased to quote from a citizen of Maine, the able and capable Mr. Thomas Earle Dwyer, a man whom I and many of you are pleased to call a friend:

"With Europe bristling with arms and bearing chips upon every shoulder, with our own President thumping his chest and shouting that America will meet force with force, with billions of dollars being appropriated for the implements of war, is it not time for sensible Americans to survey matters and question what may lie ahead, to look each to his own future as affected by these acts and expenditures, and to strive, each in his most earnest fashion, to forestall catastrophe to himself, to his loved ones, to his community, and to the Nation itself?

and to the Nation itself?

and to the Nation itself?

"We hear again—as we heard in the days before our entry into the World War—the song of hate swelling before the urging of the very men who will never be called upon to fight; we see again the cards shuffled and dealt by hands immune from contact with the implements of death; and we smell again the rotten stench of gold, of profits to be made from human slaughter, from human agony, from the horrible, senseless madness of war.

agony, from the horrible, senseless madness of war.

"I speak to you tonight from the heart of a man who has known war, from the lips of a veteran, from a knowledge born not of books but of what my own eyes have looked upon, what my own ears have heard, what memories, years may never erase. I speak especially to that generation which has flowered into manhood since the ending of the World War—that youth now ripe for the slaughter, if slaughter there be—the young upon whose sturdy shoulders rests the future of their own nation. For to these, knowing nothing of war's futility and horror at first hand, will be addressed the Song of Circe—the lure of lies, the pseudo call to chivalry, and all the devilish inducements of diplomats long steeped in the age-old guile of the serpent. of the serpent.

"To the eyes and the ears of the youth of America will come the tales of atrocities, committed only in the brains of schemers; the glamorous appeal of martial bands and martial flags and martial uniforms, the lie of lies of man's heroism if he will but be a fool and blindly follow into the pit of carnage. To my eyes and ears, to those of my comrades, came all these age-old lures in 1917—age-old yet new to use who were young, as is the youth of America today, young and blind and ignorant of the truth of war, seeing but flags and glory, and all unconscious of the truth of war, seeing but flags and glory, and all unconscious of the men who grinned at our folly as they opened their coffers to receive the only profits of war—the gold, the money gleaned from the blood and disaster—the folly of fools who listened to liars.

"Today, ladies and gentlemen, we face again the test we faced in 1914, when the nations of Europe let madness engulf them, let the guile of diplomats fling them into insensate murder. Then, as now, powerful forces sought to sow dissension in our midst, sought to turn one American against another, sought to lure this Nation into a brawl which was none of its business. Are we such fools as to fall again for their buncombe, to listen again to their lies, to become pawns in the play of European schemers, to toss the flower of our manhood and our wealth into a cauldron from which can come only agony and destitution and death for the many and riches for the few? Are we content to serve again the greed of the makers of munitions, the ambitions of diplomats, the insatiable hunger for

power of a few mortal men?
"What people want war? Do we? Do you believe—knowing human beings—that the German people or the Italian people or any man beings—that the German people or the Italian people or any other people on the face of the earth want war? Are these other human beings greater fools than we, possessed of less intelligence, any less aware of the meaning of war and its aftermath, of this profit for the terrible few and destruction for the many?

"Of course, these peoples of other nations do not want war. No more do we. No more does any sane man innocent of ulterior moments of the profit of the course, these peoples of the course, these peoples of other nations do not want war.

more do we. No more does any sane man innocent of ulterior mo-tive. Why, then, this talk of war, this European alinement bris-tling with bayonets, this hellish threat to the very foundations civilization? Why—why, indeed!—this thumping of the chest by President Roosevelt? Why this threat of meeting force with force? President Roosevelt? Why this threat of meeting force with force? Why, when no man can doubt what history records, the willingness, nay, the eagerness, of America to defend its honor and its integrity against any aggressor at any time? We have been ready in the past. Let no man underrate our readiness now.

"Why, then, this thumping of the chest—all too obviously aimed at the frightening of nations abroad? Frightening whom? Frightening them why? Upon whose behalf?

"I cannot bring myself to believe that President Roosevelt can want war, either at home or abroad. Yet the stanchest advocate of peace proves at times its worst enemy. What thoughtful man found honest hope in the picture of Chamberlain at Munich—in the picture of the representative of British common sense and stability

picture of the representative of British common sense and stability come, like a servant, to plead with a man whom every standard of normal judgment branded a madman motivated by impulses or normal judgment branded a madman motivated by impulses wholly inimical to peace and common sense and stability? Then we were told that the great man was impelled solely by his supreme desire for peace—by his willingness to sacrifice dignity and anything else necessary in the sacred quest. We believed that tale of the great man's sincerity, and, however much we may have pitied his seeming folly, we could not but respect his seeming earnestness and his effort in a glorious cause.

"Yes; we believed that Chamberlain wanted peace—that England's rulers wanted peace. We believed he and they wanted peace for its own sweet sake. But what is the truth—come to light at land's rulers wanted peace. We believed he and they wanted peace for its own sweet sake. But what is the truth—come to light at last? The published facts come forth to shock us into the knowledge that Chamberlain himself is heavily interested in German armament—for a profit, of course; that his Imperial Chemical Industries owns stock in the largest trust in Germany; that Sir Auckland Geddes, former British Ambassador at Washington, has been subsidizing Franco in Spain—Franco, the ally of Hitler and Mussolini—with money that Franco promptly sent to Germany to buy arms; that British bankers were loaning money outright to Germany to finance rearmament. All for a profit.

"There, my friends, is a new frame for the picture of Chamberlain at Munich—not Chamberlain advocate of peace, protector of the lives of Britain's peace-loving millions, but Chamberlain, owner of German industries, profiteer from the manufacture of the very things destined in war to maim and kill and poison and destroy those very peace-loving millions, those people whose faith followed their Prime Minister on his pilgrimage for peace!

"Is that not enough to convince us here in America of the folly of a faith bestowed upon the diplomats of the Old World? Can we be fools enough, or be blind enough, to fall again into the web these profiteers spin for the feet of the unwary? Can we hold a brief for any nation, whose people blindly follow events headers.

be fools enough, or be blind enough, to fall again into the web these profiteers spin for the feet of the unwary? Can we hold a brief for any nation whose people blindly follow such leaders? Are we Americans willing to repeat our folly of World War days and let ourselves be led as blindly to the slaughter for the sake of enriching a few who do not fight?

"Let me repeat that I cannot bring myself to believe that President Roosevelt can want war. But there are those, both at home and abroad, who say that he does want war, cloaking their assertion in robes of necessity, of the crying need for diverting the attention of Americans from America's own economic distress and mounting unemployment, of third-term hopes which would welcome a war or the threat of war, and resurrect the cry that put Woodrow Wilson back into the White House, 'Don't Change Horses While Crossing a Stream.'

While Crossing a Stream.'
"I hold no brief for Hitler nor for Germany. I hold no brief for any nation but the United States of America. This is our land our country. What goes on in Germany or in England, in Italy, or in any other country has no importance to me as compared with what goes on here in my own country. And God knows that here in America there are enough problems awaiting solution—decisive solution—to occupy all our thoughts and energy.

"Why, then, need our President concern himself; why need he thump his chest and shout defiance because the schemers, the profiteers of Europe, seek to shunt their burdens, their fruits of greed and mismanagement, onto our shoulders? Should he not instead ignore them—one and all—and turn his whole attention to the solution of our own domestic problems: The relief of our own insupportable system of work for the few and none for the many; the strengthening of our ramparts and the well-being of our people, who have neither cause nor desire to fight for any other nation upon the face of the earth?

"Isn't it a very good time for President Roosevelt to set an example for all good Americans to follow—to mind his own business

and let Chamberlain, Hitler, Mussolini, and all the rest stew in the brew they have deliberately concocted for themselves?

"None of them has ever had the honor or integrity or the plain

"None of them has ever had the honor or integrity or the plain everyday honesty to pay their legitimate debts to this country. Not one of them has paid what they owe us for saving them the last time from just such a mess as they have greeded themselves into now. Their promises have proven empty and their bond no better than their word, and that utterly worthless. They made suckers of us once. Are we fools enough to let them do it again?

No, my friends; I do not believe we are such fools. I do not believe that—thumping of chests or no, scheming of profit seekers or no—the young people of America are to be misled, as we were 2 decades ago, by the lies and the snares and the lures into the morass of destruction. I hope and I pray that, our youth of today is too.

of destruction. I hope and I pray that our youth of today is too intelligent, too inquiring, too determined to know the truth first, to permit any man to plunge them into the maelstrom of war beyond

permit any man to plunge them into the maeistrom of war beyond our borders.

"For the harvest of such madness is plainly writ for all to see. Beyond question, for America war means ruin. Let the doubter but lock back along the path to the last war. Let him look at our America of today, with its idle factories, with its host of jobless citizens, with its 43,000,000 being fed from the public purse, with its youth faced by dearth of work and opportunity, with its National, State, and local debt exceeding \$60,000,000,000, with every man, woman, and child of its 130,000,000 people governmentally in debt to the tune of \$460.

debt to the tune of \$460.

debt to the tune of \$460.

"Here is the enemy against whom should be aimed the chest thumping and the determination and the promise of war. Here—right here in America—are the true friends—the true allies—the only people deserving of our aid. Here lies fodder for the minds of our great. Here lies opportunity to expend all the powers of salvation with which any of us may be endowed; not over in Europe, where Chamberlain's money makes munitions for German gunners to shoot back into England; not in the Old World, where British money supplies the murderous weapons with which Franco might money supplies the murderous weapons with which Franco might blast innocent, helpless women and children; not in a stinking Old World—rotten and moldering in its hatreds bred for and by profiteers who cry for peace and glean gold from preparations for war; not there—but here.

"Let President Roosevelt and his "brain trust," his aides, and all the rest of us fight by all means. Let us use all our energy, all our resourcefulness, all our God-given intelligence to make the all our resourcerulness, all our God-given intelligence to make the fight a good fight and a successful one. But let's fight our own enemies—destitution, starvation, unemployment, ignorance, and economic agonies—for our own friends—the people of the United States of America—here at home.

"When that battle is won, then will there be just cause for chest thumping. But until it is won let's do our chestnut saving here at home."

home."

These are the words of a war veteran who knows, who lives, and who breathes Americanism. The welfare of the world depends essentially upon the welfare of America. America's welfare will only be found in America. Let us lead the world. Let us solve the economic problems of civilization under the process of free institutions and a free economy. World civilization will best benefit by America's quarantine of herself.

The till weaks from tonight good wishes and good night.

Until 2 weeks from tonight, good wishes and good night.

Our Foreign Relations

EXTENSION OF REMARKS

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

ARTICLE BY BOAKE CARTER IN THE MINNEAPOLIS JOURNAL OF APRIL 18, 1939

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Boake Carter, which appeared in the Minneapolis Journal of April 18. 1939:

BOAKE CARTER ARRAIGNS PRESIDENT ROOSEVELT FOR MEDDLING IN THE AFFAIRS OF EUROPE

There is less and less doubt that President Roosevelt is up to his

ears in power politics in Europe.

There is still less doubt that by almost any means of propaganda at his command he is deliberately attempting to stir the emotions of the American people to gain support for his betrayal of the injunctions of the founding fathers—keep free of foreign entangle-

Although this country is supposed to possess a Neutrality Act; although the people themselves made it clear in 1935, 1936, and 1937 that they desired their Government to abstain from commitments—open or secret—with any foreign nations, the train of events since Munich shows all too clearly that Roosevelt cares little for the desires of his own countrymen.

Already one secret commitment, made without knowledge of the people, was exposed through the crash of a plane in California. What other ones the President may have made is merely a matter

of question.

Neither he nor his Secretary of State nor his personal spokesman, Under Secretary Sumner Welles, let slide the slightest opportunity to make statements or loose condemnatory blasts at the least little thing the dictator nations of Europe may do.

thing the dictator nations of Europe may do.

Although the tightening by Italy of her control over the little Kingdom of Albania has nothing whatsoever to do with the United States nor will cause any injury to America one way or another, Mr. Hull lost no time in issuing a new hectoring blast. Mr. Roosevelt lost no time in letting it be known he fully approved the lecture. Together they made it clear that the American Government—which has become simply and solely Mr. Roosevelt—will not overlook the slightest opportunity to meddle with internal troubles of another continent.

Irresponsible, dangerous, and uncalled for, were he of another mind, were the President's remarks in the South: "I'll be back if we don't have a war." Did he but make that observation once it might just possibly be dismissed as a typical Roosevelt quip. But it was a repetition of a similar remark he had made several days previously. There can be little doubt that it was studied and depreviously. There can be little doubt that it was studied and deliberate, aimed to fit the pattern conceived by the President to create a war psychosis in the public mind.

One cannot forget the famous conference with the Senate Military Affairs Committee. There he revealed himself as a man who be-lieves he has been chosen to save the peoples of Europe and lead

Americans to a higher destiny.

The Senators who attended were so shocked that they agreed that many of the things he said to them ought not to be repeated aloud lest the public become alarmed. Yet it was at that conference that Mr. Roosevelt intimated that the best thing that could happen to the world would be for some one to assassinate both Hitler and

Regardless of whether assassination of these two dictators would or would not produce the hoped for results in the world's relations, the fact that the head of any nation, let alone one miles from Europe, would make such a suggestion, however covert, is shocking. It is an episode which of itself indicates a distorted frame of mind. For the American people that frame of mind is as dangerous to their own lives and welfare as is Hitler's for the German people and all Europe.

Any congressional questioning is bitterly condemned by the Presi-Any congressional questioning is bitterly condemned by the President as "interference." The demand Mr. Roosevelt made to railroad the Pittman proposals to amend the Neutrality Act, so as to give him an almost entirely free hand to play poker at the table of European power politics, with American citizens' lives as the chips, is further cause for genuine fear on the part of the people as to what the President is doing.

The actions of the Chief Executive and his rubber stamps cause one to wonder what sense is there in Congress' debating neutrality measures if Roosevelt is determined to ignore both Congress and

measures if Roosevelt is determined to ignore both Congress and the people, regardless of what the latter may decree.

Mr. Wilson up to a point acted along the same lines. Mr. Wilson, however, was an idealist. On that basis he also took part in European power politics. Mr. Roosevelt is no idealist, but is a political opportunist laboring under the delusion of grandeur produced by a messianic complex. He has said to those close around him that he has no time for the leaders of either France or Britain. He has declared he considers them incompetents.

And it appears from his own actions that he considers himself.

And it appears from his own actions that he considers himself the "chosen leader." To that end it also appears he has promised aid, comfort, and succor in food, materials, and money—everything "short of military aid"—to England and France. He has done so without consulting American public opinion. Knowing this, he is now attempting by propaganda to manufacture public opinion to endorse what he is doing.

His backing has caused France and England to change their appeasement policy. They expect America will support them if they go to war again. The colossal tragedy will occur when the public of the United States wakes up to realize the fool it has been made of and repudiates Roosevelt just as it repudiated the overconfident Woodrow Wilson.

The tragedy will then be that Europe will be in flames, millions suffer and die, because of the encouragement lent to war in Europe by Roosevelt when he failed to seek permission first of the American

people.

The two greatest domestic problems of the New Deal are: Cover up collapse of the New Deal and elect a New Deal President in 1940. War would probably solve both those problems. It would also provide that state of autocracy in America so dear to the Roosevelt heart. Are these the reasons for his meddling in Europe? A terrible thought! Yes, but the world seems at the mercy today of men with strange mentalities.

The National Conference of Jews and Christians

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1939

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I include a statement concerning the splendid work being done by the National Conference of Jews and Christians.

In view of the devastation that is being wrought in some other parts of the world in setting race against race and subjecting the adherents of religion, whether Protestant, Catholic, or Jew, to disabilities and persecutions, an aroused public opinion is becoming more and more vocal here in the determination to resist all influences and propaganda that foster intolerance and intergroup hatreds and hostilities in America.

For more than 10 years the National Conference of Christians and Jews, 300 Fourth Avenue, New York City, has been steadily engaged in the promotion of justice, amity, understanding, and cooperation among all the varying religious and racial strains in our population. The Honorable Charles Evans Hughes and Dr. S. Parkes Cadman signed the letter that brought the first group together in 1927. Hon. Newton D. Baker was the Protestant cochairman from the beginning until his death in 1937. At present Prof. Arthur H. Compton, professor of physics at the University of Chicago; Prof. Carlton J. H. Hayes, professor of history at Columbia University; and Mr. Roger Williams Straus, a New York businessman, are respectively Protestant, Catholic, and Jewish cochairmen; and the executive committee, the governing body, is composed of an approximately equal number of each of the three groups.

The purpose of the national conference, as defined in its constitution, is as follows:

Believing in a spiritual interpretation of the universe and deriving its inspiration therefrom, the national conference exists to promote justice, amity, understanding, and cooperation among Jews, Catholics, and Protestants in the United States, and to analyze, moderate, and finally eliminate intergroup prejudices which disfigure and distort religious, business, social, and political relations, with a view to the establishment of a social order in which the religious ideals of hypothephood and justice shall become which the religious ideals of brotherhood and justice shall become the standards of human relationships.

In the pursuit of this purpose the national conference is engaged in a wide-flung educational program that reaches every State in the Union. It has established round tables in most of the centers of population composed of leading citizens of the three faiths, who meet statedly to consider their mutual concerns. By seminars in cities and educational institutions, tours of minister-priest-rabbi teams, cooperation with public and religious school teachers, the annual Nation-wide observance of Brotherhood Week, by national and local radio broadcasts, by intensive work in the colleges and otherwise, it educates for understanding and good will. It conducts Religious News Service, a religious "Associated Press," serving several hundred journals. It holds regional and national institutes of human relations; the subject of this year's institute, which will bring together some 600 leaders-Protestant, Catholic, and Jewish—to spend a week together on the campus of Williams College, Williamstown, Mass., will be Religion and Citizenship: A Consideration of the Relations of Church and State in America.

In the belief that citizens of the United States have a right to differ from one another in many important ways and to perpetuate their separate cultures if they choose to do so and retain their various religious loyalties, the national conference maintains that it is the privilege and duty of all groups to cooperate as American citizens in all those civic and patriotic undertakings which are their common responsibility

and cultivate mutual respect, regard for one another's rights, and that understanding upon which a wholesome community life depends.

This, it believes, is the American ideal, the American way, the authentic American tradition that dominated the minds of the founders of the Republic.

Failure of the New Deal

EXTENSION OF REMARKS

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the Record, I include the address of Senator Robert A. Taft, of Ohio, before the first Republicans On the March dinner at the Willard Hotel, April 20, 1939, as follows:

The new Congress has been in session for more than 3 months, and we have come to a time when we can appraise the present situation. We can summarize it in six words: The New Deal is a failure. Don't let page after page of foreign news divert your attention or divert the people's attention from that fact. The New Deal is a domestic policy, openly proclaimed as the panacea which would restore prosperity, and increase the income of every poor man; in fact, of everyone except economic autocrat.

In the last 3 months we have heard little of the New Deal, but every member of the Government, whether it lies in his province or not, is ballyhooing the foreign situation, trying to stir up prejudice against this country or that, and at all costs take the minds of the people off their troubles at home. One thing is perfectly clear—no denouncing of dictators or eulogies of democracies can improve the condition of the people of this country by one penny of income.

And when we consider that condition today, we can only conclude that the New Deal is a failure, and has reduced us to a tremendously dangerous situation. The report for February shows that there are 11,470,000 people unemployed, more than the average unemployed in any one of the last 4 years. It is impossible to have a prosperous country with so many people pitifully without treewes.

The farmers' prices were to be raised. Corn today is selling at 48 cents, 20 percent less than a year ago. Hogs are down from 9\%0 cents to 7\%4 cents; wheat from 90 cents to 70 cents. In spite of all the controlled production and the pouring out of Government funds, the farmer is actually getting less money for his principal products today than he received before any agricultural regulation began. Industrial production is little better than it was 12 months ago, in spite of all the Government-spending program.

The national income for 1938 is \$66,000.000.000. compared to

ago, in spite of all the Government-spending program.

The national income for 1938 is \$66,000,000,000,com compared to nearly \$80,000,000,000 in 1928, and there were 10,000,000 less people at that time among whom to divide the income. The average per capita income in 10 years has dropped 25 percent. No wonder that times are hard. It is easy for Government officials in Washington to sit in luxurious offices, in a city subsidized by the tremendous increase in Government employment, and forget that the prosperity which exists here is almost unique in the United States. If the condition which I have described, and which has existed now for nearly 10 years, cannot be solved, there is serious danger that our American form of government cannot continue.

The second conclusion from 3 months in Washington is that the new dealers don't know what to do to change the present situation. Not a new idea has appeared since Congress opened in January. No Government policy today is even designed to produce prosperity except that of spending more money. If we have learned anything from the last 10 years, it is that Government spending cannot produce prosperity. We have spent \$20,000,000,000 of borrowed money, and billions more of money wrung from the taxpayer, and yet the condition today is far worse than it was before Government deficits began.

was before Government deficits began.

It is a favorite New Deal argument that the depression of 1937 occurred because the Government slowed up on spending money. This is a completely ridiculous fallacy. In the first place, the Government never did stop spending money, and never did balance the Budget. In the second place, the depression resulted from a complete collapse in the capital-goods industries, due to the speed with which taxes, wages, and other costs increased in 1937. In the fiscal year up to April 17 we have spent \$7,258,000,000, \$2,700,000,000 of it borrowed money. Has it stimulated business or cured unemployment? Exactly the reverse, and the

policy cannot be maintained without bankrupting the Government.

ment.

In dealing with the farmer the administration apparently is completely at sea. The same old ideas that have already failed are trotted out again. We go right on making reciprocal-trade treaties, reducing the tariff on agricultural imports below the difference in cost of production. We go right on lending more and more money on cotton and wheat, and then subsidizing exports and selling wheat to Germany, for instance, at less than we charge our own people for it. The administration is bitterly criticized by Democratic Senators for subsidizing exports, but every Senator has a different theory as to what we ought to do with cotton and other products.

We go blindly ahead with the Federal administration of W. P. A., although the country has clearly shown its belief that the administration of relief ought to be with the States and local subdivisions. The New Deal is confused and stuttering. Every day it is on the defensive, but it is just as unwilling to change any of its discredited policies as it was before the election of 1938.

Frightened by the revolt of every businessman, large and small, we have developed the so-called policy of business appeasement. The businessman is assured that the Government is really his friend, but if anyone proposes to translate this into any practical action, he seems to run up against a stone wall. The bias of the National Labor Relations Board against employers is notorious, and yet Senator Wagner and the Board members attack the motives of anyone who even suggests an amendment of the act, and oppose every amendment which will have the slightest effect on the position of the employer or the employee who is not a member of the C. I. O.

The deficit for the next fiscal year is going to be bigger and better. No serious modification of the tax plan, particularly as to undistributed profits or capital gains, can secure the approval of the President. No one has even considered the reduction of the tremendously burdensome pay-roll tax, which actually discourages the employment of labor, and even the mild suggestion that the increase be postponed has not developed into definite form.

The truth is, the same people and the same ideas dominate the administration today as have dominated it throughout. The inside New Deal crowd is obsessed with the belief that the way to improve the condition of the poor is to take it away from those who have made any reasonable success in life, and that the successful businessman is a crook until he proves himself otherwise. I do not say that this group is communistic, but I do believe they are convinced that they can run the affairs of the businessman and the laboring man and the banker and the insurance man better than he can do it himself. Only yesterday I heard Mr. Madden testify in a way which would indicate that he regarded the American laboring man as an utterly helpless ward of the National Labor Relations Board.

There are plenty of wise, experienced men in the Democratic Party. With the Republicans, they are quite able to block any new radical measures, but they have not the slightest influence with the President, and they are unable to secure any affirmative action to change the New Deal policies which have brought us to our present plight. The President has not only tried to purge these gentlemen from the party, but only last night he issued an insulting ultimatum when he said, "Where men are at variance with the course their party is taking, it seems to me there are only two honorable courses—to join a party that more accurately mirrors their ideas, or to subordinate their prejudices and remain loyal." To the President, anyone who disagrees with him is moved only by prejudice, and if he is unwilling to subordinate these prejudices, he is disloyal to his lord and master. The Republican Party certainly mirrors more accurately the ideas of the leading anti-administration Democrats than do the new dealers, and we welcome them to our party councils. There is no fundamental difference between us which cannot be reconciled.

There is only one solution to the present difficulties, and that is a complete change of policy. There is only one party which can make such a change and carry it through, and that is the Republican Party. It can be done. This country is the same country which we had in the twenties, except that there are 10,000,000 more people ready to work and produce and consume. To equal 1928, we ought to have an income of ninety billion instead of sixty-five billion. Such an increase would take care of practically all of the unemployed. There is more money available today than there ever has been in the history of the country. Demand deposits in banks, according to yesterday's figures, are higher than they ever have been before at any time, and they are owned by millions of people. This is no question of coddling the big-business man. It is a matter giving assurance to every man that if he saves and puts his time and money into some business enterprise, he will have a reasonable chance to get a return and improve his own condition and that of his family.

We can support relief if it is handled in a sensible way through local administration. We can provide old-age pensions and unemployment insurance without wrecking all enterprise and putting a premium on unemployment. We can revise the tax system so that it will not penalize initiative and thrift and the expansion of industry. We can at least assure the improved American market to the American farmer, and put him where he can get a larger share of the consumer's dollar. We need not abandon any humanitarian enterprise undertaken in the past 6 years, but we can reduce the regulation which puts every businessman in a strait jacket; we can reduce the taxation which penalizes enterprise; we can give the businessman a chance.

We have come out of every past depression by the development of private industry. We have cured unemployment by giving the proper incentive for the growth of little and big business alike. We have always done it under Republican administrations, and a Republican administration can do it again.

Keep United States Out of Foreign Wars

EXTENSION OF REMARKS

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

ARTICLE BY REV. JOHN A. O'BRIEN

Mr. KNUTSON. Mr. Speaker, under leave granted there is herewith reproduced an article on Peace, by Rev. John A. O'Brien, of the Newman Foundation, Champaign, Ill., that shows such clarity of thought and understanding of the subject that I feel it should be made a part of the permanent

KEEP UNITED STATES OUT OF FOREIGN WARS—CONFLICT WOULD NOT HELP DEMOCRACY, BUT DESTROY IT—RELIGION AND PATRIOTISM DEMAND WORK FOR PEACE

(By the Reverend John A. O'Brien, Ph. D., LL. D., Newman Foundation, Champaign, Ill.)

dation, Champaign, Ill.)

The supreme duty of the American people is to keep this country out of foreign wars. If there is one lesson taught us by the World War, it is that war solves no problems but multiplies them many times. It piles up hatreds and enmities which breed future wars. It is a never-ending vicious circle.

Why should we entangle ourselves in the crazy quilt of European jealousies and congenital hatreds? Why should we speak of "quarantines" and "democratic alliances" with European countries whose enlarged territories were gotten by the sword? Why should we pour out the blood of American youth to perpetuate the theft of the German colonies in Africa by England and France?

The propaganda that is now beginning to flood our country is an exact replica of that which pulled us into the World War. The cry is: "We should enter on the side of England and France to safeguard not their colonial possessions, but democracy." How strangely reminiscent of the slogan sounded from one end of the country to the other to drag us into the World War—"Make the world safe for democracy!" world safe for democracy!"

MAKING THE WORLD SAFE FOR DICTATORS

By entering we helped to make it safe for fascism, nazi-ism, and communism—for the dictatorships of the right and of the left. We helped to inflict the iniquities of the Versailles Treaty upon Europe and sowed the seeds of war now sprouting.

Will we ever learn from the experience of the past? Or must we go on forever making the same mistakes, treading the eternal treadmill of meaningless slaughter and blind destruction?

To those who are now filling the land with their clamor for us to enter war for the sake of democracy and to crush fascism in Europe, I ask: Is it democratic for us to crush the authoritarian form of government which Germany and Italy have chosen and to impose by force our own form of government upon them? That is not democracy. That is dictatorship—the very dictatorship which we profess to hate

impose by force our own form of government upon them? That is not democracy. That is dictatorship—the very dictatorship which we profess to hate.

Germany and Italy would have as much right to impose fascism upon us as we have to thrust democracy, willy-nilly, down their throats. Will these war mongers, shouting for war under the specious plea of democracy, ever learn that Almighty God has not abdicated His prerogative of judging the nations of the world in favor of the United States?

THE PATH THAT LEADS TO WAR

When will our ranking officials stop their offensive practice of lecturing the peoples of Europe on the form of government they should adopt and of insulting on every possible occasion the heads of the authoritarian governments? That path leads only to war.

Let us abandon that foolish and dangerous path and seek to discover the one that will keep us from the fiaming antagonism of Europe and anchor us in peace in our own Western Hemisphere.

This plea for aloofness from the European hatreds does not imply approval of racial and religious persecutions which have occurred in Russia, Germany, and Italy. I detest them with all my soul. But we will not eradicate them by war. We will only intensify and deepen them. The long, slow process of education is the only cure. is the only cure.

LET US PUT OUR HOUSE IN ORDER

By putting our own house in order, by sanitating our own social order of its abuses, and dispensing justice to workers and employers alike, by ridding our land of religious prejudices and racial hatreds, America will do more to promote the peace of the world

than it could ever do by filling the trenches of Europe with the blood of millions of American youth. Religion and patriotism thunder in the ears of the people of our

Rep the identical command: "Keep America out of foreign wars."
Keep the torch in the upraised arm of the Statue of Liberty a
beacon light of peace and freedom, not a symbol of international
hatred and organized human slaughter which people dignify by the name of war.

Operations of the Federal Housing Administration Under Section 207 of the National Housing Act

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

STATEMENT BY THE FEDERAL HOUSING ADMINISTRATION

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I include an interesting summary setting forth the operations of the Federal Housing Administration under the provisions of section 207 of the National Housing Act:

Under section 207 of the National Housing Act and the F. H. A.'s regulations governing rental housing mortgage insurance, eligible private mortgagors must be corporations, associations, cooperative societies, or trusts which "until the termination of all obligations the Administrator under such insurance are regulated or restricted by the Administrator as to rents or sales, charges, capital structure, rate of return, and methods of operations to such extent and in such manner as to provide reasonable rentals to tenants and a reasonable return on the investment."

Originally the act provided only that the Administrator find that

Originally the act provided only that the Administrator find that the project on which he was asked to insure a mortgage was in his judgment economically sound. There was no limitation as the percentage of the mortgage to the total value of the project. In the recent amendments the additional restriction was inserted to provide that no mortgage should exceed "80 percent of the amount which the Administrator estimates will be the value of the property or project when the proposed improvements are completed." The estimate of the value of the property when completed and set up as a going concern is left entirely to the determination of the Administrator. Administrator.

Administrator.

In order to enforce these limitations, the Administrator causes to be made a careful examination and appraisal of every project on which an application for mortgage insurance is submitted. This examination is first made on the site by F. H. A. officials; then it is reviewed in a regional office; and finally it is reviewed and passed upon in the Washington office.

In order to make the regulation effective, the Administrator becomes the owner of all of a certain class of preferred stock which gives him the authority to assume control of the property whenever any specific regulations are violated. Moreover, he has a

which gives him the authority to assume control of the property whenever any specific regulations are violated. Moreover, he has a representative on the board of directors of the corporation; he requires the corporation to make monthly occupancy statements and semiannual and annual financial statements, including an annual audit made by a certified public accountant. In effect, therefore, the management of the property is subject to thorough supervision at all times by the Federal Housing Administration.

In analyzing a project on which an application for mortgage insurance is received, a careful estimate is made by experienced estimators of quantities of material and labor required, and every other item affecting the project's cost and its capital structure is rigidly scrutinized. In the preparation of final estimates of what "will be the value of the property or project when the proposed improvements are completed", these cost estimates play an important part.

tant part.

Likewise, a careful study of the rental market and estimates of

Likewise, a careful study of the rental market and estimates of probable rents which the project can secure and sustain are made; the estimated operating costs are studied. The resulting estimate of the income-producing capacity of the property is extremely important in the final estimate of value and in determining the economic soundness of the project.

Generally speaking, these projects are large and constitute the creation of entire new communities of as many as 1,000 to 3,500 persons. They often bring into use large tracts of undeveloped land. Through the erection of roads, sewers, schools, and other public improvements the erection of stores and community facili-

public improvements, the erection of stores and community facilipublic improvements, the erection of stores and community facilities, and the stimulation of construction in surrounding areas, they have a material effect upon the areas in which they are located; and they may substantially enhance values above the market price for the raw acreage before development.

The determination of value under such circumstances involves a careful exercise of judgment. It is obviously difficult to make precise judgments of the portion of value attributable to land alone in the completed project when due consideration is given to the entire community development. Therefore, the Administrator

has voluntarily placed other limitations upon the amount of mortgage he will insure.

First, no mortgage is insured which exceeds the Administrator's estimate of the cost of physical improvements. This means that the land and all other cash necessary to meet miscellaneous requirements such as interest, taxes, and insurance during construction, organization and financing expenses, etc., must be supplied by the sponsoring corporation as its equity.

Second, every project is carefully examined to determine the expected results of its operations, such as ratios between gross income and net income, the ratios between net income and debt service, and the probable decline in rentals which would bring about default on the mortgage payments.

Third, the owning corporation is required to provide the land free and clear of all liens and to deposit during the construction period, subject to withdrawal only with the Administrator's approval, cash or its equivalent for expenditures not covered by the

mortgage proceeds.

The corporation owning the equity of which the land is thus a part cannot disburse dividends in excess of an amount approved by the Administrator. The dividends, furthermore, cannot be paid until certain reserves, required by the Administrator, have been established and are maintained intact. These reserves include reserves for repairs, improvements, and replacements, a reserve of operating capital, and at least one-half year's debt service.

Total capitalization of the equity stock held by the corporation thus represents only a claim on earnings of the property if, as, and when earned, and then only in an amount agreed upon by the Administrator, to be payable only after all the prior obligations have been satisfied. Moreover, any excess earnings realized during the term of the mortgage over operating costs, debt service, reserves, and the dividend ellowed must be used for additional navments on and the dividend allowed must be used for additional payments on

the mortgage.

In the projects now in operation and under construction, the following figures are significant: The average percentage of the mortgage insured to total value of the property is 76.3 percent; the percentage of mortgage to the estimated cost of construction is 90 percent. The average ratio of land value to total value of the project on completion is 10.4 percent. The average amount of mortgage per room is \$1,004, as against the legal limit of \$1,350.

Attention should be called to the fact that in making the 1938 amendments to the Housing Act, Congress had foremost in mind a substantial and general stimulation, as rapidly as possible, of all classes of residential construction, through providing means of making high-percentage, long-term loans available to builders at reduced interest rates. This purpose particularly lay back of the extensive amendments covering rental housing. The procedure which we have devised, and which we are continually endeavoring to improve, is designed to give the fullest possible scope to the policy dictated by Congress within the limits of economic soundness. economic soundness

economic soundness.

In connection with the project known as Manhassett Village in St. Louis County, Mo., the mortgage is \$1,600,000. This mortgage is less than the Administration's estimate of the cost of construction. The Administrator maintains a staff of competent building-cost estimators for this work. The amount of mortgage per room is well under the legal limit; and the rentals have been estimated so that on a conservative basis they will be reasonable to the tenants and provide a fair return to the investment. In these estimates the Administrator's position is amply protected against loss.

The differential mentioned between raw land cost and the final The differential mentioned between raw land cost and the final valuation constitutes a transaction for which stock was issued but for which no cash was paid and no cash profit was realized. The final estimate included considerations of value resulting from the installation of streets and sewers necessary to make the property accessible and other external improvements contributing to the utility of the land. Whether or not any returns are obtained on this valuation in the future depends wholly upon the success of the project in actual operation.

success of the project in actual operation.

In case the project fails to earn money as anticipated, the corporation owning the stock would suffer first a loss of dividends. In case of default on the mortgage, earnings would have to decline still further before the Administration would suffer a loss as the result of taking over the property. In other words, the equity owners would sacrifice their equity in the land, the cash which they supplied to complete the project, and all other contributions they have made to the equity capital.

An independent investigation of this project was made by the New York Life Insurance Co. before this company made the loan now insured by the Federal Housing Administration. Without in-

now insured by the Federal Housing Administration. Without insurance, this company could not have legally made the loan because it is required by State law to limit its loans to an amount not exceeding two-thirds of the value of the property, unless the loan is insured by the Federal Housing Administration.

The F. H. A. insured type of mortgage is radically different, with its numerous restrictions and safeguards, from the old type of mortgage. This can be judged from comments on the old type of mortgage taken from Barron's, the National Financial Weekly, as

of February 1939:

"Mortgages are usually granted for 3, 5, or 10 years, though no lender believes the mortgage will actually be repaid within such short periods. He hopes he will be justified in renewing the mortgage at maturity with a reduction in its amount or that another lender will take it over.

"Once the loan is made, the lender is apt to forget about the property itself, paying little or no attention to its maintenance in good condition. In turn, the owner frequently fails to provide adequately for upkeep and maintenance. It is a common practice to meet depreciation by mere bookkeeping entries. In such a case the owner, after having taken the cream off the property, is naturally quite willing to abandon it to the mortgagee."

The Canadian Government and Coal

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1939

Mr. REED of New York. Mr. Speaker, Canada is the largest export market in the world for United States anthracite and bituminous coal, annually taking around 99 percent of cur total anthracite exports and from 84 to 93 percent of our total bituminous exports.

Imports of anthracite coal from all countries entered Canada duty free until June 1931, when a duty of 40 cents a ton was imposed on imports of anthracite from all countries other than those in the British Empire, which continued to enter duty-free. In October 1932, while coal from empire countries still entered free, the duty on coal from nonempire countries was raised to 50 cents a ton, and in addition to the duty a 3-percent excise tax was placed on anthracite imported from non-empire countries.

The effect of this preferential duty and excise tax was a tremendous decrease in Canadian imports of American anthracite and a commensurate increase in imports of anthracite from the United Kingdom. In 1928 Canadian imports of American anthracite were 85.7 percent of the total quantity imported from all countries, while imports from the United Kingdom were but 14.1 percent of the quantity imported. By 1933 the United States percent of total had dropped to 46.7, while that from the United Kingdom had increased to 53.3. By 1937, due to the rise in the price of anthracite during the period 1933 to 1937, the United States percent of the total quantity had increased to 54.4, while the percent of total quantity from the United Kingdom had dropped to 32.4. The full effects of this preferential duty are felt in times of falling prices as the ad valorem equivalent of a flat duty becomes increasingly high as prices fall.

In 1929 the duty on bituminous coal was 50 cents a ton on imports from non-British countries. This was increased to 75 cents a ton in June 1931, and in addition a 3-percent excise tax was imposed. The duty on imports from Empire countries was 35 cents a ton during the entire period. In spite of this preference of 40 cents a ton and the 3-percent excise tax, imports from the United Kingdom failed to increase, the United States percent of total quantity imported remaining at about 99 percent. The effect of this duty, however, has been a curtailment in total imports of bituminous coal by Canada. From 1928 to 1937 imports decreased approximately 15 percent. In addition to the duty imposed, Canada grants subventions to her domestic coal producers, amounting to \$2 to Nova Scotia producers in the form of a rebate on rail freight charges and \$2.50 a ton in respect to rail fuel.

The duty imposed and the subventions granted by Canada certainly constitute discrimination against imports of United States bituminous coal. However, the countervailing duty imposed by the United States on imports of coal from Canada was removed in 1934 under the authority of the Reciprocal Trade Agreements Act. This permits free entry of Canadian coal into the United States, which has played havoc with our own producers of coal in the Pacific Northwest, who must market their output in competition with low-cost bituminous coal from British Columbia.

In negotiating the recent Canadian agreement opportunity was present to rectify this situation, either by lowering the amount of preference granted British countries or once more establishing free entry. At the conclusion of the negotiations, however, the only concession received by the United States from Canada was a binding of the duties at their former level. The only tangible effect of this binding was the removal of the 3-percent excise tax which applied to imports of coal from non-British countries.

In conclusion, the position of United States coal producers as a result of the agreement was bettered only to the extent of removing the 3-percent excise tax. In addition, by binding the duties, the Canadian Governmnt, for all practical purposes, barred during the life of the agreement any further negotiations for the purpose of reducing the duties. Thus, the United States must for another 5 years look for no improvement in the Canadian market for coal.

What War Means

EXTENSION OF REMARKS

HON. CARL E. MAPES

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1939

RADIO ADDRESS BY HON. ROY O. WOODRUFF, OF MICHIGAN, APRIL 15, 1939

Mr. MAPES. Mr. Speaker, the black clouds of war hang low over the civilized world. Momentous events are moving with such rapidity that we are dazed and bewildered by the succession of developments each new day. On Saturday, April 15, my colleague from Michigan [Mr. Woodruff] delivered an address over the blue network of the National Broadcasting Co. on the subject What War Means. Mr. WOODRUFF is a veteran of two wars, the Spanish War and the World War. He served in the combat forces in both conflicts. He should and does know this particular subject.

Mr. Speaker, I ask unanimous consent to extend my remarks in the Record by printing Mr. Woodruff's address, as follows:

Friends of the radio audience, today the peoples of the world are alarmed over the prospects of a conflict which certainly would be the most horrible in history, and which probably would wreck civilization itself. Europe is an armed camp. We in the United States watch events apprehensively.

A Nation-wide propaganda campaign has been under way for many months to sway American public thought in favor of war.

The "air," the newspapers, and the magazines are filled with propaganda, much of it manufactured for the purpose of arousing in our people a war psychology. All this is reminiscent of the days preceding our engaging in the World War. The results of that war can be seen all about us.

The country is being propagandized in glib terms such as "quarantining the aggressors," "presenting a united front of democracies," "supporting the democracies of the world against totalitarianism," and similar slogans.

It is vital that we look at this question of war squarely and

It is vital that we look at this question of war squarely and remember what it really means.

A systematic attempt is under way to persuade us that we cannot possibly escape participation in any war that may break out anywhere else in the world. That is not true. We can remain aloof if we wish. We will become involved in any European conflict only if and when the American people can be sufficiently swaved by meantagetured emotionalism to enoble these who want swayed by manufactured emotionalism to enable those who want to take us into foreign conflicts to achieve their designs.

to take us into foreign conflicts to achieve their designs.

What if America should go to war? What would it really mean?
Before our very eyes would spring up a vast war machine to
which Congress would abdicate its functions. Absolute dictatorial
powers would be vested in the President. All semblance of democratic government would instantly be swept away. Civil and
personal liberties, including freedom of speech and press, would
cease. Labor would be denied the right to strike. Wages would
be fixed by Presidential proclamation. Factories and farms would
produce only in accordance with governmental orders. All business would be licensed.

This is no fantasy. Such are the cold, cruel necessities of war.

This is no fantasy. Such are the cold, cruel necessities of war, and such are the plans, some of which have actually become law while others are ready to be rushed through Congress the moment war is declared, and even before, if the administration believes the people will stand for them. These purposes are revealed in the

industrial mobilization plan, the National Defense Act, and various measures ostensibly designed to take the profits out of war now

measures ostensibly designed to take the profits out of war now pending before Congress.

The industrial mobilization plan provides for the establishment of a public relations committee which would "enlist and supervise a voluntary censorship of the newspapers and periodical press." In this we can see clearly the rigid control of the press, radio, motion pictures, telegraph, telephone, and all other agencies for transmitting news. As in Germany and Italy today, we will, if we go to war, be permitted to know only what the rulers want us to know.

to know.

All of these stern and liberty-destroying changes which would come about immediately upon our entrance into war are carefully kept in the background by those who would have us participate in foreign conflicts.

Our ears have been continuously assailed for months by administration spokesmen uttering blasts of criticisms against other nations which arouse the anger of their leaders and their peoples

and prejudice the minds of our own.

Today we have an administration that has economically and psychologically increased the chances of America being drawn into war. We have an administration that has constantly increased its powers in time of peace under the plea of emergencies and has carefully planned to assume dictatorial powers the moment war

carefully planned to assume dictatorial powers the moment war is declared. The rule of fascism, the rule of nazi-ism, the rule of Japanese imperialism, is military dictatorship. The moment this Nation goes to war, by the very exigencies of the case, we come under exactly the same sort of rule by military dictatorship.

We have been assured that these emergency powers planned by the administration are to be exercised "only for the duration of the emergency created by a state of war." We have heard this promise about surrendering emergency powers all too often in the last several years; in what instance has the promise been kept? Which of the many powers already granted the President has the Which of the many powers already granted the President has the administration shown a readiness to surrender?

We know there are men in high places of power in the adminis-

We know there are men in high places of power in the administration who believe capitalism is doomed, and who are determined to rebuild America over into an all-powerful collectivist state. What surer way could there be of accomplishing this design than to secure those powers from the people, wrought up in time of war, and then, after peace has been declared, to perpetuate those powers as our permanent form of government?

Now let us face facts. War is wholly destructive. It is utterly horrible. It is without a redeeming feature. It settles nothing. Every expert in the world asserts unhesitatingly that another war would result not in any victors but in the defeat of all participating and the probable wreckage of civilization.

The next conflict will be indescribably more devastating and horrible than the last one. That fact is agreed to by every military authority in the world. Men, women, and children will be ruthlessly bombed.

tary authority in the world. Men, women, and children will be ruthlessly bombed.

The flower of American manhood and womanhood, in the event we get into war, would go to the bloody filth and vermin of the trenches to face new and more horrible kinds of destruction. That's what we talk about when we speak of war. Millions of fathers, mothers, brothers, sisters, wives, husbands, and children would be plunged into the most awful agony known to the human soul, the group of sending loved ones away to a fate perhaps

would be pendiged into the inost awar agony anown to the indination soul, the agony of sending loved ones away to a fate perhaps worse than death. That is what we mean when we talk of war. Millions of our young citizens would be required to offer up their bodies as cannon fodder to be blasted to bits and churned up with the bloody muck of the battlefields, and trampled over by battling hosts. That is what we are talking about when we

speak of war.

Millions would come back from overseas maimed and mangled in Millions would come back from overseas maimed and mangled in mind and body, a burden to themselves and society. Until they did return there would be the years of agony of waiting and waiting, with those left at home not knowing whether they were destined ever to see their loved ones again. That agony in myriad cases would be intensified by the return of loved ones so mangled physically and spiritually that death would have been more merciful. That is what we are talking about when we speak of war.

Uncounted millions, whether at the front or at home, would receive mental wounds from which they could never hope to escape in this life. That is what war means.

Following the next war the survivors would suffer a depression far worse and far longer than the 10 years of bitter want and priva-

Following the next war the survivors would suffer a depression far worse and far longer than the 10 years of bitter want and privation in which we are still struggling. Economic charts of the past 146 years show that every war has been followed by a depression; each succeeding depression has been deeper and longer than the preceding one. The depression following the World War has been the deepest and longest in the history of the world. Just as the next war will be incomparably worse than the last, so the depression which would follow would be incomparably worse than the present one. It would utterly paralyze our cultural, social, political, and economic system with evil results no man can foresee.

If we go to war regardless of the outcome, life as we have known.

If we go to war, regardless of the outcome, life as we have known it in America will be forever lost to the crippled living as well as

to those who fall in battle.

Unless we were forced to repel an invasion, no war would be worth such a price. Two oceans and friendly nations to the north and

south of us make an invasion impossible.

We do not have to make this choice of going into war on one side or the other. We need not make it if our citizens will act now. First the people must demand limitation of the powers of the President and his administration to create economic entanglements and enmittes through the operation of the broad economic and

financial powers he already possesses. The people must warn Congress now of their opposition to all legislation designed to set up a military and economic dictatorship under any conditions short of actual war.

The people must have the courage and the intelligence to resist the insidious propaganda which seeks to draw us into the tragic error of once again trying to make the world safe for democracy.

Above all, as we hear this talk of war, let us keep clearly in mind the awful realities of mangled bodies and wounded minds, of indescribable depths of human agony and human misery which lie hidden behind the glib slogans of the propagandists who would get us into war but who would not fight it for us and who would not pay for it.

Let's stay out of war. Let's not be fooled again by the war-

mongers of the world.

Six Months of Wage and Hour Progress

EXTENSION OF REMARKS

HON. GUY L. MOSER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1939

RADIO ADDRESS BY ELMER F. ANDREWS, ADMINISTRATOR OF WAGE AND HOUR DIVISION, DEPARTMENT OF LABOR

Mr. MOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Elmer F. Andrews, Administrator, Wage and Hour Division, United States Department of Labor, made during the National Radio Forum arranged by the Washington Star and broadcast over a National Broadcasting Co. network Monday, April 24, 1939:

By the light of a smoking coal-oil lamp in the kitchen of a tenement home in a New England factory town, a young woman, whom we may call Mary Jones, which isn't her name, told to the accompaniment of tears how she had lost her job.

maniment of tears how she had lost her job.

Mary worked in a shoe-stitching factory and had been making as little as \$5 or \$6 for a 44-hour week. She had heard of the Fair Labor Standards Act, which had gone into effect a little while before, and she had looked forward in excited expectancy to the 25 cents an hour she would receive under its provisions. The work-week was to be pegged at 44 hours, and for full time she would make not less than \$11 a week, besides time and a half when she worked evertime. worked overtime.

But in Mary's case it hadn't worked out that way. There in the

kitchen she said:

kitchen she said:

"The boss told me, 'If you want the job, you will get your \$5.

If you want \$11, you can get out.' He changed my time card by remarking with ink, and after he changed it, it only showed me working 3 days from 7:30 to 4:30, even though I had worked 44 hours. He gave me \$10.47 when I cried after he changed my time card. Then Joe, the floorman, came up to me and said, 'I'm sorry. I should have told you this a week ago—you can't work here any more.' Joe handed me the new time card for me to sign, but I would not sign it. I signed my right time card showing 44 hours worked." hours worked."

Mary had spunk. She knew her rights and she meant to have nem. But fear shook her resolution. After all, wasn't \$5 a week

them. But lear shook her resolution. After all, wasn't \$5 a week better than nothing at all?

"I went to the boss many times," she confessed, "and last Monday offered to give him back \$4 if he would give me my job and promised to punch the clock as he wanted me to. I was told he had no job for me. I am one of five children with a stepfather and a stepmother and I have to work."

Present in the lamp-lighted kitchen that winter night were two Present in the lamp-lighted Ritchen that whiter hight were two inspectors of the Wage and Hour Division of the Department of Labor. The following day they went to the plant and checked over the records. They seemed to be in order, though it struck the inspectors as curious that so many of the employees were working short hours—in some cases only a day or two a week. It was hard to reconcile that fact with the employer's bland statement that he was experiencing great difficulty in getting help.

The inspectors stood in the space outside the plant and watched

The inspectors stood in the snow outside the plant and watched the workers as they came and went. And they found that many of them, after putting in all day at the factory, returned at night, though no overtime appeared on their time cards.

Away from the factory, interviewed behind drawn curtains in their own homes, employees told the sordid story of their exploitation. They had been forced to delay checking in on the time clock until hours after they already had been at work, and to check out hours before they quit.

That employer was indicted by the Government and pleaded guilty to violating the Fair Labor Standards Act. He was fined \$1,500 and today he is making restitution of back wages under pain

of still stiffer penalties. Mary Jones has her job back and is receiving the pay to which she is entitled.

A manufacturer in another State showed up in the guise of a public benefactor, deeply concerned about the problems of youth

or still stiffer penalties. Mary Jones has her job back and is receiving the pay to which she is entitled.

A manufacturer in another State showed up in the guise of a public benefactor, deeply concerned about the problems of youth in a troubled world, and determined magnanimously to teach them a useful trade. Immediately after the wage and hour law became effective he renamed his factory a "school." Those of his employees who were unable to make 25 cents an hour at the piece rates he wanted to pay were dubbed "students," and he didn't charge them a cent for tuition. They continued to work at the same machines they had tended before, making stockings for sports wear—and the "philanthropist" sold the stockings in interstate commerce. The Wage and Hour Division ended that practice, and this employer also is making restitution to the "students" whom he had defrauded. A lumber manufacturer had been the subject of many complaints. His books seemed to be in proper shape. But he was buying the output of 65 neighboring sawmills at a price so low that it made it impossible for them to pay 25 cents an hour. A Federal court in this case, at the instance of the Wage and Hour Division, has enjoined the shipment in interstate commerce of two and a half million board feet of finished lumber and railroad ties produced for this company. The lumber is valued conservatively at \$50,000, and the manufacturer may be stuck with most of it. It would have been cheaper to have made sure that the lumber was produced in conformity with the law in the first place.

In a Middle Western State an organization of businessmen provided a new company, emigrating from another State, with a factory building to induce it to settle in the community. It is pleasant to find such altruism in what we so often are told is a cynical age, but it appears there was a catch in this arrangement. Our inspectors report that some of the workmen who built the factory were forced to take half their wages in the stock of the company. Men and women were engaged to wor

as to the constitutionality of the wage-hour law.

In an eastern town workers in a clothing factory were paid 2 cents an hour—88 cents for a 44-hour week. The employer said cents an hour—88 cents for a 44-hour week. The employer said they were learners and that it took anywhere from 9 months to a year for one of them to learn to operate a sewing machine. And this in a community where plenty of experienced clothing workers were out of jobs. Here again we are gathering the facts, and if they bear out the complaints the workers will be given protection. In another case we obtained an injunction to suppress an evil to common. A runway grays plent moved the great com-

all too common. A runaway gypsy plant moved to a small community in an effort to get cheap labor. The community has been misled into believing that it was obtaining a boon—an opportunity misled into believing that it was obtaining a boon—an opportunity for the employment of its people. But the employer paid 8 cents an hour and less; wages so low that the public-relief agencies, Federal, State, and local, were called upon to supplement the earnings of his employees to enable them to exist. Instead of securing a boon, the community actually was providing a subsidy out of the taxes its people paid to enable an unscrupulous employer to secure an unfair advantage over competitors who were paying decent wages and keeping their employees off the relief rolls. One of the reasons for wage and hour legislation is to prevent this sort of thing, an evil recognized by the United States Supreme Court when, in a decision delivered by Chief Justice Hughes upholding State minimum-wage legislation, it said: Hughes upholding State minimum-wage legislation, it said:

"The exploitation of a class of workers who are in an unequal position with respect to bargaining power and are thus relatively defenseless against the denial of a living wage, is not only detrimental to their health and well-being but casts a direct burden for their support upon the community. What these workers lose in wages the taxpayers are called upon to pay. The bare cost of living must be met. * * The community is not bound to provide what is in effect a subsidy for unconscionable employers."

ride what is in effect a subsidy for unconscionable employers."

If any American imagines that he has no stake in wage and hour legislation, let him ask himself whether he is willing to pay out of his own pocket to the tax collector to feed and clothe the underpaid workers of industry. We propose, by even-handed enforcement of the Fair Labor Standards Act, to make employers may their own labor costs and not the public. pay their own labor costs, and not the public.

The Fair Labor Standards Act went into effect October 24. Today, April 24, marks the completion of the first 6 months of our experience in administration and enforcement. This is an appropriate hour in which to sum up progress of the first half year and to chart, if possible, the course for the future.

A city's slums, in the dim light of midnight, may wear to the

A city's slums, in the dim light of midnight, may wear to the casual observer a not unpleasing aspect. Deep shadows mellow crass outlines and touch with beauty the sagging roofs. But presently the sun comes up and one sees revealed the broken windows, and the sunken walls, and the ramshackle stairways, the piles of filth and the rats scurrying about among the overturned garbage cans. Always we have had slum areas on the edges of our economic system. But we used to see them through the hazy shadows of our own ignorance or indifference, and we took refuge in the mumbo jumbo of old shibboleths. The Fair Labor Standards Act has been a strong floodlight thrown upon the dark places of American industry. The unpleasant things we could not standards act has been a strong floodlight thrown upon the dark places of American industry. The unpleasant things we could not see before, and the things we did not wish to see, stand revealed. We cannot duck them. No amount of talk about the beauties of rugged individualism will obliterate them. Long tolerated despicable practices have been brought to light, and we now know where the scrubbing brush and the fumigator are needed. Were there no other benefits with which we could credit the law, the light it has shed upon these dark corners of industry alone would be its justification. be its justification

But we have substantial accomplishments to report. When the law became effective last October we estimated that 11,000,000 workers engaged in Interstate commerce, or in the production of goods for interstate commerce, were covered. Of these we had reason to believe 300,000 were then receiving less than 25 cents an hour. We think we are safe in saying that most of these have had their wages raised. We also know that some 550,000 are receiving less than 30 cents an hour, the minimum wage that becomes mandatory next October. Since we do not know how much less each is receiving, we cannot talk about the possible wage increase for the entire group with certainty, but we can follow up those 300,000 who are now receiving 25 cents an hour for the first time and who will receive 30 cents an hour for the first time next autumn. Each of these employees who works 42 hours a week—the statutory workweek after next October 24—will receive \$2.10 more in his pay envelope than he is now getting—\$630,000 more each week for the entire group, or \$32,760,000 more a year. Of the remaining 10,700,-000 covered by the act, some have received time and a half for 000 covered by the act, some have received time and a half for overtime this year, or have had their working week shortened, and it seems safe to assume that they will receive still more overtime pay next year. The purchasing power of the Nation has been increased, and the additional money, having gone to the lowest paid workers, has been and will continue to be spent for food, clothing, and shelter, which will bring new business to those who have goods to sell and open up new opportunities for employment to thousands of men and women still without jobs.

As to compliance with the law to date I can speak with considerable assurance. I don't ordinarily hear about the people who are getting the benefits to which they are entitled, but I hear in tones of thunder about those who believe they are not getting their benefits. If any considerable number of workers were not getting at least the 25-cent minimum and time and a half for overtime

at least the 25-cent minimum and time and a half for overtime they would be registering a kick. For we have encouraged them to kick, have flooded the country with complaint forms, have opened up offices in many cities where they can get help in filling

out those forms.

We have not had 11,000,000 complaints. We haven't had a hundred thousand complaints. We have had just 11,910, or about one complaint for each 11,000 workers covered. That is pretty good evidence of general compliance.

Of the 11,910 complaints, many are duplicates—two or three persons reporting the same circumstances. Of the remainder, 4,145 seem to be valid. A great many, of course, are based upon missunderstanding of the law, or were filed by workers who are not employed in interstate commerce, and therefore must look to their

employed in Interstate commerce, and therefore must look to their own State legislatures for wage and hour protection.

Every complaint that seems to be valid must be carefully analyzed. Usually more information is needed and field inspectors must go out and patiently interview employers and workers and carefully check back the records. That takes time.

Nineteen cases have gone to the courts. Of these, 5 were criminal prosecutions, 14 were applications for injunctions. Still other reported violations have been referred to the Department of Justice reported violations have been referred to the Department of Justice for possible future prosecution. At every point the Wage and Hour Division has been upheld in the courts. So far we have not lost a single case—not 1. Fines levied in 4 criminal cases totaled \$31,500, of which \$17,000 was suspended pending the full restitution of wages to the employees which the employer had pocketed and proof of future compliance. Restitution of pay to workers under the 6 injunctions already granted has amounted to approximately \$12,000.

In some cases violations have been due to ignorance of the law on In some cases violations have been due to ignorance of the law on the part of employers or to misunderstanding. Frequently it has been necessary merely to point out the violation to bring the employer into line and to obtain restitution of wages due. Naturally we prefer this method wherever possible to the expense and delay of criminal prosecutions or court proceedings; and frequently, where the case is not flagrant and no falsification of records is involved, we utilize this procedure, because our major objective, as we see it, is to obtain for the workers of the country the benefits Congress intended them to have rather than the multiplication of litigation. Many thousands of dollars have been added to workers' pay by this method. In Atlanta, Ga., the other day a single employer paid \$6,416 to 139 employees—an average of \$47 apiece—and is now complying with the law.

We began enforcement 6 months ago with a small headquarters staff and with only 23 inspectors in the field to cover the whole of this engrance country an average of less than 1 inspector for

this enormous country, an average of less than 1 inspector for every 2 States. Today we have a field force of 131. It is still a skeleton staff, inadequate fully to render the service to which employees and employers both are entitled. We expect to add to the personnel as money is made available by Congress and inspectors can be properly trained.

The law, as you are doubtless aware, gives to the worker who is not paid at least the prescribed minimum rates the right to collect through court action double the amount of his withheld wages, plus a reasonable attorney's fee. Employers should not for a

plus a reasonable attorney's fee. Employers should not for a moment lose sight of that provision. Aggrieved employees do not need permission from me or anybody else to use this avenue of redress, and a few employee lawsuits could be far more expensive to the employer than voluntary, wholehearted compliance.

So much for 6 months of progress under the Fair Labor Standards Act. We have tried to proceed cautiously, well aware that we could find few precedents for our guidance. But slowly and carefully we have been forging stout tools for administration and enforcement. Most of them have been tested, in the courts and out, and found good. We enter the second 6 months with renewed confidence in our ability to make the law work, secure in the knowledge we now possess that the public is behind us, with a firmly grounded conviction that we can look to the vast majority of the country's employers to help us give substance to the dream of a better and happier America.

Federal Tax Changes

EXTENSION OF REMARKS

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

RECOMMENDATIONS OF THE BROOKINGS INSTITUTION

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following recommendations of the Brookings Institution:

The existing taxation system must be substantially modified before an adequate flow of investment money into private enterprise can be expected, according to the report of a study of taxation and investment made public today by the Brookings Institution. The report makes specific recommendations for Federal tax changes, among them being the disregarding of capital gains and losses, abolition of tax on intercorporate dividends, and substantial radiations in surfax rates in the unput brackets. It recomtial reduction in surtax rates in the upper brackets. It recom-mends that social-security taxes be reduced and old-age annuities be financed on a pay-as-you-go basis, rather than by the accumulation of a huge reserve.

The study, which was conducted by Dr. James D. Magee, of New York University, forms part of a comprehensive inquiry by the Brookings Institution into the American capital market which is scheduled for completion in the early fall. The report is careful to point out that tax modification is only one of the steps necessary to make possible industrial expansion and increased

employment.

In the development of the present tax system, emphasis has been placed on such matters as ease of collection, equitable distribution of the tax burden, redistribution of national income, and the promotion of other economic and social objectives, and little heed has been paid to the effect on investment and capital formation. As a result, the Nation is now confronted with a situation where a clear-cut choice must be made, namely, to continue the present tax system, which arrests the flow of funds into new capital enterprises, or to modify the system in the interest of industrial expansion, greater employment, and higher standards of living.

The trend of tax collections in relation to national income has The trend of tax collections in relation to national income has steadily risen. Between 1923 and 1938 aggregate tax collections increased by approximately the same level as in 1923 and 1924. In 1913 only about 7 percent was taken in Federal, State, and local taxes; in the twenties the range was from 10 to 12 percent, while in 1938 it rose to 23 percent. This rise tells only part of the story, however, inasmuch as even the greatly increased taxes of the thirties have fallen short of expenditures by about 2.77 billion dollars annually, while the smaller taxes of the twenties permitted an annual reduction in the national debt of approximately eight hundred million. The study found that the aggregate amount of taxes for every group of industries, except railroads, has increased progressively since 1923, the rise being especially sharp since 1932. Even more significant is the fact that the ratio of taxes to gross income has increased in every group, including rails. The rise in the ratio of taxes to net distributable income has been even greater. In nearly every case net income in 1937 was lower than in 1929, while taxes were appreciably higher. This appraisal of the corporate tax burden is based on figures from highly successful corpora-

rate tax burden is based on figures from highly successful corporations; for industry as a whole the burden is even more onerous.

Federal taxes levied on corporation incomes have progressively
increased over the last 15 years, the maximum tax rising approximately 50 percent between 1929 and 1938. The tax burden, however, has been heavily increased also by other changes in the law.
Important among these has been the refusal to permit consolidated returns (except for railroads) by groups of corporations
controlled by a single company. Thus a group may have to pay
heavy taxes because of profit by one unit, although the losses of
other units more than counterbalance the gain.

Other innovations which have adversely affected industry include

Other innovations which have adversely affected industry include the tax on intercorporate dividends, which is, in effect, double the tax on intercorporate dividends, which is, in effect, double taxation. The elimination of the deduction of operating losses from gains in following years has made it possible for a corporation to have a loss over a period of years and yet to have to pay substantial taxes because of profits in some of these years. Restriction of the deduction of capital losses and the more rigid regulation of depreciation charges have also added to the burden of industry.

While increasing corporate taxes have made it more difficult for private enterprise to show results which might draw new investment funds for expansion purposes, mounting taxes on individuals have diminished the attractiveness of investment even where

profit seems probable.

profit seems probable.

The very high surtax rates, together with the system of tax-free bonds, work strongly against the sale of corporate securities, particularly stocks, to those whose incomes fall in the high brackets. Taken in conjunction with the income-tax regulations with respect to capital gains and losses, they place almost insuperable obstacles in the way of risk-taking investments. Large investors are unwilling to take risks of loss in stocks when they know that if the investment is profitable the Government will take a very large share of the profit. If losses result, the extent to which they can be utilized in offsetting gains in the following year is limited.

The study reaches the conclusion that a retroactive law to end

The study reaches the conclusion that a retroactive law to end The study reaches the constitution that a retroactive law to that ax exemption of State and local bonds should not be considered. With respect to ending future exemption, it is recognized that the higher costs of borrowing resulting from such a step might have serious immediate repercussions in many instances; nevertheless, the study inclines to the view that long-run gains would outweigh the adverse effects. Since the constitutional issue has not been decided however, a modification of the tax-exemption system can decided, however, a modification of the tax-exemption system can-not be counted upon to affect the immediate investment problem.

The report makes the following recommendations for tax modification:

CORPORATION INCOME TAX

 Small corporations should be allowed a credit of \$3,000.
 Operating losses should be deductible from income for a period of 2 years.

3. Capital gains and losses should be disregarded in calculating

the tax. However, if the Congress insists on taxing capital gains as income, capital losses should be deductible. 4. The tax on intercorporate dividends should be abolished.

5. Greater flexibility should be permitted in the handling of de-preciation charges, the percentage to be varied in relation to the volume of business.

CAPITAL STOCK AND EXCESS-PROFITS TAXES

Both taxes should be eliminated. If it be deemed necessary to maintain the existing volume of revenue from corporation levies, the result should be gained by an increase in the rate on corporate

SOCIAL-SECURITY TAXES

1. The old-age annuities should be financed on a pay-as-you-go

2. The out-age aimittees should be inhanced on a pay-as-you-go basis rather than by the accumulation of a huge reserve.

2. The rates for the old-age annuities should be temporarily reduced from 1 to one-half of 1 percent and be subsequently increased only as benefit payments necessitate.

3. The modest contingent reserves should be invested in outstanding Government bonds at current rates, and the financial administration of the system should be segregated from the financial

administration of the system should be segregated from the fiscal operations of the Treasury.

UNDISTRIBUTED-PROFITS TAX

This tax should be abolished.

PERSONAL TAXES AND TAX-EXEMPT SECURITIES

1. The surtax rates in the upper brackets should be substantially reduced.

2. The normal income tax on corporate dividends should be

eliminated.

3. Capital gains and losses should be disregarded. However, if this is not done, deductions for capital losses should be allowed.

4. The Federal income tax should be made to apply to State employees, and Federal employees should similarly be subjected to State income taxes.

Money and Prices

EXTENSION OF REMARKS

HON. CLYDE WILLIAMS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1939

Mr. WILLIAMS of Missouri. Mr. Speaker, it is with some trepidation and misgiving that I venture to talk about the issuance and volume of money. There has been a great deal of what seems to me careless, thoughtless, and meaningless talk about Congress having surrendered its constitutional prerogative to issue money and regulate its value and that the time has come for Congress to resume or recapture its rights in that respect. According to this rather wild clamor, one would infer that the 435 Members of the House, with a relay of 96 Senators, should be put to work day and night running the printing presses and the mints in order that Congress may perform its function of coining money.

Anyone who has read and studied the 264 pages of the Federal Reserve Act, as amended, knows that Congress has ordered and directed, very much in detail, the manner and amount in which and upon what security Federal Reserve notes shall be issued. Congress has provided how openmarket operations shall be conducted, how discount rates shall be fixed, and how bank reserves shall be maintained. Congress itself has prescribed the manner and means by which money shall be issued, and the methods by which its volume and value are determined. Let it be said and settled

once and for all that banks do not issue money.

Federal Reserve notes are issued by the Government under the direction of the Board of Governors of the Federal Reserve System. This Board is the monetary authority of the United States, created by Congress and ordered to do certain things. This Board represents the Government and the people, not the banks. These notes are the obligation of the Government, not the banks. Application is made by the bank to the Board, not for the privilege of issuing notes but for the purpose of borrowing notes from the Government. This application may be refused in whole or in part by the Board. If it is approved, the bank must put up as collateral eligible paper or gold certificates, or both, in an amount at least equal to that of the notes desired. In addition to that, the banks must at all times maintain reserves of 35 percent against all deposits, 40 percent against all notes issued to it, and a redemption fund of at least 5 percent. If these are not sufficient safeguards, then these requirements may be increased by Congress. The Government prints the Federal Reserve notes just as it prints postage stamps, and at the same place, in the Bureau of Printing and Engraving. The banks do not print them. The Government issues these notes, not the banks. They are issued by and through the representatives of the Government, the Governors of the Federal Reserve System, who are the agents of Congress and who are ordered and directed by Congress to issue and pay out this money in accordance with a fixed and definite plan laid down by Congress. Of course, Congress has not by legislation said how many dimes shall be coined each day or how many silver certificates or Federal Reserve notes shall be printed each hour, any more than it has said how many postage stamps shall be printed or how many army shoes shall be purchased each month.

Congress has not surrendered its constitutional right in money matters but has authorized and directed certain administrative agencies to perform those duties. This is the same procedure that is followed in all governmental activities under modern complex and intricate conditions. To contend that Congress itself should coin money and regulate its value, one had just as well say that Congress should pass on every claim for compensation filed by a veteran and do away with the Veterans' Administration; that Congress itself should supervise and oversee the construction of every dreadnaught, cruiser, destroyer, submarine, and airship because it has the power to provide and maintain a Navy; that Congress itself should collect all taxes and revenue and sign checks for the payment of all obligations of the Government because it has the power to levy and collect taxes and to pay the debts of the Government; that Congress itself should build post offices and post roads and then carry and distribute the mail because the power is given Congress to establish post offices and post roads; that Congress itself in case of war should go out in command and take charge of the Army because it has the power to raise and equip an Army.

Whether we would or not, we today must recognize that there is a fourth department of government, the administrative, to which is delegated in some measure at least legislative, executive, and judicial powers and discretion. The Treasury Department and the Board of Governors of the Federal Reserve System are the administrative agencies that are carrying out the monetary policies of the Nation under the direct orders and mandate of Congress. The question for the moment is not whether the acts of Congress are wise or unwise, whether the policy we are pursuing is sound or unsound, the fact is that Congress has determined the policy under its constitutional rights. Then why talk about Congress having surrendered its constitutional rights over the issuance of money? That is a nice sounding expression. It is catchy and alluring. It seems to have been caught up and has been used in a parrot-like fashion.

The suggestion that the commercial banks of the country are coining money within the meaning of the Constitution when they accept a deposit, give the depositor credit for it, and then honor a check drawn against that deposit it seems to me in all fairness to be so visionary and fantastic as to not merit consideration. Some of the very people who are clamoring for the issuance of more money and the expansion of credit facilities are demanding at the same time that the commercial banks retain in their vaults 100 percent reserves against all deposits, thereby destroying the ability of the bank to extend credit and make loans to its customers. In one breath they want more money in circulation and easier credit conditions and in the next breath they would destroy the means by which these things are possible. If the bank must be a warehouse and safely preserve every dollar that is deposited in it ready to be returned to the depositor, how can it function as a bank and furnish this much-desired credit. Such glaring inconsistency.

In the field of money there are many wide and varied opinions. In every period there have been those who had monetary plans which were in their view a final and complete cure for all economic ills. It matters not how far apart the schemes may be, the author of each is absolutely certain that he has the last word on the subject and that everyone else is wrong. Among academic students there are wide differences. The economists in the great colleges and universities who have given a lifetime to the study of money in the quietude of their libraries, and who have written books and delivered lectures on the subject, do not agree. They are found as far apart as the East is from the West and with views as different as is the midnight darkness from the bright light of the noonday sun

In the practical everyday workaway affairs of life, among bankers and hard-headed businessmen, there is as great a difference about monetary policy as there is among the professors and economists. In this welter of confusion, in the midst of these wide differences of positive and supposedly well-informed views, it takes a good deal of courage for even a Congressman to assert that he has found the final solution to this most perplexing question. I lay no claim to such distinction.

There have been some half dozen bills introduced in this Congress that, among other things, have for their object the issuance of more money to raise the general price level or to bring back normal employment. These may be commend-

able objectives, and certainly the latter is devoutly to be wished. The usual plea is made that the general wholesale commodity prices should be raised to the 1926 level, and maintained at that point. It is confidently asserted that this can be done by a managed currency or by money manipulation, by contracting and expanding the volume of currency and credit. It is perhaps worth while to note that few of the economists and students of finance believe that can be done. There are perhaps fewer of the practical businessmen and bankers who share that view. It can be safely said that the present Board of Governors of the Federal Reserve Bank System does not think it is possible to raise and maintain prices by monetary policies alone, and I think it may also be said that no Reserve Board ever has held that idea. They have never thought that the problem was that simple. In the light of these opinions, coming from those who have given the matter serious consideration and have viewed it from every standpoint, may there not be a very serious doubt in the mind of any thoughtful person whether that plan will work.

There seems to be no very close relationship between wholesale prices and the volume of money. On the basis of 100 for 1926, from the middle of 1937 to the end of 1938, prices dropped from 88 to 77, while during the same time the amount of money in actual circulation increased from six and one-half to seven billion and excess bank reserves increased over \$2,000,000,000. Thus during the last year and a half wholesale commodity prices have dropped over 12 percent, while the amount of money available for use and credit has increased about twelve and one-half billion dollars. At this point it may be proper to say a word about excess reserves in the banks. Excess reserves, as the words indicate, are the reserves in the banks over, above, and beyond the amount required by law to be kept as security for deposits in the banks. The average legal reserve required to be kept in the banks is about \$1 to every \$6 deposited. Obviously the legal reserves cannot be loaned by the banks because the law requires them to remain in the banks as a protection to the deposits. It is only the excess reserves that can be loaned. They determine legitimate credit-expansion possibilities. For each dollar of excess reserves about \$6 may be loaned. Under present reserve requirements and with \$4,000,000,000 of excess reserves in the banks, at least \$24,000,000,000 are available for additional loans.

It would seem that if the mere existence of additional money in the banks and in the hands of the people would raise commodity prices, there should have been a rise in such prices during the last 18 months instead of a very decided drop.

This is not the only instance in recent times. In 1926. the date that is taken when it is supposed the wholesale commodity price was at an ideal level and the one to which the proponents of this plan desire to return, there were \$23,000,-000,000 of demand deposits in the banks. At the end of 1938 there were \$26,000,000,000 on demand deposit, or three billion more than in 1926, and still the wholesale commodity price was 23 percent lower in 1938 than it was in 1926. In addition to that, in 1938 the amount of money in actual circulation, which means, as I understand it, the amount of currency outside the Treasury and the Federal Reserve banks, was almost twice as much as it was in 1926, while at the same time commodity prices were about one-fourth lower. In the light of these facts extending over a period of 13 years and particularly our experience during the last year and a half, it very clearly appears that there is little connection between the volume of money and commodity

There are those who contend that other nations have stabilized prices by money management and usually point to England, Sweden, or perhaps Canada. All investigation shows that their general commodity price level has moved up and down very much the same as it has in this country. By way of comparison, from 1932 to 1937 there was a rise in the wholesale commodity price level; in Canada, 27 percent; in England, 30 percent; in Sweden, 28 percent; in the

United States, 33 percent. From the middle of 1937 to the end of 1938 there was a drop in the price level; in Canada, 13 percent; in England, 10 percent; no figures available for Sweden; in the United States, 10 percent. There is a strange parallel showing that these and other countries have done no better in stabilizing the price level than we have here. These facts tend to strengthen the conclusion that the price level is not controlled by expanding or contracting the currency.

Then there does not seem to be any very close connection between the volume of money and employment. During 1937 factory employment varied from time to time more than 13 percent up and down while there was a gradual increase in the volume of money. From the middle of 1937 to the end of 1938 there was a drop in employment of 22 percent while the amount of money in circulation increased and the bank reserves grew from seven to eight billion dollars. Viewed from any angle there seems to be no fixed relation between volume of money and commodity prices or factory employment. These three important factors in our economic life do not appear to be definitely tied together. It is very plain that there are many ingredients besides money that go to make up our complicated price structure and that they are all operating at the same time and must be reckoned with.

As to that, there is little doubt in my opinion. To claim that volume of money alone controls prices is to ignore many other factors in our modern economy. I shall not attempt to enumerate them all but only a few.

It no doubt will be conceded that inventions, improved machinery, new technological processes and great mass production affect prices. It is a matter of rather general information that by various schemes and devices, by trade associations, by collective bargaining, by group action, and pressure, by agreements, and combinations, competition is stifled and monopolistic prices prevail. Tariff policies, quota allotments, and reciprocal-trade agreements play their part in determining prices. Wars, rumors of war, and labor troubles disturb prices. Pestilence, floods, droughts, and other disasters greatly affect prices. The tax policy of the locality, State, and Nation influence prices. Legislation regulating and restricting agricultural production is an important factor. Work relief and a public-building program are to be considered. These and many other factors are at work to establish the general price level. When all these things are considered there is no wonder that sometimes when the volume of money is greatest the price level is the lowest.

Under our system Congress has given the Board of Governors of the Federal Reserve System the power to expand our currency and make credit available without limit and at a very low cost. Through open-market operations, billions of Government obligations could be bought and the money used in the operation would go into the banks. The discount rate could be lowered and the bank reserve requirements be diminished. This might make money cheaper, although it is already cheaper than it has ever been. This would make our excess bank reserves greater, although they are now greater than they have ever been before. With interest rates at the lowest in our history, with a legitimate credit expansion of \$25,000,000,000 now available in our banks, why should we have more money?

This money and these credit facilities have been made available by our governmental agency acting under authority and by direction of congressional legislation, but that agency cannot require the people to use that money or to seek additional credit, nor can it compel the banks to extend credit to those who are seeking it. It is not more money we need but more activity for what we have; not more volume but greater velocity. One school of thought at this very time is contending that on account of an all-time high in excess bank reserves there is impending a very grave danger of uncontrolled inflation. On the other hand, there are those who insist that there should be additional money issued and those excess reserves forced into action, thereby expanding credit to meet current needs. Present conditions have none of the symptoms nor show any indication of an inflationary movement. But

since the excess reserves are at the highest peak, it would seem unnecessary to increase them further and make the control of inflation more difficult or impossible in the event it should come.

It is perfectly plain, from present conditions and in the light of our experience over the last dozen years, that certain general price level cannot be established and maintained by money manipulation. Even if that could be done the desirability and the advisability of doing so may well be questioned.

It must not be inferred that it is not desirable, as far as possible, to stabilize the purchasing power and the debt-paying ability of each individual from day to day and from year to year. But does a constant level of all commodity prices do that?

The 1926 price level seems to be the goal and the ideal toward which we should strive. From 1921 to 1929 there was a comparatively steady price level, and 1926 was the average. That was the period of calm before the storm. Did that situation lead to lasting prosperity? What happened? What resulted from that period of a fairly constant price level? What occurred during that time and immediately following it is very strong argument that a rigid general wholesale commodity price level is not the solution for our trouble, but may make matters worse and add to the difficulty. During that period great disparities arose. There was a very unfair and unjust distribution of the national income. Many industries while greatly reducing the cost of production maintained the prices of their products, thereby making large and excessive profits. As evidence, in 1921 the number reporting an income of \$1,000,000 and over was only 21, while in 1929 there was a total of over 500. Was that desirable? Was that a healthy condition? The price level was fairly constant, but did it produce general prosperity?

In some industries there was an ever-broadening space between the cost of production and the price for which products were sold, leading to the accumulation of vast sums of money in the hands of that class of producers which in turn led to unsound financing, extravagant spending, and reckless speculation, which finally brought disaster. In other classes, particularly the farmer, the margin between cost of production and prices was narrowed while the price of the articles which he must buy was maintained at a high level, thereby making his burden greater and greater. Thus there grew up this great disequilibrium between different classes and greatly contributed to the disaster of 1929 and the years That period of stable prices did not lead to following. prosperity but, on the other hand, brought us to the brink of disaster and ruin.

A general high price commodity level cannot be beneficial to the farmer as long as a high price for steel, lumber, cement, leather, clothing, wire, and farm machinery is maintained, while the price of farm products is going lower. The high price of the things he buys keeps up the general level, but how can that help him when his income is declining? In the case of the laboring man, if by raising the general price level the price of food and clothing and the necessities of life are raised, how will that help him? Unless he receives increased wages and added purchasing power, and there is no evidence that he does, then the high-price level adds an extra burden to his already troublous condition. Unless higher prices mean increased employment and better wages, the result is disastrous to the laborer. While the national income increased from 1921 to 1929 about 28 percent, the average annual earnings of the laborer increased only 9 percent, and the income of the farmer increased very little, if any at all. This was not a well-balanced economy. even if the general price level did remain on an even keel. It is a question whether we want to return to that situation. The price of some commodities may be unreasonably high, while the price of others is distressingly low.

The ideal situation calls for a fair and a just relationship of prices. There should be a proper relation between what the farmer sells and what he buys. A high general price level is a great disadvantage to him if he must sell on the

lowest market and buy on the highest. In raising the general price level those things which he buys may be increased still higher without any compensating rise in the price of the commodities he sells, thereby increasing the disparity and adding to his burdens. The thing that concerns the farmer is the relative price between the products he sells and the articles he buys. How many bushels of wheat will it take to buy a plow, a harrow, or a mower? How many bushels of corn will it take to buy materials to build a new fence or paint the house? How many hogs will it take to pay the taxes and buy clothing for the family? Right now, measured by the 1926 price level as 100, industrial commodities are 20 percent higher than agricultural products, the former being 80 and the latter 67. The thing the wage earner is interested in is the relation of his income to the cost of living. How does his pay roll compare with the price of the articles he must buy? If in raising the general price level there is an increase in the things which he is accustomed to buying, then his standard of living is lowered unless he receives an increased wage which he may not do.

The ability of a debtor to meet an obligation contracted on a sound basis does not necessarily depend upon general all commodity prices remaining at a fixed level. He will be able to pay his debt if he retains the same relative position with reference to the prices which directly affect his net income that he had when he made the contract. A steady general price level may help him or it may hurt him.

It is my belief that a general commodity price level cannot be established and maintained by money manipulation and if it were possible, that it is of very doubtful benefit to the people.

The Youth Problem

EXTENSION OF REMARKS

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1939

COMPILATION BY JOSEPH CADDEN, EXECUTIVE SECRETARY
OF THE AMERICAN YOUTH CONGRESS

Mr. HILL. Mr. Speaker, under leave to extend my remarks, I wish to put into the Record the following brief compilation of statements concerning the youth problem, which has been put together by Joseph Cadden, executive secretary of the American Youth Congress. These comments throw into bold relief the serious nature of the youth problem in

In making public the findings of a 5-year study of adolescents for the Progressive Education Association, Dr. Carolyn B. Zachary has come to the conclusion that, "There is no place for youth in industry, in the professions, or in other areas. As a result, we now industry, in the professions, or in other areas. ask the young people to go back and remain children until we are ready for them."

ask the young people to go back and remain children until we are ready for them."

Commenting on the effect of this condition, Dr. Zachary says, "How very easy it would be for Hitler or anyone else who came along with a program involving youth to get hold of this group. We run the risk of a kind of leadership that may be destructive to a democracy. * * * We are never going to be able to run a democracy if the democracy is being run by the middle-aged. We need youth to get in and work with us." (Quoted as reported in the New York Times, April 6, 1939, p. 27.)

Speaking to the Eastern Commercial Association in New York on April 8, 1939, Prof. Hamden L. Forkner, of Columbia University, pointed out that boys and girls leaving school, ready for work, cannot find employment in industry. He urged the extension of the educational program in order to close the gap between the school and employment. "It certainly is self-evident," Professor Forkner said, "that if the school does not take this responsibility, other agencies of Government will, or the youth of the country will be ready to embrace fascism or communism as a way out of their dilemma. If we are not willing to pay the bill of providing a complete educational program, we will have to pay the bill of relief, crime, and probably of freedom."

Joseph Cadden, executive secretary of the American Youth Congress, commented on these opinions in the following letter published in the New York Times, April 12, 1939:

"The depressing picture of American youth conjured up by Dr. Caroline B. Zachary, of the Progressive Education Association, reported in the New York Times of April 6, is entirely out of focus. It would not, as she contends, be easy for Hitler 'to get

hold of this group.'
"The fact is that youth conditions are unnecessarily bad, but
the conclusion that America's youth is hopeless and defeated by these conditions is completely contrary to everyday evidence. Youth in this county is more on its toes than ever before.

"The events abroad during the last few years have been care-

"The events abroad during the last few years have been carefully watched and have constituted warnings to our young people who believe in the democratic way of solving their problems. The social progress which has taken place in the United States during the last few years, the establishment of the National Youth Administration, the C. C. camps, the Federal housing program, and many other important innovations have been evidence to young people of the possibility of solving these problems democratically and have been a source of hope.

"The very existence of the American Youth Congress is testimony to the fact that youth itself is hopefully and tirelessly working to improve conditions. During the 5 years Dr. Zachary was making her study the American Youth Congress, founded in 1934, has unified the efforts of the national youth organizations

1934, has unified the efforts of the national youth organizations to make the public, as well as young people themselves, aware of the need to maintain our American form of government and through it extend the job and educational opportunities for youth.

"Millions of young people are daily contributing to the needed improvement of facilities for employment, education, medical care, and recreation. They are making these efforts because they do have hope for the future, because they do believe this improved life for the future can result from their efforts as citizens in a

"Conscious as they are of national and international events, they are prepared to withstand the demagogic appeals of American Hitlers. And in answer to such appeals they increase their efforts to have both private and governmental agencies expand their facilities to meet their need for jobs, education, better health, and housing. In social legislation pending in Congress such as and housing. In social legislation pending in Congress, such as the Wagner health bill and the Thomas bill for Federal aid to education, they see the approach to a solution, an approach by way of the democratic road, which has already provided limited but definite aids in the form of N. Y. A. and C. C. C."

Although educators, social workers, and young people them-selves, are fully aware of the dangers to democracy implicit in the conditions of youth today, the Congress of the United States has avoided the question.

It is true that the Federal Government has made important contributions toward the solution of the youth problem in estab-lishing the National Youth Administration and the Civilian Conservation Corps. Congress, however, has failed to recognize the limitations of this Federal program, has failed to allot sufficient funds to the National Youth Administration, has failed to extend the educational system.

It seems essential that before Congress adjourns we take careful note of the actual conditions facing young people and do

something to relieve those conditions.

Conservative estimates of both private and governmental agencies indicate that there are at least 5,000,000 young people between the ages of 16 and 25 who are out of school and unemployed. There is a larger percentage of youth among our unemployed than in any other country in the world.

Juvenile delinquency increases where unemployment grows. J. Edgar Hoover, of the Department of Justice, reports that—

1. The largest number of arrests at any one age in the whole country is at the age of 19.

Fifteen percent of all people arrested are 19 or younger.
 Thirty-seven and four-tenths percent of all those arrested are

In a study of 1,000 juvenile criminals, Prof. Sheldon Glueck, of Harvard University, discovered that one-third have been unemployed; the other two-thirds had had unattractive jobs at low ployed; the other two-thirds had had unattractive jobs at low wages; 97 percent lived in unfavorable neighborhoods; two-thirds of the boys had been forced to leave school for economic reasons.

of the boys had been forced to leave school for economic reasons. Seven hundred thousand young people drop out of school each year because they cannot afford books, carfares, lunches, clothes. And with an increased school-age population, less is being spent for education in 1939 than in 1929. Only 3 out of 10 young people ever finish high school. Seven out of every ten find it impossible to get through because of poor health or other reasons connected with their economic status. with their economic status.

While 5,000,000 between the ages of 16 and 25 tramp the roads looking for work, we find jobs given to 667,118 children between the ages of 10 and 15. This younger group is given preference by some employers because they can be lured to the jobs by next-to-

nothing wages. Here is a broad picture of the conditions in which America's next generation of workers and farmers, professional men and lawmakers are coming of age. The future of our Nation depends on these young people.

We all agree that a well-educated, well-trained generation is a nation's greatest asset. As such this young generation is America's best investment. But we have failed to make an adequate invest-

ment.

There is need for an immediate and greatly increased investment by increasing the appropriation for the work-training program of the National Youth Administration. This economical agency is aiding young people on a part-time basis at an average of \$242 per person per year. It has proven its worth and its ability. The American Youth Congress has proposed that Congress make an appropriation of \$250,000,000 for the National Youth Administration for the next fiscal year. This is an increase of \$175,000,000 over the current appropriation. The young people of America are asking Congress "Is this too much to ask? Is this too large a sum to invest in the generation which is going to determine the future to invest in the generation which is going to determine the future of America?'

Columnists and Calumnists

EXTENSION OF REMARKS

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES Tuesday, April 25, 1939

ADDRESS BY HON. HAROLD L. ICKES APRIL 11, 1939

Mr. MINTON. Mr. President, a few days ago the senior Senator from New Hampshire [Mr. Bridges] had inserted in the RECORD a radio address by Mrs. Eleanor Patterson approbrious of the address of Secretary Ickes before the Newspaper Guild of New York City. I think, in all fairness to the Secretary, his speech on that occasion should be inserted in the Record. I now ask unanimous consent that the address delivered by Secretary of the Interior Ickes before the Newspaper Guild of New York City on April 11, 1939, be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Entirely as an avocation, I have been interested lately in two subjects—dictators and newspapers. I cannot say that to date I have had much success in coping with the dictators. I am gratified, however, at what seems to me to be an awakening sense on the part of the American people to the danger that would threaten even our institutions if we allowed the black plague of fascism to take root

Here in the United States we have felt that our democratic institutions were safeguarded by the system of checks and balances that our forefathers wrote into our Constitution. I do not take any credit to myself for the result, but I have noted that in some other countries a system of checks and balances has also been set up, with

the Czechs paying for the balances.

The jump from dictators to newspapers is not a violent one, because they have many things in common. For instance, I have noticed that both the dictators and the newspapers have failed to credit me even with good intentions. Nevertheless, I am of such a hopeful temperament that I shall continue to offer my good offices

a hopeful temperament that I shall continue to offer my good offices to the newspapers in an effort to help them to be factual in their news columns and fair in their editorializing. So tonight I shall discuss columnitis, that curious, endemic malady which in these modern days has infected one newspaper after another.

Since the word "chapel" belongs to newspaper lore, I am encouraged to announce a text for my discourse. So I turn to Revelations, chapter 13, verses 4 to 6, where I find the following: "And they worshipped the beast, saying, 'Who is like unto the beast? Who is able to make war with him? And there was given unto him a mouth speaking great things and blasphemies; and power was given unto him to continue forty and two months. And he opened his mouth in blasphemy."

What particularly strikes me in this is the expression, "And there was given unto him a mouth speaking great things." What a perfect description of a columnist! It would seem, however, that a columnist of that period was a piker compared with his modern prototype; he would run down in "forty and two months." An American columnist is like Tennyson's brook, he babbles on forever.

forever.

I was interested to read what Senator Arthur H. Vandenberg, a lifelong newspaperman, wrote recently as a substitute columnists!

"I have always wanted to 'do a column'-about columnists!

That's probably just the natural revenge instinct. Some of them know so much about everything! Some of them know so much about nothing! Some of them care so little about facts, just so long as they can sock to the jaw."

May I say that even if Senator Vandenberg has suffered at the pens of columnists to the extent that this language would indicate the season of them the bell of it.

cate, he does not know the half of it. He ought to join the new dealers.

A hard-working public official, trying to carry out an assignment which involves decisions affecting thousands of people, hundreds of millions of dollars, and vast public properties, can only marvel

at and admire those qualities of omniscience and infallibility that seem to descend upon a man the moment he casts off the habiliments of the objective news writer, the sports writer, the police-court reporter, or the soldier in order to tell a blundering world just what it should do, what it should think, and the manner in

which it should behave.

Westbrook Pegler, perhaps in a moment of self-revelation, summed up the case of the columnists in this language:

"Of all the fantastic fog shapes that have risen off the swamp of confusion since the big war, the most futile and, at the same time, the most pretentious, is the deep-thinking, halr-trigger columnist or commentator who knows all the answers just offhand and can settle great affairs with absolute finality 3 days or even 6

Columnists are obese with knowledge. They even have the gift of accurate prevision.

Wouldst know what's right and what is wrong? Why birdles sing at break of dawn? Ask the columnists.

Does milk come from the milky way? Why do dogs bark and asses bray? Ask the columnists.

Who pronounce decrees of fate, And supervise affairs of state? Who? The columnists.

Who run the earth and sun and moon? Just Thompson, Lawrence, Franklin, Broun, Just the columnists.

Who knowing their A, B, C, Rank doctors of philosophie? Who but columnists?

Wouldst learn of art, of singing males? Of sharks and minnows, spouting whales, Ask the columnists.

Who expound the Constitution, Adding circum to locution? Why, the columnists.

When F. D. R. you want to sock, Page Lippmann, Johnson, Kent, or Krock, Page a columnist.

Who, knowing all from zero plus, Right answers have to this or thus? Only columnists.

I'd like to preen and look profound, And order Presidents around, I'd like to be a columnist.

A columnist, according to the dictionary, is a journalist in charge of a daily column on a daily newspaper. The word "calumnist" has not yet reached the dictionary, but he may be described as an ex-reporter who wastes good white space to spread injurious gossip and disseminate prevarications and even unpunished libels. The "calumnist's" stock in trade is falsification and vilification. He is journalism's public enemy No. 1, and if the American press is to improve itself, it must get rid of him.

American press is to improve itself, it must get rid of him.

Some newspapers print in the masthead pious declarations about the high moral level on which the paper is edited while disclaiming responsibility for the mental eliminations of a "calumnist." A syndicated column may serve as an escape for a publisher who is willing to print under the name of a "calumnist" matter that he would not dare to publish in his respectable news columns. This is like a hypothetical church deacon testifying to the virtues of temperance at a prayer meeting while taking a pull at the bottle when no one is looking.

I recognize that there is as much difference between columnists.

I recognize that there is as much difference between columnists as there is between newspapers. Who can doubt my perspicacity when I detect evidences of virtue in the columnist who occasionally

says a kind word about me?

Some columnists are fair and reputable and careful to keep within proper bounds; some are unfair and disreputable and recognize no restraints—not even the fear of a libel. It seems to me that a columnist should be entitled to the same rights and privileges as the editor of a newspaper, and no more. It might even be argued that he ought to keep well within the limitations of the old axiom that, with great power, goes great responsibility, because the columnists, according to an estimate made by Fortune, are read by 30 percent of the total adult population of the United States.

The Merry-go-Round column of Pearson and Allen, for example, is printed in more than 300 newspapers, with an estimated circulation of 12,000,000. Such commentators as Walter Lippmann, circulation of 12,000,000. Such commentators as Walter Lippmann, Dorothy Thompson, Frank Kent, David Lawrence, and Westbrook Pegler appear in more than 100 papers each and have a combined circulation of almost 35,000,000. So it can hardly be doubted that these modern knights of the typewriter exert a powerful influence on the public mind. As Heywood Broun says: "Three or four well known syndicated columnists wield more influence than the average lawmaker in Washington." A lawmaker, however, is responsible to his electorate. To whom, I should like to know, are the columnists responsible?

What kind of men are these modern condottieri of the fourth estate? Do they fight for the public weal or under the standard

of private prejudice? Let us review some of them in parade. With a proper respect for rank, let us set at the head of our wooden column a real, honest-to-goodness general, the redoubtable Hugh S. Johnson. Of him a fellow condottiere, the no less valorious Westbrook Pegler, said in Time on September 28, 1936: "I like 'Old Ironpants' column for the wild, somewhat hilarious joy with which he sails into an argument. Sometimes it is a little cruel because he is such a tremendous puncher, and like Dempsey, once that bell rings, he knows nothing but punch, punch until something drops. * * "

Ohe cannot help but wonder whether "Old Ironpants" as Peg-

Ohe cannot help but wonder whether "Old Ironpants," as Pegler affectionately calls him, should be given space in newspapers in order to throw out his chest, flex his muscles, and do "nothing but punch, punch until something drops?"

There is something patriarchal about the valiant general. I would have you know that sometimes it hurts him more to chas-

tise than to be chastised. Papa takes son out to the woodshed to switch him because he loves him. For instance, this stern, if tender hearted, disciplinarian, recently broke an unaccustomed

silence to confess:

"Many of the men I criticize, or praise, are personal friends—for example: Henry Wallace, Harry Hopkins, Harold Ickes, John Lewis, and, above all, the President himself."

Lesser men must stand in awe of an inflexible conscience that

Lesser men must stand in awe of an inflexible conscience that compels a man to do his duty, despite his deep love for those whom he disciplines—"above all, the President himself!" "Whom the general loveth he chastiseth." I do not know how the others named by him in this burst of sentiment feel about it, but, for my part, I would that he loved me much, much less than he does.

Margaret Marshall, writing in the Nation, on March 12, 1938, among other things, said about General Johnson:

"He was born in Fort Scott, Kans., and he has been answering burgle calls ever since."

bugle calls ever since.

"His psychology is that of a top sergeant.

"His mind is a battlefield in which he rushes in all directions

roaring at the enemy."

The General's admirer and fellow marcher in the column is The General's admirer and fellow marcher in the column is Westbrook Pegler, he of the verbal whiplash, who is a graduate of the sports page of the Chicago Tribune. While Johnson is against only those numerous public officials who are bungling affairs that he could so competently manage, Pegler is against everything and everybody, according to his whim. A collection of his essays in book form is characteristically entitled "T Aint Right."

It was of him that the Nation said on March 5, 1938:
"He is agin everything, especially the Government and authority in general. Nothing is what it seems, and both sides in any controversy are wrong.
"He brings every issue down to the level of a barroom argument

"He brings every issue down to the level of a barroom argument between two 'mugs.'"

I will say for Pegler that, on occasion, he is amusing, a fact that distinguishes him from many other members of his fraternity.

Another phenomenon that frequently distinguishes a columnist is that the more violently and indiscriminately he may attack the more sensitive he himself is even to mild criticism. For instance, on March 10 last Pegler wrote a column which was as bristing with such words as "lie" and "liar" as a porcupine is with quills. Two men had ventured to take issue with him on something that he had written. Even assuming that Pegler was right, which I am willing to do, it seems to me that the castigation was out of all

ing to do, it seems to me that the castigation was out of an proportion to the offense.

Mr. Pegler does not confine himself to being "agin everything, especially the Government." He ranges much further afield. On every subject he can speak pontifically—he is a columnist. Hark to his comment on the recent denial by the D. A. R. of the use of its auditorum in Washington to Marian Anderson:

"Marian Anderson, the victim of a not-too-painful martyrdom in Washington, was excluded from one hall by a ruling which instantly defeated its purpose and made famous a hitherto obscure (sic) singer."

Here is omniscience in its fullest flower. The great sports writer also knows all that can be known about music and musicians. The Marian Anderson who is "an obscure singer," according to Westbrook Pegler, is the Marian Anderson whom other, but doubt-less less competent, critics have acclaimed as having the best voice in a generation or even in a century. Toscanini hails her as the greatest living singer. But, of course, Pegler knows better.

Just to show that Pegler's excursion into the field of musical

criticism was not a temporary aberration, let me recall that on another occasion he lined out this home run:

"Singing, of course, should be women's business. .

not a natural or happy art for males."

And on March 3 he wrote:

"It is hard to say whether or not a writer is an artist, but, for that matter, is singing ever art?"

You writers should rejoice that Pegler left open the door, even if

only a little bit, after he had slammed it in the faces of Caruso and Scotti and Marian Anderson and Kirsten Flagstad.

If Johnson and Pegler are expert at sniping, there are "calumnists" who specialize in guttersniping. These latter specialize in personal items that are intended to make one appear ridiculous in personal items that are intended to make one appear ridiculous and the more intended or insincere or incompetent or untrustworthy. And the more shining the target the more poisonous the barb. "Calumnists" of this sort do not permit themselves to worry about the truth or

falsity of any choice tidbit that their unpleasant imagination can invent or their shuffling legmen bring in.

I had an interesting exchange of letters recently with one of the most notorious "calumnists," a man whose name is a synonym

for irresponsibility even to the point of prevarication. He flatters me by regarding me as one of his pet aversions, a circumstance which, considering the manner in which he practices his art, gives which, considering the manner in which he practices his art, gives me great satisfaction. A few months ago he printed three or four inventions about me, none of which contained a vestige of truth. I challenged his veracity. I asked for the source of his misinformation. You know the answer before I can give it. "The source was confidential and his informant must be protected."

I continued to press Mr. Munchausen and I learned later that he tried desperately to find some one who would stand for the story. Then he asked for a personal interview, intending, I was told, to bring in a poor legman to serve as whipping boy.

The long and short of it was that Mr. Munchausen saw the futility of trying to gloss over his lies. He could not justify, and neither he nor his syndicate manager felt that professional ethics called for a voluntary retraction. So the episode ended—at least for the time being.

for the time being.

It hardly needs to be pointed out that when any newspaper writer runs to cover and attempts to hide behind a putative "confidential informant," when confronted with a misstatement that might either be an innocent mistake or deliberate lie, then there can be

either be an innocent mistake or deliberate lie, then there can be doubt that a lie has been uttered.

This particular "calumnist" is a practitioner of what is known in the trade as the "whispering technique." This consists of taking a bit of common knowledge, based on a formal accredited announcement, preferably a couple of weeks old, and presenting it as a new discovery. It is decked out in language designed to mislead the reader into believing that the particular hors d'oeuvre was obtained by devious or occult means, the purpose being to deceive him into believing that he is being served a truffle that the trained pig had just surreptitiously rooted out of the earth.

Now, I may be wrong, but I believe that a grave responsibility rests upon publishers and editors to deny the use of their columns

Now, I may be wrong, but I believe that a grave responsibility rests upon publishers and editors to deny the use of their columns to writers who take liberties with the truth. A disclaimer of responsibility printed in small type does not meet the situation. It happens that the Mr. Munchausen in question is paid by otherwise reputable journals for a frequently discreditable column that they print daily. Publishers ought to realize without being told that they cannot allow their papers to be "Mallonized."

To turn to more pleasant subjects, I will cite again the Book of Revelation, chapter 3, verses 15 and 16:

"I know thy works, that thou art neither cold not hot; I would that thou wert cold or hot. So then because thou art lukewarm, and neither cold nor hot, I will spew thee out of my mouth."

Here we have convincing proof that the author of Revelation had the power of divination. What better description could there be of Walter Lippmann, the man who, according to Margaret Marshall in the Nation, "writes irrelevant or futile stuff in elegant prose"?

Mabel Dodge Luhan said of him: "Walter will never, never lose an eye in a fight." She might have added that he would never even break his wooden sword unless he should trip over it in a

minuet.

On the other hand, Dorothy Thompson, the Cassandra of the columnists, has both conviction and vigor. Heywood Broun said

columnists, has both conviction and vigor. Heywood Broun said of her in the New Republic:

"Miss Thompson's very vigor is a handicap to her emulating Henry Adams and getting an education. If all the speeches she has made in the past 12 months were laid end to end, they would constitute a bridge of platitudes sufficient to reach from the Herald Tribune editorial rooms to the cold caverns of the moon."

I had a letter the other day from a correspondent in New York who referred to Dorothy Thompson as "that Florence Nightingale to sick economic royalists."

This may seem a little rough on a sincere and earnest lady who

who referred to Dorothy Thompson as "that Florence Nightingale to sick economic royalists."

This may seem a little rough on a sincere and earnest lady who is trying to cover too much ground by setting herself up as a final authority on all social, economic, governmental, national and international questions. Perhaps Heywood Broun would want to qualify his statement in view of what Dorothy Thompson has written and spoken lately on the subject of foreign dictatorships which, however, I am bound to say, would be more convincing if it were not for her disposition to see an American dictatorship in every move that is made by the administration for the improvement of our social and economic conditions or in the direction of tightening up the administrative branch of the Government. However, much will be forgiven Dorothy Thompson in view of the really fine stand that she has, with both courage and intelligence, taken on the subject of dictatorships abroad.

"Pontifex Maximus" Sullivan, an ex-liberal like Walter Lippmann, would be missed for his personal dignity and charm, even if the world would still manage nicely without the pontifications that waddle through his worried columns. Frank R. Kent is more likely to forget than to forgive, and he has a good memory. He delights in cruel jibes and acidulous comment that he will direct at a straw man if one of flesh and blood is wanting. "Croak" Carter, with complete self-assurance, could enter any intellectual goldfish-swallowing contest. Raymond Clapper is one of the fair-set most objective and most intelligent of them all. My old

Carter, with complete self-assurance, could enter any intellectual goldfish-swallowing contest. Raymond Clapper is one of the fairest, most objective and most intelligent of them all. My old comrades-at-arms, Frederic W. Wile, G. Gould Lincoln, Herbert W. Agar, Ernest K. Lindley, and Howard Vincent O'Brien, are all able to write fairly and to see both sides. Arthur Krock, as well as a number of others, have columns that they fill capably, although Arthur Krock sometimes permits himself, without abating a whit of his stately authoritativeness, to hit too closely to the belt or lend too credulus an ear to backstairs gossip. (By the way, whatever became of Henry L. Mencken, the crusty old baron of Baltimore?) of Baltimore?)

Between this group of legitimate political commentators and those others whom former Attorney General Homer S. Cummings, as a pinch-hitter columnist, recently described as "buzzards soaring high over the country, indifferent to all that is verdant and living," there is a third group that both comments and reports. Here, too, is a fair field if it is fairly covered.

is a fair field if it is fairly covered.

Drew Pearson and Robert S. Allen write a lively and, on the whole, interesting column of dependable news and of legitimate comment that is both entertaining and timely. They hit many a bull's-eye. Joseph Alsop and Robert E. Kintner are newer comers in the same field. They, too, are cutstanding and jointly present a wide range of worth-while news and lively comment. Jay Franklin confines himself largely to political news and comment upon political attitudes. He could be depended upon to ride forth for the liberal cause, even if he has to ride alone.

Hevwood Broun belongs in a category by himself. Here is a

Heywood Broun belongs in a category by himself. Here is a genial philosopher who declines to take himself too seriously, and yet one who never pulls his punches, even if he chuckles as he lands on an eagerly outstretched chin. Nor is his comment any less effective because it is well tempered and humorous. He, too, like a few other columnists, is a liberal, but he does not have to have a victim served up raw to him every day, as do those who fight the

battle of black reaction.

battle of black reaction.

Whether the columnists are with us to stay or not, I cannot predict. But I suspect that if the vogue is to continue, they who offend good taste or are lacking in ethical standards will have to use their columns for purposes other than to give vent to personal spleen, or to traduce, to misrepresent, to smear. They must lay aside their airs of infallibility. They must at least disguise their deep personal conviction of omniscience. And they ought to be more objective, make some allowance for error, understandingly take into account human frailty and fallibility. They might even occasionally give a victim the benefit of the doubt, assume that all men in public office are not necessarily crooks or that leaders occasionally give a victim the benefit of the doubt, assume that all men in public office are not necessarily crooks or that leaders of the opposite party are not blacklegs. As quasi-public figures themselves, it is their duty to be factual and truthful. Columnists can conform to these standards and still be partisan, as they have the right to be; but if they are partisan, they should not operate as wolves in sheep's clothing, pretending to be detached and objective and nonpartisan, when they aren't anything of the sort.

I suspect that the people are already seeing through the hollow pretenses of certain of our columnists. They may enjoy the snip-ing of a Pegler or the roaring of a Johnson, but they are not so simple as to believe that these are anything else than sniping so simple as to believe that these are anything else than sniping and roaring. Some may even self-consciously enjoy the personal gossip in which the keyhole peepers delight, but they know that certainly not the "calumnists," or even the columnists, are Sir Galahads; that none of them is saturated with pontifical wisdom; that they are not supermen and superwomen, immured on some Olympian height where they are able to see the present outlined against all that is past and all that is to come and thus be able, as Pegler put it, to "know(s) all the answers just offhand and (can) settle great affairs with absolute finality 3 days or even 6 days a week."

Self-respecting and intelligent people will continue to read the columns of those who write news honestly and objectively and

columns of those who write news honestly and objectively and who comment upon current events fairly and with intellectual honesty. However, reputable columnists might well do a little housecleaning on their own account and editors and publishers might do a little fungating of those columns that, irresponsibly the house the state of the state they have turned over to writers who are no credit to their profession and who do not add to the reputation of the papers that flaunt

Perhaps the Newspaper Guild can do something about the columnists. The guild has already had a marked and beneficial influence not only upon public opinion but even upon the newspapers. It has shown itself to be progressive and keenly aware of the need for social reform. I hope that the Newspaper Guild will continue to interest itself in and make its contributions to the vital problem of how to make our democracy more enlightened and successful. One thing that it can do is to see to it that the columnists, who wield so much influence on public opinion, shall not stray too far from the path of truth, which is the path of progress.

Atlantic-Gulf Ship Canal Across Florida

EXTENSION OF REMARKS

HON. PAT CANNON OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

STATEMENT BY HON. PAT CANNON, OF FLORIDA, BEFORE THE HOUSE COMMITTEE ON RIVERS AND HARBORS

Mr. CANNON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following

statement made by me before the Rivers and Harbors Committee:

Mr. Chairman and members of this honorable committee, I find it my duty at this time in the interest of the people of the district which I represent to bring before this committee the views of my constituents as respects the proposed Atlantic-Gulf Ship Canal.

At the outset I can conscientiously say that fully 95 percent of the people of my district are opposed to the construction of this canal.

Various reasons have been assigned for their opposition, most of which, in my opinion, are founded on sound economic and practical

common-sense reasoning.

With reference to the water-supply question, I would like it clearly understood that the north end of the Fourth Congressional District of Florida, which I represent, is included in and is known as the famous Indian River citrus region and produces, in all probability, the best citrus fruit in the world. The citrus groves are irrigated by artesian wells and have enjoyed in the past great productivity. Even though I am a lawyen and as such do not extensive. irrigated by artesian wells and have enjoyed in the past great productivity. Even though I am a layman, and as such do not attempt to give any expert testimony, I do feel that in all propriety I can call your attention to the fact that competent experts who have testified in the past and who will testify in the future before this committee have disagreed materially as to the question whether or not the construction of the proposed canal will interfere with the artesian wells and water supply to which I now refer. Since their not the construction of the proposed canal will interfere with the artesian wells and water supply to which I now refer. Since their opinions, none of which I can refute, are so widely divergent, it is obvious to me that this Government, in all probability, should not take the position that the Atlantic-Gulf Ship Canal should be constructed irrespective of a probable hazard with reference to the water supply. I think it quite sane, therefore, to regard any proposition with jealousy where expert testimony is conflicting and since the citrus growers in my district are concerned, I think it quite appropriate that their voices be heard. Therefore my appearance here.

It must be remembered that artesian wells are the only freshwater supply in the areas to which I refer, and it must likewise be remembered that salt water is injurious to groves as well as all other vegetation.

COMMERCIAL USE OF THE PROPOSED ATLANTIC-GULF SHIP CANAL

This committee, as far as I know, has yet to receive any testi-This committee, as far as I know, has yet to receive any testimony that this canal will be used commercially. In fact, this committee has been advised by competent persons and shipping companies to the contrary. If that fact be true, it is certainly true that the Atlantic-Gulf Ship Canal will not be patronized commercially and in sufficient measure to justify the harm it will do to the groves to which I have referred, nor will it be sufficient to justify the enormous expenditure which will be entailed as a result of the construction of this canal. We do not believe that this enormous expense should be saddled upon the majority of the citizens of a State at the instance of a minority. It is certainly this enormous expense should be saddled upon the majority of the citizens of a State at the instance of a minority. It is certainly true that the construction of the Atlantic-Guif Ship Canal is incompatible and is wholly inconsistent with the other Federal project in which the good citizens of Jacksonville, Fla., have so keenly interested themselves—that is to say, the construction of the proposed naval air base near Jacksonville, Fla. If the proponents of the Atlantic-Guif Ship Canal verily believe that the canal will be patronized commercially, then indeed it will be hazardous to any naval air base which the good citizens of Jacksonville have attempted to have constructed in that area, because of the traffic in the canal; and if, therefore, I am correct in saying that the canal will not be patronized, there seems clearly to be a duplication of effort and an overlapping of facilities insofar as national defense is concerned.

If we are to concern ourselves in a matter of national defense

If we are to concern ourselves in a matter of national defense it seems that one project should be divorced from the other, to say the least. But I do not admit for one moment that the proposed Atlantic-Gulf Ship Canal has any relationship to defense. It has not heretofore been the policy of this Government to visit its projects on citizens of a State against their better judgment, and if we are a democratic people we believe that the majority should control, and I call this honorable committee's attention to the fact that the overwhelming majority of the people of the State of Florida living to the south of the proposed Atlantic-Gulf Ship Canal are inherently and vigorously opposed to the construction of the canal at such an enormous expense, to serve no good purpose except to further prejudice the rights of the citizens of the State of Florida who have been sadly neglected in the past. If we are to concern ourselves in a matter of national defense

ADVANTAGE OF A NATIONAL-DEFENSE MEASURE

With further reference to the national-defense angle in this connection I would like to remind this body that the proposed Atlantic-Gulf Ship Canal will not be wide enough nor deep enough to constitute a ship lane sufficient for the use to which it is contemplated, for the reason that in the event of an emergency, if one vessel is sunk in the canal, it is then obstructed and of no avail and is but an impasse and rendered as though it were never constructed. Again, it would take a sizable army, together with antiaircraft equipment and other facilities to protect the canal itself. If the canal as such must be protected by an army, then it is but a war hazard.

ECONOMIC EFFECT ON SOUTH FLORIDA

Omitting for the time being the tremendous economic effect that this canal would have on south Florida in connection with its

injury to the fresh-water supply, I now call your attention to the other phase of the economic hazard insofar as my people are concerned. That is, all Florida, particularly the Fourth District of Florida, will need Federal aid and assistance as they have in the past and will need the visitation of all of the Federal agencies in that direction. If the enormous amount of money that is contemplated in the construction of the Atlantic Gulf Ship Canal contemplated in the construction of the Atlantic Guil Ship Canal is so spent, then it necessarily follows that reductions in Federal funds expended in Florida will be made, thereby causing the majority of the people of Florida to be classified as "the forgotten man." With the trend of this Congress looking toward economy, it appears to me that Florida, in the event the Atlantic-Guil Ship Canal is constructed will be presumed to have received Guir Snip Canai is constructed will be presumed to have received her allotment and quota because of that fact. Again, even though the construction of the canal would furnish work for many citizens, it is just as true that citizens who needed that work would have to be drawn from the surrounding communities and in many cases would have to come from a distance of 250 miles to enjoy the employment. This hazard is not practical for that class of our good citizens. class of our good citizens.

We, as Congressmen, are presumed to be a body of fair-minded men, and as such we must know that in the event this enormous amount of money is spent in Florida that the other communities in Florida would suffer, on the theory that there is a limit to the in Florida would suffer, on the theory that there is a limit to the amount of money that may be spent, although as Congressmen we have forgotten that fact at times. If you as Congressmen were met with the proposition with which I now attempt to cope, and were of the opinion that the construction of this canal in your State would curtail other expenditures by the Government in your State, then obviously you would take the same position as I.

I hold no brief for the illustrious gentlemen of Florida who are strong proposents for this canal, but I do have a strong feeling.

strong proponents for this canal, but I do have a strong feeling for the majority of the people of the State of Florida, and I express their sentiments on this occasion. The gentlemen to whom I have referred represent their constituents ably, but I am not unmindful of the fact that two members of the Florida delegation, one of whom I happen to be, represent over 40 percent of the people of the State of Florida, and that, if nothing else, should be the con-trolling factor in this matter.

STUART-FORT MYERS CROSS-STATE CANAL

It is most interesting to note that the State of Florida already has one Atlantic-to-Gulf canal, running more particularly from Stuart to Fort Myers, both ends of this canal lying and being situated in congressional districts other than the districts of those who propose the Atlantic-Gulf Canal now under consideration. The Stuart-Fort Myers Canal has never been advanced as a national-defense measure, and because of its similarity to the proposed canal probably should not be so advanced; but if a canal from the Atlantic to the Gulf is indispensable for the national defense, it seems obvious that the deepening of the one we now have would be far less expensive than the construction of a new one. Even though the Stuart-Fort Myers Canal is partially in my district, I do not advance or suggest its utility as a defense measure, and surely I am just as interested in the welfare of my people as is any Member of this Congress, and I shall hope to be just as as is any member of this congress, and I shall hope to be just a effective in my representation of my district as it is humanly possible for me to be. I cannot see any defense advantage connected with a canal across the State of Florida, particularly since the State of Florida is almost entirely surrounded by water.

The Seventy-fifth Congress approved a new lock for the Stuart-Fort Myers Canal and now the War Department Engineers advise us that funds are not available for the new lock and there is indeed a danger that Congress will not appropriate a full Budget for rivers and harbors this year, because of the trend toward economy, and yet the lock to which I refer costs only a few thousand dollars, and it cannot be started because of the lack of money. That being true, the construction of a new canal at an enormous cost sounds even more ridiculous to me, particularly enormous cost sounds even more ridiculous to me, particularly when we know that the Stuart-Fort Myers Canal has had full and ample recognition as to its merit and we all must agree that there is quite a divergence of opinion as to the merits of the Atlantic-Gulf Ship Canal.

The Budget Committee has reported that the amount to be spent on all river and harbor projects in the United States should not exceed \$30,000,000 this year, despite which fact the War Department has recommended \$103,000,000 be spent. How, then, can it be said that it is sound for this Congress to vote \$240,000,000, which we do not have, to construct a useless canal to appease the political whims of a minority of the citizens of the State of Florida?

In brief, therefore, gentlemen, I have given you the views of the majority of the people in the State of Florida, which has been my pleasure and my duty. I respectfully request that this state-ment made by me be extended into and made a part of the record of this hearing before your honorable body.

I am indebted to you for your indulgence in this connection. LXXXIV-App-106

Roy W. Howard Gives Us Sound Advice on International Relations-Let Us Refrain From Intemperate Speeches

EXTENSION OF REMARKS

HON, LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1939

Mr. LUDLOW. Mr. Speaker, our friend, the Reverend CHARLES AUBREY EATON, of New Jersey, once delivered a powerful political sermon in the Well of this House, based, as he announced it, on "the gospel of St. James Farley."

With that illustrious precedent in mind, I assume it is proper for me, as a Methodist layman, to sermonize briefly today, basing my homily on "the gospel of Roy W. Howard." I take as my text the first and second paragraphs of Mr. Howard's epistle from Paris dated April 13, 1939:

As far as I have been able to observe, the French and British people, who are closest to the danger zone, appear less fittery, less inclined to hysteria, than certain ultravocal elements at home.

For the moment, I think, Americans can contribute more to peace by keeping their shirts on than by taking their coats off.

There is a world of wisdom in Mr. Howard's unvarnished Hoosier idiom. It may grate on cultured ears, but it clicks in the average American's mind. All over the United States there is a feeling that there have been altogether too many injudicious speeches by Cabinet ministers, near Cabinet ministers, Senators in charge of foreign relations, and others who might be assumed, because of their positions, to reflect American public opinion. There is a widespread feeling that these voluntary spokesmen are rendering a great disservice to their country, and that it would be in the interest of the peace of America and the peace of the world if they would subside.

Mr. Howard and I grew up together in Indiana, and we have been lifelong colleagues in the newspaper fraternity. In all of my association with newspapermen I have never encountered a mind quite so keen. He has a nose for news that is equivalent to a sixth sense, and his powers of analysis and discernment are indescribably accurate. His statement that British and French are less jittery and less given to war hysteria than Americans coincides with a letter from an American traveler in England which came to my attention recently. This traveler, exploring the countrysides of the British Isles, has come in contact with the rank and file of Britishers, and he says they are wondering "what America is excited so much about."

In discussing this subject I have no criticism to offer of those who are seeking conscientiously to live up to their duties and responsibilities as officials of our Government in a most trying time.

I am seeking, as I know Mr. Howard has sought, to offer some suggestions that may be constructive and helpful. One of these is that we may have no more sword rattling, jingoistic speeches by Cabinet ministers, near Cabinet ministers, and leaders in Congress associated with foreign affairs. Such speeches accomplish nothing constructively, they settle nothing, but they do definitely disturb the equilibrium of international relations and draw us closer to the brink of war. When a leader of a legislative body who is a member of its Foreign Relations Committee says that "we"—presumably speaking for America-"hate" this, that, and the other foreign government he is-unintentionally, of course-sowing the seeds of war and not the seeds of peace.

Let us reflect for a moment on the effect which these violent and injudicious attacks by American Cabinet ministers and outstanding legislators have on public opinion in other countries and how they react to the disadvantage of America. There can be no doubt that these attacks tend to solidify the strength of the totalitarian powers against America. Hitler, as shrewd as he is unscrupulous, can say to his people:

"Look, America is lined up with Great Britain and France

to destroy Germany. We must fight for our lives."

The ruler of every dictatorial country can, and no doubt does, use these intemperate speeches delivered in America to prove to his subjects that they are fighting with their backs to the wall, thus strengthening his military position by arousing a united, though misinformed, public opinion at home. If our public men only realized that they are playing into the hands of Hitler and Mussolini every time they indulge in such pyrotechnical outbursts they probably would be more careful.

Our best prospect for continued peaceful relations with the world lies in our ability to demonstrate that America, founded on the doctrine of freedom and equal rights, is a friend of the common people in every country of the world, as, indeed, we are. President Roosevelt's admirable invitation to the powers to get together around a table to discuss economic justice and disarmament is an appeal to that sentiment. In sending out that invitation the President struck a major chord of sympathy, for the peoples of all countries are inexpressibly weary of war. They are weary of its insufferable burdens, of its griefs and heartaches, of the pain it puts in the hearts of mothers.

I endorse the President's well-meant effort with all possible enthusiasm, but I would be more hopeful of its success if it had not had such an unfortunate build-up in the ill-advised speeches and outgivings of American statesmen, which by their frequency and repetition have created doubts among the peoples of other lands as to the friendliness of America's intentions-doubts which have been artfully played upon and cunningly magnified by the dictators. The world is hoping and praying that the President's idea of holding a peace conference will prevail, because it embodies the hopes and aspirations of humanity, and it seems tragic, indeed, that it had to be proposed in such a prejudiced atmosphere.

Mr. Speaker, the people of America are stunned by the revolting cruelties and misdemeanors of tyrants in foreign lands, but they are not reconciled to America being placed in the role of policeman to correct these wrongs. They are in favor of making every preparation for national defense but no more. The enormous mail now flooding Members of Congress is evidence of a widespread, Nation-wide fear that we are in danger of being involved in foreign entanglements. "Give us a real neutrality law and keep us out of foreign wars" is the burden of these letters and telegrams.

There is, too, a corresponding interest in the resolution I have introduced to amend the Constitution so that the people shall have a right to vote on proposals to send our young men to fight in wars in another hemisphere, the women having equal voting rights with men. The 21 railroad brotherhoods, a million strong, a few days ago reaffirmed their support of my resolution. The Farmers' Union, representing the agricultural masses, has declared for it. As an indication of the trend of thought among farmers, I present the following letter from Mr. Edmond C. Foust, the able editor of the Hoosier Farmer, published by the Indiana Farm Bureau, Inc.:

THE HOOSIER FARMER, Indianapolis, April 10, 1939.

LOUIS LUDLOW, M. C.

House Office Building, Washington, D. C.

DEAR MR. Ludlow: I desire to express my sincere appreciation of your endeavor to bring about a law whereby it would be necessary to call a referendum before war could be declared, other than in case of invasion.

case of invasion.

In my position I have the opportunity to come in contact with many people in various walks of life, and I think that I express their feeling when I say that they are for your measure.

The propaganda at the present time regarding the possibility of the United States becoming engaged in a world war is not very popular, as 20 years of meditation have developed some sound thinking on the part of these people. A repetition of 1916 is not desired and, I might add further, I believe would not be tolerated.

We need a national defense, and every mother's son would fall in line to defend their home, but our American boys are not going across the water to pull someone else's chestnuts out of the fire.

I make these declarations because I feel so keenly the need for

law such as you have proposed. Hoping that I may be of some service to you, I am, Yours truly,

EDMOND C. FOUST, Editor.

With the war tension circling the earth; with kaleidoscopic changes occurring in international relations; with one hour not knowing what the next hour will bring forth, let us pray that America will not become involved in the miasmas of hate that brood over the world, but will maintain more luminously than ever before her traditional role of good neighbor and friend of man. Let America stand erect, calm, and dignified in a world of storm.

Admission of German Refugee Children to the **United States**

EXTENSION OF REMARKS

HON, ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Tuesday, April 25, 1939

EDITORIALS FROM THE WASHINGTON POST, NEW YORK SUN, AND ST. LOUIS POST-DISPATCH

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial by Dorothy Thompson entitled "The Wagner-Rogers Bill," dealing with the admission of German refugee children in the United States; also an editorial by David Lawrence from the New York Sun of April 20, and an editorial from the St. Louis Post-Dispatch of Wednesday, April 19, 1939.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

> [From the Washington Post of April 24, 1939] ON THE RECORD-THE WAGNER-ROGERS BILL (By Dorothy Thompson)

The world situation, Senator Robert F. Wagner and Representative Edith Nourse Rogers are responsible for the introduction into Congress of one of the most intelligent pieces of immi-

tion into Congress of one of the most intelligent pieces of immigration legislation ever framed in this country.

Our previous legislation has been only vaguely selective. Our quotas are established by a mathematical computation. But this bill would admit to the United States immigrants of an age group which is precisely the one for which there is a definite need, and the organizations supporting it are prepared to take care of every one of the immigrants, so that nothing will be left to chance. It is, therefore, the first planned immigration which we have ever had, and the revolutionary crisis in the world is responsible for it.

The bill would permit a maximum of 20,000 children refugees under the age of 14 to enter this country over 2 years' time and outside the quota, provided that the child-welfare agencies which are organized in every State of this Union are prepared to find a home for each individual child.

The little immigrants would be selected by the American Friends' Service Committee, the organization of the Quakers, whose humanity, coupled with hard common sense, has given them an amazing

ity, coupled with hard common sense, has given them an amazing prestige in every country in the world.

The child-welfare agencies, who have already raised a revolving fund of a quarter of a million dollars, have no doubt—on the basis of surveys already made—that they can place these children with foster parents able to care for them and educate them until they can earn a living.

REFUGEE QUESTION IS WORLD PROBLEM

The refugee problem is a world problem and the United States realized months ago that something constructive must be done about it in an intergovernmental fashion if it was not to add

increasingly to world chaos.

That was why the United States Government initiated the Evian Conference, which led to the setting up of a permanent intergovernmental committee. We are dealing with one of the greatest mass migrations in history—and a migration caused not by economic depression nor by natural catastrophes but by artificial political measures.

The Wagner-Rogers bill is a very small contribution to a solution of a tiny segment of this problem which is now being dealt with by the British, French, Scandinavian, and Dutch Governments, as well as by our own.

But it is a contribution which makes a great deal of sense, both from the humanitarian and from the practical viewpoint. For from the humanitarian and from the practical viewpoint. For years the vital statisticians of this country have been pointing out that the failing birth rate is a cause for concern. This Nation, occupying the better part of a whole continent, and containing only 130,000,000 people, is rapidly ceasing to have an expanding population, will soon have a stable one, and after that may be expected to decline unless there is fresh immigration.

The average age of the population is increasing, and under the new old-age pension legislation a large burden will have to be borne by the young. It is also a very great question whether this halt in the expansion of the population is not responsible for many of our economic ills since the number of people newly requiring the essentials of life is diminishing.

CHILDREN HAVE GOOD BACKGROUND

Children under 14, therefore, fall into the age group which is

Children under 14, therefore, fall into the age group which is most desirable for immigration, according to the vital statisticians. And coming to this country at an impressionable age to be taken immediately into American families, the assimilation which usually takes two or three generations will be accomplished in one. Furthermore, the children available come from a much better background than much of our previous immigration. In the past the citizenship of this country has been augmented by people who were unable to earn a living in their own homelands. The families of these children have had enough health, competence, and general ability to support themselves and are would-be immigrants wholly

ability to support themselves, and are would-be immigrants wholly because of political conditions artificially imposed.

Many of these children have been orphaned or half-orphaned by the German revolution. Others have devoted parents who are willing to give up their children to foster parents in a distant

country only because those children have no chance to grow up to be normal human beings where they are. The testimony on this point at the hearing now going on in Washington from people who have been in Germany and former Austria is impressive and unanswerable.

VARIED FAITH IN EXODUS

Contrary to popular opinion, these children are by no means all Jewish. If the bill passes, it is the intention of the committee to select children from various racial and religious categories so to select children from various racial and religious categories so as to get a balanced ratio and to select them all with a particular view to their health and intelligence. There are Catholic children, Protestant children, and others officially classified under the German Nuremberg laws as non-Aryan, although they may be only a quarter Jewish and have been brought up as Christians for generative control of the control of

The Austrian children, and particularly the Viennese children, are the products of one of the best systems of education which I have ever been familiar with. Since they are to be placed in American homes, the American Friends Service committee which will make the selection will be forced to pay special attention to the kind of human material they are taking. And because the whole proj-ect is planned from start to finish, the children can be placed in the most desirable areas from a population viewpoint. They will be scattered through all the States.

MANY HOMES HERE WANT CHILDREN

That they will find homes is I think unquestionable, in view of the fact that there are in this country at any moment far more homes desirous of taking children than there are children to fill the demand. This fact will be vouched for by any of the adoption agencies.

agencies.

Also, the experience of the child-welfare agencies in placing American children from institutions or disrupted families in foster homes has been highly encouraging. The home is carefully selected in the first place, and the child is followed up for 5 years. In 98 percent of cases the adjustment between the child and the family is completed satisfactorily; and these children start out by being social cases and present certainly as many, if not more, problems than will these immigrant children, who are perfectly normal and have been brought up in a perfectly normal environment as far as their own homes are concerned.

The abnormality is in the political and social environment.

I see no conceivable reason, even from the most hard-boiled standpoint, why this bill should not be passed. Hundreds of social agencies are guaranteeing that these children will grow up in normal conditions and not be public charges.

BILL OPPOSED BY THE TIMID

Unless we are so utterly defeatist as to believe that this country can no longer stand a normal addition to the younger age group, there is no conceivable economic argument against it.

And if we are that defeatist we had better prepare to make way for the dictators, who at least affirm life for their own tribes.

I am leaving out of account in this argument all humanitarian considerations, although they are vital. It was Walt Whitman who said, "The largeness of nature and this country would be monstrous without a corresponding largeness and generosity in the spirit of the citizen," and in antithesis to the heroic principle as enunciated by the dictators he said that it was always hospitality that indicates heroes

The bill will be opposed by the timid, by those who think we live on a different planet from the rest of the world and that the whole earth can be chaotic without its affecting us, and it will be opposed by those who believe that the principles to which this country gives allegiance—the ideals of liberty and human rights—ceased to have validity along about 1781.

The bill is being supported by those who are hopeful and confident of the future of this country and have put their individual and organized effort behind making the proposed legislation work out successfully in practice.

[From the New York Sun of April 20, 1939]

Today in Washington—Proposal to Lift Quota on 10,000 German Children Yearly Is Analyzed

(By David Lawrence)

Washington, April 20.—Catholic and Protestant clergymen of prominence have joined in asking Congress that 10,000 children of Germans affected by religious and political persecution be permitted to enter the United States in each of the years 1939 and 1940.

Hearings on a bill to make this possible begin today. Some of the sponsors of the movement are Cardinal Mundelein, of Chicago, Carnon Anson Phalas Stokes of the Protestant Falsacone Chapter.

Canon Anson Phelps Stokes, of the Protestant Episcopal Church; Governor Lehman, of New York; President Hutchins, of the University of Chicago; and President Ray Lyman Wilbur, of Leland Stanford University; Herbert Hoover; former Governor Landon; Frank Knox, of Chicago; Dr. Harry Emerson Fosdick; Mary E. Woolley; and George Rublee, who represented the United States in the negotiations with Germany recently with reference to refugees.

The plan is, of course, wholly a humanitarian measure, but it

has stirred up some scattering opposition on the part of those who feel that the children, when grown, would be competitors of American-born children. The legislation is backed by Senator Bos Wagner, of New York, Democrat, and Representative Edith Nourse Rogers, of Massachusetts, Republican, and will be considered in a nonpartisan way.

SUMMARY OF THE PROPOSAL

In Washington, the Pathfinder, a weekly publication of large circulation throughout the country, which has been conducting a campaign in behalf of the bill, says:

"According to the best estimates available, there are about

"According to the best estimates available, there are about 75,000 German children in distress. Such authoritative sources as the American Friends Service Committee say that America's proposed total of 20,000 admissions could be chosen from 50,000 of the 75,000 in distress. Approximately only half of these 50,000 are Jews, the rest being in Nazi disfavor because they may have one or more Jewish grandparents or because their parents are politically supported that the statement of the service of th

or more Jewish grandparents or because their parents are politically outlawed. This means that all faiths are represented and that all groups in the United States have reason to take active interest in the Wagner-Rogers proposal. * * * * "Of the hundreds of thousands of Europeans who are refugees or potential refugees, the children arouse the greatest sympathy. With life still stretching before them they find themselves shorn of opportunity, shorn of education, and in some cases shorn even of the right to play, the right to enjoy sun and grass."

The plan provides for Great Britain and the Netherlands and other countries to admit as many of the children of refugees as possible, and, in the case of the United States, adequate guaranties are to be given that the care and support of the children will be guaranteed by individual Americans before admission is granted.

Already assurances that homes will be forthcoming in America in

guaranteed by individual Americans before admission is granted.

Already assurances that homes will be forthcoming in America in congenial surroundings have been given, so that this part of the plan is not in any way difficult. The children are to be below the age of 14, and tragically, indeed, it will be necessary for the children to be separated from their parents. But the latter are, in most instances, willing—and no children will come without the parents' consent—to have the youngsters taken away from Germany and given a chance to live in freedom.

HAVEN FOR THE OPPRESSED

What will happen to the parents, of course, is a problem that cannot be determined, but each year for the next 5 or 10 years, no doubt, some of these parents will wait their chances on the regular quota of admission, and they will have the knowledge that

their children at least are growing up in free America.

The relatively insignificant total to be admitted—10,000 a year—will hardly affect the economic status of the 130,000,000 persons in

will hardly affect the economic status of the 130,000,000 persons in the United States, and the argument of future economic competition is not given much weight by most Members of Congress.

America has received from Germany some of the finest types of citizens. Back in 1848, when Germans fled here to escape political persecution, there came the fathers and mothers of some of the best families in the United States today, judged from any standpoint of measurement. Indeed, history shows that the German convilsation which emigrated to the United States in the learners.

best families in the United States today, judged from any standpoint of measurement. Indeed, history shows that the German
population which emigrated to the United States in the last 90
years has enriched the American Nation.

Traditionally, the United States has opened its arms to refugees
escaping persecution for political or religious reasons ever since
the days when the Pilgrim Fathers arrived from England and the
Huguenots from France to avoid the intolerance of the Old World. The gesture of the United States in admitting 10,000 children in each of 2 years is a small part of the general solution of the refugee problem which confronts the world, but it would be worth doing if only to continue uninterruptedly the tradition of the Republic to afford political asylum to those whose lives are threatened because of race or religion or political beliefs.

[From the St. Louis Post-Dispatch of April 19, 1939] SHOULD 20,000 CHILDREN BE ADMITTED?

Despite the economic hardships of our own citizens, Senator Wagner's proposal to admit 20,000 German refugee children into

the United States in 1939 and 1940, over and above quota restric-tions, has received widespread support. It has been approved by such newspapers as the New York Herald Tribune and the Richmond Times-Dispatch; by ex-President Hoover; by Mrs. Calvin Coolidge, who thus breaks her rule of silence toward pending legislation; by Cardinal Mundelein; and, in principle, by the C. I. O. and

The children to be admitted are all under the age of 14 and would thus offer no immediate competition in the labor market. It would be necessary for each to have sponsors—persons willing to receive and support them, guaranteeing that they would not become charges. Mrs. Coolidge, for instance, is a member of a group of Northampton, Mass., women who wish to take 25 of the refugees. About half of the children are full-blooded Jews; the remaining half are Catholics or Protestants who may have had a non-Aryan grandparent or whose parents have incurred the disfavor of ruling authorities in Germany.

Other countries have already acted to provide homes for these unfortunate youngsters. Great Britain, waiving the usual entrance regulations, has taken 2,800 and has made preparations to take 5,000 more. Holland. Belgium, and France have opened their doors to others. Little Holland alone has accepted 1,700 children, and has not yet closed the doors. None of these countries is as well able as our own to make places for the children.

It is hardly necessary to point out that the condition of the children is tragic in the extreme; the parents of many are in concentration camps or so reduced in circumstances and so devoid of hope that they are willing to undergo the excruciating experience of breaking up the family to permit the youngsters to have a fair chance in life.

No longer is this country open to the oppressed of all lands as it once was and the distress of many of our own people is great. Yet the case of these European children, reduced to poverty and cast adrift through no fault of their own, is a very special one. Among them there are no doubt some who will add luster to their adopted countries, and most of them will become useful citizens, passionately attached to the land which gave them their only chance to lead normal lives.

Consolidation of Army Posts

EXTENSION OF REMARKS OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 26, 1939

Mr. HESS. Mr. Speaker, at the present time there are upward of 335 posts, camps, and stations either wholly or partly under the jurisdiction of the War Department. A resolution which I have introduced today requests the Department to furnish Congress with a plan for consolidation of posts and abandonment of unnecessary posts such as will best serve the interests of national defense and governmental economy.

The reasons for present locations of most of the Army posts in the United States can be found by tracing back through the pages of our history and following the story of the development of our country as its settlers progressed westward. Time was when there was need for armed protection of our frontiers as they moved steadily toward the Pacific. Here and there forts were built and garrisons were provided to protect our pioneer settlers as they invaded the domains of the Indians. With the flight of time, conditions have changed. No longer is there need for forts and garrisons for protection against the red man; but they remain, for the most part, located where they were in the early days, without much thought being given to such considerations as value of locations occupied, economy in operation, value as training areas, convenience for mobilization purposes and strategic value.

Is it not about time that consideration be given to scrapping some of these old posts which have long ago served their purpose and to distributing the garrisons of our Army geographically to meet the more important considerations that justify their existence? With our military policy of a relatively small Army, its distribution geographically should be given careful thought.

The determination of allocations of our armed forces to strategic centers is a function of the War Department. same may be said of other considerations-training facilities, economy in operation and administration, selection of locations with due regard to mobilization requirements. All of these enter into the problem of locating our forts and garrisons to best meet the requirements of our national defense

It must be admitted that it costs a great deal more to maintain dozens of small posts than it would to eliminate such of those posts as are no longer needed from any standpoint and combine the garrisons of others. Some of these small posts are now located on valuable land within the limits of large cities. Such sites should be sold and the proceeds used to acquire training areas with diversified terrain suitable for training large units-brigades and divisions. The days of fighting with small units are gone forever. These small garrisons should be stepped up to larger proportions, located for the most part near large railroad centers, affording means of rapid transportation to any part of the country, with large areas in close proximity suitable for the training of the higher commands. In general, these training areas should be selected with a view to climatic conditions that would permit all-the-year-round training out of doors. It would be well, however, to locate some of them in areas where seasons vary and to assign to those areas one or more divisions for training during varying seasons. No nation can foresee what country it may have to fight some time or where the battleground will be. A well-trained army must therefore be prepared to fight in any kind of climate and at any time of the year.

There are so many considerations affecting the locations of Army posts, both at home and in our foreign possessions, that the whole question is one that should be made a study by the General Staff from a purely military viewpoint devoid of political considerations, with a view to recommending to Congress the abandonment of those Army posts no longer con-

sidered essential to our national defense.

In 1931 the then Secretary of War, Mr. Hurley, directed the Chief of Staff, General MacArthur, to submit a memorandum on the abandonment of Army posts and reservations. This report is most complete and is as follows:

since the close of the World War the War Department has been continuously engaged in eliminating its surplus holdings, with the result that the property which will remain after the disposal of military posts now proposed will represent practically the minimum required to enable the Army to perform its mission. The total acreage now under control of the War Department is only about 13 percent greater than it was on April 1, 1917, notwithstanding the acquisition of extensive landing fields throughout the country necessitated by the air program.

War Department real estate, totaling 300,885 acres, has been disposed of by sale or by transfer to other departments of the Government since the year 1919. Of this total, 55,774 acres have been sold at a price of \$12,643,269, and 245,111 acres, with an appraised value of \$88,422,032, have been transferred to other departments of the Government.

In addition to the above, the War Department, during the same

In addition to the above, the War Department, during the same period has sold buildings and other improvements on real estate, totaling approximately \$10,000,000, and at the present time sales

totaling approximately \$10,000,000, and at the present time sales of real estate which total 12,122 acres at an estimated value of \$1,097,060 are pending.

Furthermore, there are 16 parcels of real estate at an estimated value of \$10,000,000 which have been under consideration by the War Department for sale for some time, but which are being held awaiting more favorable conditions for their disposal.

It has been the policy of the War Department to convert into a source of revenue for the Government, all holdings of real estate which are not immediately needed for military purposes but which a source of revenue for the Government, all holdings of real estate which are not immediately needed for military purposes but which must be retained for ultimate military use. The actual rentals received from such property now amount to \$699,430 annually. In addition, there are 24,319 acres of War Department property valued at \$14,427,216 on permit, lease, or license to other departments of the Government, and for which no direct rentals are paid into the Treasury.

the Treasury.

After thorough restudy by the General Staff of the needs of the military service, it is now planned to dispose of 53 military posts either wholly or in part. The list of posts proposed for complete disposal contains the following stations occupied at the present time: Fort Brown, Tex.; Fort Eustis, Va.; Fort Hunt, Va.; Camp Harry J. Jones, Ariz.; Fort Lincoln, N. Dak.; Camp Stephen D. Little, Ariz.; Miller Field, N. Y.; Fort Missoula, Mont.; Fort D. A. Russell, Tex.; Chanute Field, Ill.

The abandonment of these posts is influenced by reasons of military efficiency as well as economy. The small Regular Army must be distributed so as to enable it to perform its peacetime missions in training our citizen components. Several of the posts listed above are of temporary construction and if retained would involve the War Department in large expenditures of funds to make them habitable. Certain ones have long outlived their use-

fulness. In this connection it must be remembered that strategic locations of garrisons against foreign aggression, under modern conditions of rapid transportation, have ceased to be of any special

value.

value.

In addition, it is proposed that the following harbor-defense forts, camps, and landing fields, which are now unoccupied except by caretakers, be completely disposed of: Fort Dade, Fla.; Fort DeSoto, Fla.; Key West Barracks, Fla.; Fishermans Island, Va.; Fort Ward, Wash.; Willapa Bay, Wash.; Fort Morgan, Ala.; Camp Upton, N. Y.; Camp Lee, Va.; Camp Eagle Pass, Tex.; Camp Furlong, N. Mex.; Park Field, Tenn.; Carlstrom Field, Fla.; Dorr Field, Fla.

In further addition, 29 harbor-defense posts are to be disposed of in part. All but 3 of them are now unoccupied or on a caretaking

In further addition, 29 harbor-defense posts are to be disposed of in part. All but 3 of them are now unoccupied or on a caretaking status. It is necessary to retain the portions of these posts on which are located the fortifications, guns, etc., which would be utilized in time of necessity. The list of these posts is as follows: Fort Levett, Maine; Fort Stark, N. H.; Fort Foster, N. H.; Fort Constitution, N. H.; Fort Heath, Mass.; Fort Andrews, Mass.; Fort Revere, Mass.; Fort Ruckman, Mass.; Fort Strong, Mass.; Fort Warren, Mass.; Fort Rodman, Mass.; Fort Getty, R. I.; Fort Greble, R. I.; Fort Wetherill, R. I.; Fort Schuyler, N. Y.; Fort Terry, N. Y.; Fort Mott, N. J.; Fort McRee, Fla.; Fort San Jacinto, Tex.; Fort Travis, Tex.; Forts Baker and Barry, Calif.; Fort Rosecrans, Calif.; Fort Miley, Calif.; Fort Casey, Wash.; Fort Columbia, Wash.; Fort Whitman, Wash.; Fort Flagler, Wash.

The total appraised valuation of the 53 posts proposed for disposal is approximately \$22,000,000. In working out the details in connection with the disposal of these posts certain adjustments will have to be made for the distribution of the Army. As a result, it may become possible to add to the above list several other stations which now occupy a doubtful status.

While the West Department plans to dispose of these posts and

which now occupy a doubtful status.

While the War Department plans to dispose of these posts and reservations above listed, some may be transferred to other departments of the Government, National, State, or local, provided it is found they can serve a useful purpose on an economical basis. In many cases the War Department now has authority of Congress to be a constant of the conference of transfers. In other cases congressional authority make these sales or transfers. In other cases congressional authority must be secured.

The War Department has already named its member of the Board appointed by the President, and upon which all interested services are represented, to consider what nonmilitary governmental use might be made of this property surplus in the War Department.

It appears to me that in the interest of both economy and military preparedness the need for these abandonments and consolidations is greater today than it was in 1931.

I sincerely trust that the Military Affairs Committee of the House of Representatives will give consideration to my resolution and request the War Department to submit a plan as suggested in the resolution.

Ideals and Principles of Thomas Jefferson

EXTENSION OF REMARKS

HON. CLIFTON A. WOODRUM OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1939

ADDRESS BY HON. JAMES A. FARLEY AND INTRODUCTORY ADDRESS BY HON. CARTER GLASS, OF VIRGINIA

Mr. WOODRUM of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made at Lynchburg by the Chairman of the Democratic National Committee on April 13 and an introduction by the senior Senator from Virginia:

INTRODUCTION OF MR. FARLEY BY SENATOR CARTER GLASS AT THE JEFFERSON DAY CELEBRATION OF THE LYNCHBURG YOUNG DEMOCRATIC CLUB AT LYNCHBURG, VA., APRIL 13, 1939

Mr. President and fellow Democrats, this is the birthday anni-Mr. President and renow between the desired and renow versary of the greatest Democrat who ever lived. There were great characters in Virginia and in the Nation in that era of our history, but no man had greater versatility, greater discernment, and was as great a statesman as Thomas Jefferson, and tonight we assemble here to pay tribute to his ideals and to hear him addressed on the subject of them by one of the finest men of the present administration

As I had occasion to say at the dinner to which most of you were not invited, any community in the United States would honor itself by honoring Jim Farley. He was the most effective and the ablest chairman of the Democratic National Committee that served during my entire life of more than 81 years. His achievements are the most outstanding of any Democratic national committeeman. He has nearly driven the Republican Party out of existence and has

carried for the Democratic Party more electoral votes than any Republican candidate ever received in 3 or 4 years.

However anyone may differ with Jim Farley, nobody has ever been found to say that he isn't a man of his word, who keeps his promises—he doesn't make many—but it is something to keep them all them all.

Some people say that I am a cold and a reserved sort of person, which, of course, isn't true; but be it true or not, I have personally loved Jim Farley ever since I have known him. You may always depend upon what he says. He is what he is and proud of it. He is a politician, and he is the best politician that has ever figured in the public life of America. He has carried the Democratic Party to signal success in every campaign which he has directed, and without being a prophet, I may very safely predict that he will carry it to success in the next national campaign.

Strange as it may seem to my fellow citizens, I am one of those United States Senators who do not believe in talking long but talking frequently, and I am not going to follow the example of some people who introduce the speakers of the occasion by making Jim Farley's speech for him, but I am going to present him to this great audience—the greatest that I have ever seen assembled here in the armory—with the confident expectation that he will entertain and instruct you and make another contribution to the cause of democracy. of democracy.

I present James A. Farley, Postmaster General of the United

ADDRESS BY HON. JAMES A. FARLEY, CHAIRMAN OF THE DEMOCRATIC NATIONAL COMMITTEE, AT THE JEFFERSON DAY CELEBRATION OF THE LYNCHBURG YOUNG DEMOCRATIC CLUB, AT LYNCHBURG, VA., APRIL 13

For many years now, the Democratic Party has made a custom of celebrating the birthday of its immortal founder, Thomas Jefferson. We have had a dual purpose in doing this. The first Jefferson. We have had a dual purpose in doing this. The first purpose has been to honor the memory of a worthy patriot and the second has been to rededicate ourselves to the fundamental principles of American democracy.

principles of American democracy.

This is an appropriate setting for an observance of Jefferson Day and I am indebted to the Young Democrats of Lynchburg for their kindness in inviting me here. A discussion of human rights and political liberty should carry an authentic ring when spoken on Virginia soil.

I am also happy to be in the home city of my good friend, Senator Carter Glass, a great American, whose integrity of purpose and fidelity to conviction should serve as a model for all who aspire to a place of trust in public affairs. He has served the Nation well and those who disagree with him in viewpoint are quick to acknowledge his honesty and his sincerity.

This year's observance takes on an added meaning because there never was a time when the world was more in need of Jeffersonian

never was a time when the world was more in need of Jeffersonian guidance than it is today. It is frequently said that democracy is on trial—merely because popular government has been supplanted in some nations by the iron rule of dictatorship. I dissent from that view. The dictator never lived who could confer on his subjects a gift equal to the simple dignity of American cit-

In my opinion, the events of this troubled period serve to vindicate the intrinsic value of the democratic process. I doubt if any individual on earth who ever tasted the joy of free living would voluntarily prefer to live under a form of government that presumed to order for him his thoughts, his opinions, his occupation, and his way of life. Every new victory for the law of force and violence is a defeat, not only for its immediate victims but for all humanity.

On former occasions such as this we paid lip service to the blessings of democracy, perhaps without realizing what they realiy meant. That is no longer true. We speak of democracy today almost in reverent tones, because we know from the sad experience

almost in reverent tones, because we know from the sad experience of other lands that the most precious things we have are the direct result of the form of government under which we live.

Whenever free-born men and women think of liberty, the name of Thomas Jefferson immediately springs to mind. It would be idle for me to explain why that is so to an audience of Virginians. A great writer has stated that Jefferson fashioned the national platform when he gave us the preamble of the Declaration of Independence. I think you will agree with that statement.

We pay tribute to Jefferson tonight because his philosophy enters into everything that goes to make up the great American tradition.

And so Jeffersonian democracy has no truck with communism, nor with fascism, but stands four-square for that Americanism, which is the full development of American democracy.

What else does democracy imply?

What else does democracy imply?

It means that the people who turn the wheels of industry and fight the nation's battles shall have the ultimate determination of the nation's policies.

And what is the denial of democracy?

It means a padlock on the lips, shackles on the press, worship—
if at all permitted—by the toleration only of a single man; it
means racial and religious persecution, misery for millions, and slavery for all.

The amazing onward march of the dictators of the Old World, preying on the fears, the insecurity, and the unhappiness of the masses has been due not to democracy but to the failure in the proper functioning of democratic institutions.

The demagogue of reaction has made his appeal for the rejection of democracy by pointing to the evils that have been permitted to grow up in democratic nations; to men denied the right to

work; to men and women in need of bread; to weaknesses in the mechanisms of the state that make for waste; to the legalized exploitation of the many by the few; to swollen fortunes here and bread lines there.

The demagogue of reaction ascribes these evils not to the plutccracy which has taken over the instrumentalities of democracy, but to democracy itself.

If you still stand for life, liberty, and the pursuit of happiness, you stand for the kind of democracy that Jefferson foresaw; and if you would preserve democratic institutions, you must stand for the elimination of the social, economic, and political evils that have clogged the machinery that was designed to make those institutions

That is what President Roosevelt saw and knew: and from his first hour in power he has dedicated himself to the colossal task of putting the mechanism of democracy in order. It was a colossal task for the evils had accumulated through many years and had fastened themselves deeply in the economic system.

Now, in effecting the eliminations and in making the readjust-ments, we may have made some miscalculations, but no one honestly doubts that there has been an honest effort to put our national

house in order.

And this we know—there has not been a single move that we have made that was not aimed at the preservation of democracy.

There is not a nation in the world today that does not know this to be true. We who are near at hand, in the midst of the prejudices, the party passions, and the clashing of personal ambitions, lack the right perspective. But we can read the story of what we have tried to do in the reactions of other nations far enough

away to view the record objectively and without passion.

And the answer is that in every nation across the sea where democracy still lives—if not in governments, in the hearts of men—President Roosevelt is hailed by the masses of the people as the greatest and most sagacious democratic leader of his age.

And in every country where liberty has been crushed, where millions are driven to missay by accounting President Roosevelt is

lions are driven to misery by persecution, President Roosevelt is the most hated statesman in the world.

That fixes his status in the fight for freedom.

That anticipates the certain verdict of history.
Politics usually speaks the language of gross exaggeration and
often of deliberate misrepresentation. When the enemy paints a
portrait, it is naturally distorted. What has the administration and
its supporters in mind? What do we want?

We certainly want business to make a reasonable profit on its investment, for capital takes the risk.

We want labor to secure a wage that is sufficient to bring a sense of dignity and security and to have working conditions commensurate with the dignity of toil, for capital without labor would be as barren as money on a desert isle.

We want the farmers to feed capital and labor to reap rewards for their toil sufficient to lift or keep the mortgage from the farm and enough besides to leave a balance in the bank.

We want the banks to thrive and to use their hoarded gold to meet the needs of constructive industry and safely to finance the

building of the people's homes.

We want business to boom—and we want all America in on

the business

We want the aging worker free from the haunting fear of a twil ght of misery and poverty, and the widowed mother to have a chance to rear her child at home, and the crippled child to have a chance to support himself in self-respecting toil; we want a reasonable provision to tide the worker over the occasional periods

reasonable provision to tide the worker over the occasional periods of unemployment—and these are the reasons we have written into the statutes the Social Security Act—which is the emancipation proclamation of the masses.

We want a press that's free, the right of free speech, and the freedom to worship God according to the dictates of conscience—the most sacred right of all, as Jefferson believed when he gave immortality to his name with his statute of religious freedom.

When lefferson wrotes the incorporation for his time he forget that

When Jefferson wrote the inscription for his tomb he forgot that he had been Ambassador, Secretary of State, and President, but not that he had written the Declaration of Independence and the statute designed forever to protect the people from the terrors of

statute designed forever to protect the people from the terrors of religious persecution.

These are the big things, in broad terms, that have inspired our efforts during the last 6 years, and they are the things for which our forebears have fought and wrought for a century and a half of

glorious achievement for the human race.

Now the opposition has forsaken constructive effort to concentrate on the manufacture of abusive language to apply to Roosevelt. Its contributions to political thinking give more heat than light. It is acting on the supposition that government by vilification will appeal to people with grave problems on their minds. It assembles the victims of all the grievances on all subjects and in all lines and seeks to weld them into a political army.

and seeks to weld them into a political army.

It does not dare tell what policies it will sponsor. It is trying to sell the people a pig in a poke.

Human problems affecting the happiness and the libertles of the people cannot be solved by abuse any more than by bullets and bayonets.

Among the leaders of the opposition, Mr. Hoover is the most articulate and the most courageous. He clearly lives in a world of illusions, warmed into a glow by self-admiration. He evidently has persuaded himself that the Nation looks back with yearning eyes to the gladsome days of his administration and eagerly awaits an opportunity to restore the conditions as he left them after 4 years of the most tragic failure in American history.

But his illusions are not without some encouragement, since he

But his illusions are not without some encouragement, since he has emerged again as the acknowledged leader and spokesman for his party. His party's leaders listen to his gloomy tales and fore-bodings with the reverential silence of children in the nursery listening to the bedtime stories of a much-loved governess.

And this must be said in justice to Mr. Hoover: He is the only leader among the enemies of Rcosevelt who has the temerity, if not the capacity, to submit some kind of program. It may be a shopworn program; maybe its telltale fingerprints are well known and registered in the homes of millions. It may evoke visions of bread lines and scup houses, of starving millions, of crowded courts of bankruptcy, of crashing banks, of evicted tenants, of homesteads knocked down by auctioneers to the highest bidders, of wharves left desolate by a ruined foreign trade; but at least it is a program. desolate by a ruined foreign trade; but at least it is a program. Many of his party may mistrust him, many may even doubt his popular appeal, a few may question the wisdom of his frankness, but none of his associates can match his presumption in urging a return to his reactionary measures. Let us pay this tribute to him: He does not deceive a single soul he could not if he would, and I prefer to think that he would not if he could.

What do these opponents want?

Well, they still are agitating against relief for the unemployed. He misunderstands the lesson of history who concludes that the man who is jobless may safely be left to starve. And he must care little about the preservation of American institutions who would practice such inhumanity.

They draw sweeping, blanket indictments of the Democratic administration, but they dare not get down to cases.

What measures of the administration would they repeal?

Would they repeal the banking laws under which there are scarcely any failures and go back to the old laws of the Hoover regime when banks crashed by the thousands, sweeping away the

savings of the people?

Would they repeal the reforms of the stock market under which

Would they repeal the reforms of the stock market under which the investor knows what he is buying and go back to the old system of unregulated speculation?

Would they wipe out the Tennessee Valley project which has given life and opportunity to a vast empire and turn the Nation's heritage over to the exploitation of a powerful few?

Would they repeal the Wagner labor law, which submits the disputes of capital and labor to the arbitration of reason and justice, and go back to the good old-fashioned plan, "That they should take who have the power, and they should keep who can"?

Would they repeal the Wagner Act for collective bargaining and make human labor a more commodity again?

We have set up an organization and a system which has saved

We have set up an organization and a system which has saved hundreds of thousands of home owners from eviction and hundreds of thousands of farm homesteads from foreclosure-would they tear those down?

We have written the Social Security Act, the most humane and

We have written the Social Security Act, the most humane and civilized piece of legislation in our history—would they wipe it out? These things may be improved as experience may dictate, but never in our generation will they be repealed.

They complain—or some of them do—of the cost of preparedness for our protection in a world gone mad. Now we want no war with anyone; we shall have no war through any fault of ours; but if war is forced upon us, we intend to be prepared to fight for the preservation of our institutions and our freedom.

History will record that no administration since that of Wash-

History will record that no administration since that of Washington is more conspicuous for constructive achievement for the

More than that—it will record that never has any administration inherited so much ruin and wreckage, so much economic disorganization and anarchy, so much human misery and despair; and while the evils that have been accumulating through half a century of shortsightedness and neglect cannot be cured by the waving of a magic wand, we have lifted the feet of our people from the swamp in which we found them to solid ground again where they can work out their own salvation.

The outstanding lesson to be drawn from the political events of the past few years is the fact that the electorate is solidly behind the constructive reforms of the Roosevelt administration. The American people are not ungrateful and they have never yet listened to the bugle call of retreat when victory was at hand in the never-ending struggle for human progress.

After 6½ years of defeat and discouragement the opponents of the Chief Executive's program think they see a bright beam of light ahead. They are looking forward to 1940, inspired by the same brand of optimism that gave them so much courage during the early months of 1936.

The expected victory is based on the belief that the host of dis-The expected victory is based on the belief that the host of discontented factions will unite behind the candidate who is most successful in concealing his views on public questions. The same formula was tried in the last Presidential campaign with unhappy results. I dislike to destroy an illusion but it might be well to make this point clear: The next President of the United States will be a forward-looking individual who belongs to the political party that gave the Nation Thomas Jefferson, Andrew Jackson, and Franklin D. Roosevelt. We are ready for the fray; we stand on the record and we welcome the opportunity to test the issue at the ballot box. ballot box.

With the die-hard economic and political Tories we need not concern ourselves. The time has come to ignore their complaints and press forward to the realization of the Nation's unbounded possibilities of prosperity—prosperity for every section and for every class. With the enormous resources with which nature has endowed this Nation, with the bank vaults choking with idle money, with the energy of the workers and the resourcefulness of our industrial leaders, the only thing that can hold back general prosperity would be a short-sighted refusal of any element of the people to work in harmony and in harness.

And so the administration is inviting all men of good will and patriotic impulse to cooperate in putting into movement the wheels of industry. To say that we are hostile to this or that essential factor, when all are equally essential in the restoration of good times, is directly opposite the truth.

In view of the perilous conditions throughout the world today, the time has come for all Americans to work together as Americans

the time has come for all Americans to work together as Americans and to end the internal feuds that rest on nothing more substantial and to end the internal feuds that rest on nothing more substantial than spites and selfishness and prejudices and foolish hates. We have seen too many unseemly hates, and our great American family has engaged too bitterly in family feuds that tend to endanger the common heritage of our fathers. We who have been in power by the will of the great majority have kept the faith. On this anniversary of Jefferson's birth his ideals and philosophy are more highly valued than ever. Had all nations followed the eternal principles of equality and justice advocated by Jefferson, we would have today a contented, peaceful, and prosperous civilization instead of the marching troops, the distress, and the fear that hangs heavily everywhere of another world war.

Let the American people lay aside all backbiting and bickering and let us present a united democracy as an example to the world. Liberty and freedom can never be extinguished while the torchlight of Jeffersonian democracy is held aloft by the citizens of this Republic.

Republic

Let us cherish the great heritage that has come to us from Thomas Jefferson and let us hand down to our children the blessings and benefits of a united national family. Let us persevere with a common determination that, no matter what befalls in less fortunate lands, we will make the American family, as Jefferson has planned, the most united, the most contented, the most tolerant, and the

most prosperous in all the world.

That was the dream of Jefferson.

That is the ambition of Roosevelt.

And that must be the common vision and the common aspiration of us all.

"The Penalty Clause or Bust"-President Roosevelt Is Busy Putting Men to Work, While John L. Lewis Is Equally Busy Keeping Men Out of Work

EXTENSION OF REMARKS

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 26, 1939

ARTICLE BY PAUL MALLON

Mr. MARTIN J. KENNEDY. Mr. Speaker, on April 21, 1939. I called the attention of the House of Representatives to the serious consequences that would visit the American public and most particularly the people of my city if the pending negotiations to reach an agreement between labor and the operators in the bituminous-coal fields were unsuccessful, and Mr. John L. Lewis, head of the C. I. O., called the strike he has threatened. As I pointed out in my statement of April 21, 1939, the sole issue was the penalty clause in the agreement. Mr. Lewis will not consent to its continuance because he fears that an opposition union might be able to organize the coal fields. This, of course, makes the real issue the continuance of the power of John L. Lewis in the coal fields. This viewpoint of mine is substantially confirmed by an article which appears in the Times-Herald of Washington, D. C., on April 26 by Mr. Paul Mallon. The article reads as follows:

[From the Washington Times-Herald of April 26, 1939] (By Paul Mallon)

Behind all the smoke and soot of conflicting propaganda in the coal strike predicament is the clear fact that no question of wages, hours, or working conditions is involved.

hours, or working conditions is involved.

If you can penetrate the publicity mists, you will find it is true that John Lewis reached an agreement with the operators on every point except one long before the Federal Government stepped in.

The one thing the C. I. O. boss wanted that the operators would not give is elimination of the system providing fines for unauthorized strikes. The miners proposed the system back in 1917 to assure the operators they would live up to contracts. It authorized penalty fines of \$1 to \$2 per day per worker on unauthorized

strikes. If the operators locked out the miners, the operators were required to pay it, and if the miners broke their contracts, they had to pay it.

So 340,000 miners have been idle nearly a month. More have

been called out for May 4 if the Appalachian lock-out is not settled. Largest coal bins in the East will reach the bottom next week. Coal-carrying railroads are reported to be losing \$10,000,000 a week. All because old Uncle John wants freedom to break the contract he proposes to sign.

Proposes to sign.

Not much of a secret is being made by Uncle John as to what authorized strikes he wants to call. He has not been shouting about it outside the conference room, but he is afraid of A. F. of L. coming into his mines. If the pushing A. F. of L. miners' union gets one member in a C. I. O. mine, he wants the right to break his contract and call a C I. O. strike. He knows that if he can get this freedom none of his operators would dare hire an A. F. of L. man.

Authorities here did not expect much from their mediation efforts when they started, because this is a tight and dangerous pinch for Lewis. A formal Nation-wide tie-up would probably be very unpopular. Coal-starved consumers might arise wrathfully against the idea of a fuel starvation merely to protect John Lewis against inroads from the A. F. of L. On the other hand, if Lewis gives in, the A. F. of L. progressive miners' union may straight-arm its way into the United Mine Workers, which is the main source of funds for the whole C. I. O.

Lewis adherents are already shouting this is a conspiracy between

Lewis adherents are already shouting this is a conspiracy between the operators and the A. F. of L.; that steel consumers of coal are behind the rebellious operators; that his friend Mr. Roosevelt did

not tell Miss Perkins to start mediation.

Some measure of truth may exist for these air-filling challenges, but the real drama lies in the personal struggle of Mr. Lewis to extract himself from the hole of his own digging.

Paramount Problems of Puerto Rico

EXTENSION OF REMARKS

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO IN THE HOUSE OF REPRESENTATIVES Wednesday, April 26, 1939

Mr. IGLESIAS. Mr. Speaker, before living conditions in Puerto Rico can be brought up to American standards, credit must be made available for the exploitation of the island's natural resources. I recommend the establishment on the island of a Federal agency with adequate funds and broad powers to make loans for the development of agricultural and industrial enterprises.

It is hard for continental Americans to understand the hardships of your fellow Americans in Puerto Rico as perhaps your forefathers who conquered the West or mine who conquered the Southwest might have understood them. They knew the same daily struggle for life, the hunger and fear of hunger, the terrible insecurity that is the daily lot of the citizens of our island. But no State today can be compared with Puerto Rico for the depth of its depression or the complexity of its problems. As your forefathers conquered the geographical frontier and built this glorious Nation, so these Puerto Rican Americans must conquer the industrial frontier and build the economy of their little

Last year the average actual earnings per week of some 71,000 workers surveyed by the Commissioner of Labor was \$5.36 a week. It has been proved that the cost of living in Puerto Rico is much higher than it is anywhere on the mainland. When these paltry wages are applied to the purchase of such expensive necessities, you can understand why Puerto Ricans, even those fortunate enough to be employed, do not have a decent standard of living. And consider the misery of those 125,000 families whose breadwinners have no employment at all.

In studying the causes of this condition there is no comparison but there is a contrast between the island and the mainland. Consider the matter of concentration of population. In Puerto Rico there are about 531 people struggling for existence to every square mile of area. In continental United States as a whole, there are only about 41 persons for each square mile. In order to find a concentration of population similar to that of our island, we must go to the third most thickly populated State, Massachusetts. I mention it, not for invidious comparison, but merely because it has about the same number of people per square mile as has Puerto Rico.

The people who live in the great State of Massachusetts do not by any means live exclusively on the income derived from agricultural activities. A majority of them are engaged in industrial or commercial pursuits. They have conquered this new frontier of industrialization and have reached the promised land of a self-supporting economy. A visitor to the State finds a reasonably happy, prosperous citizenry, decently clothed and healthy.

Now, let us turn to Puerto Rico, the infant commonwealth under the American flag. As a part of the United States, this is not only a new land, a different, tropical land, but a new people of a different Latin temperament who have been taken under the protection of our American institutions. While its loyalty cannot be questioned, it is isolated by cultural as well as physical factors from that intercourse which has been vital to the building of the economies of other sections. It requires particular attention and ingenuity to solve its peculiar problem. It cannot be expected to develop along exactly the same lines that any given State has followed. Nevertheless, its economy must be placed on a par with that of the States, and that can be done only by making adequate finances available.

By contrasting Puerto Rico's economy with that of Massachusetts we can better understand its problems and perhaps point a way toward their solution. The people of Massachusetts can choose their means of livelihood from among many diverse industries. The textile and shoe businesses are most prominent, but to illustrate the diversity we may consult the 1930 census. That document lists some 197 different kinds of manufacturing and mechanical industries alone in Massachusetts, while it names only 13 for Puerto Rico. Massachusetts has about the same amount of land per capita as Puerto Rico, but only about 3 percent of its working population are engaged in tilling it, as compared with about 52 percent in our island. The predominance of agricultural employment in Puerto Rico shows that its economy is undeveloped. If it were thinly populated it might continue thus indefinitely. But since it has a great and rapidly increasing population to support it must do as other thickly populated areas have done-develop its economy to support its people. To support them properly it must employ its people in lines other than agricultural; it must have some such diversity of industries as exists in Massachusetts.

How can Puerto Rico hope to attain that economic prosperity, that American standard of living, which is a part of the blessings of American liberty promised us when the island was occupied? While it may not follow exactly the same pattern as any other place, the general lines can be known in advance. Because there are so many people living in so small a space it is impossible for them to live to so large an extent upon the income from farming. Greater income may be attained by two methods—namely, intensification of agricultural production and industrialization of the products of the soil. Either we must emulate the little, thickly populated countries of Europe, and utilize every inch of our arable soil to produce as much income as possible for those who till it. or we must emulate the industrial States and use our excess labor assets for the processing of every product of our soil. Thus we can increase its value and the income of those who produce it. Or the answer may be a combination of these two lines of development.

The form that our development may take cannot be planned—cannot be predicted item for item in advance. If it is to progress on the American pattern, in accordance with the accepted laws of economics, its daily and yearly progress will be dictated by the self-interest and the genius of individual and group enterprise. Following these two inevitable lines, it must develop organically, without any false or strained regulation. But to say that we should not regiment our development is not saying that we should not assist it. With-

out in any way controlling the manner in which the people of Puerto Rico shall obtain economic self-support, the United States Government can supply them with one of the indispensible prerequisites of that attainment—adequate credit.

The progress of no State could have been achieved without the aid of her sister States—without the commercial and financial interplay which is the lifeblood of economic development. While Massachusetts supplied manpower and goods to the West, the West was supplying food and raw materials to Massachusetts. Credit and money flowed freely from State to State. It was only through this mutual helpfulness of all the States that each of them has been able to reach its present high point of development. The people of Massachusetts may be happy in the thought that fellow Americans in other States have contributed to their well-being and that they, in turn, have contributed to the prosperity of other Americans.

It should be made clear why credit has not in the past been sufficiently available for new Puerto Rican enterprises. Their isolation has made it hard for Puerto Ricans to get loans from continental sources. Although an enterprise may be as sound as any business on the continent, people here hesitate to send their money to such a far away place without a large and assured rate of return that will justify their imagined risk. There are a few well-to-do people on the island but many of them are citizens of Spain or people of a conservative Spanish type who do not have the initiative to invest their assets in innovations. They like to put their money into rental yielding properties or other forms of investment rather than into stock of commercial or industrial enterprises. Agencies of the United States Government have been carrying on lending activities in Puerto Rico for many years and have found them to be quite successful. Officials of the Government engaged in such activities will testify that loans can be made on a safe and sound basis to enterprises which will gradually but surely increase the economic security and the income of the islanders. If given sufficiently broad powers and adequate resources, and if administered by people familiar with island affairs, I am sure that a Federal credit agency in Puerto Rico could make loans of great economic benefit to the island and still remain quite solvent.

The Federal Government has been very helpful to Puerto Rico in many ways. Among other things, the Puerto Rico Reconstruction Administration's activities in the latter years of the depression have prevented chaos. At the same time that it has ameliorated the very worst effects of the depression by relief activities, that administration has also set up within the framework of the relief-work principle certain permanent enterprises, such as Lafayette Sugar Central and the various resettlement farms which dot the island. These enterprises point the way toward a permanent solution. However necessary may be the activities of the P. R. R. A. in furnishing relief, it must be borne in mind that the attempt to furnish relief and at the same time to set up permanent economic enterprises on a pay-as-you-go basis has some elements of inconsistency. As long as all the funds must be spent for directly creating work, they cannot at the same time be spent for creating permanent, employmentfurnishing business activity. For that purpose there is necessary an agency able to lend to enterprises initiated and managed by others. It must be able to lend without restriction as to the amount of immediate employment, but rather with a view to the permanent employment which the institution and continuation of the businesses financed will furnish. The building of a road creates employment today but none tomorrow. On the other hand, the financing of a self-liquidating commercial, industrial, or agricultural enterprise creates employment today and perpetuates itself to create employment for an indefinite time in the future.

The establishment of such an agency is particularly desirable at the present time. Efforts at rehabilitation have been slowed down by various new factors. The economists and industrialists point out that one is the imposition of the quota system on sugar, which has prevented Puerto Rican produc-

tion from expanding. Another is the effect of the 1934 reciprocal-trade agreement with Cuba upon the price of sugar and the similar effect of the proposed new reciprocal-trade agreement. A third is the effect of the Fair Labor Standards Act upon various enterprises in Puerto Rico. Without questioning the general good effect of the law, it is said that its effect upon specific industries in Puerto Rico has been to put almost insurmountable difficulties in their paths. The law will not have the effect of destroying those industries, but it will have the effect of lessening the number employed in them. Puerto Rico does not shirk its duty to march shoulder to shoulder with the other parts of the country in social legislation. However, if, in the course of such legislation, damage is done to Puerto Rico's means of livelihood, we believe that the rest of the country should help us to provide substitute sources of income. The establishment of a credit agency for the financing of such substitute industries would eventually make possible the raising of wage standards in Puerto Rico. Then legislation which the rest of the country takes in its stride would not so seriously affect the economy of the island.

It would be unwise for the Congress to provide for a credit agency in Puerto Rico unless it knew in general what kinds of enterprises might be financed by it. It might also be considered unwise if the Congress provided for increased production in Puerto Rico to compete unfairly with similar production in the States. If there were adequate credit, many new enterprises could be commenced in Puerto Rico. None of them would compete seriously with similar production in the States. Rather they would supplement the economy of the entire Nation and make it more self-sufficient. There are many tropical and other products which are now imported from foreign countries and which might very well be produced within our own boundaries on the island of Puerto Rico. That these products would find a market is assured because they would be produced within the tariff wall while their competitors' products are produced outside of it.

The Puerto Ricans have never regretted their connection with the United States. It has been a friendship as well as a business partnership. The setting up of a credit system in Puerto Rico would be a logical development along the same lines. The American troops that occupied Puerto Rico 41 years ago found the majority of workers in a state of peonage, ignorant and reliant upon autocratic masters and government. General Miles told the people of the island that the Americans had come to promote our prosperity and to give us the blessings of enlightened civilization. Since then the Government has brought Puerto Rico the light of education and has developed the leaders of the people into a new democratic form of government. To solve the island's problems will take a quality of leadership as high as that which built this Nation and I am sure that leadership exists. If credit can be extended to the island these new leaders can give economic substance to their political liberty.

Hoover Dam

EXTENSION OF REMARKS

HON. J. WILLIAM DITTER OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

EDITORIAL COMMENT ON NAME OF DAM

Mr. DITTER. Mr. Speaker, the Secretary of the Department of the Interior has had a weighty problem on his hands. He has wrestled with it in many ways. It is a matter which seems to give him as much concern as the free press of the country-what appears to be the Secretary's problem child No. 1. But, as a close second, the christening of dams looms large. The following press comments are pertinent:

> [From the Newark Star-Eagle of March 1, 1939] "HONEST" HAROLD ICKES STEWING AGAIN

"Honest" Harold Ickes, the Cabinet officer with the high-temperature temper, has recently lost another hot-and-heavy battle.

This time it's the war over the official title of the highest dam in the world, out in Colorado. Mr. Ickes has done his best to erase the name of the only living former President from the dam, but his efforts to prevent memorializing Mr. Hoover are now disclosed as vain.

Mr. Ickes has done everything he can to see that maps, pamphlets, road signs, and other indicators give the name of the structure as Boulder Dam. How active he has been and the relentlessness with which he has sought to suppress the proper title. Hoover Dam, as well as the exchange of letters in which he was finally defeated, have been revealed in a selection from the private papers of Homer Cummings, former Attorney General, published by Charles Scribner's Sons.

Mr. Ickes wrote to Mr. Cummings several years ago, protesting

the use of the name Hoover Dam in a Federal suit.

Mr. Cummings' reply did nothing to sooth the oft-troubled Ickes brow. The dam, Mr. Cummings pointed out, was called Hoover Dam in the acts of Congress appropriating the money for its construction. It was called Hoover Dam in the contracts under which it was built. Hoover Dam, Mr. Cummings concluded, it had better remain.

"Honest" Harold is a thick-skinned old warrior, who hates to

admit he's wrong. He will doubtless continue to call it Boulder Dam, acts of Congress to the contrary notwithstanding.

The rest of the country, however, will doubtless be willing to abide by the law and call it Hoover Dam, especially since Herbert Hoover was largely responsible for its construction. And that will have the responsible for its construction. leave Mr. Ickes where he usually is—a loud-mouthed, mean-spirited minority of one.

[From the San Francisco Chronicle of January 29, 1939] HOOVER DAM-SO MR. ICKES WAS WRONG

At last it can be told.

That dam controversy is settled.
Secretary Ickes to the contrary notwithstanding, it is Hoover am, not Boulder Dam.

Dam, not Boulder Dam.

Railroad and post-office maps to the contrary notwithstanding, it is Hoover Dam, not Boulder Dam.

Brochures, pamphlets, guidebooks, road signs, and the Democratic National Committee notwithstanding, it is Hoover Dam, not Boulder

It took a long time to get the low-down, but it's a matter of public record now.

LONG-HIDDEN TRUTH

The private papers of Homer Cummings, until recently this coun-The private papers of Homer Cummings, until recently this country's Attorney General, were released to the public by Charles Scribner's Sons, which is publishing selected correspondence in book form, and the long-hidden truth about the correct legal name for the world's greatest dam came to light.

They disclose a hitherto unknown sidelight on the antics of Interior Secretary Ickes in his persistent determination to prevent a former President of the United States from being memorialized. The correspondence does not mention that Secretary Ickes and former President Hoover were of opposite political faiths, but it does mention Ickes' opinion of those who disagreed with him.

They were "reactionary Republican papers" and they "roundly condemned" him.

The record now shows they happened to be right and the Secretary happened to be wrong, but one thing Secretary Ickes has demonstrated is that he can stick to it, right or wrong.

WROTE TO CUMMINGS

WROTE TO CUMMINGS

Under date of January 17, 1935, Ickes wrote the then Attorney General Cummings that a bill of complaint in a Federal suit against the State of Arizona contained reference to "water discharged at Hoover (Boulder) Dam," and that gave him "nothing at all to cheer about," because, Ickes wrote:

"Having gone to great lengths to give to Boulder Dam its original and proper name, which my predecessor in office (Secretary Wilbur) attempted feloniously to take from it, for which praiseworthy and meritorious public act I have been roundly condemned by reactionary Republican papers in all parts of the country. I may say that the reference in this bill of complaint to 'Hoover Dam' gives me nothing at all to cheer about."

Despite the Secretary's gratuitous and altogether casual handling of his felonies, however, and despite the terrible things the reactionary Republican papers said about him, official Government records at that time and ever since designate the huge man-made barrier in the canyon as Hoover Dam.

barrier in the canyon as Hoover Dam.

CUMMINGS IN REPLY

Attorney General Cummings so informed the honorable Secretary in his reply, dated January 21, 1935. The Attorney General observed that he was "not surprised" at "dear Harold's" perturbation,

"The difficulty in this particular instance seems to grow out of the fact that while the term 'Boulder Dam' is used as often as pos-sible and scattered somewhat promiscuously in strategic places in

the bill of complaint, nevertheless the drafters of that document seemed to feel it necessary in describing the dam to use the title employed by the Congress in the acts of appropriating money for its construction. I believe these acts refer to the dam as 'Hoover Dam.' Moreover, the dam is referred to as Hoover Dam in the contract between the United States and the Metropolitan Water District, under which contract, I understand, the dam is actually being constructed.

"Our department was not aware that you had officially rechristened the dam, or that there had been any change in its technical name since the order of Secretary Wilbur made on the 17th of September 1930.

"I rather doubt whether it is feasible to do anything about the matter at this late date, even if it were deemed appropriate so to do. In other words, it looks to me very much like water over the Hoover (Boulder) Dam."

IT'S HOOVER DAM

So it may be Boulder Dam to Secretary Ickes, but to the rest of the people of the United States, by no less than congressional action, it is Hoover Dam.

It's just the Army that's out of step with the honorable Secretary. But it was a swell fight while it lasted.

Thank you, Mr. Cummings, because at last—
That dam thing's settled.

WHY, MR. ICKES! (By Ed Ainsworth)

It is Hoover Dam and not Boulder Dam after all.

Even Harold Ickes knows it and has known it ever since 1935. And none other than Homer S. Cummings, then United States

Attorney General, told him so.

Attorney General, told him so.

This concluding and conclusive chapter in the long war over
"What's in a name?" has just come to light with the publication
of Selected Papers of Homer Cummings, edited by Carl Brent
Swisher and published by Charles Scribner's Sons.

The Hoover Dam versus Boulder Dam controversy has been going
on almost ever since Secretary of the Interior Ickes took office in

One of the first things Ickes did was to announce that the "Hoover" was out and the "Boulder" was in. He just overlooked one important detail. This was that he didn't have the power to change the name of the dam, no matter how much he personally disliked Herbert Hoover.

The following two letters tell the story. This first one is from

Ickes to Cummings:

"JANUARY 17, 1935.

"DEAR HOMER: On page 4 of the bill of complaint in the case of The United States of America, plaintiff, v. The State of Arizona, defendant, there is a reference to 'water discharged at Hoover (Boulder) Dam.' Having gone to great lengths to give to Boulder (Boulder) Dam. Having gone to great lengths to give to Boulder Dam its original and proper name, which my predecessor in office attempted feloniously to take from it, for which praiseworthy and meritorious public act I have been roundly condemned by reactionary Republican papers in all parts of the country, I may say that the reference in this bill of complaint to Hoover Dam gives me nothing at all to cheer about. I should have been glad to point out what was undoubtedly merely an inadvertence, but I lacked the opportunity, since I did not see the bill of complaint until after it had been printed and filed with the Supreme Court."

And Attorney General Cummings' reply:

"January 21, 1935.

"Dear Harold: This acknowledges your letter of the 17th of January about Boulder Dam, and I am not surprised by your perturbation. Even in the midst of great events the misuse of a cherished

name is apt to be upsetting.

name is apt to be upsetting.

"The difficulty in this particular instance seems to grow out of the fact that, while the term 'Boulder Dam' is used as often as possible and scattered somewhat promiscuously in strategic places in the bill of complaint, nevertheless the drafters of that document seemed to feel it necessary in describing the dam to use the title employed by the Congress in the acts of appropriating money for its construction. I believe these acts refer to the dam as 'Hoover Dam.' (See 46 Stat. L. 1146; 47 Stat. L. 118; and 47 Stat. L. 535.) Moreover, the dam is referred to as 'Hoover Dam' in the contract between the United States and the Metropolitan Water District, under which contract, I understand, the dam is actually being constructed. dam is actually being constructed.

"Our department was not aware that you had officially re-christened the dam, or that there had been any change in its technical name since the order of Secretary Wilbur made on the

September 17, 1930.

"I rather doubt whether it is feasible to do anything about the matter at this late date, even if it were deemed appropriate so to do. In other words, it looks to me very much like water over the Hoover (Boulder) Dam. When I see you, I shall extend my commiseration in person."

[From the New York Herald Tribune of September 28, 1938] THAT "HOOVER DAM"

So justly famed is our esteemed contemporary, the New York Times, for accuracy that we can only conclude from reading its headlines and special correspondence yesterday that an important

rectification of history has occurred, and that we missed any information about it. Under the heading "Hoover Dam Lake Opens Gold Area," a story sent in to the Times from Las Vegas, Nev., described the potential gold development at a spot "53 miles up Lake Mead from Hoover Dam."

Six years ago no one would have been surprised by this story. "Hoover Dam" was the name by which the structure that retains "Hoover Dam" was the name by which the structure that retains Lake Mead was then known. This name was officially given to it by the then Secretary of the Interior, Dr. Ray Lyman Wilbur, in 1930. the then Secretary of the Interior, Dr. Ray Lyman Wilbur, in 1930. Secretary Ickes had been in office only 2 months when he let it be known that henceforth the dam would be officially called "Boulder Dam." When the country protested that this was mere petty political spite on the part of the administration, Mr. Ickes sought to justify his act by insisting that the name "Boulder Dam" was that which had been originally used, and that there was no authorization for calling it the "Hoover Dam."

The facts of the matter are that the name "Boulder Canyon Project" was used in the original act of Congress authorizing the project, because at that time it had been planned to build the dan in Boulder Canyon. The site was later moved, thus removing all justification for the use of the term "Boulder Dam." When Secretary Wilbur christened it the "Hoover Dam" he did so as a tribute to the

Wilbur christened it the "Hoover Dam" he did so as a tribute to the part played by Mr. Hoover in preparing and carrying out the project beginning with the early surveys and plans while he was still Secretary of Commerce. When Mr. Ickes removed the name of Hoover it was clear that the motives were partisan.

Secretary Ickes indignantly refused to change his decision despite recurring criticism. With vituperative stubbornness he stood by "Boulder Dam"—stood by it, that is, unless, as we have said, a change was made which has escaped our attention. If it is once more to be called the "Hoover Dam," we offer Mr. Ickes our congratulations. If not, we hope that the usage by the New York Times of the term "Hoover Dam" will be copied by other newspapers in the country and that, by acclamation if not by official proclamation, this structure will be known henceforth by the name it should rightly bear—that of Herbert Hoover. bear-that of Herbert Hoover.

[From the Washington Times-Herald of March 4, 1939] BEHIND THE NEWS-CHANGE THE NAME OF HOOVER-BOULDER DAM-S!X!@!, YES, No, OR SOMETHING

(By Paul Mallon)

Ferociously honest Harold Ickes, who is always accusing the press of diabolical inaccuracies, seems to have snared his own large toe in one at least. He has successfully deluded an entire world—mapmakers, press, and movies—into believing that dam out in the Colorado River was Boulder Dam.

A bit of long-suppressed inside history shows an Attorney General of the United States Homer Cummings, ruled that Icker illegally.

of the United States, Homer Cummings, ruled that Ickes illegally changed the name of the dam to Boulder—and so advised the Interior Secretary away back in January 1935. Cummings, then a fellow Cabinet member of the irate Interior Secretary, held the dam was still "Hoover Dam" in honor of the chairman of the committee who brought the Colorado River States into the water committee. pact, Herbert Hoover.

It might never have become public but for an oversight on the part of Cummings. When he left office recently he permitted a writer to have his public papers for publication in book form. Somehow his exchange of letters with Ickes on this subject got into the batch and appeared in the book.

The letters show the world lost two outstanding humorists when

these two took up their careers in politics. The Interior Secretary's letter (January 17, 1935):
"Dear Homes: On page 4 of [your] bill of complaint in the case of The United States of America, plaintiff, v. The State of Arizona, defendant, there is a reference to 'water discharged at Hoover [Boulder] Dam.' Having gone to great lengths to give to Boulder [Boulder] Dam.' Having gone to great lengths to give to Boulder Dam its original and proper name, which my predecessor in office attempted feloniously to take from it, for which praiseworthy and meritorious public act I have been roundly condemned by reactionary Republican papers in all parts of the country, I may say that the reference in this bill of complaint to 'Hoover Dam' gives me nothing at all to cheer about. I should have been glad to point out what was undoubtedly merely an inadvertence, but I lacked the opportunity, since I did not see the bill of complaint until after it had been printed and filed with the Supreme Court."

opportunity, since I did not see the bill of complaint until after it had been printed and filed with the Supreme Court."

The Cummings reply (January 21, 1935):

"Dear Harold: This acknowledges your letter of the 17th of January about Boulder Dam, and I am not surprised by your perturbation. Even in the midst of great events the misuse of a cherished name is apt to be upsetting.

"The difficulty in this particular instance seems to grow out of

"The difficulty in this particular instance seems to grow out of the fact that while the term 'Boulder Dam' is used as often as possible and scattered somewhat promiscuously in strategic places in the bill of complaint, nevertheless the drafters of that document seemed to feel it necessary in describing the dam to use the title employed by Congress in acts appropriating money for its construction

employed by Congress in acts appropriating mohey for its construction.

"I believe these acts refer to the dam as 'Hoover Dam.' (See 46 Stat. L. 1146; 47 Stat. L. 118; 47 Stat. L. 535.) Moreover, the dam is referred to as 'Hoover Dam.' in the contract between the United States and the Metropolitan Water District, under which contract, I understand, the dam is actually being constructed. rather at this late day, even if it were deemed appropriate to do so. In other words, it looks to me very much like water over the Hoover (Boulder) Dam. When I see you, I shall extend my commiseration in person."

Thus apparently the dam has been Hoover Dam legally for 4 years, although no one knew it except Messrs. Cummings and

Unless the new Attorney General Frank Murphy will take a less legal and more Ickesian view of the Interior Secretary's predicament, apparently it will remain Hoover Dam.

The Reciprocal Trade Agreement Program

EXTENSION OF REMARKS

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 26, 1939

STATEMENT BY ALBERT J. HUTZLER

Mr. HOUSTON. Mr. Speaker, under unanimous consent to extend my remarks in the Record, I include a statement by Albert J. Hutzler on the 1938 results under the reciprocal trade agreements program, as follows:

[From Commerce Reports of February 18, 1939—Issued by the Bureau of Foreign and Domestic Commerce, U. S. Department of Commerce]

1938 RESULTS UNDER THE RECIPROCAL TRADE AGREEMENTS PROGRAM (By Albert J. Hutzler, Trade Agreements Unit)

During the year 1938, United States exports to both the group of 17 countries with which reciprocal-trade agreements had been concluded and to the group of nonagreement countries decreased, the rate of decline being slightly smaller to the agreement group than to the nonagreement group. Taking an annual average for

than to the nonagreement group. Taking an annual average for the past 2 years, however, exports to agreement countries have shown a much greater rate of increase over the preagreement period 1934–35 than average exports to the nonagreement group. The value of total imports into the United States during 1938 declined sharply from the relatively high level of the preceding year, with a lesser rate of decline from the agreement group than from the nonagreement country group. During the 2-year period 1937–38, the increase in imports from the agreement country group over the 2-year preagreement period was less than the average increase in exports to those countries.

RELATIVE CHANGE IN EXPORTS

While United States exports experienced a moderate decline in 1938 from the level of 1937, the exports from this country have shown smaller declines than those from most other countries. Ex-1938 from the level of 1937, the exports from this country have shown smaller declines than those from most other countries. Exports from this country remained at high levels in 1938 because of the continued demand abroad for American aircraft, machinery, and metal manufactures, and because of the large surpluses of wheat, corn, fruit, tobacco, and other agricultural commodities, some of which were again available for export from this country. The demand for American machinery and metal manufactures has continued strong, due in a considerable measure to the heavy requirements of the rearmament programs of several European countries which have prevented those normally large exporting countries from supplying both export and domestic demands.

In 1938 there was a net decline of 6.8 percent compared to 1937 in the value of exports to the 17 agreement countries (not including the United Kingdom, with which an agreement became effective only on January 1, 1939), while the decline in exports to all other countries during the same period averaged 8.1 percent. In contrast to the general trend, exports to the Netherlands (including overseas territories), Switzerland, Czechoslovakia, Honduras, Colombia, and Costa Rica, of the agreement group, were greater in 1938 than in 1937.

That exports to the nonagreement group as a whole during the same periods did not show a greater decline was due largely to the continued high level of exports to the United Kingdom and to increases in exports to Norway, the Union of Soviet Socialist Penylliss, and some other countries. Exports to the United Kingdom and to increases in exports to Norway, the Union of Soviet Socialist Penylliss, and some other countries. Exports to the United Kingdom and to increases in exports to Norway, the Union of Soviet Socialist Penylliss, and some other countries. Exports to the United Kingdom and to increases in exports to Norway, the Union of Soviet Socialist.

and to increases in exports to Norway, the Union of Soviet Socialist Republics, and some other countries. Exports to the United Kingdom accounted, roughly, for one-third of the exports to the nonagreement group. Although United States exports of cotton to the United Kingdom declined in 1938, total exports to that country were well maintained for the year because of increased shipments of petroleum products, wheat, tobacco, and other agricultural products. Exports as a whole to the Union of Soviet Socialist Republics experienced a large gain in 1938 over the previous year, mainly because of the substantial gain in exports of machinery, particularly metal-working machinery.

metal-working machinery.

The comparison of exports during the 2-year agreement period which closed on December 31, 1938, with the 2-year preagreement period of 1934-35 shows a definitely greater average rate of increase in exports from the United States to the group of agreement countries than to the nonagreement countries as a whole. Exports to the agreement group in the 2-year period 1937-38 were greater in value by 61.2 percent than the average for the preagreement period 1934-35, while exports to all other countries increased by an average of only 37.9 percent in value.

During the past few years there have been several powerful forces other than trade agreements which have served to increase and then

During the past few years there have been several powerful forces other than trade agreements which have served to increase and then to maintain American foreign trade above the levels that previously prevailed. However, it seems significant that, in comparison with the two preagreement years 1934–35, during the past 2 years our exports have experienced a much greater rate of increase to trade agreement countries which have reduced or stabilized their tariffs or other trade barriers on distinctive American products than our exports to the nonagreement group.

RELATIVE CHANGE IN IMPORTS

As previously indicated, imports into the United States during 1938 experienced a marked decline in comparison with 1937. This as previously indicated, imports into the United States during 1938 experienced a marked decline in comparison with 1937. This decline in imports is generally attributed to the recession in business, and to the large domestic supply of agricultural products which, in contrast to the previous year, was more than ample for this country's needs. While most categories of imports declined in 1938, the decline was particularly severe in imports of certain raw materials, notably rubber, tin, wool, hides and skins, and certain farm products such as grain, fodder, and oil seeds. Beginning in the latter months of 1937, the demand for certain imported raw materials lessened considerably with the decline in industrial activity in this country and, in the case of some products, prices decreased markedly. Also, beginning in the latter months of 1937, the domestic supply of certain agricultural products became substantial enough to eliminate the necessity for large-scale importations of these products. It so happens that imports of the raw materials and agricultural products in question had been obtainable mainly in nonagreement countries. Consequently the percentage of decline in the value of imports in 1938 was greater for nonagreement countries as a whole than for the agreement group.

¹ Including the 17 countries (and colonies) with which agreements were in operation during the greater part of the last 12 months. Only 1 of the agreements was in operation throughout 1935, 6 throughout 1936, 12 by the middle of 1936, 15 by the middle of 1937, and 18 by the end of 1938. The last (with Ecuador) only came into force on Oct. 23, 1938, and is therefore not yet included in the above calculations as an agreement country. The new agreement with Canada, and the agreement with the United Kingdom (including Newfoundland and non-self-governing British colonies) which became effective Jan. 1, 1939, bring the number of agreement countries up to 19. GENERAL NOTE.—Percentage changes have been calculated upon fuller figures

in thousands.

Source: Latest records of Division of Foreign Trade Statistics, Bureau of Foreign and Domestic Commerce.

In 1928 there was a decline of 28.9 percent over 1937 in imports into the United States from the group of agreement countries, whereas imports during the same period of comparison from the nonagreement countries declined by 41.6 percent. In

the broader comparison between the 2-year period 1937–38 and the preagreement period 1934–35, the increase in imports into the United States from agreement countries averaged 35.2 percent, while imports from the nonagreement group increased 37 cent, while imports from the nonagreement group increased 37 percent. That imports from nonagreement countries during the 2-year period increased at a greater rate than imports from agreement countries, whereas a contrary tendency would normally have been expected, is due to the heavy imports of raw materials and agricultural products, mainly from nonagreement countries during 1937, to which attention has already been called. In 1938 this abnormal tendency was reversed and imports from agreement countries showed a smaller rate of decline in imports than from nonagreement countries. than from nonagreement countries.

COMPARATIVE CHANGES IN EXPORTS AND IMPORTS

United States exports during 1938 to the agreement countries as a whole decreased about \$86,000,000 from the levels of 1937, while the year's decrease in imports into the United States from the same countries was about \$362,000,000.

Taking a broader view, a comparison of the past 2 years with the preagreement years of 1934 and 1935 shows an increase in exports to the agreement countries group averaging about \$465,-000,000 annually, and an increase in imports from the same countries averaging approximately \$280,000,000 annually.

PROGRESS OF PROGRAM—RECENT AGREEMENTS CONCLUDED—NEGOTIATIONS ANNOUNCED

With the conclusion of the trade agreement between the United States and the United Kingdom in November 1938, the reciprocal trade agreements program assumed greater proportions as a trade-enlarging influence. At the same time a second agreement with Canada was signed, superseding the first agreement concluded at the end of 1935, and an agreement was concluded in the latter part of 1938 with Ecuador. The 19 countries with which reciprocaltrade agreements are now in operation, together with their colonies, account for approximately 60 percent of the total foreign trade of the United States.

The trade agreement between the United States and the United Kingdom, which became effective January 1, 1939, covers not only the trade between these two countries, the largest trading countries in the world, but also the trade of the United States with Newfoundland and the non-self-governing British colonies. The importance of this agreement may be judged by the fact that the trade of the United States with the United Kingdom and the other areas covered by the agreement constitutes nearly one-fifth of our trade with the world as a whole. The United Kingdom is generally the largest world as a whole. The United Kingdom is generally the largest market for our exports and ranks among the three leading countries

as a source of our imports. Our trade with some of the more than 50 British colonies to which the agreement relates is also large.

The second agreement with Canada, which became effective Janu-

ary 1, 1939, considerably enlarged the undertakings by each Government, since the experience of both countries under the first agree-ment had been considered to have been highly satisfactory. In recent years Canada has closely followed the United Kingdom as the best customer for our exports, taking about one-seventh of the total. Canada is much the largest source of imports into the United States.

The agreement with Ecuador will enable the United States to retain its already favorable trade position in that country, as well as

provide new opportunities for expansion.

During 1938 announcements were made of the intention to negotiate agreements with Turkey and Venezuela and a limited supplemental agreement with Cuba.

1 These figures include Surinam (Dutch Guiana) the trade with which is too small to warrant individual listing.

1 United States statistics show only a small portion of the actual exports to Switzerland as most of the exports are transshipped through a third country and are shown as exports to the third country. Therefore too much significance should not be attached to the statistics of exports to Switzerland.

3 These figures include all French colonies. Only France proper is listed separately.

4 Agreement became effective Apr. 16, 1938. The statistics of exports to Czechoslovakia are not representative of the actual trade as many shipments are declared as destined to third countries from which they are transshipped to Czechoslovakia. This was particularly true prior to 1938 during which year a larger share of exports to Czechoslovakia. slovakia was consigned direct.

GENERAL NOTE.—Percentage changes have been calculated upon fuller figures in thousands.

The Republican Formula—"A Fair Chance for a Free People"

EXTENSION OF REMARKS

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1939

RADIO ADDRESS BY HON. KARL E. MUNDT, OF SOUTH DAKOTA, APRIL 22, 1989

Mr. MUNDT. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following address delivered by me over the radio on Saturday last:

Good afternoon ladies and gentlemen, it has frequently been said of American democracy that "ours is a government by discussion," and I believe that there is considerable of truth in that statement. While many other governments have become governments by bullets or by bayonets, by coercion and by concentration camps, by dictation and by decree, the American system, praise God, still remains government by discussion.

"THE GOVERNMENT IS TOO MUCH WITH US'

That being the case, it follows as the night the day that in this country we can have the type of government we desire, because we determine it by discussion, and it has become an American axiom that we always have the kind of government that we deserve. When people spend too much time discussing golf scores and bridge hands or busy themselves too much with business or babies, to the exclusion of any attention to their National Government, we find men elected to serve the people coming to feel that the people spends sion of any attention to their national deviations, as the people should serve them instead, and we find, as I presume Shakespeare would have put it, that "the Government is too much with us." It squanders our money, it meddles in our private affairs, it cripples our progress with back-breaking taxes, it tampers with the American formula for success, it discards our traditions and violates our ideals, and all because we are too busy or too dull, or too weak or too timed. and all because we are too busy, or too dull, or too weak, or too timid to discuss government freely. frankly, and openly, so that we can arrive at conclusions which today are so apparent that they become as inevitable as conclusions in mathematics, once we survey the

And surely the time has come when we should, all of us, spend And surely the time has come when we should, all of us, spend more time discussing Government. America has not come over 150 years to live in a perpetual state of depression, nor did we reach the pinnacle of national success simply to move back permanently to the valleys of distress, disappointment, and depression. Our history has always been dotted with a series of economic curves—of ups and downs, with each "up" being higher and more universally enjoyed than any previous one. But this "down" which now engulfs us has lasted so long and remains so bad that it is coming to resemble more a complete economic collapse than a recurring resemble more a complete economic collapse than a recurring economic curve.

So as we worry along in this seventh successive year of the Franklin Roosevelt depression it is high time that all of us analyze clearly and convincingly this "deal" which is no longer "new," to try to discover what there is about it which is perpetuating so needlessly and so unhappily the era of the depression.

A NEW RECORD FOR THE NEW DEAL

This misnamed New Deal administration now seems destined to hang up a new record in American history as the only 8-year Presidential regime to keep this country on its knees for its entire administration and to rule from its inauguration to its exit without a single sample of the traditional American prosperity of which we have always had at least a taste during other octennial intervals. have always had at least a taste during other occennial intervals. Such continuous failure cannot mean that America has run its course—it means, instead, that too much tampering with the American system has brought us the Old World poverty for the time being along with the Old World economic ideals and politices which the New Deal has been so energetically importing.

Any fair and full analysis of the underlying political philosophy of the Roosevelt regime reveals one simple fact so clearly that to fail to recognize it is to fail to read the evidence—that basic rule of government is that the New Deal has adopted from the Old World the idea that the central government must exercise complete control over the activities of the average citizen. The New Deal has readily a support of the second of the readily in the belief but the all Deal may be credited with sincerity in this belief, but in all events it must be charged with stupidity in believing that any central government under any president could ever promote prosperity in a complex country like ours by giving to bureaucrats and political overlords the managerial rights which belong to the businessman, the laborer, the farmer, and the average citizen in a free democratic government such as ours was prior to the advent of this "new dementia."

F. D. R. BECOMES "H. D."

President Roosevelt now occupies the unenviable position of the Humpty Dumpty of Mother Goose fame and it will require the best efforts of all this country's money and all this country's men to put our house in order again and start a new era of traditional American prosperity and opportunity. The Roosevelt philosophy of unrestricted Government authority over everybody has failed, as it was bound to fail in a democratic society. The price we would have to pay for even a semblance of success under such a prevailing Government attitude would be to submit to the processes of dictatorship, and that price is too high to pay for the sorry samples of success which similar governmental attitudes have scored in Russia, Germany, and Italy. This zeal for unrestricted control is evidenced by the Court-packing program, the N. R. A., the political administration of relief, the Presidential purge, the first reorganization bill, and dozens of equally significant if less sensational manifestations of the do it from Washington theory of government. theory of government.

WOLVES IN SHEEP'S CLOTHING

By the device of selecting social and economic goals which all Americans admire, the New Deal has preached liberalism and practiced reaction to the point of Government domination unparalleled in history. It has sold the American public more economic wolves under the mantle of "adjectiverous" sheep's clothing than any other administration in America. But the protective mantle is breaking down, the political wolves have bared their fangs, and the taxpayers, the unemployed workers, the underpaid farmers, and thoughtful citizens everywhere are beginning to recover from their dreams of delivious.

A FAIR CHANCE FOR A FREE PEOPLE

The result of this economic chaos and national confusion points definitely to a sweeping Republican victory in the 1940 elections. Consequently the Republican Party now faces the greatest responsibility in its history; ours is the job to restore order out of chaos, prosperity out of poverty, business out of bungling, increased purchasing power to replace the crippling influence of curtailed production, and to restore the rights of self-government following this period of government decrees from self-nominated political princes of privilege. I suggest as the basic philosophy on which the Re-publican Party can march to victory, and after that lead the march to recovery, that we adopt as the goal of self-government under republicanism the objective described by the following formula: A fair chance for a free people. That, to me, is what America should offer to its citizens; that is what the Republican Party should provide under its incoming administration—a fair chance for a

No honest man should ask for more and no dishonest man should be given less than a fair chance to prove his merit, and the Government should not take away any more freedom of choice and freedom of control than is necessary to guarantee to Americans in all walks of life and in all occupational pursuits a fair chance to succeed.

chance to succeed.

Under the program of a fair chance for a free people, America can give labor honest jobs instead of political doles; it can give farmers fair prices for full crops instead of subsidies for obeying Government mandates; it can enable business to operate for profit and expand with confidence instead of fearfully marking time while conflicting Executive decrees demand an ever-changing course of conduct. The Republican Party can on such a platform achieve the goals which the present administration merely admires and acclaims; it can bring America back from a hazardous and unnecessary desige to meddle in foreign boundary disputes and unnecessary desire to meddle in foreign boundary disputes and concentrate our activities upon the No. 1 job of making democracy work at home; instead of dissipating its efforts in loud talk about work at home; instead of dissipating its efforts in loud talk about saving democracy for the world it can register definite progress in saving democracy in America. Our people have lost neither the ability nor the inclination to govern themselves and to solve their own problems while constantly climbing the ladder toward social and economic betterment—they are tired of ignoring the ladder in vain attempts to jump over the moon in one leap, and the inevitable fall after each jump is breaking the morale and the machinery of our traditional processes of self-government. It is time for a change, and under a Republican administration after 1940 let us all join in making that change so effective and so permanent that the American goal of a fair chance for a free people will once again be the maxim by which this country forges forward just as we grew to be a country so strong and so sound under it that even 7 extravagant years of maladministration have not destroyed our bounce nor broken our hopes.

AMERICA NEED NOT GO TO WAR

AMERICA NEED NOT GO TO WAR

Included in these hopes which I am sure are shared by everyone

in this radio circle this afternoon is that biggest most heartfelt hope of all, namely that America may remain at peace.

And coming from Washington just a few hours ago as I have, let me assure those of you who may be in less direct contact with your National Government than I, that anyone talking about

America's going to war these days is doing so either for private profit or political preferment, because we never have had less actual reason for meddling in European boundary disputes than we

have today.

Alined on both sides of these disputes are governments which borrowed our money freely both before the World War and after, and just as freely broke their promises to pay it back.

Alined on both sides of these disputes are governmental forms which are equally antagonistic and repulsive to American democracy. The current European crisis is no ideological quarrel; it is the age-old fight of imperialistic nations whose dollar diplomacy and power politics inevitably and intermittently lead to war and always will.

MAKE DEMOCRACY WORK AT HOME

Woodrow Wilson led us into one ghastly war to attempt to change human nature in Europe and we failed. We must all unite to keep another Democratic President from leading us into another conflict which this time might well destroy the last remnants of

the democracy it purports to protect.

America has no love for either the German putsch, the Italian invasion, the Japanese grab, or the Russian purge. We must not waste the life of a single American boy in overseas warfare to advance or repel either fascism or communism in the Old World.

Let us instead make our democracy work at home, by so doing we will most helpfully contribute to the spread of Christian and democratic ideals throughout the world. And in the job of making democracy work at home we no longer have so far to look ahead. Life begins anew for America in 1940 with a rededication to the principles of a fair chance for a free people in the finest country of the world.

Welcome, Archbishop Spellman

EXTENSION OF REMARKS

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1939

Mr. MICHAEL J. KENNEDY. Mr. Speaker, Members of the House, in these days of turbulence and violence abroad, with the dark clouds of war suspended over all of Europe, striking terror to the hearts of every man, woman, and child in foreign lands, an event has taken place in our great country during these last few days which is of great moment to those of us who turn for guidance in times of great stress to the spiritual influences of the church. His Holiness Pope Pius XII, the Prince of Peace, in his infinite wisdom has stretched his hand across the sea to bestow his blessing upon the Right Reverend Francis J. Spellman, auxiliary bishop of Boston, appointing him archbishop of New York to replace the dearly beloved and late lamented Cardinal Hayes. His Excellency will act as spiritual adviser to the thousands of Catholics in the largest and wealthiest archdiocese in the world. He is a most worthy emissary of the Pope of Rome, and due to his many years of association with the former Cardinal Pacelli will reflect many of the theories and ideals of His Holiness which will serve to strengthen the bond uniting the Catholics of our Nation. To the many thousands in the archdiocese of New York he is the new shepherd of their flock, and the wisdom of his vast experience is greatly needed at this time; under his spiritual guidance we need harbor no fears that any will stray from the fold. I wish him health and an abundance of strength to carry on the great work which lies before him. The archbishop of the archdiocese of New York is not only the head of thousands of Catholics, he is a first citizen. His work is administrative as well as religious in ministering to the needs of his people; his concerns are civic as well as philanthropic. I am confident he will take great pride in continuing the fine record of achievement attained by the Catholic Charities organization in New York City for the benefit of the poor and the sick and the needy.

I am very glad, therefore, Mr. Speaker, of the opportunity of paying tribute today to Archbishop-elect Spellman, who has had a most distinguished career as one of the outstanding scholars of the Roman Catholic Church. He is in every

respect a worthy successor to that long list of notable and beloved men who have held the high office of archbishop of the archdiocese of the great Empire State of New York, one of the great strongholds of the Catholic faith.

The Crisis in Democracy

EXTENSION OF REMARKS

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 26, 1939

ADDRESS BY DR. H. G. HARMON, PRESIDENT OF WILLIAM WOODS COLLEGE

Mr. CANNON of Missouri. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I desire to include the following timely and scholarly address delivered by Dr. H. G. Harmon, president of William Woods College, at Fulton, Mo., March 25, 1939:

The framers of the Constitution of the United States used the term, "We, the people of the United States." In speaking of "We, the people," they spoke of the hopes, ambitions, and aspirations of all of the people as they tried to establish freedom in a new government. Not much time had passed before they realized that the hopes and ambitions of the people must be entrusted to political parties. In the hands of the major political party, now the Demo-cratic Party, lies the realization of the hopes of "We, the people." The privileges of such a position are secondary. Its responsibili-

ties are primary. The execution of these responsibilities is at once difficult and imperative—difficult because of the nature of the virtues demanded. In April of 1917 Woodrow Wilson said, "It is far lighter work to pioneer, needing merely muscle and physical courage, than to patiently and resolutely face the problems of a crowded and perplexing civilization." In an earlier day of American history all of the malcontent, the extremely radical, the ultraconservative, and those for one reason or another were at outs with their party or their Government could go west and there lose themselves in physical exertion in the unexplored wilderness of free land. Now man has completed his trek westward, and there is no longer any free west into which may be shunted the malcontent. Thus, we have come to the period in our political history where we must "patiently and resolutely face the problems of a crowded and perplexing civilization." Patience and resolution are characteristics which a political party develop only through great and intelligent effort. virtues demanded. In April of 1917 Woodrow Wilson said, "It is far

The discharge of this primary responsibility is imperative because the existence of democracy is challenged. The alinement of world powers today is pro and antidemocratic. Even Fascists, Nazis, Communists, and Monarchists—the antis—will join hands against democracy. Democracy cannot be taken for granted. Its con-

democracy. Democracy cannot be taken for granted. Its continuance must be nutrured.

Democracy is in a crisis. The threat of dictators is not the most significant or alarming symptom of crisis. The gravest symptoms of crisis are inherent in the working of democracy today under the present economic, social, and international situations. It is these internal problems which we of democracy must solve if we are to be worthy disciples of Jefferson, Jackson, Cleveland, Wilson, and Franklin Roosevelt and if we are to merit the gift of the millions who have died for freedom and the attentions of the billions who look to us as an example of a free people

lions who have died for freedom and the attentions of the billions who look to us as an example of a free people.

Let us see the conflicts which arise in the mechanism of a democracy. Last spring Mr. William E. Rappard. director of the Institute of International Studies, of Geneva, Switzerland, delivered the Harris Foundation lectures at the University of Chicago. Mr. Rappard is one of the finest diagnosticians in political life today and at the same time one of the truest friends of democracy. In delivering his lectures he brought to our attention three conflicts which have arisen in American democracy. He left them in the which have arisen in American democracy. He left them in the field of theory. I wish, if I may, to give them application to the political existence of today.

In the first place, there is the conflict of individual liberty and

In the first place, there is the conflict of individual liberty and social equality. The writers of the Declaration of Independence held it to be a self-evident truth that men were "free and equal." It was natural that in a post-revolutionary and colonial life the emphasis was placed upon liberty, for we had just emerged from a war the slogan of which was "Freedom and liberty," and the economic conditions of colonial life provided of necessity a certain degree of equality. Imbued as we were with the dream of liberty, it soon was apparent that we should have to place certain restrictions upon liberty. I shall not trace these historically, but shall cite some of the more recent restrictions which we found it necessary to place upon the liberty of even a free people.

Recently we have found it necessary to pass labor legislation by which man is no longer free to work as he pleases. We have set limits to the time he works, how much or how little he may receive which man is no longer free to work as he pleases. We have set limits to the time he works, how much or how little he may receive for his work, and the conditions under which he may work. We have found it necessary to control the whole machinery of production, saying how much land may be seeded, how many animals may be raised on a farm, how much a factory can produce, how many days a week a factory may operate, and how much profit it may make. As production has been controlled, so has consumption, until the Government has found it necessary to tell us, by setting limits, what we may buy, what we should pay, and what we may do with the purchased goods. Likewise, we have been denied the privilege of being as reckless as we may care to with human life, and the program of social legislation has provided security and dignity for those in the latter periods of life. Obviously we have found it necessary to restrict liberty.

This is seen in sharp contrast in recent political life. I would characterize the period of Presidents Harding and Coolidge as one which emphasized liberty. Here we saw unrestrained economic exploitation. Men could build estates as large as it was possible to build them, although there were millions unemployed and hungry. Calvin Coolidge carried to extreme a policy of "let alone" with labor. In other words, capital was left free to exploit labor without defense for labor. During this period we saw disastrous and criminal sweep of speculation. Any thinking person knew that speculation was going forward apace at such a speed that only disaster could follow. But this was perfectly legitimate and proper in an era which emphasized the freedom of democracy. It proved to be the freedom of the jungle, in which the great could claw apart and kill the weak.

The Roosevelt administration, on the other hand, has stressed

be the freedom of the jungle, in which the great could claw apart and kill the weak.

The Roosevelt administration, on the other hand, has stressed the concept of equality. We have seen the rise of a class—the "forgotten men"—a group which should never be permitted in a democracy. We found a whole group whom liberty had trod down and whom equality must raise again. We see now care for the aged and the unemployed whereby those who have are forced to share with those who are less fortunate. We see more dignity given to human life. Not that the unfortunate economically now are equal to those more fortunate, but there is greater degree of equality. The Roosevelt stress upon equality has used the Nazarene philosophy, "We are our brother's keeper."

Either liberty or equality in extreme is murderous to democracy. Recently we have seen extreme liberty nearly extinguish the light of self-government. However, we must be warned of the fact that overemphasis upon equality is communism, and this is the antithesis of democracy. Democracy must solve this problem of the conflict between personal liberty and social equality. We must face the problem with patience and resolution.

The second major conflict within democracy is between the concept of personal liberty and governmental efficiency. The dictators accuse democracies of being debating societies in which uninformed majorities rule and half truths triumph. Dictators often point out that our liberty defeats efficiency in government through political intrigue, irrelevant discussions, and unsound compromises. As a party and as a people we must learn to restrain our individual liberty in behalf of well-practiced discipline. This we must do to demonstrate that while regimentation may be strong for a short thrust, cooperation is more efficient on the long pull.

An obvious example is before us. In the early days of the Roose-

strong for a short thrust, cooperation is more efficient on the long pull.

An obvious example is before us. In the early days of the Roosevelt administration there was efficiency through accord. When Mr. Roosevelt came into office, banks were closed and then reopened, and a palsied economic system was given strength. Prosperity, which for years had hidden around that mysterious corner, was chased out into the open and was driven down the main thorough-fares of American cities. Employment was provided for some 20,000,000 who had lost their work. The wheels of industry, which had become matted with cobwebs of disuse, were cleaned out and ciled, and industry began again. Now, in the later days of that same administration, constructive achievement is more difficult because of functional jealousies, personal ambitions, desire for personal preferment, and uncompromising convictions. One now hears of liberals and conservatives as though they were not brothers in sonal preferment, and uncompromising convictions. One now hears of liberals and conservatives as though they were not brothers in one party but perhaps cousins. One hears of the Roosevelt following, the Garner group, the Hull faction, the Clark clique—groups rather than one Democratic Party. One even hears of regulars and independents as though they were lined one against the other. Nor is this an inappropriate time to mention the desirability of according the Commonwealth of Missouri.

Liberty must be made to produce governmental efficiency. This

task we must face with patience and resolution.

The third and last crisis which I would mention is that which arises from the international situation—the crisis of war. Governments like plants or animals thrive in a friendly environment. Democracies thrive on peace. In peaceful times they are at their best and operate with the greatest efficiency. Dictatorships are the ones which thrive on war. They arose in countries which were disappointed in the war. They are the debtor nations from the war. And dictatorships depend upon war or the threat of war for the cohesive force which holds their people together. Without war or the threat of war, dictatorships fall apart. Without war or the threat of war, democracies thrive. When war comes to any nation, democracy ceases. Armies are not democratic organizations. In war even democratic peoples suspend democratic pro-

cedures. Thus, France has already found it necessary to place her ference, marks a new and somewhat changed era. president in the position of a dictator. Democracy cannot come to full and beautiful bloom in soil that is fertilized and tilled by and for dictators. We must have peace if democracy is to live.

And if we are to have peace, the Democrats must demand certain things. They must demand neutrality in their cooperation with fellow democracies—neutrality, both legal and mental, for a people first must surrender their mental neutrality before they can be brought to surrender their legal neutrality.

In the second place, the democracies must bearn to service for

brought to surrender their legal neutrality.

In the second place, the democracies must learn to sacrifice for peace as they would for war. America has never been slow to pay the greatest sacrifice in war, but often we have been far too slow in making any sacrifice to maintain peace. We may have to sacrifice markets, commerce, profits, and other things to maintain peace, but it is better to do so than to make the same sacrifices

sacrifice markets, commerce, profits, and other things to maintain peace, but it is better to do so than to make the same sacrifices in a war that brings destruction to all.

Finally we must cooperate with the peace-loving nations, but we must cooperate with them in counsel as well as in strife. We must learn to give leadership to the weak and vacillating democracies of Europe. Munich might have been more satisfactory had the courage of American diplomacy been represented. If we are, as we must, to help pay the bills of Europe's political intrigue, we should be present when the bargain is made. We should cease to be the cat'spaw to pull the political chestnuts out of a world conflagration kindled in our absence. We must find a way to remain at peace. This hope must be pursued with patience and resolution.

These are the problems of democracy, and the solution is the responsibility of this party if democracy is not to be murdered at the hands of its friends. We must find a way to equalize the desire for personal liberty and social equality. We must make liberty conducive to governmental efficiency, and we must maintain world peace, which is the only condition under which democracy can survive. This demands courage, but there is one whose courage is as great as David's, who as a lad dared to fight the giant. This demands patience, but there is one whose patience in the face of criticism, opposition, and betrayal has been as great as that of Job. It demands resolution, but there is one whose resolution is as great as the transitivity for the party of right for time marches on his side and It demands resolution, but there is one whose resolution is as great as that of Job. It demands resolution is as great as the irresistible forces of right, for time marches on his side, and right leads him in the pursuit of freedom. This one is the leader of the present party, Franklin Delano Roosevelt. Dissolve this crisis we must if government by the consent of the governed is to remain the heritage of a free people.

The White House Conference on Children in a Democracy

EXTENSION OF REMARKS

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Thursday, April 27, 1939

ADDRESS BY THE PRESIDENT, APRIL 26, 1939

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix or the RECORD an address delivered by the President of the United States on Wednesday, April 26, 1939, at the White House, in connection with the White House Conference on Children in a Democracy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mme. Secretary, and members of the conference, it is, perhaps, because I happened to be born with what may be called a "relative mind" and because I have sought to cultivate that kind of thinking for nearly half a century that I think of this conference in the first instance in terms of the past.

the first instance in terms of the past.

Child welfare—to use a much misused term—did not enter into the public conscience of any nation until about 100 years ago. And we know from reading Dickens and the literature of his period that the well-being of children in those early days was principally considered from the viewpoint of schooling and of crime prevention and the ending of physical cruelty—all interwoven with the sentimentality of the good, the ultragood Victorians.

As time went on some interest came to be taken in every nation, but still the activities of those who sought the bettering of the younger generation of the moment viewed the problem before them as a problem somewhat apart from the relationship of the younger generation to the broader public weal.

Even at the time of the first children's conference to assemble in the White House under the leadership of President Theodore Roosevelt in 1909, the conditions that surrounded child life were

Roosevelt in 1909, the conditions that surrounded child life were discussed more in terms of child life than in terms of the national

This was true to a very great extent in the two succeeding White House conferences, and it occurs to me that this, the fourth conference marks a new and somewhat changed era.

ference marks a new and somewhat changed era.

It is still our task to bring to bear upon the major problems of child life all the wisdom and understanding that can be distilled from compilations of facts, from the intuitions of common sense, and from professional skill. This conference, like the others, is composed of men and women having a broad range of experience and interest in matters pertaining to the welfare of children. It is our purpose to review the objectives and methods affecting the safety, well-being, and happiness of the younger generation and their preparation for the responsibilities of citizenship.

But we have gone one step farther. Definitely we are here with a principal objective of considering the relationship between a successful democracy and the children who form an integral part of that democracy. We no longer set them apart from democracy as if they were a segregated group. They are at one with democracy, because they are dependent upon a democracy and democracy is dependent on them.

Our work will not be concluded at the end of the day—it will

Our work will not be concluded at the end of the day-it will only have begun. During the greater part of the coming year the members of this conference, representing every State in the Union and many fields of endeavor, will be at work. We shall be testing our institutions, and our own convictions and attitudes of

testing our institutions, and our own convictions and attitudes of mind as they affect our actions as parents and as citizens, in terms of their significance to the childhood of our Nation.

In an address on Pan American Day, 2 weeks ago, I said "Men are not prisoners of fate, but only prisoners of their own minds. They have within themselves the power to become free at any moment." On April 15, in addressing the heads of two great States, I stated that I refused to believe that the world is, of necessity, a prisoner of destiny. "On the contrary," I said, "it is clear that the leaders of great nations have it in their power to liberate their people from the disaster that impends. It is equally clear that in their own minds and in their own hearts the peoples themselves desire that their fears be ended."

In providing for the health and education of children, for the formation of their minds and characters in ways which are in harmony with the institutions of a free society, democracy is

formation of their minds and characters in ways which are in harmony with the institutions of a free society, democracy is training its future leaders. The safety of democracy therefore depends upon the widespread diffusion of opportunities for developing those qualities of mind and character which are essential to leadership in our modern age. Further, democracy is concerned not only with preparation for leadership, but also with preparation for the discharge of the duties of citizenship in the determination of general policies and the selection of those persons who are to be entrusted with special duties. Beyond this, democracy must inculcate in its children capacities for living and assure opportunities for the fulfillment of those capacities. The success of democratic institutions is measured, not by extent of territory.

opportunities for the fulfillment of those capacities. The success of democratic institutions is measured, not by extent of territory, financial power, machines, or armaments, but by the desires, the hopes, and the deep-lying satisfactions of the individual men, women, and children who make up its citizenship.

We shall be concerned with ways in which the broad chasm between knowing and doing may be bridged over. We shall be reminding ourselves that all the lectures on nutrition will avail nothing unless there is food for a child to eat; that a law for compulsory school attendance is one thing and a chance to go to school is another. Prenatal instruction cannot assure healthy bables unless the mother has access to good medical and nursing care when the time for the babv's arrival is at hand. We know papies unless the mother has access to good medical and nursing care when the time for the baby's arrival is at hand. We know how to budget a family's expenditures; we have undertaken to preserve home life for fatherless or motherless children through the joint effort of the Federal Government and the States. We have made great progress in the application of money and service to the promotion of maternal and child health; the restoration of crippled children to normal physical condition; the protection of neglected children and children in danger of becoming delinquent, especially in rural areas: and the elimination of child

tection of neglected children and children in danger of becoming delinquent, especially in rural areas; and the elimination of child labor from industries shipping goods in interstate commerce.

Yet, after all has been said, only a beginning has been made in affording security to children. In many parts of the country we have not provided enough to meet the minimum needs of dependent children for food, shelter, and clothing, and the Federal Government's contribution toward their care is less generous than its contribution to the care of the aged.

It is not enough however, to consider what a democratic

It is not enough, however, to consider what a democratic society must provide. We must look at our civilization through the eyes of children. If we can state in simple language some of the basic necessities of childhood, we shall see more clearly the

issues which challenge our intelligence.

We make the assumption that a happy child should live in a home where he will find warmth and food and affection; that his parents will take care of him should he fall ill; that at school he will find the teachers and tools needed for an education; that when he grows up there will be a job for him; and that he will some day establish

As we consider these essentials of a happy childhood our hearts are heavy with the knowledge that there are many children who cannot make these assumptions.

We are concerned about the children of the unemployed.

We are concerned about other children who are without adequate

shelter or food or clothing because of the poverty of their parents.

We are concerned about the children of migratory families who have no settled place of abode or normal community relationships.

We are concerned about the children of minority groups in our population who, confronted with discrimination and prejudice,

must find it difficult to believe in the just ordering of life or the ability of the adults in their world to deal with life's problems.

We are concerned about the children living beyond the reach of medical service or lacking medical service because their parents

cannot pay for it.

We are concerned about the children who are not in school or

who attend schools poorly equipped to meet their needs.

We are concerned about the children who are outside the reach
of religious influences, and are denied help in attaining faith in

an ordered universe and in the fatherhood of God.

We are concerned about the future of our democracy when children cannot make the assumptions that mean security and happiness.

This conference and the activities which it initiates furnish an opportunity for us to test ourselves and our institutions by the extent to which they serve our children. I look to you for comprehensive review of the problems before us and suggestions as to practical ways in which we may advance toward our goal.

Many branches of the Federal Government are engaged in the

promotion of the health, education, and well-being of the Nation's children. You will be asked to consider the points at which these children. You will be asked to consider the points at which these undertakings may be strengthened, and the needs for service which cannot be supplied with the resources at hand. But the attention of this conference must not be directed to Federal activities along. or even to joint Federal and State undertakings. It is the local community which is the focal point for all these programs. Children receive benefits not in Washington but in the places where they live.

The men and women within the sound of my voice, as well as you who are assembled at the White House, are in the larger sense members of this conference. Recommendations will be brought to us in a final session next year. It then will be for all of us to determine the extent to which they will be translated into action. I bid you, the members of the conference, Godspeed in your high

One Hundred and Twentieth Anniversary of Founding of I. O. O. F.

EXTENSION OF REMARKS

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES Thursday, April 27, 1939

ADDRESS OF HON. M. M. LOGAN, OF KENTUCKY, AND LETTER FROM PRESIDENT ROOSEVELT TO BURTON A. GASKILL

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address delivered by the junior Senator from Kentucky [Mr. Logan] on April 26, 1939, over a Nation-wide hook-up, from the Lodge Hall of Washington Lodge, No. 1, Baltimore, Md., on the occasion of the one hundred and twentieth anniversary of the founding of the Independent Order of Odd Fellows on American soil; and, as a part of that address, a letter of greetings written by President Roosevelt to Grand Sire Gaskill, extending his felicitations.

There being no objection, the address and letter were ordered to be printed in the RECORD, as follows:

Every hour in the day brings tidings of war, and the horizons of the nations grow blacker with the passing of the days. That the nations are to be devastated by war seems no longer doubtful, and whether civilization, as we know it, will continue in the world is a question that brings thoughts which are unpleasant to dwell upon. One hundred and twenty years ago there was founded in the United States the Independent Order of Odd Fellows by a peaceloving patriot whose name was Thomas Wildey. If the tenets of this order had found lodgment in the hearts of all men, the picture presented by mankind today would be as different from that we see as a calm morning in June is different from the swirling blizzards of the North in the coldest winter.

This fraternity has been the leader for more than 100 years in an effort to reach the objectives making for the improvement and

This fraternity has been the leader for more than 100 years in an effort to reach the objectives making for the improvement and elevation of human character. It has sought the general welfare and happiness of the human race as a whole. While it reveres religion and has an unfaltering faith in God, the Creator and Preserver of the Universe, it never takes part in the divisions or classifications of human society. It goes about doing good as good should always be done. It has established more homes for the aged, for widows, and for orphans than any other fraternal organization. It has donated millions upon millions for the care, protection, and education of children. It has cared for the sick, buried

the dead, and sought at all times to bring happiness to the sorrow-

the dead, and sought at all times to bring happiness to the sorrowing and relief to the suffering.

There is nothing new in the principles of our order. It seeks to make well-known principles of right living a force in the world to produce the well-being of humanity. These principles are found written in the books of great philosophers of antiquity. They are found in the Bible, which is the foundation of our faith, and they embody the simple teachings of the Christ. We seek no reprisals, we punish no one. Where our order cannot render service it remains silent. It has always practiced mutual relief among its members, and, long before this Government of ours listened to the wailings of the unfortunate, it was extending a hand of helpfulness to all within its confines. It makes no distinction between the rich and poor, nor the high and the low. It looks alone to the spirit within and seeks to find the virtues dwelling in the bosom of men. It judges not. It determines the worth of a man by his life and conduct. Until recently its doctrines were heard by its members in every civilized country. Its temples dotted the earth. From humble beginning it grew to glant proportions and was welcomed everywhere. Its ideas of social welfare and mutual assistance were taken up by the nations of the world. Its power to do good was not exceeded by any organization in all the world. In all of its history no one has ever charged that Odd Fellowship provoked discord, taught hatred, or brought strife into any part of the earth.

The brotherhood of man has been, and is, its main objective. of the earth.

of the earth.

The brotherhood of man has been, and is, its main objective. Its members are taught that God is the Father of all men, and, as that is true, all men are brothers. Each individual is the object of His paternal care. It has covered the earth gently by its example of kindness and service. It will continue more now than ever to teach brotherhood, universal brotherhood, and it welcomes any assistance in this great work that may come from organized governments, or from organized groups of society. Odd Fellowship shall now begin anew and build to nobler heights on its old foundation, broadened as the exigencies of humanity may require. It asks nothing but an opportunity to serve, to be a father to the fatherless, a comforter to the sorrowing, the helper of those who are helpless. It must seem strange to those who are familiar with the teachings of this fraternity that there should be any country which would not welcome its members. The stern truth, however, has been forced upon us, and we know that there are certain forms of government where love and kind-

that there are certain forms of government where love and kind-ness are not wanted by those in authority.

There is a greater objective than I have mentioned. Odd Fellowship believes in peace and in the peaceful settlement of all controversies among men or nations. It hates war, but is willing to make any sacrifice to protect the liberties of its members and their right to continue to teach righteousness and justice among men. We know that the time will come some day when war will their right to continue to teach righteousness and justice among men. We know that the time will come some day when war will not be the remedy for settling disputes. It will not come, however, until the law of universal brotherhood shall be acknowledged as it is taught by us. Our order is engaged always in an effort to eliminate from the heart greed and selfishness, and when that is done a way will be found in amity for nations to settle their disagreements. It may be that the day is distant, but whether it comes now, or whether in a century or many centuries in the future, when it does come those who then live will know that Odd Fellowship has once more succeeded in leading the world to a sane way of living.

Therefore let us not be discouraged by the things presently happening in the world. We must not despair because the path that leads to the peace of the world is now dark. We must play our part for the future, and, if it requires work and suffering to achieve the end which must be accomplished if civilization is to be saved, then let us work and suffer until the will of God prevails on earth and the human race finds happiness. We need leadership to carry on our work, and in the future, as in the past, it will be found. When we reach one goal we must consolidate our gains and start anew for the higher goal and thus continue until the final objectives are obtained. We must not grow discouraged. We cannot stand still. We must let our watchword be "Forward."

We have taken one step recently that is fraught with great possibilities. We have solemnly determined that we will turn our attention to building the moral stamina of our people. This means that we must begin with childhood, that children must be taught the right principles of living and the importance of morality and religion. Our present grand sire, Gaskill, is so zealous in his work that he has devised a plan which embodies his ideas of the training

right principles of living and the importance of morality and religion. Our present grand sire, Gaskill, is so zealous in his work that he has devised a plan which embodies his ideas of the training of youth. He presented this plan to the sovereign grand lodge at its annual meeting last September in Oklahoma City. He succeeded in getting it adopted. He has gone about it in the right way and has a definite program. He has sought the help of legislative bodies in the respective States. He is asking that the children in public schools be given a certain weekly period in which they may go to the church of their choice to receive moral instruction in accordance with their faith. This has nothing to do with creed. Odd Fellowship recognizes no special creeds. We find good tion in accordance with their faith. This has nothing to do with creed. Odd Fellowship recognizes no special creeds. We find good in the teachings of all religions and religious denominations. We ask that from a busy life, time be taken to fortify the child against the opposition he is sure to encounter when he reaches the state of manhood. We are hopeful that our order will be the leader in this monumental work of preparing children to do their part on the world's stage. Having made the start, we must not turn back. If we make mistakes, we will correct them. Again, our watchword must be "Forward."

I look with hope to the future of our fraternity. I know it is progressive in its nature and that it can adjust itself to the changing progressive in its nature and that it can adjust itself to the changing times and conditions without forsaking any of its fundamental principles. It may be necessary to devise new methods for their application. I am firmly convinced that as long as liberty reigns and God is supreme Odd Fellowship will make its record more glorious still and will raise ever higher its spotless banner, leading ever upward until its ends be achieved.

Now, in conclusion let me repeat words which should always be dear to the heart of every Odd Fellow:

"This is the land where hate should die—
No feuds of faith, no spleen of race
No darkly brooding fear should try
Beneath our flag to find a place.
Lo! every people here has sent
Its sons to answer freedom's call;
Their lifeblood is the strong cement
That builds and binds the Nation's wall.

"This is the land where hate should die-Though dear to me my faith and shrine, I serve my country well when I Respect beliefs that are not mine. He little loves his land who'd cast Upon his neighbor's word a doubt, Or cite the wrongs of ages past From present rights to bar him out.

"This is the land where hate should die This is the land where strife should cease, Where foul, suspicious fear should fly Before our flag of light and peace Then let us purge from poisoned thought
That service to the state we give,
And so be worthy as we ought
Of this great land in which we live."

> THE WHITE HOUSE, Washington, January 9, 1939.

Mr. BURTON A. GASKILL.

Grand Sire, Sovereign Grand Lodge of the I. O. O. F.,
506 Guaranty Trust Building, Atlantic City, N. J.
DEAR BROTHER GASKILL: The 120 years that have elapsed since the founding of the Odd Fellowship in America afford a broad perspective on which to view the accomplishments of our order in this country.

Its record is a noble one told in terms of true brotherhood among men; the relief of sickness and distress; the care of the widow; the education of the orphan and the promotion of good will and good citizenship wherever our far-flung subordinate lodges have been established.

In the hope that our fraternity will in the years that lie ahead ever uphold its splendid humanitarian ideals, I send fraternal greetings and good wishes.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

Red Cross Convention

EXTENSION OF REMARKS OF

HON. KENNETH Mckellar

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Thursday, April 27, 1939

ADDRESS BY HON. CORDELL HULL, SECRETARY OF STATE, AT THE CONVENTION DINNER HELD IN CONNECTION WITH THE ANNUAL RED CROSS CONVENTION, WASHINGTON, D. C., APRIL 25, 1939

Mr. McKELLAR. Mr. President, on April 25 the Honorable Cordell Hull, Secretary of State, at the dinner held in connection with the annual Red Cross convention at the Mayflower Hotel in Washington, D. C., made a notable speech. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is with deep pleasure that I welcome this opportunity to extend my best wishes to the American Red Cross Society on the seventy-fifth anniversary of the organized existence of the Red Cross movement. Three-quarters of a century is not a long period measured in terms of the annals of history. But into that relatively brief span of years, the men and women who had launched

this noble mission of mercy and the men and women who, through succeeding generations, have carried on and developed the work thus begun, have crowded achievements, so splendid, so heartening that you, who stand in their place today, should be justly proud and irresistibly inspired to seek even greater heights of endeavor. And with you, all of us, who hope and work for a brighter future for mankind, should find in your unselfish efforts a source of pride and of inspiration.

The first idea of what has now become a truly universal Red

and of inspiration.

The first idea of what has now become a truly universal Red Cross movement, was borne on a battlefield in the heart and mind of a great humanitarian, a citizen of Switzerland. All of us today owe a debt of homage to Henri Dunant, who, amidst the anguish of the Battle of Solferino, heard the heart-rending cries and groans of the maimed and the dying, echoing through centuries of armed conflict and all but unallayed by the inadequate forces of mercy; and who there determined to dedicate his life to the cause of arousing everywhere a realization of the desperate need for orand who there determined to dedicate his life to the cause of arousing everywhere a realization of the desperate need for organized care of the victims of battle. It is a glorious tribute to the indestructible vitality of the better human instincts that his idea blossomed forth into an international organization, which for 75 years has been functioning on the basis of an intergovernmental convention; that back of this international institution there are today 61 national Red Cross societies, united into a world league, with a membership of nearly 34,000,000.

The Red Cross movement is founded upon the instinct of human

The Red Cross movement is founded upon the instinct of human decency and a sense of social responsibility. Men and women in every country contribute to its support, money and materials, time and work, not because of any compulsion, but because the objectives and activities of the Red Cross strike a responsive chord in human hearts. There is no finer example of voluntary effort

the common good.

It is not the battlefields alone that know the healing and re-creative touch of Red Cross activities. The flaming emblem of your movement is in evidence wherever there is suffering, in time of peace as well as in time of war.

When nations stand embattled, the clash of their armed forces

when nations stand embattled, the clash of their armed forces leaves in its wake human wreckage to which the intrepid workers of the Red Cross bring comfort and aid. But there is also much work for the Red Cross to do behind the battle lines. There is need for supplementing the activities of the regular medical and sanitary forces of the armies and the navies in caring for the sick and the wounded. There is an important role for the Red Cross to play in aiding prisoners of war and in arranging for their exchange.

exchange

Under modern conditions of warfare the tasks of the Red Cross expand as instruments of war acquire a greater and greater degree of destructiveness, and as the range of their cruel operation extends to the entire country rather than remain restricted to the fields of battle. Under our eyes the line of demarcation between the combatant and the noncombatant population is being rapidly obliterated. The miracle of flying is being perverted to the ignoble use of attack upon civilians, far removed from areas of armed conflict, upon women and children, upon the old and the feeble. These defenseless victims of war, too, need aid and comfort. To them, too, the Red Cross must increasingly bring its mission of

mercy.
So shocking to every humane instinct has this new method of so shocking to every numane instinct has this new method of warfare already become, so deeply has it stirred the consciences of men everywhere, that the last International Red Cross Conference, with 54 national Red Cross societies represented, unanimously adopted a resolution, in which it appealed, in the name of humanity, "to the competent authorities of all countries to prevent or so restrict bombing from the air as to safeguard the lives of helpless women and children and aged civilians."

When there is no war the Red Cross devotes its efforts to alleviating the suffering caused by natural disasters. From its very be-

when there is no war the Red Cross devotes its entire to allering ating the suffering caused by natural disasters. From its very beginning the Red Cross movement accepted this field of activity as an integral part of its responsibility. Dunant himself urged that the societies of mercy, the creation of which he was advocating so ardently for work in time of war, should also "render great service at the time of epidemics, floods, great fires, and other unexpected catastrophes." catastrophes.'

Your own organization, the American Red Cross, has a conspic-Your own organization, the American Red Cross, has a conspicuous record of service rendered in connection with such peacetime disasters. The forest fires in Michigan more than 50 years ago; the storm and tidal wave that swept Galveston in 1900; the San Francisco earthquake and fire of 1906; the periodic floods on the Mississippi and the Ohio—these are but a few of the visitations of nature, major and minor, the widespread ravages of which, causing untold destruction and suffering, the American Red Cross Society has been called upon, during the period of its existence, to aid in alleviating and repairing. to aid in alleviating and repairing.

There are similar records in many other countries. There are also remarkable instances of international cooperation in such peacetime work of mercy. Earthquakes, tidal waves, great fires, epidemics, wherever they occur, galvanize human beings throughout the world into spontaneous offers of aid. And the Red Cross is the principal organized channel through which these floods of

is the principal organized channel through which these floods of sympathy and material aid pour toward the afflicted locality.

The alleviation of suffering is a wonderful thing. The willingness of millions of men and women to assume voluntary responsibility for making it possible and effective is one of the finest flowerings of a truly great civilization. The immense strides in this direction made by the Red Cross movement during the period of its existence strengthen in all of us our faith in the spiritual destiny of the human race. But while contemplating this inspir-

ing picture, let us always bear in mind that in the upward climb of civilized man there is something even more fundamental than the alleviation of suffering—and that is the prevention of suffering.

Over many of the catastrophes of nature man has no control. There we humans are mere helpless victims of the misfortunes

which befall us. The alleviation of suffering is the beginning and

the end of our possible activities in connection with such disasters. That is not true with respect to war, the greatest of the sources of suffering and anguish with which the human race is afflicted. Here we are victims, not of the blind forces of Nature, over which we have no control, but of man-made conditions. In war we are all victims, but some among us are also the deliberate authors of our misfortunes.

War itself—that is, the period of armed hostilities—takes its fear-ful toll in human life and suffering, in material destruction, in moral and spiritual degradation. But war also casts a shadow before

and leaves a pall behind.

and leaves a pall behind.

Long before the guns of battle begin to thunder, preparation for war exacts a growing tribute of human suffering and anguish. Economic activity is increasingly diverted from production designed to maintain and improve the material standard of life to the creation of instruments of destruction. Spiritual activity is more and more turned away from enlightenment, and intellectual progress to artificial cultivation of hatreds and animosities. Confidence in the future is chattered. Creating thought and animosities.

artificial cultivation of hatreds and animosities. Confidence in the future is shattered. Creative thought and enterprise, the freedom of the individual become chained to the chariot of brute force.

Long after the guns of battle are stilled the disruptive and destructive forces which preparation for war and war itself had brought into being continue to sway human affairs. It is only the resilience of the human spirit that makes it possible for a nation to undertake and carry through the truly heroic task of restoring the order of peace after the chaos of war. The greater the material and moral destruction of a war, the more difficult that task becomes. that task becomes.
And all this to what end?

And all this to what end?

Nations have most frequently resorted to war on the plea that it is the only method open to them for redressing wrongs or the only means left to them of settling international differences. For neither of these purposes is war the best of the remedies available to man, or, in fact, a remedy at all. There is no controversy, no difference, that can arise between nations which could not be no difference, that can arise between nations which could not be settled, with far greater benefit to all concerned, by the peaceful processes of friendly adjustment than by resort to armed force.

When a nation makes a deliberate resort to armed force, on any plea whatever, it pursues in reality a wholly different objective; it uses war or threat of war as an instrument of a policy of territorial expansion or domination of others. Such nations are the authors of war, the awful cost of which is paid by their own people and by the rest of mankind.

Whenever there are nations in the world which adopt this type of policy; their intentions of the world which adopt this type of policy; their intentions and continue world which adopt this type.

whenever there are nations in the world which adopt this type of policy, their intentions and actions inevitably set into motion forces of resistance. Terrible as are the realities and consequences of war, sooner or later conditions arise in which peaceful and peace-loving nations prefer armed defense to subjection and

peace-loving nations prefer armed desense to subjection all slavery.

There is ample room on this earth for the 2,000,000,000 human beings who inhabit it. There are ample known resources of materials and skill to enable all nations to enjoy a high level of economic prosperity and to face a future of continued plenty. There are ample proven resources of mind and soul to enable the whole of mankind to enjoy the blessings of spiritual advancement. But there has never been, and there is not today, room on this earth for a political organization of mankind under which a single nation or a group of nations will enslave and dominate all the others. others.

No single nation holds a monopoly of material resources needed by all to maintain the modern level of civilized existence. While by all to maintain the modern level of civilized existence. While some nations are more generously endowed than others, none is or can be self-sufficing within its frontiers, except at the price of a disastrous decline in the level of satisfaction of its people's wants. In the present stage of civilization and technical progress, the material and spiritual resources of the entire world are available to all nations through mutually beneficial trade and through all those innumerable peaceful and friendly international relationships in every phase of human activity, whose capacity to enrich the lives of individuals and of nations has already been convincingly demonstrated. No nation can prosper without adequate access to the resources of the entire world, rather than only to those contained within its own frontiers. And such access is possible contained within its own frontiers. And such access is possible only on the basis of peaceful international cooperation.

No nation is excluded from participation in the benefits of these

precious means of betterment and advancement of mankind except as it deliberately excludes itself—either by short-sighted attempts at national isolation or the even more short-sighted policy of armed aggrandizement. Isolation dooms a people to inescapable or armed aggrandizement. Isolation dooms a people to inescapanic impoverishment; armed aggrandizement, under modern conditions of warfare, entails destruction for which no conceivable advantages secured by the conqueror can possibly provide compensation. A nation entering upon either of these ruinous courses inflicts an incalculable injury upon its own people and upon the world as a

The maintenance and improvement of the structure of peaceful international relationships, upon which the entire fabric of our present-day civilization rests, require a willing contribution from every nation. They are impossible unless each nation respects the independence and sovereignty of every other nation; unless each

nation scrupulously observes its international obligations and the rules of conduct embodied in the voluntarily accepted provisions of international law; unless each nation is prepared to abstain from resort to armed force as an instrument for the settlement of international differences and controversies and to adjust all such disputes solely by pacific means; unless each nation is willing to place its economic relations with all other nations upon a basis of the greatest practicable, mutually advantageous interchange of goods and services flowing through the channels of equal economic opportunity and nondiscriminatory commercial treatment.

Every thoughtful man today, in every country of the world, is confronted with the inescapable duty of weighing—in the scales of reason, common sense, his own advantage, and the good of his nation—the benefits of living in a world functioning on the basis of the principles I have just enumerated against the prospect of living in a world caught in the stifling net of anguish and suffering engendered by the constant recurrence of war, of preparation for armed hostilities, and of the aftermath of armed conflict.

I, for one, cannot believe that any nation today has irrevocably entered upon a road from which there is no turning, save in the direction of a new widespread war. The road to peaceful adjustment of whatever reasonable and legitimate grievances there may exist has always been open and is still open. But upon this road one must travel with a sincere desire for peace, with a firm determination to observe the pledged word, once given, with a sense of respect for the dignity of the human soul. I hope with all my heart that at the present fateful juncture of history all nations will decide to enter them this road.

heart that at the present fateful juncture of history all nations will decide to enter upon this road.

Yet so long as some nations continue to arm for conquest, all other nations are confronted with the tragic alternatives of surrender or armed defense. So far as our Nation is concerned, the mere posing of the alternatives supplies the answer. We hope devoutly that a negotiated peace before rather than after the senseless arbitrament of war, a peace based on a mutually fair adjustment of outstanding problems, will be the happy lot of mankind in the future which lies immediately ahead. We are prepared to make our appropriate contribution to such a peace. But if our hopes are doomed to disappointment, if, after all, the red flames of war rather than the noonday sun of peace are to illumine our horizon, we are equally prepared to defend successfully our national interests and our cherished institutions.

So long as the possibility of a new war still haunts the world, the

So long as the possibility of a new war still haunts the world, the American Red Cross is a vital adjunct of our national defense. We must do everything in our power to strengthen its resources, to make it fully effective for the great service of mercy which it will be called upon to render if our hope and labor for peace should unhappily fail.

unhappily fail.

All of us honor the Red Cross for the unfailing spirit of sacrifice and humaneness with which it stands ever ready to perform its gallant wartime task. In this same spirit, I am sure, you leaders of the American Red Cross, will be the first to welcome the daywhen that task will become no longer necessary; when the mitigation of the horrors of war will no longer be needed because war itself will disappear from the ken of humanity; and when it will-become possible for you to devote all your energies to the neverending work of alleviating the suffering and anguish caused by unpreventable disasters of Nature.

The Good Earth

EXTENSION OF REMARKS

HON. CLAUDE PEPPER

IN THE SENATE OF THE UNITED STATES

Thursday, April 27, 1939

EDITORIAL FROM THE NEW YORK TIMES OF APRIL 25, 1939

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the New York Times of Tuesday, April 25, entitled "The Good Earth."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of April 25, 1939]

Dr. Hugh H. Bennett, Chief of the Soil Conservation Service, knows how to drive home with dramatic force the meaning of our reckless method of farming. Even the most unimaginative mind must be impressed by his declaration before the House Labor Committee that "we are losing every day, as a result of erosion, the equivalent of 200 40-acre farms" and that the good earth thus whirled off is "gone, gone forever"—with the wind and the water.

The desolation that has visited many a once fertile area is the result of industry and blindness. Yet man is not wholly to blame. Long before the plow turned up land once given over to the buffalo, droughts which run in cycles had parched the Great Plains, the most sorely stricken region. To tamper with climate is impossible. The alternative is to adapt agriculture to the cycle. But this involves a change in farming methods difficult to bring about. Productivity in some regions has steadily declined and with it standards of living. The evidence is strong that a wet cycle began in 1936. With it the hope springs up that nature will herself redeem some of man's negligence. But the rains help but little. With the topsoil gone the water runs off the fields. Even if properly designed irrigation systems are constructed it will take years before the underground waters are replenished. Nature has established a balance that is easily disturbed. Man must now restore it.

The work to be done has been thoroughly discussed in a dozen Government reports. Though the character and extent of the damage are well known, intensive surveys must be made which will take years. The Federal Government must continue the policy of purchasing and rehabilitating scattered crop farms and converting them into grazing ranges. Farms must be increased in size with the aid of Government credit in the interest of higher agricultural efficiency. Water must be caught and distributed by means of properly designed irrigation systems. The States must do their share by encouraging grazing associations to operate large tracts as units, by permitting qualified property-tax-paying owners to form soil-conservation districts, by formulating taxation policies suited to the new economic and social conditions, and by reforming the old leasing system. Action is needed which calls for voluntary cooperation and a sacrifice of old privileges, but which nevertheless makes heavy demands on local initiative and self-reliance.

Foreign Relations-Congress or the President?

EXTENSION OF REMARKS

HON. GERALD P. NYE

OF NORTH DAKOTA-

IN THE SENATE OF THE UNITED STATES

Thursday, April 27, 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, APRIL 25, 1939

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Record an address delivered on Tuesday evening, April 25, over the Columbia Broadcasting System by the Senator from Ohio [Mr. Taft] on the subject Foreign Relations—Congress or the President?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Citizens of the United States of America, the express powers given by the Constitution of the United States to the President in respect to foreign relations are quite limited: "He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur; and he shall nominate, and, by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers and consuls." But from the nature of foreign relations, and from the beginning of the Government, the courts and the Congress have held that the President's power over foreign relations is predominant. The Nation cannot speak with a multitude of voices, and the President must be the person who conducts all negotiations with foreign nations. The Supreme Court has said: "In this vast external realm, with its important, complicated, delicate, and manifold problems, the President alone has the power to speak or listen as a representative of the Nation. He makes treaties with the advice and consent of the Senate; but he alone negotiates. Into the field of negotiation the Senate cannot intrude; and Congress itself is powerless to invade it."

invade it."

On the other hand, Congress, and particularly the Senate, is given extensive powers and duties with reference to any Government action other than negotiation in the foreign field. Only Congress may regulate commerce with foreign nations. Only Congress may declare war. Only Congress may raise and support armies, and provide and maintain a navy, although the President is Commander in Chief when they are raised or provided. Only Congress, therefore, has power to act in the field covered by the Neutrality Act, involving the embargo of shipments abroad, restraint on American ships, restraint on the loaning of money or credit to foreign nations.

straint on the loaning of money or credit to foreign nations.

The President is responsible for what this Nation says to foreign nations, but he must be very careful in his statements as to what this Nation will or will not do, because unlike most executives in

European countries he has not the final power to put his foreign policy into effect.

The position sometimes taken that Congress should keep en-The position sometimes taken that Congress should keep entirely out of foreign policy is wholly contrary to the Constitution. Congress has no business to interfere in negotiations with foreign governments, but it has not only the right, but the duty, to consider the policies which involve specific legislation like the

Neutrality Act.

Neutrality Act.

There is another careless statement made that no American, in Congress or out, should criticize anything the President does or says in his relations with foreign nations, because politics should stop at the water's edge. I quite agree that foreign policy is not a partisan issue, and as a matter of fact there is just as much difference on the Republican side today as on the Democratic side. But if in time of peace any citizen feels that the President's handling of foreign policy is wrong, or likely to lead to a war which he thinks unnecessary, it seems to me his right and duty to state that fact clearly, and do whatever he can to change a policy which he thinks likely to result in war. The essence of democratic government is that men shall be free to express their opinions on any subject, certainly on a subject as vital as foreign relations. No President should be permitted to lead the country gradually into a situation where a declaration of war is almost forced on Congress, without full opportunity for criticism. The people whose very existence may be terminated by war should have full opportunity to hear both sides and approve or disapprove the preliminary steps of any policy, and so it is entirely proper that Congress, and Representative Samth and myself, as junior Members of it, should discuss our foreign policy, whether that discussion involves criticism of the President or not.

Everybody in the United States today asserts that he is for peace, thouch come of the weather the secure of the weather.

that discussion involves criticism of the President or not.

Everybody in the United States today asserts that he is for peace, though some of the weapons to secure it seem to me rather warlike. The basic purpose of the Neutrality Act and the amendments now being considered is to keep the United States out of war. I believe that most of the provisions of that act tend to accomplish that purpose. The cash-and-carry provisions, providing that credit may not be given to governments engaged in war, certainly prevent our acquiring a financial interest which may lead to our support of one country against another. The provisions prohibiting loans directly to such governments have the same effect. The prohibition against American vessels carrying arms to belligerents should prevent incidents of the kind which led to our joining in the World War. The prohibition against American citizens traveling on vessels of nations involved in war is likely to remove a cause of war if such a vessel

is sunk by an enemy.

The only provision in the Neutrality Act which seems ineffective to me to aid peace is that which prohibits the shipment of arms, ammunition, and implements of war to belligerent states. Since we are selling on a cash-and-carry basis the materials from which such munitions may be manufactured, there does not seem any great difference in principle in the shipment of munitions; nor do I see that any nation can object to other nations buying arms in this country if the same market is onen to every nation, which I see that any nation can object to other nations buying arms in this country if the same market is open to every nation which can approach it, and so we give them no cause for war. I cannot believe that inability to get arms from us will prevent a nation going to war, for it can build its own munition plants and buy the raw materials from us. But the refusal to sell any arms discriminates against small nations which have no arms plants of their own. I should be inclined to favor an amendment of this section of the act to permit the sale of arms to any nation on a cash-and-carry basis.

basis.

But I should be very much opposed to the Thomas amendment and to any other amendments which give the President any power to discriminate between different nations according to his idea as to which may be the aggressor in a particular war. If we begin to take sides in foreign disputes, we will almost certainly become involved in such disputes. From George Washington to Woodrow Wilson, a policy of neutrality has always been considered as likely to keep us out of war and benefit this country. George Washington said: "Europe has a set of primary interests which to us have none or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to comto our concerns. Hence, therefore, it must be unwise in us to com-plicate ourselves by artificial ties in the ordinary vicissitudes of her politics or the ordinary combinations and collisions of her friend-ships or enmittes." Woodrow Wilson insisted on a complete neu-trality for 2 years, until direct interference by Germany with our own citizens and rights compelled us to war.

If a war occurs in Europe and our Government deliberately sides with one nation or group of nations and assists that na-tion by embargoing exports to its enemies, it will not be long before our people identify their interests completely with one side before our people identify their interests completely with one side. In these days of propaganda, all of the propaganda would come from that side. The Government itself, having taken sides, would tend more and more toward war until we would find ourselves first financing and then supporting with troops the favored nation. The slightest incident with the nation against whom we discriminated would arouse, both in the people of that nation and in our own people, the intense bitterness which leads inevitably to war. I am pleased that even Senator PITTMAN in his amendments of the Neutrality Act proposes no power to the President to discriminate. Should a situation ever arise, after a war has begun, in which our interests seem to be directly involved in the result, Congress can determine at that time whether or not to declare war. determine at that time whether or not to declare war.

The President's position seems to me much too warlike. A year ago in Chicago he declared his belief that we should "quarantine the aggressor nations." In his opening speech to Congress he said: the aggressor nations." In his opening speech to Congress he said: "The defense of religion, of democracy, and of good faith among nations is all the same fight. To save one, we must now make up our minds to save all." It is somewhat difficult to see how we can save democracy and good faith among nations by a policy of mere defense of the United States. The President said further in that address that we cannot safely be indifferent to international law-lessness anywhere in the world, and cannot let pass, without effective protest acts of aggression against sister pations. The world. tive protest, acts of aggression against sister nations. The word "effective" suggests armed intervention. The President, however, suggests that he does not mean armed intervention, and says: suggests that he does not mean armed intervention, and says: "There are many methods short of war, but stronger and more effective than mere words, of bringing home to aggressor governments the aggregate sentiments of our own people." This must mean economic sanctions or embargoes against foreign nations, which, in my opinion, would abandon our whole historical policy of neutrality and lead directly to war.

The President seems to me to accept too easily the assumption that we will become involved in a European war. In leaving Warm Springs 2 weeks ago, he said: "I'll be back in the fall if we don't have a war." Finally, after his return, he endorsed wholeheartedly an editorial in the Washington Post which interpreted his Georgia remark as a threat to Germany and Italy that we would join

an editorial in the Washington Post which interpreted his Georgia remark as a threat to Germany and Italy that we would join England and France in case of war. That editorial said: "Nothing less than the show of preponderant force will stop them, for force is the only language which they understand." The President "made it plain that a war forced by them would from the outset involve the destinies of a nation which, as they fully realize, is potentially far stronger than Italy and Germany united."

There are plenty of other people in the United States who believe that we should threaten to join in a European war. Some of them would frankly be in favor of taking, immediately, an active part in behalf of England and France if war occurred. Others argue that if there is a European war we are bound to become involved sooner or later, and if we threaten to join England and France, we will

if there is a European war we are bound to become involved somer or later, and if we threaten to join England and France, we will decrease the chances of war. I do not accept this argument. I do not see any reason why we must necessarily become involved in a European war if the people do not wish it. If we are determined to stay out of such a war, we can stay out of it. It is a question of our determination to do so. Those who argue that we cannot keep out are really in favor of going in. I believe we should stay out of it and can

The argument is that we should join England and France first, in order to save democracy in Europe, and then to prevent Hitler and Mussolini from overrunning the United States. I do not beand Mussolini from overrunning the United States. I do not be-lieve that a war in Europe, no matter what its result, would ulti-mately assist democracy in the world. As a result of the last war, half the democracies became dictatorships.

The line-up in Europe today is more one between nations, as in 1917, than between forms of government. Already we see lined up on the English and French side the autocracies of Poland, Rumania, Greece, and Communist Russia. A practical dictatorship has been established in France. Before such a war were over we might find communism or fascism in control in England and France, even if the war is successful from their standpoint. We are primarily interested in the preservation of a republican form of government in the United States, not in Europe. If we join in another world war, I doubt if we could maintain such a government in this country. There would be an immediate demand for ment in this country. There would be an immediate demand for arbitrary power, unlimited control of wages, prices, and agriculture, and complete confiscation of private property. We would be bound to go far toward totalitarianism. It is doubtful whether we would ever return. War is the enemy of democracy. Our best service to the cause of democracy is to keep it alive in the United States and provide a standard to which the world may in time return. Nor do I believe that we face any danger from Germany or Italy. We can defend our position in North America and the Caribbean against the world if we have to do so, and that very fact means that we will never have to do so. There is some selfish reason for all of Hitler's and Mussolini's acts of military aggress.

reason for all of Hitler's and Mussolini's acts of military aggression up to now, outrageous as those acts have been. But it is hard to see any reason for a military attack on the United States. Germany and Italy will never be released from the complications of the European situation to such an extent as to become a threat

to the United States.

Those who desire the repeal of the Neutrality Act, those who favor the President's apparent position may talk of their affection for peace, but they have already accepted in their minds the thought that we should take an active part in a European war if it occurs. They have developed the same callousness to war which has existed in the past, and they do not even admit to themselves that it involves the suffering and death of millions of Americans under the most horrible circumstances. Modern war is more terrible than any past war. It involves the unlimited slaughter of civilians as well as soldiers. If we had been in the last war from the beginning as these people would have advocated slaughter of civilians as well as soldiers. If we had been in the last war from the beginning, as these people would have advocated, we would have lost millions of men instead of hundreds of thousands. Almost any solution is better than war, and certainly we should not admit that the welter of different races in Europe and the inevitable conflicts which constantly result should drag us into a maelstrom of destruction.

I hope the President does not mean what he seems to say. Perhaps he is only threatening Germany and Italy without intend-

ing to carry out that threat. But such a course is dangerous, for it may lead England and France into taking a position they cannot maintain without our active assistance. It might even encourage a too aggressive attitude, which the French at least have often adopted in the past. Let us not threaten anything unless we intend to carry out the threat. Our bluff might be called. Finally, the President should be exceptionally careful about promising support in war, which he cannot give without action of Congress, for Congress accurately reflects today the determination of the American people that they shall not become involved in European war.

Federal Remuneration to State and Local Government Subdivisions for Tax Losses on Government-Owned Forestry Lands

EXTENSION OF REMARKS

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1939

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the Record. I desire to submit herewith a compilation showing the effect of my bill, H. R. 4833, upon the several States in which the Government owns forestry lands. It will be borne in mind that the purpose of this bill is to reimburse the State and its subdivisions for losses sustained by the removal of large acreage from the tax rolls of the State and county governments. It will be recalled that beginning in 1934 the Federal Government purchased vast areas of cutover and other lands suitable for reforestation purposes. Unquestionably this act on the part of the Government is going to redound to the benefit of the country as a whole. But the State and county subdivisions have realized that the removal of these large tracts of land from the tax rolls has worked a great hardship in many of the counties where substantial acreage was purchased.

This is best illustrated by a small county in my own congressional district, Perry County, Miss., where approximately half of the acreage of the county was purchased by the Federal Government, and the consequent loss to the county by the removal of this acreage from the tax rolls. These counties have all felt the effect of this, but in some counties where these large tracts have been purchased it has been found very difficult to maintain the schools, roads, and county budgets generally.

H. R. 4833 does not cover the public-domain lands. It only covers the lands authorized to be acquired under the Reforestation and Bankhead-Jones Farm Tenancy Acts.

PROVISIONS OF THE BILL

Under the provisions of the present legislation by which the Government acquired these lands the counties are to receive 25 percent of the gross receipts from timber and other assets sold by the Forest Service from the lands. The difficulty about this is that in most instances the gross income from such sales is negligible, due to the fact that the lands were largely denuded of all timber at the time of their acquisition by the Government. This provision under statute would be ample remuneration to the counties in 25 years from now after the timber has developed, but the immediate difficulty is that there is no provision made for the ad interim period before this timber reaches a merchantable status.

This bill seeks to remedy this situation by providing a reasonable revenue to the counties and the States pending the increased value.

RATES

The bill provides for an annual minimum guaranteed payment to the counties by the Federal Government of 3 percent of the purchase price paid by the Government for the land. In other words, under the present law the counties are given 25 percent of the gross revenue received from the sale of products of the land. These payments may amount to only a few dollars under the present law. Under the pro-

posed legislation the counties would be guaranteed a minimum of 3 percent of the Government purchase price of the lands. To illustrate, under the present legislation the Government owns 153,636 acres of land in Perry County, Miss., for which it paid \$262,871. Under existing law Perry County received in 1938, \$831.06 from the Federal Government. Under the proposed legislation Perry County would be granted a minimum annual payment of \$7,886.13, exclusive of farmtenant lands.

The total of the guaranteed annual payment for any county is to be equal to 3 percent of the value of the lands of this class in the county. Of this 3 percent, any amount which was added for increasing the payment within the range between 1½ percent and 3 percent is to be repayable by making deductions from any part of the basic payments from receipts for subsequent years which is in excess of the guaranteed minimum of 3 percent.

This bill also amends the present law so as to remove the limitations therein which restrict the use of the payments to expenditures for public roads and public schools. Payments made by the Government to the counties under this bill may be distributed to the counties in such manner as the State legislature may direct.

Mr. Speaker, in order that the Members of Congress may be advised as to the acreage held by the Government in their own States and congressional districts, I submit herewith a list showing by States and congressional districts the gross acreage, the land purchased, and the price paid therefor by the Federal Government. Anyone interested in determining the amount that would be received by his congressional district under the terms of this legislation, if enacted into law, may easily ascertain such amount by multiplying the total price paid by the Government for the land held in his district by the 3-percent rate.

The list is as follows:

Summary of land purchases to June 30, 1938, under act of March 1, 1911, as amended by act of June 7, 1924, by States, counties, and congressional districts

[Lands purchased means lands acquired and land approved for purchase June 30, 1938, it being assumed that land approved for purchase on that date has been acquired at this time. This list does not include the lands purchased under the Bankhead-Jones Farm Tenancy Act.]

Imports of Farm Products

EXTENSION OF REMARKS

HON. DANIEL A. REED

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1939

Mr. REED of New York. Mr. Speaker, under the trade agreements, I wish to point out that imported farm products, which might have been produced by our farmers to their benefit, are increasing month by month. It is obvious that tribute is being paid to foreign countries, and paid unnecessarily, to the extent of millions of dollars.

Mr. Speaker, I repeat that which should be repeated over and over again, which is this: That a nation, whether it buy from abroad or produce at home, can have no more than she produces. The development of her domestic producing facilities, whether farm or factory, is the true and only sound test of her prosperity.

Present low farm prices tell the tragic story of the American farmer under the low-tariff policy of the Roosevelt administration.

Imports of farm products

Products	January and February 1938	January and February 1939
Cattlehead	46, 100	184, 000
Hogspounds	15, 766	15, 055

Labor's Stake in Trade Agreements and Foreign Trade

EXTENSION OF REMARKS

HON. JAMES M. MEAD OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 27, 1939

ADDRESS BY LYNN R. EDMINSTER, APRIL 22, 1939

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Record an address by Lynn R. Edminster, Special Assistant to the Secretary of State, before the Cook County (III.) League of Women Voters at the Palmer House, Chicago, Ill., on Saturday, April 22, 1939, on the subject Labor's Stake in Trade Agreements and Foreign Trade.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

With your kind indulgence I should very much like to choose this forum meeting as the occasion for dealing with an extremely important phase of the trade-agreements program which has heretofore had far too little attention except from opponents of the program. I refer to the relation of trade agreements and foreign trade to the interests and the welfare of American labor.

At once I hasten to add, if there be those here present whose primary interest in foreign trade springs from a different quarter, let them not be unduly alarmed. For I think it can be taken as axiomatic that the true interests of labor as a whole in this country are likewise the true interests of the Nation; and what I want to make clear today is that the trade-agreements program does promote the genuine interests of labor. I need scarcely add that the great importance of Chicago as a labor-employing community and the well-deserved reputation of the National League of Women Voters for nonpartisan and objective discussion of public issues make this an appropriate place and occasion for discussing labor's interest in the tariff and foreign trade.

I know of few subjects concerning which there has been more widespread misunderstanding in this country. For years labor in

the United States has been told by exponents of ever-ascending tariffs that such tariffs, reaching embargo levels, are in the interest of the American workingman; that they are essential to the maintenance of "the American standard of living." In the interest of labor itself and of the national welfare with which that of labor is so closely linked, it is surely of the utmost importance that this point of view be critically examined.

I propose to begin by stressing some of the fundamentals involved—fundamentals which apply to all countries, under all circumstances.

First of all, what is the proper test of tariff policy from the standpoint of labor? Is it not the same as for any other policy affecting labor? Does that policy increase the economic security and well-being of labor as a whole? This leads to the double question: Does it increase or reduce total employment; and is the nature of the employment which it does foster such as tends to promote, or to retard, the attainment of higher standards of living among the workers? That is the real test.

In order to see how embargo tariffs meet this test, let us consider for a moment what it is that they do and what experience has taught us about them.

has taught us about them.

There is one thing, to begin with, upon which I am sure we can all agree; whatever the reasons offered in justification of extreme measures of trade restriction by the countries that employ them, such measures do greatly impede the flow of international trade. That is axiomatic. That is their very purpose and nature; and the more severe they are, the more trade they stifle.

But does this matter to labor? Is a generous flow of trade between nations a matter of vital concern to labor? To this question there is but one answer. The true interests of labor everywhere—in the United States, in every country—are promoted by policies of moderation in regard to the tariff which permit the surpluses of each nation to be exchanged for those of other nations. For it is in those circumstances that labor finds the greatest opportunity for sustained employment under conditions greatest opportunity for sustained employment under conditions which add most to the real wealth of every country. That is what makes higher standards of living possible for the people of all

makes nigner standards of living possible for the people of all nations.

There are perhaps some who will insist upon a fuller explanation of this statement. It is hardly more than stating a truism to say that the material basis for the advance of civilization throughout the past has been of a twofold character. One phase has been the progress of science and invention, with the enormous increase in production of goods and services for the use of mankind thus made technically possible. The other—and the one I am more particularly concerned with at the moment—has to do with what, in the familiar jargon of economists, we call the principle of "division of labor," whereby people everywhere are inclined to specialize in these types of occupation which, under all the attendant circumstances, they can pursue to the greatest advantage.

There is nothing vague or mysterious about that principle. It is simple and elementary. The native tribesman, spending all of his effort in wringing from nature those few simple things required to keep body and soul together, illustrates well the opposite extreme under which practically no division of labor has developed. It is this principle, operating interdependently with the development of scientific discovery and invention, which throughout the world today constitutes the basis of organized production of that vast agglomeration of goods and services for human consumption which comprise the world's real wealth.

which comprise the world's real wealth.

Such division of labor would, of course, be impossible without trade. The wider the geographic range of trade, the further the principle can be carried, thus multiplying the efficiency of workers everywhere and increasing the sum total of goods and services available for the consumption of all. Within our own country we available for the consumption of all. Within our own country we accept the principle almost as a matter of course in connection with local and regional specialization in different types of industry which results in the exchange of the products of one part of the country for those of another. Notwithstanding the recent disturbing growth of interstate trade barriers within our own national borders, no thoughtful person would seriously propose that we turn backward in this country toward a general system of local or family self-sufficiency.

The same considerations apply to international trade. Trade between nations enormously increases the extent to which this basic principle of division of labor can be carried for the benefit of all. principle of division of labor can be carried for the benefit of all. Artificial barriers to international trade, which have in recent years been carried to such great extremes, impede the operation of the principle but do not in the least impair its fundamental validity. The so-called practical man may scoff at it as academic and theoretical. That is a familiar vein. Who was it that once defined a "practical" man as one who insists on repeating the errors of his forefathers? Calling this proposition "theoretical" does not alter its essential validity. After all, it is simply a matter of common sense. The history of civilization itself is written largely in terms of trade. The transition from the parrow feudal economy and the

trade. The transition from the narrow feudal economy and the low living standards of medieval times to the much wider economy and the enormously improved living standards of modern times is essentially a story of the development of far-flung trade, based upon an ever-widening consumption of goods by the masses of the people. It is this far-flung trade, together with the complex financial and other relationships that are an essential part of it, which constitutes the essential basis of the world's economic life today. Upon the successful functioning of this vast system of international economic relationships the genuine prosperity of every country is in large measure dependent.

What results when these international relationships are thrown

violently out of gear is not merely a matter of theory. The experience growing out of the world economic depression that began in 1929 is one which should illumine this subject for all time. And to no group were the results of that experience more disastrous

What happened? At the close of the twenties there began what proved to be the most severe and sustained peacetime disruption of production and distribution the world had ever known. To this collapse rising trade barriers and other international economic maladjustments were among the most important contributing causes; collapse rising trade barriers and other international economic maladjustments were among the most important contributing causes; and in that situation the tariff policy followed by the United States throughout the twenties, reaching its ultimate extreme in the Hawley-Smoot Act of 1930, played a prominent part. As the depression grew deeper these maladjustments became more severe. Trade barriers rose to prohibitive levels; the processes of international exchange were completely disorganized, and international trade declined disastrously. By 1932 world industrial production had fallen to 69 percent of its 1929 level, world prices of agricultural and other raw materials had declined to half or less than half their 1929 levels, while international trade had dropped to 74 percent of its 1929 volume and to 39 percent of its 1929 value.

These figures were fraught with meaning for laboring people throughout the world—for tollers everywhere, in city, on land, in mine. By early 1933 well over 30,000,000 people in the world were unemployed. Other millions not completely out of work were only partly employed and standards of living declined among the millions who were employed. More than a third of all employment which had been available in 1929—at a time when there was already substantial unemployment—was wiped out. This disastrous decline in employment opportunities took place, moreover, in the face of a growing world population which required more, not fewer, jobs for workers. Its costs in terms of human sacrifice and suffering cannot be expressed in statistics.

be expressed in statistics.

Nowhere-in no country--was labor immune to the effects of this Rowhere—in no country—was labor immune to the effects of this general disaster. Everywhere the resort to trade restrictions and other extreme measures served only to aggravate the general disease. That, in brief, is the story of what the world-wide paralysis of production and trade—with trade barriers rising on every hand like Chinese walls—meant to the laboring man.

I have stressed these simple fundamentals about trade, and I have stressed these simple fundamentals about trade, and have illustrated them in their international setting, because only in such broad perspective can this problem, as applied to labor in the United States or in any other country, be properly understood. I turn now to the domestic scene and to the light which our own experience sheds upon this subject.

The claims made in this country on behalf of prohibitive tariffs as a protection to the laboring man are generally reducible to

The claims made in this country on behalf of prohibitive tariffs as a protection to the laboring man are generally reducible to the proposition that, somehow or other, by shutting out practically all imports of everything that can be produced in this country at costs which are not utterly fantastic, we can give our working people more jobs, at better pay, than they would otherwise have. In short, as already stated, the broad claim is that the standard of living of the American workingman is dependent upon what amounts essentially to an embargo-tariff policy.

That there is something radically wrong with this assumption, however, has been conclusively demonstrated right here in our own national laboratory within the past 10 years. It is demonstrated by what actually took place in this country during this same world-wide depression of which I have just spoken.

On the events prior to 1930 which led up to the economic collapse in this country I need not pause to dwell. I need only say that the tariff policy which this country pursued throughout the twenties was one of the basic factors contributing to the gradual undermining of the whole economic situation both here and abroad. In 1930, after a year of discussion which foretold the ultimate de-

undermining of the whole economic situation both here and abroad. In 1930, after a year of discussion which foretold the ultimate decision, the Hawley-Smoot Act was passed. That act was practically a literal fulfillment of the embargo policy. Almost everything that could be produced in the United States outside of a hothouse was unceremoniously excluded from our shores. The industrialist, the laborer, and the farmer were to have—and, in fact, got—full possession of the American market. Practically nothing that any American industry could produce, or any farmer could grow, at costs not actually prohibitive was permitted any longer to come in from abroad and share in the slightest degree in the American market.

That the results of that act failed dismally to square with the theory of its proponents, including those who upheld the embargotariff policy for labor, is now a matter of history. Neither the industrialist nor the laborer nor the farmer was really protected by that policy. Just the contrary. The Hawley-Smoot Act was, in effect, a deadly attack on the real interests of all three. What it really did was to reduce to the point of ruination both the foreign and domestic markets for the products of American industry and agriculture. By raising prohibitive barriers to imports, it deprived foreign countries of the means of buying our exports, provoked tariff retallation, greatly intensified the growth of trade barriers throughout the world, and lost for our great exporting industries—both manufacturing and agricultural—the foreign markets on which they were heavily dependent for the sale of their vast exportable surpluses.

Between 1929 and 1932 the value of our exports fell from \$5,000,000,000 to one and six-tenths billions, or to less than a third of what they had been. Though actual quantities exported, particularly of agricultural products, fell less sharply, that was small consolation to the cotton grower when, during 1932, the price of cotton fell below 5 cents a pound; or to the wheat grower, with wheat descending to 32 cents a bushel; or to the corn farmer, with corn falling below 20 cents a bushel. The essential fact was that this decline of three and one-half billion dollars in income from export sales of products of our farms and cities constituted a frightful blow to our entire economic life. Its effects permeated everywhere. No industry, no region, no locality was exempt. Depression in the cities curtailed the urban market for farm products. for farm products; depression in the farms curtailed the rural

for farm products; depression in the farms curtailed the rural market for city products.

Carried along helplessly in the general tide of disaster were the very industries that had sought to protect themselves behind embargo tariffs. In their overzeal to push tariff rates on their products upward to complete embargo levels, these so-called "protected" industries became the victims of their own folly. Demanding and obtaining 100 percent of a domestic market which was spoiled in the very process of getting every fraction of it, proved to be a very poor business proposition so far as they were concerned. I once heard a very able Congressman illustrate this point in debate by asking a colleague which he would rather have, 95 percent of something or 100 percent of nothing.

For labor in the United States this whole experience was a

For labor in the United States this whole experience was a disaster of the first magnitude. By 1932, underemployment and unemployment together had created in the United States an army of unemployed amounting to 15,000,000 people—30 percent of our working population. Manufacturing industry alone contributed 5,000,000 potential workers to the ranks of the unemployed. The index of income of industrial workers, as measured by incomes of factory workers, miners, and railroad employees, fell from 1072 in 1929 to 46.5 in 1932 (1924-29=100). What all this meant in terms of economic and social costs need not be dwelt upon. It is enough merely to mention the ruin and desperation wrought in the homes of the workers; the terrific burden of private and public relief; the widespread loss of confidence and even of hope

which were the inevitable result.

In view of what happened in this country following the adoption of the Hawley-Smoot Act, those who have been led to believe that embargo tariffs promote the interests of the workingman surely owe it to themselves to give this matter further thought. The question they should ponder is not whether tariff protection should be either done away with or so drastically reduced as to subject any reasonably efficient industry to destructive foreign competition and wholesale loss of jobs by its workers. No responsible person would advocate such a policy. The real question is whether a policy of extreme protectionism, resulting in tariff embargoes, may not have, for labor, just the opposite effect from that intended.

On that question the evidence is, it seems to me, quite clear,

namely, that such an extreme policy does result in lower standards of living for labor, and does, sooner or later, create conditions tend-ing to disorganize and reduce employment rather than to create it. As has just been pointed out, not even the workers in those industries that assume to be protected behind embargo tariffs are really protected from the ultimate adverse reactions of such a policy upon protected from the ultimate adverse reactions of such a policy upon our general prosperity. Eventually, they, too, are victims. As for the great masses of the laboring people, most of whom are not employed in these so-called protected industries, an embargo tariff policy continuously retards the improvement of living standards and, at the same time, promotes and aggravates periodic economic dislocations which result in widespread unemployment and an actual decline of living standards.

I have already indicated the broad reasoning on which these conclusions rest and the manner in which they have been borne out by recent historical experience. But now let us examine this mat-ter a little more closely as it applies to the great mass of laboring people in the United States.

Just who, let me first inquire, are these laboring people and what is their interest in the tariff? When one looks closely into this situation, he arrives at some very interesting and very surprising

The number of persons gainfully employed in the United States is in the neighborhood of 50,000,000. Nearly half of these are in the service industries, such as transportation, wholesale and retail trade, public utilities, hotels, professional services, and retail trade, public utilities, hotels, professional services, and so on. These occupations obviously are not within the range of foreign competition; hence tariffs cannot protect them. On the contrary, those engaged in them are burdened as consumers and also suffer allows with others from the distributions of sources. along with others from the disturbing effects of embargo tariffs

along with others from the disturbing effects of embargo tariffs upon general prosperity.

Ten million more of the "gainfully occupied" are farmers. Some branches of agriculture are on a sufficient import basis so that tariffs on their products tend to foster and maintain those particular fields of production. But the greater part of American agriculture does not fall within this category; and when tariffs are raised to embargo levels, agriculture as a whole—as the Hawley-Smoot experience clearly demonstrated—is severely hut, the import branches along with the rest. The millions who gain their livelihood from agriculture—whether as owners, tenants, or hired labor—are most, if not all, of them injured rather than benefited by such a policy.

This leaves some 15,000,000 workers other than those in the service occupations or in agriculture. About half of these are in manufacturing industry; the remainder are, for the most part, in

the building or mechanical trades, or in mining, forestry, and fisheries. Of this 15,000,000, fully two-thirds are in branches of production which cannot be effectively protected by tariffs. They are engaged either in those types of manufacturing or mining industry which are on an export basis; or else in building and other trades which are outside the range of tariff protection. Of the remaining 5,000,000 workers, it would appear—as nearly as one can estimate it—that not over half are employed in industries, or branches of industries, which are within the range of effective tariff protection. By this I mean industries engaged in producing things of a kind which are also imported in sufficient quantities so that tariffs can have any substantial effect upon prices of the domestic article. That is to say, probably not over a third of the workers in manufacturing industry—or 5 percent of the number of "gainfully occupied" people in the United States—come within this group.

Nevertheless, it is obvious that the interests of even 5 percent of our workers must always be a matter of serious public concern. There can be no question as to that, for, after all, this 5 percent represents a great many persons. The real question is: What kind of a general tariff policy is in the interest of the workers in these industries?

Cortainly as I have already shown an emberga-tariff policy is

kind of a general tariff policy is in the interest of the workers in these industries?

Certainly, as I have already shown, an embargo-tariff policy is not in their interest. The Hawley-Smoot experience is proof positive of that. There are no benefits to either capital or labor in such industries from a tariff policy which spoils their domestic market. If tariffs which are so high as virtually to eliminate imports of competitive and semicompetitive articles could have saved such industries, then surely they should have fared better than all the others during the years immediately following the adoption of the Hawley-Smoot Act. I deliberately refrain from singling out particular industries in this connection; but I think it can safely be said that the condition of the supposedly "proit can safely be said that the condition of the supposedly "protected" industries was little, if any, better than that of the rest. Even such industries could not truthfully claim, in the face of the actual conditions, that embargo tariffs were an effective mainstay for their workers.

When, on top of this, it is argued that wages and standards of living for labor generally throughout the United States are dependent upon such a policy, such argument is confronted by a solid wall of reason, experience, and present-day fact which defi-nitely refutes it. The fact that wages and living standards of labor are. in general, higher in the United States than in foreign countries is not at all because of the tariff. High wages do not necessarily mean high costs. If they did, it would require to be necessarily mean high costs. If they did, it would require to be explained just how we export anything at all and sell it in competition with foreign producers. What counts is the efficiency of labor in relation to all the factors of production. In many of our industries, that efficiency is so great and costs are so low that we can undersell producers anywhere in the world.

Moreover, if tariffs determined wage levels, it might be expected that wages, generally speaking, would tend to be higher in the "protected" industries. Actually, the factors which determine relative wage levels in different industries are numerous: and it would

tive wage levels in different industries are numerous; and it would tive wage levels in different industries are numerous; and it would be pressing matters much too far to assume that either the presence or the absence of tariff duties is the determining factor. Nevertheless, a careful survey of wage statistics in the different branches of manufacturing industry discloses no tendency for the average wage payment per worker to be higher in industries which may broadly be listed as "protected" than in other manufacturing industries. In fact, just the reverse. Such a survey, based upon data covering a broad range of industries, shows that average weekly earnings of workers in the "protected" group in the year 1937 were only \$20.88. By contrast, and in spite of the inclusion of this relatively lower wage group in the national average, year 1937 were only 20.00. By contrast, and in spite of the inclusion of this relatively lower wage group in the national average, the average weekly earnings in all manufacturing industry in 1937 were \$25.14. Whatever the causes may be the facts are that wages tend, on the average, to run higher in the nonprotected industries. There is no fair comparison of the available data that does not show this tendency.

The net of this whole situation, therefore, is clear. Labor in the United States is not helped but is hurt by embargo tariffs. The overwhelming majority of the workers in this country unquestionably stand to gain from a policy of tariff moderation which, by fostering healthy trade, promotes the sound prosperity of the

entire Nation.

It was in full recognition of these basic facts that this Government embarked upon the trade-agreements program. The interest of labor in the program is explicitly recognized in the Trade Agreements Act. The act sets forth as its immediate objective expan-

ments Act. The act sets forth as its immediate objective expansion of foreign markets for products of the United States, and includes among its ultimate objectives "restoring the American standard of living," "overcoming domestic unemployment," and "increasing the purchasing power of the American public."

The program has been in effect nearly 5 years. Agreements have been concluded with 20 countries. These agreements have already contributed greatly to the reopening of export outlets. Moreover, implemented as they have been by our adherence to the most-favored-nation principle, they have safeguarded much of our export trade from the further inroads of rising trade barriers and trade discriminations abroad.

There is no way in which the effects of trade agreements can be

There is no way in which the effects of trade agreements can be definitely isolated from the effects of other factors that influence the course of trade. All statistics are subject to qualification. For those persons who realize the shortcomings of the figures, it is perhaps sufficient to know what common sense tells us, namely, that

when effective barriers to trade are reduced it is easier for trade to when effective barriers to trade are reduced it is easier for trade to flow than it was before. For those who must have figures, however, it is worth noting that in the 2-year period, 1937-38, our average annual exports to trade-agreement countries were 61 percent greater than the average for the two preagreement years, 1934-35; whereas our exports to nonagreement countries increased by only 38 percent. Imports of American products into trade-agreement countries, generally speaking, have increased at a more rapid rate than imports of the same products from other countries. Moreover, labor should take note of the fact that during 1938, when production in our manufacturing industry was in a slump, exports Moreover, labor should take note of the fact that during 1938, when production in our manufacturing industry was in a slump, exports tended to hold up much better than did domestic production. While this export movement was undoubtedly due in substantial part to rearmament programs abroad, it consisted also of a normal flow of trade which was facilitated by trade agreements. The agreements were certainly a stabilizing element in that they tended to check still further declines in production and employment.

There is not the slightest doubt that labor as a whole in this country has already benefited greatly from the trade-agreements

country has already benefited greatly from the trade-agreements program, and stands to benefit further from its continuation and program, and stands to benefit further from its continuation and expansion. Every worker, in his capacity as a consumer, is benefited. It is well-known, moreover, that the burden of excessive tariff protection falls most heavily on those least able to pay. As producers, millions of workers employed in export industries and in transportation and other services that are partially dependent upon export traffic, have benefited either directly or indirectly from the increased volume of business made possible by reviving exports. In this connection the increase of 52 percent in the physical quantity of all exports, industrial and nonindustrial, between 1932 and 1938, is significant. So, likewise, is the 150 percent increase in the value of our exports of manufactures and semi-manufactures during the same period. While the trade-agreements program was, of course, but one of a great many factors responsible for this increase, the vast trade coverage which the program has attained and the wide range of valuable concessions obtained on manufactured and other commodities are sufficient evidence that it must have played an important part in the situation.

In order to secure these advantages for our great exporting industries, both agricultural and nonagricultural, it is of course industries, both agricultural and nonagricultural, it is of course necessary that we grant to other countries improved access to the American market for the kinds of products which they export. That is logical, fair, and necessary. Trade is a two-way proposition. We cannot expect to sell more without buying more; and we cannot expect other countries to lower their tariffs and other import barriers on products in which our exporting industries are interested, unless we are willing to reduce some of our excessive

In the process of determining on what items duty reductions should be made, and how great the reductions should be, the inter-ests of both employers and workers in the industries concerned are always in the foreground. Every responsible official associated with the administration of this program, from top to bottom, is genuinely anxious for the welfare of American labor. There is not one of them who does not fully realize that the greatest care must be exercised in the negotiating process to guard against any action which would result in severe hardship to either employer or em-ployees in any established industry. Any other attitude would be

ployees in any established industry. Any other attitude would be contrary to good public policy.

The trade-agreements organization seeks in every reasonable way faithfully to discharge this manifest obligation. The utmost care is exercised in assembling and analyzing all of the pertinent facts. The interested departments of the Government cooperate to the full in this work. As wisely required by the Trade Agreements Act, machinery is set up for obtaining the views of all interested parties.

Every employer and every representative of a labor group is given full opportunity to present any facts or views relevant to any

Every employer and every representative of a labor group is given full opportunity to present any facts or views relevant to any pending trade agreement. Such information is genuinely desired and solicited. Those responsible for the administration of the act are surely as anxious as anyone else to avoid serious mistakes or injustices. For that reason the machinery which has been set up for carrying out this part of the act is carefully designed to insure that the testimony offered by the interested parties shall be carefully digested and made a systematic part of the proceedings leading up to decision upon any given item. In short, in the administration of the act every effort has been made to carry out in good faith the expressed intent of Congress.

For labor as a whole, the trade-agreements program, carefully administered, is an opportunity. So far as its influence on our economic affairs can extend, it operates to promote more employment, better employment, and higher standards of living for the workers. It is, accordingly, a logical part of the labor program of an administration which has earnestly sought to promote the true interests of labor as an indispensable phase of our national progress.

progress.

Labor has another concern in this program. At the outset of my remarks I dwelt upon the world setting of this whole problem. In closing, I return to the international scene. I do so because, for labor and for all of us as Americans, what happens in the world during the highly critical period through which we are passing is of surpassing importance.

The present world situation is one which calls for sober reflection on the part of everyone, and certainly of labor. The continuous piling up of armaments throughout the world, and the surcharged atmosphere in which the world goes on living from day to day, are a menace and a burden the seriousness of which it

would be impossible to exaggerate. The diversion, on an enormous scale, of the energies of the workers from peace-time pursuits to the building of armaments—however justified it may be in the case of particular countries on grounds of defense—is surely unfortunate from the standpoint of the real interests of labor, as of everyone. Instead of using this vast storehouse of energy to raise living standards, the world is confronted with the spectacle of its use for the piling up of weapons of destruction of property. of its use for the piling up of weapons of destruction of property and of life itself. While this situation of political insecurity and

of wholesale diversion of human energy continues, there can be only retrogression and increasingly imminent disaster.

Should war occur, does any sane person really believe that labor anywhere—whether here or abroad—will not have to pay a heavy price? After all, the great masses of the people throughout the world are tollers; and it is the masses of the people who must bear the brunt of war. the brunt of war

There is still time to reverse the fatal course of recent years and months and to start back along the road to peace and constructive human endeavor. The way is still open to that gradual resumption of healthy economic and other relations between nations which is

of healthy economic and other relations between nations which is essential to genuine and sustained prosperity and to the well-being of peoples everywhere. In this situation the trade-agreements program is all important. It represents almost the only sustained effort being made anywhere in the world today to reconstruct international economic relations on a sound and permanent basis. As such, its implications far transcend in importance the immediate commercial value of the agreements, great though that is.

That armaments have continued to increase and the danger of war remains ever present does not in the least impair the validity of this approach. No responsible person has ever contended that the trade-agreements program is an effective and an immediate guaranty of world peace irrespective of all else. The fact remains, however, that restoration of a healthy flow of international trade is essential to the creation of those conditions of economic security and well-being throughout the world which make for peace and order within nations and hence between nations. In that sense, the trade-agreements program does strengthen the foundations of world peace.

The broad goal toward which the trade-agreements program points is the rebuilding of the world's economic life, with all that this means for human advancement everywhere. In this great enterprise all of us have a large stake—certainly none more than labor.

Farming Is a Business

EXTENSION OF REMARKS

HON. JOHN W. FLANNAGAN, JR. OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

ADDRESS BY HON. JOHN W. FLANNAGAN, JR., OF VIRGINIA, APRIL 22, 1939

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address, I delivered before the Virginia Youth Conference held at : the University of Virginia last Saturday, April 22:

Farming is a business. That's the thought I want to get over to Farming is a business. That's the thought I want to get over to you this morning. Heretofore it has been looked upon more or less as a means of eking out a living by many of those actually engaged in tilling the soil and as a hobby or plaything by the rich and well-to-do who can afford to engage in the hazardous undertaking. During recent years, and especially since the advent of our present administration, we are becoming conscious of the fact that it is a business—a serious business, a hazardous business—and to prove successful will have to be conducted upon a business basis. I want you to carry this thought back home with you: Farming is not only a business, it is the biggest business, the most important business in America, and when it is in an unhealthy condition, when the farmers are selling the products of the soil below the cost of production, our whole national economy is thrown out of gear, and our whole population—more especially our laboring people—suffer along

whole population—more especially our laboring people—suffer along with the farmers. We will come to this later. Let me first remind you of the enormity of the farming business.

Roughly speaking, there are 6,000,000 farms in the United States. There are 32,000,000 people living on these farms, one-fourth of our population. These farms include 1,054,000,000 acres, of which 415,000,000 acres are seen lands. In these lands and the buildings these people are series and the buildings the people of the series are series and the buildings the people of the series are series and the buildings the people of the series are series and the buildings the people of the series are series and the buildings the people of the series are series and the buildings the people of the series are series and the buildings the people of the series are series and the buildings the people of the series are series and the series are series are series and the series are series and the series are series are series and the series are s population. These farms include 1,002,000,000 acres, of which 415,000,000 acres are crop lands. In these lands and the buildings thereon the farmers have, at present values, invested over \$33,000,000,000. Moreover, they have invested in farm machinery over \$3,000,000,000 and in livestock and poultry over \$5,000,000,000. Just a few years back these same lands, machinery, livestock, etc., were valued at \$78,000,000,000. Our agricultural business represents 20 percent of the capital investment of the Nation. It engages 17 percent of the verybors.

The annual volume of business done by the American farmer is a cormous. While it dropped off considerably during the depression

and has not as yet regained its predepression volume, it is still by far the largest business in America. Last year the income of the farmer was around \$8,000,000,000. Out of this he paid in wages \$500,000,000, a feed bill of \$400,000,000, a fertilizer bill of \$150,000,000, a machinery bill of over \$500,000,000, a tax bill of between three hundred and fifty and four hundred million dollars, and an unterset bill of between four hundred and fire hundred million dollars. interest bill of between four hundred and five hundred million dollars. These are just a few of the large items the farmers pay

The importance of the farming business cannot be overemphasized. Any business engaging the attention of one-fourth of the population of a nation is, to say the least, a national business. Any population of a nation is, to say the least, a national business. Any business that supplies the food and fiber for a nation is not only a national business but one so vital to the well-being of the nation as to demand not only the respect but the earnest consideration of every man, woman, and child of that nation. The Supreme Court decision in the original A. A. A. case declaring farming to be a local business, to be regulated by separate laws, to be passed by 48 different States, did not in any respect change the nature and character of the business. I was glad to see the Supreme Court on Monday take a broader and more enlightened view with respect to farming. The first A. A. A. decision, in my opinion, cost the farmers several billion dollars and the American people as a whole just seven times that amount, because for every dollar you add to the seven times that amount, because for every dollar you add to the farm income you add \$7 to the national income. If, as the Presi-

farm income you add \$7 to the national income. If, as the President says, we need a national income of eighty or ninety billion dollars—and I think we do in order to have a reasonable degree of presperity—then the only way you can bring about the eighty or ninety billions in national income is to increase your farm income from its present \$8,000,000,000 to around eleven or twelve billions. There is a direct relationship between the farm income and the national income. As I stated, \$1 in farm income produces \$7 in national income. Why? Because the farm dollar, like the laboring man's dollar, is not hoarded but goes into circulation. It is the dollar that makes the "wheels go round." The farmer pays the grocer, the grocer pays the doctor, the doctor pays the lawyer, the lawyer buys a new law book, and by this time the dollar has passed out of the local community into larger fields, but still on its way paying debts or making purchases.

but still on its way paying debts or making purchases.

dollar has passed out of the local community into larger fields, but still on its way paying debts or making purchases.

The farm is the great reservoir from which new wealth flows out annually through all the arteries of production and trade. When the farm business is flourishing, the wheels of industry spin and labor finds employment. And, conversely, the best way to slow business down is to slow the farmer down. Let me show you how it works. For instance, the farm income increased from a little over \$5,000,000,000 in 1932 to around \$10,000,000,000,000 in 1937 and the national income went up from less than \$40,000,000,000 in 1937 and the national income went up from less than \$40,000,000,000 to around \$70,000,000,000. What was the effect of this increase in farm income on business? Well, among other things, here is what happened: The pay roll of labor increased from twenty-eight billion to forty-three billion; factory employment in farm implement plants increased 274 percent; factory employment in machinery, excluding farm and transportation, increased 121 percent; advertising increased 46 percent; increased 43 percent; and rural retail sales increased 100 percent.

To show the close relationship existing between the farmers and laboring people, how the condition of the farmer affects labor, let me call attention to the fact that in recent years products consumed in rural trade have kept busy one and one-third million factory workers. This compares with between five and six million factory workers who have been kept busy supplying the wants of the urban trade and about one-half a million fectory workers supplying products for export trade. When the

ing the wants of the urban trade and about one-half a million

and six million factory workers who have been kept busy supplying the wants of the urban trade and about one-half a million factory workers supplying products for export trade. When the tide turned upward in 1933, 544,000 factory workers went back to their jobs, of which 40 percent were devoted in making products for rural trade. In 1930 one-third of the factory workers who lost their jobs could attribute their fate to the weakened farm situation. Similarly, it is estimated that two out of every five who regained their jobs in 1933 did so because of the improvement in farming conditions.

Being not only the largest business in America, but the most important business in America, it should be put and kept upon a business basis. The time has passed when the American people can expect the American farmer to feed them at a loss. As a matter of fact, I do not think the American people expect it; but because the American farmer did, at a loss, feed the American people, is the reason why during the past few years thousands of farms have been sold under the hammer, 40 percent of our farms are plastered with mortgages, tenancy is increasing at the rate of 40,000 per year, and millions of acres of our lands have been worn out—practically destroyed.

Now, the reason the farmer was operating at a loss was due to

Now, the reason the farmer was operating at a loss was due to Now, the reason the farmer was operating at a loss was due to the fact that he was not operating on a business basis. He had no plan, and if he had had a plan he had no machinery to put it into effect. The average American believes in fair play, and believes that the farmer at the end of each year should be able to balance his books with black ink. Get this: We will never have a permanent healthy condition in America until the farmers are able at the end of the year to declare a reasonable dividend upon the at the end of the year to declare a reasonable dividend upon the capital invested, and this after paying operating expenses, taxes, charging off a fair and reasonable amount for depletion and deprectation, and setting aside a fair compensation for their services. In the conduct of its business industry demands such a set-up. If the ability to pay a dividend is the criterion by which we test the health of industry, why shouldn't the same yardstick be used on the farmer? And yet during our 150 years of national life we never, until the advent of the present administration, attempted to set up a national farm program in ar effort to put farming on a business basis. We did all during the years talk about the farm problem, our politicians made all kinds of promises both in and out of season, our national platforms would make hopeful and solemn pronouncements, but it all proved to be "sounding brass and tinkling cymbals" because no definite action was taken. However, since 1933 definite and constructive action has been taken to mut kling cymbals" because no definite action was taken. However, since 1933 definite and constructive action has been taken to put farming upon a business basis, and we are beginning to make prog-ress. We have at last recognized the fact that farming is not only a business but a national business that vitally affects the well-being of our Nation and that the only way to successfully deal with it is to place it upon a business basis by national legislation.

We have at last recognized the fact that the farmers, unaided by national laws, are unable to work out and carry into effect a farm program. This is due to the fact that it is impossible for a farm program. This is due to the fact that it is impossible for 6,000,000 farmers, scattered from one end of this country to the other, to organize, agree upon a program, and then set up the machinery necessary to carry it into effect. The first national farm program we ever had was the 1933 A. A. A. Constitutional or unconstitutional it was a step in the right direction, as it attempted to do that which industry has been doing all the while, hold production and consumption in line. And constitutional or unconstitutional, it worked. It practically doubled the farm income during its existence.

Now, there are several difficulties in working out a farm pro-

Now, there are several difficulties in working out a farm program. For one thing we have too many ill-considered farm programs floating around. I know that many of these programs are being advocated by those who are anxious to assist the farmer, and I know too that many of the advocates are two-faced demaand I know too that many of the advocates are two-faced demagogues who, while privately admitting that the plan is impracticable, nevertheless, in order to curry favor with the farmer, publicly preach their Utopian plans with all the fervor of a religious zealot. Then there is a powerful influence in this country against any program that will in truth and in fact protect the farmer. It comes from those who speculate in farm products and from many of the processors of farm products. And trace your propaganda against national farm legislation down and you will find that it is coming from these fellows or their Myrmidons and hirelings. hirelings.

The present farm program, in my opinion, is a sane, sensible on the right track, and I think we are, and experience during the next few years demonstrates that we are, then, of course, there are many improvements we can make based upon that experience. We will never get anywhere condemning before testing. We will are many improvements we can make based upon that experience. We will never get anywhere condemning before testing. We will never make any real progress as long as there is any question in the farmer's mind as to what the program is or will be. Let the farmers know that the present program is their program, that it is up to them to make it a successful program, and that this can only be done by cooperation—by working and pulling together. This thing of attempting to work out another program before we actually find out how the one we have is going to work only creates confusion. Remember that no program, however perfect, will prove successful as long as there is a question mark as towhether it will be carried out or discarded.

whether it will be carried out or discarded.

The farm problem when it was tackled in earnest back in 1933 was the most serious problem in America. Due largely to the haphazard way in which the farming business had been conducted and, also, as strange as it may seem to science, engineering, and education, farming was perhaps at its lowest ebb.

I said due in part to the haphazard way in which farming had been conducted. Let me for a few minutes tell you what I have in mind in making the statement. While we all knew that the violent fluctuation in farm prices which, in turn, brought about violent fluctuation in land values, plus the rottenest marketing system for farm products that human ingenuity could devise, were system for farm products that human ingenuity could devise, were the real causes that kept agriculture on its back, we had done nothing over the years but deplore the situation and suggest remedies. No constructive action had been taken. While we all knew that overproduction was primarily the cause of these violent fluctuations—that the surplus products would set the price for the whole—we went right along producing surpluses and dumping them on the market. Why? The Lord only knows.

Suppose industry had operated under the same system, what would have happened? Yet, from a business standpoint, there would have been as much sense in the automobile industry, for instance, running their factories at full speed, turning out all the automobiles they were capable of producing without regard to when, where, and to whom they were going to be sold. When when, where, and to whom they were going to be sold. When the depression came on, the automobile industry and all other industries took into consideration that the reduced purchasing power of the American people would sharply curtail the sale of automobiles and, following good business practices, cut down production in line with demand. Any other policy would have wrecked industry. What did the farmers do? Take the cotton farmer, for instance. When the A. A. was declared unconstitutional he went right back to unlimited production, without regard for demand, and produced the largest cotton crop in 1937 ever produced in this country, knowing at the time that the reduced purchasing power of our people had reduced domestic consumption and also knowing that a considerable part of our foreign markets, due to our transition from a debtor to a creditor Nation, had been lost and that rayon and other fibers had displaced several million bales of cotton. The same thing was true with respect to all other basic farm products. I said science, engineering, and education entered into the sad plight of the farmer. They did. Machinery was invented that made each man-hour more productive; plants were bred that resisted disease and produced more per acre; cows that gave more milk; hens that laid more eggs; hogs that put on more weight; animal diseases and insect pests were brought under control, and discoveries made for converting to human use farm wastes. One hundred years ago three working people in each four were doing their work on the farms. Today about one working person of each five is doing his work on the farm, and he turns out more work than the three did 100 years ago. Today the average farmer produces enough to take care of himself and family and 14 people besides. Our scientific discoveries and inventions, however, instead of proving a help, only proved a hindrance. Seemingly, we did not have wisdom enough to take advantage of our knowledge. We simply used it to pile up larger surpluses which, of course, hammered the price of farm products to lower levels.

mered the price of farm products to lower levels.

Well, you ask, What have we done about it? I answer by saying that we have, in my opinion, tackled the problem in a sensible way. Study and consider the whole program before you condemn, because we are simply trying to put good business principles and practices into the farming business. How? By setting up the necessary machinery to enable the farmers to do that which industry has been doing all the while, hold production and consumption in line. If you will carefully examine the present farm legislation, you will find that this is the underlying principle. It is not a program of scarcity, or of regimentation, as the enemies of the farmers would have you believe. It is a program of plenty and abundance. It is true that the program recognizes the law of supply and demand. It should. This law is rather ancient, and I am thinking, will continue on through the years to enter into our business transactions. It will ever be with us. Like Mark Twain said about the weather, we can talk about it but there is nothing we can do about it. The ever-normal granary feature, however, makes the program one of plenty and abundance. And it is not a program of regimentation unless permitting the farmers to adopt good business practices is regimentation. It is a little strange that these fellows who hollo "regimentation" never thought of the word as long as the practice of holding production and consumption in line was only practiced by industry. If this practice means regimentation of the farmers, why doesn't it also mean regimentation when it comes to the farmers because before the farm plan goes into effect, the farmers themselves, two-thirds strong, have to affirmatively vote for it.

There are those who now say the farm program will not work. Let's see. What does the record show? It shows that under the program the farm income—and the farm income is the acid test—doubled, that is, it went up from around five to around \$10,000,000.000.

There are those who now say the farm program will not work. Let's see. What does the record show? It shows that under the program the farm income—and the farm income is the acid test—doubled, that is, it went up from around five to around \$10,000,000,000.

Only program that will do this, to say the least, is not a failure. Oh, they say that farm prices last year fell off and the farm income dropped over \$1,000,000,000. True. Put the blame, however, where it belongs—on the Supreme Court and not on Congress. The Supreme Court decision in 1936 in the Hoosac Mills case invalidating the 1933 A. A. A. was a serious and costly setback to the farmers. Let me briefly recite just what happened when the Supreme Court threw the act out of the window. The farmers, no longer with a program, acted like a ship without a rudder, disregarded entirely the law of supply and demand, and without rhyme or reason planted without regard to how and at what prices the products could be disposed of. Here is what happened to the basic farm crops: Wheat production was increased 248,000,000 bushels, corton production increased around 1,000,000,000 bushels, cotton production increased over 6,000,000 bales, and to-bacco production increased 400,000,000 pounds. The result, a decrease in farm income of around \$1,000,000,000. And we have not recovered from the effects of the decision as yet, because the present low level of farm products is due largely to the Supreme Court interrupting the farm program.

Now, as I have stated the prime object of the bill is to bring production and consumption in line and give the law of supply and demand a chance to bring about parity prices, that is, prices for farm products that will give the farmer's dollar as much purchasing power as the other fellow's dollar. We have provided in the bill for parity payments and I am strongly of the opinion that these payments should be made until, at least, we have had sufficient time to find out if the act will bring about that which we have set out to accomplish.

But in spite of the overproduction the 1922 A A A with its

But in spite of the overproduction, the 1938 A. A. A., with its loan feature to peg prices and its soil-conservation and adjustment payments, has held prices far above the prices of 1933, when we had a comparable situation with respect to overproduction. To illustrate let me take wheat and cotton. Before the 1933 A. A. A. could become fully effective we had a 2-year cotton supply on hand and about a 400,000,000-bushel wheat carry-over, about as much surplus cotton and wheat as we had back in March 1933. However, the farm price for cotton has been around 8 cents per pound instead of the 1933 price of 5 cents per pound, and the wheat price has been around 51 cents per bushel instead of the 1933 price of 32 cents per bushel. Moreover, the farmer who has cooperated under the 1938 act, due to the loan, soil-conservation payments, and adjustment payments provided for in the act, has been getting between 86 and 90 cents per bushel for his wheat, and 12.9 cents per pound for his cotton.

Wheat	
Farmer who cooperated under 1938 act: Government loan on wheat	
Soil-conservation payments	16-18
Price-adjustment payments	10-12
Price received by wheat cooperator	86-90
Farmer who cooperated under 1938 act:	Cents
Government loan on cotton	_ 8.8
Soil-conservation payments	_ 2.5
Price-adjustment payments	_ 1.6
Price received by cotton cooperator	_ 12.9

In considering the farm program we have no right to single out, as is usually done, the attempt to hold production and consumption in line and create the impression that this is the whole program. We should consider the program as a whole. Let me briefly mention some of the other provisions in the act and in supplemental legislation so you may obtain a bird's-eye view of the whole program.

The soil-conservation feature of the act is, in my opinion, the best long-term program yet devised. Before the advent of this administration we had paid very little, if any, attention, to the conservation of our soil. When a field was destroyed by erosion we simply cleared a new field. In a virgin country this can be done for awhile, but sooner or later the price of such folly will be pretty high. What did we find when we looked into the matter? Why, that over 282,000,000 acres of our farm lands had been ruined, that 3,000,000,000 tons of our soil was being washed away annually, and that 200 forty-acre farms were being destroyed by erosion each day. It was about time we quit talking and took action. Under the soil-conservation provision of the act we pay the farmer to take out of production soil-depleting crops and plant the acreage to soil-rebuilding and conserving crops such as grass and legumes. This part of the program has a double-barrel effect—it not only conserves and rebuilds our soil, it goes a long way toward holding the production of our soil-depleting crops in line with consumption.

in line with consumption.

Another important thing that has been done is the setting up of new farm credit facilities and liberalizing the old. In 1938, for instance, the farm-mortgage debt amounted to \$7.082,000,000, of which \$2,835,900,000, or about 40 percent, was held by the Federal land bank and the Land Bank Commissioner. In 1928 only 12 percent of the farm-mortgage debt was held by the Federal land bank. Last year alone the saving in interest due to refinancing of loans through the land bank and Commissioner amounted to over \$42,000,000. The American farmer, since the advent of this administration, pays the lowest interest rate paid by any farmer in the world. In addition to the land bank and Commissioner, other credit facilities are now available. Last year the Production Credit Corporation made 243,000 loans amounting to over \$300,000,000. The Federal intermediate credit banks, which serve as banks of discount for short-term production credit, made loans and discounts last year totaling over \$450,000,000. Most of this was loans and discounts for farmers' financing institutions. During 1938 the 12 district banks for cooperatives and the Central Bank for Cooperatives made advances totaling over \$94,000,000. At the end of last year 1,631 cooperative associations had loans outstanding with these banks. The Farm Credit Association also is authorized to make emergency crop and feed loans. Last year more than 174,000 such loans were made aggregating more than \$19,000,000.

Industry all the while has been surrounded by a tariff wall to protect its American market. Under our tariff system it has been able to sell on a restricted market, while the farmers, on the other hand, have been forced to sell on a world market. There has been no such thing as an American market for agricultural products in the sense there has been an American market for the products of industry. In an effort to equalize things and give, as far as possible, the American farmer some of the benefits of our tariff laws, section 32 of the 1938 A. A. provides that 30 percent of all tariff receipts shall be used in aiding the exportation of agricultural products. While this is not a drop in the bucket compared to the protection industry receives under the tariff laws, it is a step in the right direction.

protection industry receives under the tariff laws, it is a step in the right direction.

Let me briefly refer to another measure set up to aid in the farm-surplus problem. Last year we authorized the creation of four research laboratories which will engage in finding new uses for agricultural products within the field of industry. I need mention only one accomplishment in this new field for you to get a glimpse of the possibilities for the future. A soybean laboratory was set up a few years ago at Urbana, Ill., and it has so far succeeded in promoting the industrial use of soybeans that a crop almost unknown as an income producer 15 or 20 years ago returned last year an income of \$32,000,000 to the growers. The new regional laboratories which will be built this year will turn some of the best research talent in the country to the task of finding new outlets for surplus farm products. The laboratory which will serve this eastern region will be located at Philadelphia and will undertake immediately to work on new uses for milk, tobacco, potatocs, apples, and vegetables.

Tenancy for years has been a serious threat to our very national

Tenancy for years has been a serious threat to our very national existence. That's a pretty strong statement, but I mean every word of it. We can no more carry on half landowners and half tenants than we could have carried on half free and half slaves. You can't anchor a man to the soil unless you make him an

owner. The only anchor that will hold him and permit him to enjoy "life, liberty, and the pursuit of happiness" is ownership. Make him an owner, and overnight you make him a better citizen. Make him an owner, and overnight you make him a better citizen. There is something about the ownership of the soil that sobers a man up and brings to him a finer and truer appreciation of his responsibility to his family, to his State, and to his God. And yet, knowing and appreciating these things, what did we find? We found that there are over 2,800,000 tenants in America—43 percent of our farmers, as compared with 25 percent 55 years ago, when we first commenced securing statistics on land tenure. We found that tenancy is increasing at the rate of 40,000 per year. As an approach to this overshadowing tenant problem, we passed the Bankhead-Jones Farm Tenant Act in 1937 to provide loans to help a limited number of tenants.

Ten million dollars was appropriated for the year beginning July 1, 1937, and twenty-five million for the year beginning July 1, 1938. I realize that with these limited funds we cannot scratch the sur-1, 1937, and twenty-five million for the year beginning July 1, 1938. I realize that with these limited funds we cannot scratch the surface, but I also know that we have taken a step in the right direction. We have made a start and that's the big thing. Last year we made loans in 333 counties. During the year 1938-39 loans will be made in 700 counties. Funds for last year were enough for 2,000 loans and this year we will have funds sufficient for about 7,000 loans. For the loans last year, restricted as they were to 333 counties, there were more than 38,000 applicants. As a result of the first year of this program around 2,000 people have deeds in fee simple to farms. The Government holds their notes, payable in 40 years at 3-percent interest, secured by mortgages on the farms. The farms purchased are, of course, family-size farms. And let me say right here in passing that we are doing everything we can to promote and encourage family-size farms. If I had my way, I would outlaw corporate farming before the sun goes down. What we need to build a greater and better America is more family-size farms, owned and occupied by contented farmers, who are not only making a living out of the soil but who are making enough over and above a living to enjoy some of the conveniences and blessings of our modern civilization.

Another thing that has burdened agriculture has been its mar-

Another thing that has burdened agriculture has been its marketing system. While we have in some respects improved the system through cooperative action and marketing agreements and system through cooperative action and marketing agreements and the Tobacco Grading Act, much remains to be done. If industry had to put up with the farm marketing system, it would, in my opinion, be flat on its back in 6 weeks' time. Suppose, for instance, the prices of automobiles were fixed, like the prices of grains are more or less fixed, by an exchange in the city of Chicago, whose very lifeblood is sufficient fluctuation in prices as to not only permit but encourage speculation, what would happen to the automobile business? Why permit the price of wheat, the staff of life, to go up or down as may best serve the grain speculators, and permit the price of automobiles to remain more or less stable? If we don't work out some sensible marketing system for agricultural products, we are going to have, whether you like it or not. tural products, we are going to have, whether you like it or not, governmental price fixing. It is as sure to come as you are sitting there unless a better marketing system for agriculture is worked

The act of 1938 also gives the Secretary of Agriculture the right to make complaint to the Interstate Commerce Commission with respect to rates, tariffs, and practices relating to the transportation of farm products and to prosecute the same before the Commission. Much good, it is hoped, will come from this provision.

Much good, it is hoped, will come from this provision.

The act also sets up the machinery for insurance of wheat producers against loss in yield of wheat due to unavoidable causes, including drought, flood, hail, wind, insect infestation, plant disease, etc. This, of course, is but an experiment in crop insurance. The act, however, is self-sustaining, as the cost will be borne by the wheat producers. It is hoped that this will prove successful.

Taken as a whole, it is a great program and one that the American farmer should be proud of. It is not going to succeed, however, unless the American farmer cooperates, looks upon farming as a business, his business, and puts into it sound business practices. He has got to make such changes and adjustments as are necessary. He has got to make such changes and adjustments as are necessary. He has got to plan and figure out what he can, in his particular locality, produce and sell at a profit. Because the southern cotton farmer's father was a one-crop farmer—a cotton farmer—is no reason why he should close his eyes to present-day conditions and remain exclusively a cotton farmer; and he need not become peeved because we cannot, by legislative flat, change natural laws so he can remain a cotton farmer. The sooner the South wakes up to the fact that it can no longer depend solely on cotton, the better off it will be. There is no more sense in the southern farmer's going ahead and producing cotton that he cannot sell at a profit than there would have been in the buggy manufacturer, after the advent of the automobile, going ahead and producing buggies in the same of the automobile, going ahead and producing buggies in the same old way. The buggy manufacturer had to make adjustments. Some of them went out of the buggy business, converting their plants to other uses, while others cut down the production of buggies and took on other lines. The southern farmer had as well realize now as later that he has got to do what the buggy manufacturer did. There are more crops that can be grown in the South, and grown at a profit, than cotton.

What the American farmer has got to do to be successful is to "plant to prosper." The farmer's success depends upon selling his crop at a profit. It is too late after the crop has been raised to determine this fact. It should be determined in advance.

I have given you, my friends, some of the high spots in the farm program. I cannot close without paying my respects to the man who has labored in season and out of season to give to the farmers of America a real program—Secretary Wallace. of the automobile, going ahead and producing buggies in the same

It is related that in one of our southern churches a certain member who laid no claim in particular to plety or consecration was elected as an elder. Many of his acquaintances expressed surprise ber who laid no claim in particular to piety or consecration was elected as an elder. Many of his acquaintances expressed surprise that he had been thus honored by the congregation. Upon being pressed for the cause back of his elevation, he replied that the "roughneck" element in the church demanded recognition. I do not mean by this story that the one I am about to refer to represents the "roughneck" element in our population, because he does not. He represents our choicest citizenry, the backbone of our Republic, the farmers. The point I wish to make is this: It is time our farming population demanded recognition in a national way. During our 150 years of national life we have never had at the head of this Government a farmer. Don't you believe it is about time that the farming element in our population received recognition?

If this time has arrived, then, without political considerations, but as one farmer to another. I suggest the name of Henry A. Wallace, our present Secretary of Agriculture, who has, in my opinion, done more to lead the way to a safe, sound, long-term farm program that will stabilize the farming industry and place it upon a paying basis than any other man. In making this suggestion I am not shooting in the dark. I speak from experience. For the past 8 years, as a member of the House Agriculture Committee, I have been closely associated with him in his effort to work out a program that will bring relief to the farmers of our land.

The final and very significant question may be asked with respect to this vast farm business, as, indeed, it is asked on all sides, Where do we go from here? What is the prospect for the future? In sizing up the agricultural situation we are, of course, concerned with the conditions surrounding the men who are now operating the business of farming in this country. But we are in a way even

the conditions surrounding the men who are now operating the business of farming in this country. But we are in a way even more deeply concerned with the outlook for the young men who

more deeply concerned with the outlook for the young men who will take over the business in due course. Just what is the outlook in agriculture for the young generation of today who are in school and college and are now sizing up their chances in this great field? I for one do not feel unduly pessimistic. It is unquestionably true that this generation of farmers has had to live through exceedingly hard times. Despite great improvements in the last half dozen years the times are none too good on the farms. We all realize this and have no disposition whatsoever to minimize the difficulties of the present situation. Nor is it at all likely that all of these difficulties will be ironed out in the near future.

I am certain, however, that one human inclination is to judge the I am certain, however, that one human inclination is to judge the future altogether too largely by the recent past. It is just as possible to err on the side of pessimism as on the side of optimism. What do you suppose the farmer of the period following the hard times of the forties and fiftles thought about the outlook for his son on the farm? We have considerable literature on this subject and it all paints an exceedingly dark picture. Yet the young man who entered farming around the latter fiftles stepped into one of the most fortunate 15-year periods, from the standpoint of getting ahead, that has been seen up to this time. ahead, that has been seen up to this time.

Some of you can remember the black picture that existed in the latter eightles and through the nineties. What farmer of the nineties wanted his son to follow in his footsteps? Very few indeed. Yet the fact is that that generation of men who entered farming at the close of the nineties became the most prosperous farmers, prob-

ably, of any period in any country.

ably, of any period in any country.

The point I am making is that it frequently is darkest just before the dawn. I do not feel that a background of 20 years hard times necessarily needs to dampen our sane estimate of the possibilities for the future. I am not meaning to hold out any shallow prophesy of impossible things. The farm is not normally the place to get rich, but it is normally a place to live an exceedingly satisfying life and make a comfortable living. I think we may be justified in expecting at least that much for those who will enter this greatest of all American enterprises within the next few years.

The States—At the Crossroads

EXTENSION OF REMARKS

HON. WARREN R. AUSTIN OF VERMONT

IN THE SENATE OF THE UNITED STATES Thursday, April 27, 1939

ADDRESS BY HON. HENRY EPSTEIN, JULY 25, 1938

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The States-At the Crossroads," delivered by Hon. Henry Epstein, solicitor general of the State of New York, at the annual convention of the National Association of Attorneys General at Cleveland, Ohio, on July 25, 1938.

The address will prove interesting to Senators and other legislators with respect to the subject of immunity of the income on bonds and other securities of the States and municipalities, a subject likely to engage the attention of the Senate within a short time.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, attorneys general of the sovereign States, fellow officers of their staffs, the genius of American constitutional democracy lies in the federated unity of 48 independent and interdependent Commonwealths. In that formula lies the safety of our freedom.

freedom.

One hundred and fifty years ago 13 independent States, lying along the Atlantic seaboard, united for their common defense and for the common administration of certain limited problems which they delegated to a central Government. Along with meticulous—we might say almost frightened—prohibitions upon the extent of that new Government's powers, they reserved to themselves every sovereign power save those expressly delegated. In every word of that Constitution, in every debate upon its ratification, in every page of our subsequent history, the independence of the States stands forth as the dominant characteristic of American Government.

Within this very month a group of attorneys general and State officers, including representatives from among those same 13 States, officers, including representatives from among those same 13 States, deemed it necessary to organize a Conference on State Defense. Strictly a nonpartisan movement, the conference has dedicated itself "to the end that the integrity and sovereignty of the States in this Nation may be preserved."

Today I propose that we inquire into the principles of our state-hood and into the tendencies that have brought the States to the crossroads of their destiny as sovereign governments.

THE TREND TO CENTRALIZATION

James Bryce recounts that at a church convention in New England a proposal for a common prayer, "O Lord. bless our Nation," was rejected as importing too definite a recognition of national unity. Instead, the convention adopted the prayer "O national unity. Instead, the co Lord, bless these United States."

My purpose today is not to suggest a new form of blessing for these United States. The churchmen of Bryce's story may have been over sensitive on the subject, but certainly in their day the trend to centralization would have met with instant

That trend is dominant in much of our political philosophy today. It is a philosophy which has no patience with the protest that ours is a dual system of government—the very antithesis of such centralized forms of government as have destroyed the freedom of the individual in foreign lands. This school of thinks

freedom of the individual in foreign lands. This school of thinking turns at once to the Federal Government for the solution of all problems of government. It assumes at once that the States are outmoded forms of government and wholly incapable of meeting the problems of today.

The repercussions of this philosophy are most evident in the constitutional issues facing us today. Thus, during the term of the Supreme Court which has just closed, out of a total of 95 cases involving questions of constitutional law, fully 14 involved questions of State sovereignty, and 12 involved the commerce clause as a "limitation" on State power.

Are the people beginning to forget the part which the States must play to preserve our form of government? As the chief law-enforcement officers of the States it is your duty to look ahead and to point the way when the people are confused by such issues as these. So let us briefly retrace the steps, and reexamine the reasons, which

let us briefly retrace the steps, and reexamine the reasons, which led to the creation of our unique governmental structure.

The propagandists of centralization have, to some extent, succeeded in smearing the phrase "States" rights" with false connotations. They say it is the vestigial remains of something that died 75 years ago. They say it is the vestigial remains of something that died 75 years ago. They say it is the slogan of whatever political party happens to be out of power. In a New York newspaper a few days ago the organization of the Conference on State Defense was referred to as a perpetuation of the "States' rights racket." That paper naively asks for the complete elimination of the States.

Assuming that most of you are not so susceptible to propagandists, and that you have made some study of the Government our fore-fathers created here, I still believe that, as an expression of the indestructible character of the reserved powers of the people, the true doctrine of "States' rights" is one which we must forever assert

In its proper meaning that doctrine maintains that local affairs should be controlled by the States and that local government must always be defended from encroachment by an overreaching central government. This, I believe, is the true doctrine of States' rights. The key to democracy still lies in the smaller units of our governmental structure.

WHY DO WE HAVE STATES?

Those who differ with this view ask the simple question, "Why do we have States?" They are entitled to an answer.

This country was settled at different times by different peoples. Their forms of local government were various and were suited to their respective manners and customs. In not a few instances a difference in religious beliefs was the motivating factor in the settlement of a colony.

The differences that the colonists brought with them were not merged in the common soil of the new continent. On the contrary, in a land so vast and varied their initial differences multiplied; there arose new groupings and new alinements. As a result widely different political, social, and religious views prevailed in the early days of the Colonies, just as they do in the States today. At the time of the Revolution they constituted 13 separate, independent, and distinct nations. Save for their common language, they were almost as varied in interests, economy, and culture as the states in Europe.

Yet despite these great differences, there were several denominators common to the people who considered themselves Virginians, Pennsylvanians, and New Englanders. The first was an unyielding desire for liberty and freedom in all things. The second was a passionate resentment of arrogant central government, administered from outside their borders, without consideration of local conditions and local preferences.

conditions and local preferences.

It is familiar history that this hatred of centralized government was carried over into the Articles of Confederation. They declared "each State retains its sovereignty, freedom, and independence, and every power, jurisdiction, and right which is not by this confederation expressly delegated to the United States in Congress assembled."

So successful was the effort to avoid the dangers of centralization in the Articles of Confederation that the Federal Government was incapable of performing even the limited tasks allotted to it. But when the Constitutional Convention met to remedy this situation, we find that, even as a price for a unified national defense, not one of the States was willing to sacrifice its sovereignty and independence in local affairs. The love of local government ran strong—the dangers of centralization were understood far better, I fear, in those days than they are today.

In the light of world conditions today it is thrilling to read such pamphiets of that time as the following from Ford's Essays:

"* * no extensive empire can be governed upon republican principles, and * * * such a government will degenerate to a despotism, unless it be made up of a confederacy of smaller states, each having the full powers of internal regulation. This is precisely the principle which has hitherto preserved our freedom. * * In large states the same principles of legislation will not apply to all the parts. * * "

In order to get the Constitution adopted at all it was necessary to satisfy the people that it guaranteed their rights and liberties as individuals, and a republican form of government under their respective States.

"The conveste of the wife a prevention of the prevention of the states and states and states and states are states as individuals, and a republican form of government under their respective States. So successful was the effort to avoid the dangers of centraliza-

as individuals, and a republican form of government under their respective States.

"The counsels of the wise prevailed over the prepossessions of the multitude." The Constitution was ratified largely because of a "dread of foreign powers." But even that dread could not induce the States to yield their sovereignty to a strong central government. Several of the conventions which ratified the Constitution accompanied their acceptance with an earnest recommendation of various amendments to it, amendments designed to meet the fears of those who thought that it encroached too far upon the liberties of the people.

There can be no fear for our future so long as the spirit of those amendments and a passionate devotion to human freedom characterizes our people. That spirit and that devotion burns bright today. The current constitutional convention in New York, and its debates on the necessity for a Bill of Rights and a safeguard against unwarranted searches and seizures are ample proof of

against unwarranted searches and seizures are ample proof of that spirit.

Even a commentator from across the seas, Mr. Anthony Eden,

Even a commentator from across the seas, Mr. Anthony Eden, at a July 4 dinner in England, has just remarked on America's adherence to constitutional government and America's belief in "freedom of the individual." And just a week ago James Truslow Adams, wrote the following in the New York Times—note that it might have been written in Boston or Philadelphia 150 years ago: "* * past history, and most emphatically much of present history, show that when there occurs great concentration of power, despotism, or, as we now prefer to call it, dictatorship, inevitably results, with loss of personal liberty, with the growth of a bullying bureaucracy, and with the denial of justice and freedom of spirit. Wherever the idea becomes firmly planted that the good of 'the state' counts for more than the good of the individual, and wherever power is concentrated at one center in individual, and wherever power is concentrated at one center in the state, then, in the long run, the good of the individual, any individual, is almost certain not to be considered at all. Force and injustice take the place of freedom and self-government."

THE NEED FOR STATES TODAY

And now let us do something too seldom done these days—Jet us consider the need for the States today, under modern con-

I think we will all agree with the viewpoint of the early federalists that there are, now as then, ample reasons why we should have a strong Federal Government. Surely no one would argue that we should have 48 systems of coinage, or that the States should levy their own imposts and tariffs on goods and commodities from other States and nations. Obviously, there is need for a coordinated method of regulating commerce.

Many social and economic problems have, in the last 50 years, grown beyond the power of the States. But unlike some modern

grown beyond the power of the States. But, unlike some modern grown beyond the power of the States. But, unlike some modern federalists, I will not concede that because there is need for a Central Government there is no need for the States. To quote James Truslow Adams again: "* * * I do think that many more functions may have to be added to the Federal Government, but for that very reason I would divest it of every function it does not have to exercise for the good of the whole."

No government is self-executing. The very term "govern" implies control and direction of people by other people. But every human

being thinks best in terms of his own environment. That is why an attempt to govern 48 different countries is just 48 times as difficult as to govern any one of them.

Where would this Nation be today if, throughout the past 150 years, it had been necessary to refer every local problem to Washington? President Wilson once said: "Things get very lonely in Washington sometimes. The real voice of the great people of America sometimes sounds faint and distant in this strange city." Where would we be today if every time a new law had to be passed, a local regulation made, a policeman appointed, or a local official elected it had been necessary to obtain Federal sanction? Where would we be if for the past century we had had to rely on Washwould we be if for the past century we had had to rely on Washington for the building of schools and roads, the clearing of forests, or the regulation of our State problems? Attorneys general of the States—of Ohio and Massachusetts, of Virginia, Illinois, and California—the people of the United States have made a great Nation. But it is the people who have made it, and a most vital instrument

of their Government still remains the State.

As a resident of New York I am in a position to know much more about the problems of my State than those of you from the Middle West. The attorneys general from the New England States know their peculiar problems better than the problems of the Southern

States, and you from the West and South certainly know more about your problems than we do.

During the nineteenth century Massachusetts was the most in-During the nineteenth century Massachusetts was the most industrialized of the American States. As a result it pioneered in labor legislation and it blazed the trail by an enactment in 1836 of a statute providing for the education of working children. It is more than an accident that Massachusetts was the first State to enact an effective 10-hour law for women; that it was the first to employ factory inspectors, the first to establish a State labor department, and the first to pass an industrial-safety law. These laws were passed in Massachusetts not because the people of that State were any stronger in their zeal for social reform than the people of other States. These laws came because Massachusetts, as a highly industrialized State, knew the special problems of industry. No one would have expected such legislation to be urged in Kansas, let us say, during the same period. Kansas then had no need for it.

then had no need for it.

If you were to look for legislation to protect coal miners against conditions existing in that industry, would you look to New York? Would you not look rather to Pennsylvania and West Virginia where those problems exist?

Those of you who represent great agricultural States know full well how long it would take a man born and bred in the industrial East to really understand the problems of your States. If we concede that now and then one finds a man so rare, let us admit that the affairs of government will not always await the arrival of such a genius. Nor does it follow that when found he will be arrivated with power.

will be entrusted with power.

How, then, does the transfer of a Massachusetts legislator from Boston to the District of Columbia in and of itself change him? How does it render him more capable of understanding the local problems peculiar to a State other than his own? Multiply these

problems peculiar to a State other than his own? Multiply these problems by 48. Is there any probability that he will adequately appreciate the local problems peculiar to 48 different States?

The answer was obvious to the founders of our Nation, As President Roosevelt once said while Governor of New York: "It was clear to the framers of our Constitution that the greatest possible liberty of self-government must be given to each State, and that any national administration attempting to make all. and that any national administration attempting to make all laws for the whole Nation, such as was wholly practical in Great Britain, would inevitably result at some future time in a dissolution of the Union itself."

Despite the fact that we can now hurl ourselves around the world in less than 4 days—or that we can disseminate news instantly throughout the Nation, it is still inhabited by human beings. And human beings have not essentially changed in emotions, habits, and capabilities. The Brave New World of Aldous Huxley has not yet arrived. People are not created uniformly in a

This Nation is still made up of 127,000,000 people who do not think alike, eat alike, or even live under like conditions. Nobody

think alike, eat alike, or even live under like conditions. Nobody is capable of reducing to a simple formula the complex factors of governing so vast a Nation of dissimilar people as ours. And so long as that is true, any venture to supplant local autonomous government with federalization of all laws must fail.

As a matter of fact, I see no reason why all the people of this Nation should be made to conform to a national or Federal formula. If the people of New York choose to live differently from the people of Nebraska, that is their prerogative—so long as what they do does not run counter to accepted principles of national interest.

There is no sound reason why some States should not, if they desire it, prohibit the sale of liquor. But that is no reason for national prohibition. If one State wishes an income-tax law, should all States be made to pass such laws? The States must be left free to deal with problems as they arise in each community. That system has given us a century and a half of unbroken

democracy The itch to centralize all our governmental machinery in the District of Columbia is not a new phenomenon. Indeed, it is not a phenomenon at all but simply a manifestation of the perfectly human conviction that we, each of us, could run a better world. Hamilton and the federalists of his day fought to widen the power of the Central Government. Jefferson and Jackson stayed the tendency. But the Civil War, Federal control of the Western Ter-

ritories, and the comparative ease with which special interests could manipulate through the Federal machine, all played their part in the progressive break-down of State lines. The cry of our modern federalists—besides whom Hamilton or Marshall were comparative "States' righters"—is that "the States have defaulted in their obligations," and that "we can handle everything more efficiently from Washington, anyhow."

Thus, one columnist recently urged a "mere reorganization of the country into departments, zones, or districts combining several States in one" because "the States, with their predatory and wasteful political machines, are inharmonious, inefficient, and in many respects unable to meet the obligations which parallel their rights as States." He suggests that we keep municipal government but eliminate the States—in other words cut off the arm but save the finger.

finger.

I deny the default of the States. If we look at the record we find quite the contrary to be true. People are apt to forget that long, long before the present trend to federalize social reform, the States themselves took the leadership in this field. Let me cite

merely a few instances:

It is the States which provide a system of public education in this country unequaled elsewhere in the world. It is the States that have passed mortgage moratoria laws, and emergency housing that have passed mortgage moratoria laws, and emergency housing laws, and which have regulated unwholesome and dangerous trades. In the public interest and welfare, the States have, at one time or another, regulated public utilities, insurance companies, banking agencies, and even laundries, and places of amusement. The construction of buildings, the production of oil and gas, the sale of milk, the manufacture of ice and bread, all of these and countless other matters of public welfare have received, and will continue to receive, the attention and consideration of the States. They are local problems and should receive local consideration. To the extent that Federal legislation has followed it has been the result of experienced State experimentation, impossible without the of experienced State experimentation, impossible without the autonomy of the States.

Mothers-aid laws were adopted by 40 States in 10 years, and by 1934 all the States but 2 had passed some kind of mothers-aid laws.

Arizona first enacted old-age assistance laws in 1914 and since

1923 such laws have been enacted in 15 States.

State legislation regulating hours of employment date from our post Civil War period. Forty-four States now have legislation restricting the hours of labor for women.

Massachusetts, in 1912, was the first State to pass a minimum-wage law, and in 1913 six States followed. By 1933 24 States had such legislation.

A prohibition against child labor existed in New York as early as 1897, but even before that, in 1842, Massachusetts had passed child-labor laws. By 1853 six other States had laws regulating the working time of children and by 1900 practically every State in the Union had such legislation.

A State workmen's compensation law was first held constitutional in 1911 and today all but four States have such laws. teen have already amended these laws to include provisions for occupational diseases.

If labor, as a class, needs additional legislative reforms—and I fully believe it does—I submit that the States are in all respects capable of continuing in the lead. It might be well for labor to consider the ultimate price of Federal regulation, and to weigh the lesson of centralized labor laws in other countries. Federal regulation may be, and in many instances is shown to be, essential, but

is should never be at the expense of independent State action.

Getting down to brass tacks, the greatest obstacle in the path of advanced social legislation by the States has always been the Federal courts. Had the sanction of constitutionality been granted when the States first tried to act, the catalog of State reforms would be even more comprehensive. There are many social reforms yet to be accomplished. But let it not be said that "the States have failed." We still have a long way to go, but the States have done their part.

done their part.

done their part.

In 1916 Charles Evans Hughes, then Associate Justice of the Supreme Court, said: "But in the face of the difficulties already upon us, and destined to increase in number and gravity, we remain convinced of the necessity of autonomous local governments. An overcentralized government would break down of its own weight. It is almost impossible even now for Congress in well-nigh continuous session to keep up with its duties, and we can readily imagine what the future may have in store in legislative concerns. If there were centered in Washington a single source of authority from which proceeded all the governmental forces of the country—created and subject to change at its will—upon whose permission all legislative and administrative action forces of the country—created and subject to change at its will—upon whose permission all legislative and administrative action depended throughout the length and breadth of the land, I think we should swiftly demand and set up a different system. If we did not have States we should speedily have to create them. We now have them, with the advantages of historic background, and in meeting the serious questions of local administration we at least have the advantage of ineradicable sentiment and cherished traditions. And we may well congratulate ourselves that the circumstances of the formation of a more perfect Union have given us neither a confederation of States, nor a single centralized government, but a Nation—and yet a Union of States each autonomous in its local concerns." mous in its local concerns."

AT THE CROSSROADS

For some time now it has been quite evident that despite the need for States, which Mr. Justice Hughes so cogently pointed out, we have been rapidly approaching the crossroads—crossroads, where

one road must inevitably lead to the destruction of the States or their reduction to the status of "Crown colonies." And it is at these crossroads that we must choose between the continuance of our dual system of government and some other form.

So far as the solution of national social and industrial problems is conversed. It recognizes the present of the recognize of the present of the recognize of the present of the recognize of the present of the recognized of the recogni

is concerned, I recognize the necessity for Federal action. The vision and courageous action of the President cannot be praised too highly. But there are many places at which the flood of Federal waters overflows the land and is likely to invade territory far afield from this historic channel. We may well need some "Federal flood control"

we may went deed some redetained. We may went deed some redetain flood control."

Within the past year bills were introduced into Congress asserting the right of the Federal Government to lands under water which for generations have been regarded as the property of the States themselves. It required vigorous opposition by the State of California and by all of the port agencies in the country to receive this essentian.

refute this assertion.

In a recent case, Hinderlider against LaPlata River and Cherry Creek Ditch Company, the Department of Justice took the posi-tion that States surrendered their sovereignty when they entered into interstate compacts with Federal consent. It took the combined efforts of a group of attorneys general before the Supreme Court to refute that contention. Again, but a few days ago Prof. George D. Strayer, of Teachers

College, warned against the consequences of carrying out the recommendations of the Federal Advisory Committee on Education, saying, "It would be unwise to give the Federal Government smuch control over the national school system as is advocated in the recent report * * *." He readily admitted that some mistakes might be made in our State educational system. "But," he said, "it is better that such mistakes be made than that we should develop a national system of education that would in time seek to control our public-school system in all its detail."

control our public-school system in all its detail."

These illustrations show how the tendency to deal with problems of national concern may go beyond the limits of legitimate Federal activity and invade the proper field of the States. As officers of those States, you have done well in defending them against such invasions. Federal control of business and of agriculture are tending to crowd out State regulation. Centralized control of business and agriculture has, to a large extent, been unavoidable under modern conditions. But if our form of government is to be preserved, the States should not be kept from shouldering all that they can. And there can be no question of their ability to handle most business and agricultural problems, if they have the will to do so. Federal aid in so doing will not be, and should not be, refused.

will to do so. Federal aid in so doing will not be, and should not be, refused.

It is not my purpose to deal with all aspects of this problem here. We are concerned today primarily with a Federal invasion of State sovereignty, that goes to the very foundation of the power to govern. It is an invasion so significant, so vibrant with destructive power, so inconsistent with the concept of sovereignty, that all other usurpations are as nothing in comparison. I refer to the power to tax. Today, for the first time in history, the Federal Government asserts the complete power to tax the States. It announces its determination to tax revenues of the States and to tax their fiscal powers. It asserts, in effect, that, as sovereign and tributary provinces, the States in the conduct of their self-liquidating public enterprises must file a corporate income-tax return.

I cannot believe that the States will ever accept such a distorted view of the American commonwealth.

view of the American commonwealth.

When Helvering v. Gerhardt was decided, some of us predicted When Helvering v. Gerhardt was decided, some of us predicted that the Government would attempt an interpretation of that decision making every State officer and employee taxable, making bonds of the States taxable, and, indeed, attempting taxation of State revenues. Those fears have now been realized. In a study issued by the Department of Justice on June 24, 1938, the supreme power of the Federal Government to tax State bonds and all State officers was directly proclaimed. This study asserts that the Governor, the attorney general, legislators, judges, policemen—all are subject to Federal taxation.

Now do not mistake me—so fer as future taxes on it is cutte

Now, do not mistake me-so far as future taxes go, it is quite

Now, do not mistake me—so far as future taxes go, it is quite true that as individuals State officers should pay the same taxes as anyone else. But that never was and never has been the question. The question is entirely whether this should be done with the consent of the States, or by an asserted "supreme power of taxation" alleged to exist in the Central Government.

The same is true of State bonds. Their immunity from Federal taxation does not exist for the sake of the bondholder. It is a necessary incident of the sovereign character of the borrowing power of the States. Paradoxically enough, the Department of Justice recognizes this, for, in the same study, it is asserted that the States have no such power with respect to Federal salaries or Federal bonds. And why not? Because, it is blandly replied, the Central Government is supreme in the taxing field. I quote their language: "The principle of immunity protected the Federal Government against taxation by the States but did not necessarily shield the States against the exercise of the delegated, and supreme taxing power of the Central Government."

Attorneys general of the States, with full forethought and deliberation, I label that statement of the Department of Justice the most shocking assertion, the claim most destructive of every concept of our Constitution, and of the reserved rights of the

concept of our Constitution, and of the reserved rights of the States, that I have ever read in a Federal document.

The most critical phase of the whole situation is, of course, the definite attempt of the Treasury to tax the revenues of the States and of State agencies. Their intention is quite clear. The De-

partment of Justice says, "tax immunity is a privilege of Federal, not of State, instrumentalities." They say that the States are subject to the "supreme taxing power of the Central Government." They say that the words "from whatever source derived," ment." They say that the words "from whatever source derived," in the sixteenth amendment must be given their full and literal interpretation. And they have acted accordingly. In the Gerhardt case they fiatly asserted a Federal right to tax the revenues of the Port of New York Authority, a State instrumentality collecting toll revenues exclusively for the account of the States of New York and New Jersey. They have pending against the Delaware River Joint Commission a claim for a direct tax against that agency of Pennsylvania and New Jersey for over \$50,000 in Federal stamp taxes on the issuance of their outstanding bonds.

agency of Pennsylvania and New Jersey for over \$50,000 in Federal stamp taxes on the issuance of their outstanding bonds.

With the attempt to tax State revenues we come, of course, to a crossroads where we must finally determine whether this Government is to go on as an "indestructible union of indestructible States." There is no margin, there is no "profit" in the revenues of a State which can absorb a Federal income tax of practically 20 percent. If the States or their agencies must file a Federal income-tax return, they face immediate default on every State obligation that has been issued on a revenue basis. It has been the fashion to sneer at the aphorism that "the power to tax is the power to destroy." With the taxation of State bonds and revenues, however, it takes on a grim reality.

On the one hand, there is the cry of the centralists that the States have not fulfilled their social obligations; now it is proposed to tax the only means with which those obligations could be fulfilled. But the disciples of centralization have not confined themselves to these conflicting claims. Only a few months ago the Governor of

But the disciples of centralization have not connect themselves to these conflicting claims. Only a few months ago the Governor of my State pointed out that the States are faced with fire from still another direction. They are being rapidly crowded out of the accustomed sources of State taxation by the expanding search for new sources of Federal revenue. Crowded out of their sources of taxation, threatened with a direct tax on their revenues, the States now find themselves faced with the charge that they have failed to carry their proper hurden of the obligations of government. their proper burden of the obligations of government.

These are my reasons for believing that the States are at the crossroads. The time has come for the States to do one of two things. They can suffer a "continued existence" in the sense that Manchukuo exists, and eventually find themselves relegated to innocuous desuetude, or they may take a stand and fight their final battle in the Supreme Court of the United States and before

of course, if the States choose to consent to Federal taxation, no violence will have been done to their sovereignty. For myself, I see no means by which such consent can be given other than by constitutional amendment. Congressional legislation, by its very nature, cannot protect the States against an outright invasion of their fiscal systems.

It may be that some States might derive as much from the taxation of Federal bonds and salaries as its bondholders and employees will pay to the Federal Government. Frankly, I do not know of any method devised to protect those States which now have no income-tax law. Will they be compelled to enact such laws in order to make the Federal tax on their bonds and salaries reciprocal? Failing that, will they be compelled to pay the Federal tax in any event? These questions have received no consideration. sideration.

Several weeks ago at Marietta, Ohio, the President said "on a thousand fronts Government—State and municipal as well as Federal—is playing the same role of the insurer of security for the average man, woman, and child that the Army detachments played in the early days of the old Northwest Territory."

If the Federal Government is to continue to play its part within the scope of its delegated powers and the States theirs within the scope of their reserved powers, both need funds. We must not lose sight of the fact that what we all want is to have both of the component parts of our Government, play their respective parts.

component parts of our Government play their respective parts.

As for us, our duties as the chief law-enforcement officers of
States are clear. If it is the will of the people of the States to
consent to the Federal taxation of the salaries of State officers
and employees and the interest upon State and municipal bonds,
theirs is the power to consent. But I do feel that it is our duty,
but as we render a divisory control to the scalar taxation of the salaries to the power to consent. just as we render advisory opinions, to advise the people that their States may be taxed out of existence. We are now prepared to call attention to that danger through

the Conference on State Defense. You have all been advised of the reasons for the formation of the conference—its work and its objectives. It should have the active support of the attorney general of every State in the Union.

The work of the conference has already succeeded in impressing upon some Federal officials the flagrant injustice of any attempt to impose retroactive Federal taxes on State employees or any Federal taxes on outstanding State bonds. The President has called for no such taxation in his message of April 25, 1938. The protagonists of centralized Federal authority have gone far beyond President Roosevelt.

It would be folly, however, to assume that even these objectives have been attained. Not until legislation has actually been enacted have been attained. Not until legislation has actually been enacted which will include not only these objectives, but which will also express the determination of Congress that no attempt should be made, at any time, to levy upon the revenues of the States, can the conference afford to relax its efforts. So far as I am concerned, I also recommend that the conference should include within its objectives a stand that any attempt to tax the States or their securities should be taken only with their consent, expressed through the adoption of a constitutional amendment. We face a real crisis in the history of State government. But I sincerely believe we have both the opportunity and the duty to bring about a recognition of the true doctrine of States' rights. A bring about a recognition of the true doctrine of States rights. Trestatement, if you please, of those rights in the light of modern needs. As State officers no one knows better than you the proven adaptability of the States to handle those needs and to handle them with a minimum of local friction. Of paramount consequence is the fact that the States can handle them without improved the states of the stat pinging on the traditional freedom and independence of their people.

The story of the Council of State Governments is a striking lesson of the ability of the States to create efficient machinery for cooperaof the ability of the States to create efficient machinery for coopera-tion in the handling of modern problems. The use of interstate compacts in the handling of regional problems has had remarkable growth during the past two decades. Compacts covering harbor control, fisheries, water power, flood control, joint police activity, all point the way to a sane solution of regional problems within the framework of our constitutional system. "If the six New England States demand the right to control their water power by united action among themselves, why should they not be allowed to do so instead of having a bureau at Washington do it for them?"

No one today has expressed the solution in more ringing words than James Truslow Adams. I quote again and in conclusion from his article of a few days ago in the New York Times:

"There are three great advantages in such a system. It is democratic. Local people are handling their own local problems. There is no congressional logrolling. * * Finally, such a system of State cooperation, * * * decreases the centralization of power at one point, keeps down the increase in a national bureaucracy, and lessens the inherent danger of any one government's getting control of all our lives.

"Thus in considering what may be the 'proper' functions of the Federal Government we have to take a broader view than our ancestors did, but in doing so, with the knowledge of what has happened in the past and what is happening elsewhere today, we should take into consideration the spheres that the American spirit and form of government reserve to the individual and to the individual States. He was not able and do it wisely we may be able vidual States. If we can do this, and do it wisely, we may be able to add to the necessary powers of the Federal Government and yet avoid the dangers of concentrated power and a totalitarian state. I see no other way of escape."

The War Conspiracy

EXTENSION OF REMARKS

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

EDITORIAL FROM THE NEW YORK ENQUIRER OF APRIL 24, 1939

Mr. RUTHERFORD. Mr. Speaker, an editorial in the New York Enquirer, under date of April 24, 1939, entitled "American People Must Rise Up and Smash the War Conspiracy," is well worth the attention of every Member of Congress. At a time when the President is going off half cocked in matters relating to our foreign affairs, the time has come for the American people to take matters into their own The people of this country do not want war and they do not want the President to continue his shadow boxing with our foreign relations. The great majority of the people of our country want him to follow the admonitions of Washington and keep out of foreign entanglements. Mr. Speaker, I heartily approve of the sentiments set forth in the following editorial:

[From the New York Enquirer of April 24, 1939]

On the eve of our celebrating the sesquicentennial of the in-auguration of George Washington as our first President, the administration took a precipitate plunge into international diplomacy by forwarding to two European dictators a note that is without antecedent in the whole history of the international relationships of this Republic.

If we could but procure the opinion of the Father of his Country, who passionately besought us to keep clear at all times of the pitfalls of Old World disputes, concerning our Government's latest communication to Hitler and Mussolini, we would find that it met with his uncompromising condemnation.

Washington's words and example carry no weight with the powers that be in our National Capital. And for this very reason

America is now facing disaster. If the people do not at once assert their sovereign authority, that disaster will ensue as surely as the

rising of tomorrow's sun.

rising of tomorrow's sun.

In fulfillment of its duty as an American newspaper, the New York Enquirer has at all times opposed the policies and actions of the autocrat of Rome and the autocrat of Berlin. In fulfillment of the same duty it has unfailingly expressed its disapproval of the policies and actions of the autocrats of Moscow, London, Paris, and Tokyo. It has treated all of them impartially.

The administration has no stomach for impartiality in its intercourse with foreign governments. It has taken sides with one alinement of Old World bandits against another alinement of Old World bandits

of Old World bandits.

And it is resolutely bent upon sacrificing the warm young blood of millions of American boys in order to satisfy its thirst for the downfall of the former and the triumph of the latter.

Its note to Hitler and Mussolini, in tone and content, reveals to the merest tyro in international affairs that the "Must" philosophy which has wrought such havoc in our domestic concerns is its guiding creed in its dealings with Italy and the Reich. Even if it were desirable that our Government should endeavor to get as arbiter in the present crisis beyond the Atlantic (and it

Even if it were desirable that our Government should endeavor to act as arbiter in the present crisis beyond the Atlantic (and it certainly is not), the role would demand its proceeding with the utmost circumspection, skill, and dignity. Its note to Hitler and Mussol'ni evinces none of these essential qualities. Its language is the language of the brawler, not of the peacemaker. To crown the infamy of it all, the American people are asked to believe that this exhibition of diplomatic gaucherie is a master stroke for the cause of democracy, world peace, and what-not besides. Well may America hang her head in shame to see herself the derided laughingstock of the world because of the action of men who find themselves temporarily in a position to make her vital interests the playthings of their own vanity and self-aggrandizement.

Our resourceful Secretary of State has drawn attention to the encomiums voiced by foreign governments upon the note to Mussolini and Hitler. What was to be expected from these governments but the rankest flattery? We Americans know full well, as a result of bitter experience, that nothing is more relished by foreign governments than to see the stewards of Uncle Sam's affairs making asses of themselves and him for the delectation and

fairs making asses of themselves and him for the delectation and benefit of allen peoples.

It can be predicted right now as an absolute certainty that when the twin despots to whom this outlandish note was dispatched have given their reply, this Republic will be left holding the bag, a bag filled with the writhing serpents of hate and of war. This is the unholy business that is preoccupying the mind of the administration every hour of the day and the night, at a time when our own afflicted land is in the grip of a Hitlerism which keeps 13,000,000 of its citizens out of work, which compels tens of millions of its citizens to lead a hand-to-mouth existence, which extorts taxes upon taxes from Americans while it permits foreign nations to defraud them of billions, which squanders and squanders the wealth of this land in the pursuit of policies that squanders the wealth of this land in the pursuit of policies that have no place in the American order of things, which creates class hatred and places a rich premium upon the achievements of those who are laboring to turn the constitutional structure erected a hundred and fifty years ago by Washington and his brother nation-builders into a ghastly heap of ruins marking the grave of American liberty.

It ought to be enough for the American people to perceive that their Government is not acting in the best interest of their country, of international peace and stability, and of civilization itself when they find Josef Stalin, merciless murderer of millions, pouring out his heart in praise of the note to Hitler and Mussolini and

vowing loyal cooperation with America.

This is as logical as an alliance between hell and heaven.

And let it not be forgotten that Soviet Russia, the land whose government exults in having outlawed God within its own borders, is one of the 31 countries whose safety from nazi-ism and faseism the administration demanded in its communication to Berlin and Rome, and buttressed that demand with the all-too-evident threat

Rome, and buttressed that demand with the all-too-evident threat that the precious young lives of America's youth would be offered up to accomplish it by force of arms if need be.

The time has come for the American people to take matters into their own hands. They are the masters of their Government. With the very existence of this Republic at stake, as a result of what is transpiring in Washington, they must cease contenting themselves with mere conversational opposition. They must get right out in the open, express their will with a voice of thunder reaching Washington from all sections of this mighty land, compand their servants to obey it, and take all the steps necessary to mand their servants to obey it, and take all the steps necessary to

mand their servants to obey it, and take all the steps necessary to secure obedience.

Some will say that all this means great exertion and great expense. What of it? Is not the cause worth any sacrifice?

The men whose naked feet left bloodstains on the snows at Valley Forge did not count the cost of the service they were rendering their beloved land. The Americans who fought under and labored with George Washington for 8 long years throughout the horrors of the Revolution found more than ample recompense for their sacrifices in the knowledge that these sacrifices were made in the glorious cause of an America wholly free of European counserthe glorious cause of an America wholly free of European connec-

tions. We are not Americans if we are not as patriotic as they.

Let us of this generation, faced as we are by such an astounding challenge, act as becomes the heirs of the selfless men and women who won for us the liberty our country has so long enjoyed and

which is now in imminent danger of falling a fatal victim to internationalism as practiced by the votaries of French, English, and Scylet tyranny on the historic banks of the Potomac.

We, the sovereign people, cannot render a greater act of homage to the Father of his Country, as we acclaim the hundred and fiftieth anniversary of his Presidential inauguration, than by taking such measures as will guarantee that this Republic will be faithful to his inspired doctrine of nonentanglement with the affairs of foreign nations in any shape or form.

Arbor Day

EXTENSION OF REMARKS

HON, GEORGE H. HEINKE

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

ADDRESS BY HON. GEORGE H. HEINKE, OF NEBRASKA, APRIL 22, 1939

Mr. HEINKE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I made on April 22, 1939, in the city of Washington, at which time the Nebraska delegation in Congress and other Nebraskans planted an elm tree from Arbor Lodge State Park, at Nebraska City, in honor of J. Sterling Morton, author of Arbor Day. The tree is planted at the northeast corner of the grounds occupied by the Department of Agriculture.

Ladies and gentlemen and honored guests, at a meeting of the State Board of Agriculture of the State of Nebraska, held on January 4, 1872, J. Sterling Morton, one of the members, proposed

January 4, 1872, J. Sterling Morton, one of the members, proposed the following resolution:
"Resolved, That Wednesday, the 10th day of April 1872, be, and the same is hereby, set apart and consecrated for tree planting in the State of Nebraska; and the State board of agriculture hereby name it 'Arbor Day'; and to urge upon the people of the State the vital importance of tree planting; and that we do hereby offer a special premium of \$100 to the county agricultural society of that county in Nebraska which shall, upon that day, plant properly the largest number of trees, and a farm library of \$25 worth of books to that person who, on that day, shall plant properly in

books to that person who, on that day, shall plant properly in Nebraska the greatest number of trees."

The resolution was adopted, and on the first observance of Arbor Day more than a million trees were planted in Nebraska. In that resolution J. Sterling Morton gave to the world a great idea, namely "blant trees."

namely, "plant trees."

Subsequently the Legislature of the State of Nebraska set aside
April 22 of each year (the anniversary of the birth of Mr. Morton) a legal holiday to be known as Arbor Day and consecrated to the

planting of trees.

Since the adoption of Mr. Morton's original resolution in 1872, almost all the States, as well as many of the nations of the world, have set aside a day in each year consecrated to the planting of trees. Each year billions of trees are planted over the entire world trees. as living memorials to J. Sterling Morton the author of Arbor

as fiving memorans to Day.

Day.

Observance of Arbor Day would not be complete without calling attention to a few brief incidents in the life of J. Sterling Morton and his accomplished and estimable wife, Caroline Joy. He was born on April 22, 1832, near Adams, Jefferson County, N. Y. Caroline Joy was a native of Maine. As children they migrated with their pioneer parents to the State of Michigan, where they grew to manhood and womanhood. Both attended Albion College in Detroit, Mich. Later Mr. Morton received a degree from Ann Arbor, Mich.

Mich.
On their wedding day in 1854 Mr. Morton and his young bride turned their faces to the West on their long journey to Nebraska. They first settled at Bellevue, and in the year 1855 Mr. Morton accepted a position with the Nebraska City News, the first newspaper established in Nebraska, at a salary of \$50 per month.
Immediately upon his arrival at Nebraska City, he took up a homestead of 160 acres 1 mile west of the city which continued to be his home until the time of his death in 1902.
Both were lovers of nature and of adventure. Their first effort in the development of the homestead was the erection of a house

in the development of the homestead was the erection of a house surrounded by trees, shrubs, and flowers. Sixty-five acres of this homestead, including the Morton mansion, are now known as Arbor Lodge State Park, which is a part of the Nebraska system

of State recreational grounds.

In this beautiful park a memorial has been erected in honor of J. Sterling Morton, the author of Arbor Day. Each year thousands of tourists from all parts of the world make pilgrimage to this shrine to pay homage to the memory of the man who gave the world the idea "plant trees."

J. Sterling Morton was appointed Secretary of Agriculture of the United States by President Cleveland in the year 1893 and served in that capacity with unusual credit and distinction to himself,

his State, and country.

He was original in thought and action, a tireless worker, and a practical, powerful, and energetic leader.

Mr. Morton and his young bride were the progeny of pioneers, and they came to Nebraska to live the lives of pioneers in a new

and they came to Nebraska to live the lives of pioneers in a new and undeveloped territory.

They were the parents of four sons, each a pioneer in his chosen field of science, industry, or statecraft. Joy, the eldest, donor of Arbor Lodge Park, was a pioneer in manufacturing; Paul, the second, was a pioneer in transportation, vice president of the Santa Fe Railroad, later to become Secretary of the Navy under Theodore Roosevelt; Mark, the third and only living son, is a pioneer in manufacturing and agricultural pursuits. Carl, the youngest, died in early manhood at the start of a brilliant career. A grandson, Sterling Morton, 2d, is well known throughout this land as an industrial pioneer and, like his grandfather, a strong uncompromising foe of all which is uneconomic and wasteful.

When I employ the term "pioneer" I envision: A trail blazer: one

When I employ the term "pioneer" I envision: A trail blazer; one who is first in vision or accomplishment; one who enters new fields; one who prepares the way for others; one who has courage, moral as well as physical; a courageous, ambitious, industrious, and persevering person: In short, a person who encounters a problem and emerges with a solution.

The pioneer not only subdued an inhospitable land and provided for his own security, but he discharged every obligation to his country and the society in which he lived.

The original pioneers are gone, but the need for pioneering

lingers on.

lingers on.

Pioneering is not confined to the subduing of inhospitable lands and converting them into a virtual paradise for those who follow, but it extends as well to current problems such as the science of government, man's relations with his fellows, issues which involve labor, industry, finance, jurisprudence, science in all its branches, conservation of our natural resources, and, in fact, a field so large that it not only embraces every conceivable activity of the race but challenges the ingenuity of every member of it. ber of it.

The pioneers not only developed the land upon which we live and of which we are so proud and thankful, but they created the greatest government on the face of the earth today.

I say to you that the pioneer made America and that only a reincarnation of the spirit and virtues of the pathfinders will

reincarnation of the spirit and virtues of the pathinders will preserve it.

Mr. Morton was a practical man, not a theorist.

He knew of no substitute for industry, courage, perseverance, frugality, thrift, and economy.

An elm tree has been provided for our ceremony today. It came from Arbor Lodge, the home of J. Sterling Morton, at Nebraska City. Now, in memory of him who loved trees, we plant this tree with the observation "that other holidays repose upon the past; Arbor Day proposes for the future."

Amendment of the Wage and Hour Law

EXTENSION OF REMARKS

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1939

LETTER FROM VARIOUS FARM GROUPS

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from various farm groups:

> AMERICAN FARM BUREAU FEDERATION, Washington, D. C., April 27, 1939.

Congressman W. J. Norrell,

House Office Building, Washington, D. C.

Dear Congressman Norrell: In the absence of Congressman Graham A. Barden the undersigned farm organizations respectfully request you to report to the House of Representatives their dissatisfaction with the agricultural provision of the Norton amend-

satisfaction with the agricultural provision of the Norton amendment to the wage-hour law, as ordered reported, and as given to us by members of the Labor Committee.

We reassert the absolute necessity for approval of an amendment in the form of the Barden amendment. The House Labor Committee steadfastly refused to permit representatives of farm organizations to appear and present their cause. We vigorously object to the proposal to bring the Norton amendment to the floor of the House under suspension of the rules procedure, especially since the House under suspension of the rules procedure, especially since the House Labor Committee refused opportunity for full and open hearings.

The Barden amendments are necessary for the protection of farmers against increased costs. The burden of shorter hours and minimum wages coming as they do at the time when agricultural products must move into establishments for preservation and conditioning for consumption, directly depress the return to the farmer. The effect of the wage-hour law as applied to agriculture already has been reflected in the prices farmers receive and further increases will accentuate the burden upon them.

Respectfully yours,
AMERICAN FARM BUREAU FEDERATION,
EDWARD A. O'NEAL, President. ATIONAL GRANGE,
FRED BRENCKMAN, Washington Representative.
NATIONAL COOPERATIVE MILK PRODUCERS FEDERATION,
CHARLES W. HOLMAN, Secretary.
AGRICULTURAL PRODUCERS LABOR COMMITTEE, IVAN G. McDaniel, Attorney.
NATIONAL COOPERATIVE COUNCIL, EZRA T. BENSON, Secretary.

The Responsibility of a Democratic Society for the Care of Children and Youth

EXTENSION OF REMARKS

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1939

ADDRESS BY THE RIGHT REVEREND MONSIGNOR ROBERT F. KEEGAN AT THE WHITE HOUSE

Mr. MICHAEL J. KENNEDY. Mr. Speaker, the youth of our country are the empire builders of America. Society in general, therefore, under the guidance of the Government has a very definite duty toward our youth. Under leave to extend my remarks, I wish to include therein a most significant and able address delivered before the White House Conference on Children in a Democracy, on April 26, by the Right Reverend Monsignor Robert F. Keegan, distinguished executive director of the Catholic Charities of the Archdiocese of New York, which I am sure will prove of great interest to the Congress, as follows:

What is the responsibility of a democratic society for the care of children and youth? The answer to this question, in my opinion, is of vital importance not only to our children and youth, but to our democracy itself. Children and youth are precious. Their minds, hands, and hearts will shape the America of

Our democratic society receives its mandate from every man, woman and child in America. Our citizens are free to form themselves into associations of various kinds and have the duty

themselves into associations of various kinds and have the duty through the ballot box of delegating powers to local, State, and Federal Government, thus sharing the common responsibility of all for the general welfare.

What do our children and youth face today? Frustration, in-security, fear, despair, resentment, confusion, lack of opportu-nity. The responsibility of our democratic society is to marshal security, fear, despair, resentment, confusion, lack of opportunity. The responsibility of our democratic society is to marshal every asset, every resource known to man, to fortify our children and our youth against the insidious forces in our national life and in the world today, which would regiment them, deprive them of their freedom, deny them equality of opportunity, ruin them morally in body and soul. It is the further responsibility of our democratic society to its children and youth to see to it that the home, the church, and the school teach the fundamental concepts of our democracy—the right of each person to life, liberty, happiness, equality of opportunity, freedom of the press, of religion, of assembly, and of petition.

This conference, insofar as it is humanly possible, must help to provide for our young people what our American concept of a demo-

provide for our young people what our American concept of a demo-cratic society in its very charter purports to give to all its people— hope, security, and genuine guaranties in the pursuit of happiness. It seems to me that the most urgent and salutary message that this conference will give to our children and youth is the straight-

forward, frank, and courageous statement that we recognize and are sensitive to their needs. We must not let these difficult years rob our young people of hope. The totalist ideologies lure youth to false havens of security. They force upon youth a spurious security in exchange for freedom.

This regimentation of youth across the sea is a sad result of an utter disregard of basic human rights and privileges. Such is not our objective. A properly ordered society should aim to provide for its children and youth the essentials for security without sacrificing freedom. If our children are to be nurtured in a mahner constitution of a demogratic society was must see for consistent with our ideas of a democratic society, we must safe-

guard, defend, and develop the fundamental pillars of a well-ordered civilization—the home, the school, and the church. Upon these rest the welfare, the stability, and the future of our Nation.

A democratic society must be able to set its own house in order.

It must be able to achieve an adequate standard of living for all its families, else the well-being of children and youth will be placed

in jeopardy.

The foundations of our democratic institutions are the home, the school, and the church. Never must their primacy be assailed.

Home life is the highest and finest product of civilization. home is the highest and linest product of civilization. The home is in fact the very cornerstone of society and the child is the capstone of the home. Any program for children and youth in a democracy must preserve and strengthen home life. Any threat to the home must be considered a challenge which will call for the marshaling of every resource of society to repel it. And the first to respond to this call must be our welfare agencies, private and public, local. State, and Federal, all cooperating in a common effort. local, State, and Federal, all cooperating in a common effort. This is the American way.

These varied agencies for child welfare must focus on the ultimate

These varied agencies for child welfare must focus on the ultimate goal—to conserve or to rebuild the home—the child's natural environment. When the home collapses the future of the child is gravely endangered. Indeed, it is well-nigh impossible to build a stable society unless the home is what it should be, a fortress within whose walls reign the angels of harmony—mutual respect and

mutual love.

Frightful it is to behold the plight of a child pinned under the debris of a shattered home. The termites of selfish living have eaten away the basic structure of many of our American homes. These evils we should unflinchingly face and courage-ously combat. We must stop the advance in our country of that deadliest of the enemies of the home and society—the demon of divorce.

Where the home has been irrevocably shattered and it is im-

Where the home has been irrevocably shattered and it is impossible to preserve the natural environment of the child, we should devote ourselves to the intelligent selection of a substitute home in accordance with the highest standards of social work. To forget the home is to forget the child. To remember always the supreme importance of the home is to set programs for children and youth upon a sure and firm foundation.

To the school has been entrusted many important rights and responsibilities of the parent. In the school the child not only experiences his first contact with society outside the home, but receives a lasting imprint through his formative years. Society, especially a democratic society, must furnish and provide in its schools a foundation in right living for the child. This tremendous responsibility must be broad in its concept, must develop the whole child as an integrated personality geared to the tempo of today. No one side of the child's life should be overdeveloped. No one side should be left undeveloped. Balance is needed in the educational process. The whole child must be developed, his mind formed, and his body strengthened. Not be developed, his mind formed, and his body strengthened. Not only must his sense faculties be refined and his memory trained, but more important still, his higher spiritual powers of intellect

and will must be nurtured.

The aim of education is not to teach our children and youth how to make a living so much as it is to teach them how to live,

how to make a living so much as it is to teach them how to live, and how to live harmoniously with others. Character, more than brains and brawn, is the essential for successful living and for an ordered society. To build character, youth must be taught the art of right thinking and the science of self-control.

The educational program, of course, should meet the myriad diversities of the complex life of today. With equal diligence should children and youth be prepared vocationally for the farm, the workbench, and the office. But the future citizen of this great Nation—on the farm, in the factory, or in the office, must be a completely integrated personality—a properly orientated creature of the Omnipotent God, and brother of his fellowman. Man or child cannot do without absolutes, namely, the existence of God, the eternal and immutable principles of right and wrong, and the inherent dignity of man. It is an obligation on educators to teach these absolutes according to the best possible methods that they may enrich, ennoble, and give a solid moral foundation to the generation that is to follow.

Educators must get over to our children a fuller appreciation of

the generation that is to follow.

Educators must get over to our children a fuller appreciation of democracy, what it means to be born in America, the priceless heritage to which they are the heirs, the responsibility that will soon be theirs for preserving our free institutions. Academic freedom has never meant a license for teachers in our schools and colleges to impress on the young, immature and plastic minds, subversive doctrines looking to the overthrow of our American form of government. The crime against our youth committed by such tactics is second only to robbing little children of their faith such tactics is second only to robbing little children of their faith in God. Certainly one of the basic responsibilities of a democratic society is to see to it that our children and youth get a fair, full, and complete statement of the principles upon which this democracy rests.

this democracy rests.

On January 4 of this year the President of the United States, in his message to Congress, said that religion is the source of democracy and international good faith, and that "religion, by teaching man his relationship to God, gives the individual a sense of his own dignity and teaches him to respect himself by respecting his neighbors." Paramount is the responsibility of a democracy to its children in the sphere of religion, for religion is at the very heart of true democracy.

Who is the child that society should be mindful of him? Religion gives us the answer. The child is a person, an individual.

ligion gives us the answer. The child is a person, an individual, an intelligent, free, human being. The child is but the bud—the

flower is the man. Man's dignity is rooted in God the Creator, and man's destiny is the eternal companionship with God. "What is man that Thou art mindful of him?" "Thou hast made him a little less than the angels," endowed him with the powerful force of intellect, given him a free will, and energy strong enough to control and adapt many of the powers of nature. Man is the child of God, out of whose meditations have sprung philosophies, out of whose dreams have been born the arts and the literature of the cress from whose lebors have arisen puremids and cethadrals.

ages, from whose labors have arisen pyramids and cathedrals. If such is man, then such preeminently is the child—for the child is but the bud from which man will flower. Only in religion can child welfare efforts find their true foundation, for only in religion can be found the inherent and intrinsic dignity of the human personality. The man was not made for the State but for God, and each individual man has a value beyond our conception in the eyes of his Eternal Father.

conception in the eyes of his Eternal Father.

Religion, therefore, must be a very practical force in a child's life. For if he is not taught the truths of religion in his formative years, he cannot be expected to learn them later when his mode of thinking has been set. Religion must provide the guides and the ideals for right living. It must afford vigorous incentives and inspiring motives for right conduct. It must teach the necessity for divine assistance in meeting the stresses and strains of life. It must teach the child that from the eternal realities of religion spring the living sources of democracy. In religious principles repose the guaranties of natural rights and freedoms and the proper respect for legitimate authority.

I am impelled here to speak of the abuse of one of our fundamental freedoms—the freedom of the press. I consider it a major danger to our children and our youth that this democracy permits an output of foul magazines, salacious pictures, and perverted literature to continue year after year unchecked. This indecent literature is making a frightful assault on the morality of our children and our youth. Freedom of the press does not

of our children and our youth. Freedom of the press does not mean the license to undermine the moral fiber of the youth of

mean the license to undermine the moral liber of the youth of our land and to pander to their lowest instincts.

To those of you who think that I may exaggerate I suggest that you take a walk some day in your local community and surprise yourself with what you can purchase in stationery stores and corner newsstands in the way of vicious literature. Censorship is repugnant to our American way, but would you call it censorship to restrain a child from entering a burning building in which he could do nothing else but lose his life?

It certainly seems to me that a democratic society interested in

It certainly seems to me that a democratic society interested in preserving the moral wholesomeness of its children and youth has some responsibility in this area.

The founders of our Nation builded a democracy rooted in religion. They held to a natural moral law made by God and binding on all men. But they did not intend that our precious liberties should be abused to the moral detriment of the youth of the land. It is the responsibility of a democratic society to incule cate in the votth the netural moral law and the stepped principles. the land. It is the responsibility of a democratic society to inculcate in its youth the natural moral law, and the eternal principles of religion—principles which are at once the way of life, and the way to eternal life.

Ours, then, is the sacred trust to formulate standards and programs of child welfare in terms of all these basic considerations. God grant that in these eventful days, fraught as they are with the fate and the future of humanity, we may act wisely. In acting for the children and youth of today, we safeguard the America of

May this conference help to confer upon the children and youth of America opportunities and guaranties for the preservation of human rights and dignity, and for the development of our fundamental democratic institutions—the home, the school, and the church—which today we love and which tomorrow, pray God, they will revere.

Stand by America

EXTENSION OF REMARKS

HON. THOMAS D'ALESANDRO, JR. OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1939

Mr. D'ALESANDRO. Mr. Speaker and Members of the House, on Thursday, March 30, 1939, the American Legion, Department of Maryland, celebrated Stand by America Day and also the anniversary of the Legion. As a guest, I observed 25,000 Baltimoreans of all classes and creeds who stood shoulder to shoulder in the Fifth Regiment Armory and roared out a pledge to stand by America. Chinese girls in native costumes waved American flags. White and Negro veterans in the uniform of the American Legion stood beside plainly clad citizens of a dozen different nationalities. Uniforms of nearly a hundred organizations splashed color over the vast throng. Arranged as a reaffirmation of faith in the principles of American democracy and, at the same time, a celebration of the twentieth anniversary of the American Legion, the program was probably one of the greatest mass demonstrations of patriotism in Baltimore since the World

I wish to congratulate the following members of the committees that arranged this great display on real democracy: General committee: Mr. J. Bryan Hobbs, chairman; E. Mil-

ton Altfeld; Benjamin L. Wolfson.

Distinguished guests: Maj. Gen. Milton A. Reckord, chairman; all past department commanders, officials of all veteran, patriotic, and civic groups.

General arrangements: Frederick C. Miller, Charles J. Rowe, Carl Yagle, W. Frank Kirwan, Charles H. Wieland, Robert J. Stewart, Joseph M. Gonder, Alexander Malone, and all post commanders.

Parade: Capt. Richard C. O'Connell, chairman. Trophies and awards: Mr. Joseph Ferri, chairman.

Seating: Anthony J. Peroutka, chairman. Publicity: Edward A. Convery, chairman.

Americanism: Dr. W. D. Clodfelter, chairman. Women's division: Mrs. J. Bailey Mercer, chairman.

Sons of American Legion: William F. McCormick, chair-

Boy Scouts: George Harman, chairman.

Liaison committee: Walter F. Richardson, chairman.

Floats committee: Harry Phillips, chairman; Morris Zareswitz, vice chairman.

At this time, Mr. Speaker, I wish to extend my remarks and include in the RECORD the address made by the Honorable Herbert R. O'Conor, Governor of Maryland, as follows:

The American Legion, standing as it does for the preservation of the principles of true freedom, is to be congratulated by every thoughtful American for having sponsored Stand by America Day. By it, the Legion has focused the country's attention upon the need for action to offset the subversive forces now working amongst us.

To me, this national mobilization of patriotic fervor is one of the finest examples of the dramatization of an idea that could be imagined. It will, I hope, shock into wakefulness those of our countrymen who have been decrying the possibility of danger to us from any of the "isms" that have well-nigh wrecked many of the nations of the world. It will awaken them, I believe, to the realization that action represents and decides active active that actions that the second contract of the second contract realization that action—prompt and decisive action—is necessary if we are to circumvent the disloyal groups that are burrowing at the foundations of our free American institutions.

the foundations of our free American institutions.

America must awaken to this danger before it is too late.

We must be alert to protect and preserve those things that we hold near and dear. If we do not, we shall see our individual liberties snatched from us just as they have been taken from millions of other citizens of once-free countries. As a Legionnaire, and as an American who values the liberties he now enjoys, I call upon everyone to heed the call of the American Legion—to stand by America now, so that we may continue to have America by which to stand. to stand.

Maryland, as one of the Thirteen Original States, is determined to uphold the principles and ideals for which our forefathers fought and died. As Governor of this State, I can give assurance that today, just as in every crisis of our Nation's history, our citizens will stand

by America.

Meeting of the Manhattan Democratic Club of the Eighth Assembly District of New York City

EXTENSION OF REMARKS

HON. WILLIAM I. SIROVICH OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

ADDRESS BY HON. WILLIAM I. SIROVICH, OF NEW YORK, APRIL 5, 1939

Mr. SIROVICH. Mr. Speaker, under leave to extend my remarks, I wish to put in the RECORD the following speech delivered by me on the 5th of April 1939 before a special meeting of the Democratic County Committee held at the Manhattan Democratic Club of the Eighth Assembly District, placing in nomination M. Michael Edelstein, as executive member and leader of the eighth assembly district of New York City:

Mr. Chairman and fellow Democrats of the county committee of the eighth assembly district, man is governed by three basic instincts: First, that of self-preservation, or the will to live; second, self-perpetuation, or the will to love; and third, self-expansion, or the will to possess more. The third instinct, which is the will to more, is characteristic of man only. Animals, not being conscious of the future, and satisfied with what they have for the moment, are possessed of the first two instincts, but have no will to more.

are possessed of the first two instincts, but have no will to more. Only man wants more than he needs.

The world of man has been made possible by the threefold extension of his personality: First, by his physical or biological extension, which resulted in the establishment of civilization; second, by the expansion of his mind, which resulted in the establishment of culture; and third, by the expansion of his will, which created for him his social, economic, and political fabric. The basic difference between man and animal is that the former has the shillity to create tools while the latter has not. Animals has the ability to create tools, while the latter has not. Animals do not make tools. Man's tool-making ability is a compensation for his natural weakness. He is the weakest of all higher animals, not only as far as his senses but as far as his limbs are concerned. The bull moose has a greater audibility and the eagle a greater visibility than man. The reindeer and the ostrich can outrun him that are fish can outrun him.

visibility than man. The reindeer and the ostrich can outrun him just as fish can outswim him. Finally, man is earthbound because of the lack of wings and is helpless in the struggle with higher animals because of his weak hands. However, by his tool-making skill and by his ability to create implements, instruments, and apparatus, he cannot only overcome the higher animals but he can perform functions for which nature has not equipped him.

Through the development of transportation he extended his legs. Through the perfection of radio and telephone he has extended his ears. Through the invention of the microscope and telescope, he has extended his vision. Through the development of shipping he can outswim any fish, and through the creation of aviation he has, so to speak, drafted wings upon himself, and can outfly any bird. In short, through the extension of all the five senses—hearing, seeling, feeling, tasting, and smelling—he has been enabled to outgrow his actual physique and matters of nature. The extension of the five senses, through the perfection of tools, machinery, and equipment, has resulted in the created art; to prolong his memory he invented writing and printing; to find his way in nature memory he invented writing and printing; to find his way in nature he created principles of mathematics and science. Culture is thus he created principles of mathematics and science. Culture is thus an extension of the mind, as civilization is an extension of the body. The expansion of his will, to the will to possess more, which is one of the sources of his economic creativeness, is a double-edged sword in the struggle for his existence. This uncurbed expansion of the will, to the will to possess more, resulting in the vast accumulation of wealth by individuals, is the cause of all wars, rebellions, revolutions, and other political and economic unbeavals. The will to possess tions, and other political and economic upheavals. The will to possess more is thus one of the sources of man's brutality and cruelty, and is more powerful and more unyielding than the will to life, or the will to perpetuate oneself, because this will to more draws from two sources—the physical and the spiritual.

The will to more draws from man's vision, from his consciousness of the future, from his gift for abstractions, as well as from his physical will. To preserve his wealth, man would transgress all physical will. To preserve his wealth, man would transgress all boundaries of law and decency, and resort to means which are degrading and debasing. It is for this reason that all forces of the spirit have united to curb the will to more. Religion, politics, ethics, the law, and the state are vying with one another to limit the sphere of that grasping will. For the sake of its own existence the state must curb the will to more of the individual or of a group of individuals. The law, by delimiting the sphere of the right of the individual, is already curbing the will to possess more.

vidual, is already curbing the will to possess more.

All postulates of social justice arise out of a vehement negative attitude to the will to more. All true ethics teach man not to exploit his fellow man, and tries to impose limitations upon his will to more. The basic religious document of civilized humanity, the Decalog, is dedicated to the delimiting and curbing of the will to more. Without these forces trying to bend and control the will to more, the life of man would differ but little from that of the jungle, and man would reduce his fellow men to a beast of burden or to a part of nature. In the jungle the rule of unregulated freedom prevails. Animals can roam as they please and move about unhindered. It is the perfect order of "do nothing." The result is that the mighty and strong devour the weak, and its move about unhindered. It is the perfect order of "do nothing." The result is that the mighty and strong devour the weak, and its order of life is, might makes right. Instinctive brute force rules. This jungle rule, when applied to human society, manifests itself in two forms; first, in the unregulated freedom of the do-nothing order, in which the economically powerful may devour the economically weak; or, second, when the king of the jungle has imposed his will upon the other creatures and made himself dictator. posed his will upon the other creatures and made himself dictator, thus regulating the rule of force. This regulated rule of force of the jungle, when applied to organized society, is fascism—either right or left fascism. In the Fascist state, like in the jungle, when the lion or the tiger asserts his will, the dictator imposes his will upon his fellow men without regard to their desire, wishes, ideas, or welfare. If jungle chaos is the state of doing nothing, jungle order in the state is dictatorship. There could possibly be no objection to either the do-nothing order of things, or to the dictatorship, if man were only a part of nature and nothing more than the tiger, lion, or any other ferocious animal. But man is more than a part of nature; he stands on the threshold of two worlds, the physical and the spiritual. He is a citizen of both, and governed by both. Such is not only the dictum of all true religions and philosophy, particularly of Biblical religion, in which man appears as the crown of creation, and is God's main care and concern, but it is the dictum of our own experience, of our own recognition. If man were

is not only the dictum of all true religions and philosophy, particularly of Biblical religion, in which man appears as the crown of creation, and is God's main care and concern, but it is the dictum of our own experience, of our own recognition. If man were only a part of nature, he would be as unproductive as the animal. Animals have no mathematics, have no science, have no religion, have no law, have no ethics, because they are not spiritual beings. These creations of the spirit could only emanate from spiritual beings, consequently man cannot be said to be just a part of nature, and entitled to the same rule as the jungle. The law by which he lives must be a human law and not a jungle law.

The cry of humanity demands that man be treated as a spiritual God-fearing citizen. He must not be brutalized, tyrannized, and exploited. He must be treated with graciousness, kindness, and dignity. The day of the autocratic boss and the corrupt politician is passing by. The successful ruler of the future will be the servant and not the master of his people. The earth of Europe and America is hallowed and saturated with the blood of martyrs who died to preserve religious, intellectual, political, and economic freedom. We must be worthy sons of our illustrious forbears, never to permit the destruction of our inalientable rights contained in our Bill of Rights that makes possible the pursuit of life, liberty, and happiness. Now is the time to make the world safe for democracy here and abroad. [Applause.]

Mr. Chairman, we are living in a critical period of the world's history. Throughout the civilized world men are battling for principles, struggling to achieve ideals, contending for justice, sacrificing their health and wealth, and ready to die to preserve liberty and democracy for their fellow man.

In this tremendous world conflict the conscience of mankind demands that everyone do his duty to preserve intact and inviolate these hallowed and sacred convictions that must be handed down from generation to generation, unsu

I would be derelict in the performance of my sworn duty to uphold the Constitution of our great Republic that I love and have sworn to defend if by action, deed, or words I failed to unequivocally register my most vehement and solemn protest openly, courageously, publicly, and officially against any form of democratic leadership that subverts the will of the people through its elected officials. That type of leadership must go. [Applause.]

From a political and economic standpoint the will to possess more is responsible for the exploitation and commercialization of

more is responsible for the exploitation and commercialization of human beings, in which mankind is exploited for the benefit of the few. This political commercialization of human life is the symbol of autocracy and degradation, represented by the dictatorship of Hitler, Mussolini, and Stalin, through the philosophy of nazi-ism, fascism, and communism, that is today challenging the rule of democracy throughout the civilized world.

The reason you men and women, representing the Democratic County Committee of the Eighth Assembly District, have congregated here this evening, is to select a Democratic representa-tive, a new Democratic leader, who will be, not the dictator and master of the people of the district, but will be the servant and agent of the citizens of his community and help to cooperate with them to uphold the ideals for which true democracy stands.

with them to uphold the ideals for which true democracy stands. [Applause.]

Mr. Chairman, if you permit the great nations that have existed in this world in the past to march across the proscenium of time, you will observe that each country had left an indelible impress of its culture and civilization upon the pages of time.

Greece paid tribute to intellect. Men like Socrates, Plato, Aristotle, Pathagarus, Sophicles, Aescheles, Euripides, Homer, Solon, and others, will continue to shine resplendent in the glory of their contributions throughout the ages to come.

The symbol that was emblazoned upon the Roman escutcheon was the tremendous force and will nower that activated and

was the tremendous force and will power that activated and motivated ancient Rome to the glory of conquest. Upon the flag that every Roman soldier carried were the Latin words "Civis Romanus Sum"—I am a Roman citizen—and woe betide any nation or individual that ever attempted to discredit the rights of Roman citizenship. The will to more, of Rome, was always the divising force to the establishment of its great employed with driving force to the establishment of its great empire, and right

or wrong had to prevail.

Ancient Judea, the home of the Semitic people, gave to the world the principle of ethics and conscience. Ethics, which is

the relationship that should exist between man and his fellow man. Conscience, God's inner light to man, which constantly echoes and reechoes the sublime sentiment, "Let thy conscience be thy guide."

India, the home of the ancient Brahmins, contributed the sacred philosophy of holiness. Life was sin-ladened, and could only be cured through sacrifice, redemption, and salvation, in order to achieve Nirvana.

Christianity, through the Saviour, gave to the world the greatest of all blessings, love—to love thy neighbor as thyself.

Anglo-Saxon civilization placed upon the altar of humanity the great Magna Carta, which was the first chapter of human rights, that is responsible for parliamentary constitutional democracies throughout the world.

America, our beloved country, became the haven and refuge of all the oppressed of the world, giving liberty, freedom, and happiness to all of its citizens regardless of class, race, creed, or color and devoid of any discrimination or partiality. Such a democracy we are battling to conserve and preserve here in our community, that it may shine as a beacon throughout our Nation, as the eternal symbol of our renewed hope, our everlasting faith and our profound love for the greatest democracy that exists in the world-our own beloved America.

in the world—our own beloved America.

That is why I have risen to nominate for the leadership of our district an eminent and distinguished lawyer, an exponent of intellect, a man with force and the courage of his convictions, with the spiritual conscience of God to guide him in his ethical promises and obligations to his fellow men, a man with love for his country in time of peace and ready to die for it in time of war, a real executive, a capable administrator, an indomitable leader of men, who seeks no office or glory for himself, but who desires to serve others and give of his today that his constituents may have their tomorrow. Such are the basic characteristics, virtues, and qualifications of our nominee for leadership of our democratic organization, in order to preserve intact the ideals of democracy and all that it stands for. [Applause.]

Mr. Chairman, as the chosen spokesman of the militant and enthusiastic Democratic County Committee of the Eighth Assembly District of New York City, it is my exceptional privilege to place in nomination for the position of executive member and leader of our district the unanimous choice of our membership, the brilliant, intellectual, aggressive, progressive, honest, fearless, and incorrupti-

intellectual, aggressive, progressive, honest, fearless, and incorrupti-ble militant leader, who will battle for the redemption and resur-rection of civic honesty and decency, and be a model for other Democratic organizations in our Nation to emulate.

For your respectful consideration and with your kind indulgence, I have the great honor to present to you our new leader, my very dear and personal friend, M. Michael Edelstein, who symbolizes to my mind all the attributes and virtues that courageous, fearless, and honest leadership implies, and who will lead the New Deal Democracy of our great President, Franklin Delano Roosevelt, to its deserving victory and success in the future. [Applause.]

An American Plan for Flood Control

EXTENSION OF REMARKS

HON. CLYDE T. ELLIS OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

ADDRESS OF HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. ELLIS. Mr. Speaker, under leave granted me by unanimous consent of the House, I quote in full the address of Senator James J. Davis, of Pennsylvania, delivered before the National Rivers and Harbors Congress at Washington, March 23, 1939:

March 23, 1939:

Mr. Chairman, strangely enough, we are at least 50 years behind times in our local voluntary plans for flood control. I believe floods and uncontrolled waters cause as much damage as fires and uncontrolled flames, possibly more. Add to this the dangers arising from our polluted streams, and I feel confident this is true. It would be an interesting problem for the statisticians to make an estimate of the relative losses which come to our people through the problems arising from uncontrolled fire and water. Certainly they are ancient foes. Although I definitely believe in the national responsibility for flood control, certainly there is need for local advisory flood-control organizations as there has been need for volunteer fire companies. The same sense of neighborliness which has been so helpful in fighting the hazards of fire should now carry over to meet the menace of floods. Local advisory flood-control organizations should be set up on a community basis to create flood-control sentiment in State and Nation and be helpful in times of emergency for actual flood rescue work. I suggest this not as a substitute

for national planning and national responsibility, but as a necessary supplement for them. It is true that floods are more to be feared in some localities than others, but at least we have a right to expect that where devastation has come with more or less regularity, year

that where devastation has come with more or less regularity, year after year, local organizations should be present to advise State and Nation of the flood-control and rescue needs of the community.

We have some outstanding national and sectional organizations, such as the Mississippi Valley Flood Control Association, the National Rivers and Harbors Congress, the Miami Conservancy District, the Tri-State Authority, the Massachusetts Planning Board, and others. These organizations are doing a much-needed work. My heartiest good will extends to all of them. But before they can be thoroughly effective, local organizations by the hundreds should be set up through the activities of interested citizens in every part of the Nation. Certainly, there is as much reason for the existence of a local flood-control organization at a thousand points throughout the land as a woman's club, a service club, or a local civic unit of any kind. I know of no greater organization challenge in America today than just this. I am profoundly impressed with this need and am confident that in the immediate future we shall see hundreds of civic-minded organizations instituted to carry on a great national flood control and soil conservation program. tion program.

what would these local organizations do? Very briefly, I would suggest that their responsibility would be wholly advisory and educational. They would attempt to create understanding among all classes of citizens, farmers and urban dwellers alike, and to indicate the part that each citizen plays in the problem of uncontrolled and impure waters. I am as deeply interested in the purification of our rivers and streams as I am in their conservation for flood control. Whenever a person turns a water spigot he becomes a party to the problem of water control. Whenever a factory is set up on a river bank it has a potential relation to the problem of stream pollution. Every drain, every sewer, every wrongly cultivated parcel of land, every unplanned town or city, every badly planned grade, every culvert, and every slope and level of every factory, field, and forest in the land have a part to play in the tragedy of uncontrolled or polluted waters. It is not only excessive rainfall that causes floods but, equally, it is our failure to provide for excessive rainfall when it comes in relation to the ordinary uses of water. uses of water.

I believe in the national responsibility for flood control. I have always held this position. I know the arguments being made against it. I also know how impossible it is for individual States against it. I also know now impossible it is for individual States to meet these problems without Federal cooperation and a large measure of responsibility. However, I am firmly convinced that national plans for flood control will get nowhere unless they are well integrated with local plans that have a sound basis in the intelligent flood-control activities of our people as a whole. Herein my be found the need for the local advisory flood-control organizations which I have suggested.

my be found the need for the local advisory flood-control organizations which I have suggested.

The estimated cost of erecting a Nation-wide plan of flood control as called for by existing plans of the United States Army Engineers is somewhere in the neighborhood of \$8,000,000,000. I can conceive that all of this money could be spent and that elaborate facilities could be provided in dams, reservoirs, levees, and irrigation systems, and at the completion of all of them we might find ourselves as badly off as we are today if we do not learn how to control waters in small areas at their source. Our need is for a national plan of flood control which comes from the practical intelligence of the American people. No conference of a few wise heads in Washington will ever be a suitable substitute for this.

A challenging task of local education and organization confronts us. This is the way we have met the problems of education, fire

A challenging task of local education and organization confronts us. This is the way we have met the problems of education, fire control, road construction, and a dozen other civic improvements of the last century. This is the way we should now proceed if the American people are to become thoroughly flood-control conscious. This is a task of education and organization second to none in the Nation today for the losses sustained by the Nation occasioned through uncontrolled waters in flood damages and soil erosion far exceed any other material losses which afflict our people. I believe the task remaining before us is equally as important as that which your great Congress of Rivers and Harbors has already so nobly met. Both national and local activities are required to combat the growing menace of uncontrolled waters.

The Connally "Hot Oil" Act—The Significance of Its Proposed Continuation as Permanent Law

EXTENSION OF REMARKS

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1939

Mr. COFFEE of Washington. Mr. Speaker, I am desirous at this time of inviting the careful attention of the Members of Congress to the need for careful study of the various bills relating to the oil industry that are on their way through committees. Some of the proposed oil legislation is most worthy of your approval if you are interested in looking after the consumer. There are other proposals that are not only inimical to the public interest but constitute the very background of some of the monopolistic practices in the oil industry.

THE PENDING "HOT OIL" BILL

In this latter category I place the proposal to extend and make permanent the Connally Act relating to contraband oil. Effective in a field like east Texas, where the independent producers showed signs of competitive strength against the major oil companies, it has been most harmful to independent and consumer alike. An Interstate Commerce Committee subcommittee is holding hearings on the bill this week and it is my sincere hope that it will kill that legislation for all time. I urge you to vote against S. 1302 and its companion, H. R. 4547.

PSEUDO INDEPENDENTS OF THE OIL INDUSTRY

You are going to be approached by concerns that call themselves independent and urged to support this Connally Act. Do not be fooled by pseudo independents which speak but the major oil company bidding. I am told that a representative of the Independent Petroleum Association of America will appear and urge the extension of the Connally Act in the name of the independents. Again, I say, do not be fooled. If you will refer to the hearings before the Darrow N. R. A. investigating committee you will find that this so-called Independent Petroleum Association of America received contributions from the major oil companies in 1933, as follows:

Consolidated Oil Corporation	\$10,000
Atlantic Refining Co	2,000
The Texas Corporation	10,000
Indian Territory Illuminating Co. (Cities Service)	1,500
Phillips Petroleum Co	3,000
Standard Oil Co. of Ohio	
Standard Oil Co. of California	5,000

Money in those amounts is not ordinarily given out for the mere social advantages of belonging to an organization. Money in those amounts means control, and when the socalled Independent Petroleum Association of America speaks before committees or speaks to individual Members of Congress it is the voice of the major oil companies.

It will not be long before the large oil-producing States will be appealing to Congress to renew and extend approval of the interstate oil compact. This is the second leg of the major oil companies' control over prices. The major oil companies appoint the advisers to the interstate compact, attend its meetings, and generally direct its activities. By this instrument the oil-producing States seem to feel they have been issued a license to conspire to violate our antitrust laws. As in the past, this document will no doubt be presented and passed through without even the holding of hearings to bring out the price-fixing motives behind it.

In addition to the above, Congress has aided the major oil companies and the oil-producing States by the application of a high tariff on imported petroleum while our exports continue to increase year by year. Congress has also permitted the Bureau of Mines of the Department of the Interior to issue monthly forecasts of demand for petroleum which are used by the major oil companies and the oil-producing States as a blueprint to hold supply below demand and thus increase prices.

There are a number of ways in which this Congress can truly aid the consumer of oil and preserve the competition of the independent in all branches of the industry.

WAYS IN WHICH WE CAN HELP THE PUBLIC

First and foremost, it is necessary to divorce the oil pipe lines from their major oil company domination and control; it is necessary to establish these important transportation facilities as common carriers in fact. Over on the Senate side a provision for a new commodities clause, which would have divorced pipe lines, was placed in S. 2009, upon its

introduction. However, the heat put on by the major oil companies and their lackeys soon convinced the Senate Interstate Commerce Committee that if they wanted any railroad legislation they had best not offend the major oil interests. So powerful were these major oil companies that they persuaded the counsel for the railroads to disown the provision in their own committee-of-six draft of railroad legislation. This reminds me that when we catch up on some of our other repair work we might appoint a good committee to investigate the interlocking directorates or connections that exist between the railroads and the major oil interests.

PIPE-LINE DIVORCEMENT

Senators Borah and Gillette have sponsored a new and complete pipe-line divorcement bill, S. 2181. It is hoped that the Senate Judiciary Committee, to which the bill was referred, will give this bill a prompt hearing. Congress is just about 40 years late on this pipe-line problem, and divorcement legislation should be enacted at the present session.

On the House side our own Committee on Interstate and Foreign Commerce has an opportunity to include this pipeline legislation in the railroad legislation it is considering. A new commodities clause appears in H. R. 4862 that would effectively divorce pipe lines. May the committee have the intestinal fortitude to keep the provision therein despite the major oil company lobby.

OTHER RECOMMENDED BILLS

In addition to pipe-line divorcement we must enact legislation that will divorce the major oil companies from the operation of marketing properties. I am told that Congressman Harrington's H. R. 2318 to accomplish this purpose will be given an early hearing by a subcommittee of our Judiciary Committee. Similar action is expected on the companion bill in the Senate by Senator Gillette, S. 448.

Most vital of all for the protection of the consuming public is the enforcement of our antitrust laws. Extreme vigilance is essential as to the oil industry at least until such time as Congress passes additional legislation to protect against the growth of monopoly.

ENFORCE THE ANTITRUST LAWS

Special interests will be urging you to cut appropriations for the antitrust division of the Department of Justice or otherwise to tie its hands. I would welcome the opportunity to cast my vote for an appropriation bill that would carry a \$5,000,000 fund for the antitrust division. Monopoly and restraint of trade are not party issues; all political parties have endorsed our antitrust laws. Those in position to monopolize or restrain trade do not need the care of Congress; they are able to employ the best brains among those who have their mental powers for sale. It is the duty of Congress to protect the consuming public and the independent merchant from the avaricious monopolist. We could go home tomorrow if our duty lay otherwise. Cartellization, on the European plan, needs only a Hitler to write, execute, and judge the laws. Monopoly and cartellization are sisters under the skin; the only difference is that with cartels the dictator is recognized as the nominal or puppet head of the government while monopoly recognizes no head but its own.

There is a crying need for a number of grand-jury proceedings to stamp out unlawful conspiracies in the oil business. The House Appropriations Committee can do its duty to the American people by seeing that enforcement activity is not handicapped by lack of funds.

ALL COMPETITION IS ELIMINATED IN MANY AREAS

In my own part of the country the major oil companies have practically eliminated competition in the oil business, and the public is paying the price. From information reaching me there is need for prompt action to expose this conspiracy. The need has been evident for some time. Almost 2 years ago I stated to this body as follows:

A number of years ago the Federal Government caught the major oil companies on the Pacific coast red-handed in a violation of the antitrust laws. The usual injunction suit and consent decree followed. But what good did it do? The major oil companies have gotten around or openly violated that decree to this

day, so that conditions in the oil business on the Pacific coast are more controlled by them than ever before. And the situation gets

A year and a half ago the Attorney General promised prompt action on this west coast oil monopoly. that part of the country are still anxiously waiting.

I realize that it takes money to prosecute these large cases; the array of legal talent, "the best that money can buy," that faces the Government when it attacks a monopolistic industry like oil, is overwhelming. The glitter of gold to defend these major oil companies even extends to the enticing away of some of Government counsel, as happened in the Madison oil case, or as resulted from the investigation by the State of Michigan. Despite these evidences of human frailty, there are sufficient men of high caliber available to be employed by the Government if Congress will do its duty in supplying the necessary funds.

THE TEMPORARY NATIONAL ECONOMIC COMMITTEE IS URGED TO ACT

And now, just a word about the Temporary National Economic Committee which is supposed to be investigating monopoly in this country. The \$600,000 which we recently appropriated will disclose a lot of facts, but we must remember that it will also buy a lot of whitewash.

I hope I am wrong in my present reference to this committee because I have a sincere desire to see facts disclosed. We provided the committee with specific subpena power so that they could get at the facts. My faith was weakened when I read the chairman's press release of April 10, which I append hereto. Every Member of Congress should read it. What does it look like to you?

I fervently trust that this pronunciamento does not presage a slacking of zeal on the part of this committee created for the purpose of fearlessly exposing monopoly in all its ramifications.

STATEMENT OF SENATOR JOSEPH C. O'MAHONEY, CHAIRMAN OF THE TEMPORARY NATIONAL ECONOMIC COMMITTEE

The committee has authorized me to announce a new phase of its studies particularly designed to afford business and industry an opportunity, in cooperation with the committee, to present its own story of the Nation's economic problems.

For the inauguration of this new phase of the committee's work

the oil industry has been selected. Numerous conferences have been held with representatives of both big and little business of varying or conflicting views in this industry, and invitations are being extended to them to assist in designating witnesses who will appear at the hearings to present to the country and the committee their views and facts with respect to the economic problem.

To indicate the manner in which this program has been developed, it may be stated that Mr. Axtell T. Byles, president of the American Petroleum Institute, the largest trade association in the oil industry, has consented to seek the cooperation of various leaders in the industry. These persons will be given the opportunity to present prepared statements to the committee and then will be subprepared to appear in present of the protected bearings.

tunity to present prepared statements to the committee and then will be subpensed to appear in person at the projected hearings. The committee will call other witnesses in order to make certain that an adequate presentation is made of all available information with respect to the manner in which the oil industry is conducted. Interest will naturally center on problems of production, refining, transportation, and distribution, with particular reference to the effect upon employment and upon the prices which are charged for the finished product, as well as the effect of industrial and corporate organization upon the industry. What is the exact relationship between the independent producer and the independent tionship between the independent producer and the independent distributor upon the one hand and the major units in production and distribution upon the other? What restraints, if any, exist upon free enterprise? These and many other similar questions which are constantly being propounded will be presented and

The committee's offer is made without limitation as to the con-The committees offer is made without limitation as to the content of the testimony or reports, except that the material presented include data requested by the committee and that opinions, including any criticism that may be made of existing governmental or intraindustry policies, be supported by actual evidence.

From the date on which the committee was organized, as I announced before the first hearings last December, it has been in-

tended to provide a distinct method of nongovernmental presentatended to provide a distinct method of nongovernmental presentation to the committee. The program now announced offers that opportunity. It will make possible the presentation in a forum, which is so situated as to command national attention, varying opinions by business and industrial groups or leaders with respect to the cause and cure of our economic ills. It is not possible at this time to state how many separate industries will be heard in this manner, because there is a natural limitation of time and money, but it is believed that the study of the oil industry will make possible a thoroughgoing test of this procedure as a means of develop-ing objective testimony.

The projected oil hearing will be the first hearing conducted by

the committee itself. Heretofore the presentations which have been made have been presented and directed by the executive debeen made have been presented and directed by the executive departments and commissions which are represented on the committee. These presentations have not been concluded. Some are still in preparation and will shortly be presented at public hearings, but the committee has authorized this announcement in order that its intention to make a well-rounded study of the economic problem should be generally known.

It is the hope of the committee that the presentation of the oil hearings may be begun not later than the 1st of June, but ample opportunity will be given to the witnesses to prepare. Written statements will be filed with the committee at a specified date in advance of hearings, so that the members of the committee and its staff may thoroughly review the material which is to be pre-

its staff may thoroughly review the material which is to be presented. The witnesses will then be informed well before the hearings as to the general nature of the questions to be asked by or on

behalf of the committee.

The order of appearance of witnesses will, of course, be directed by the committee, and every effort will be made to arrange the hearings in such a manner as to afford the most effective and fair

nearings in such a manner as to allord the most effective and fair presentation of conflicting views.

It should be understood that the committee has not as yet planned similar presentations by any other industry or business. It will, however, entertain applications for similar hearings. It was felt that the opportunity should be offered, leaving entirely to business and industry the decision whether this procedure would be

helpful.

Industrial leaders or groups which feel that they may make a contribution to the solution of their own or the Nation's problems by taking advantage of this formula may make application to the committee through the chairman or the executive secretary for an opportunity to be heard on the general basis outlined in this statement. For the present it is possible for the committee to consider only presentations by or on behalf of specific industries. Later on it is expected that provision may be made to take more general testimony.

In cases where hearings cannot be held due to limitations of

time, it is hoped to make arrangements to receive testimony through reports, and the committee expressly reserves the right to receive the material submitted either via hearings or reports or both. This program is undertaken without limitation as to other investigations which the committee may be pursuing or

Expects to pursue.

I am happy to be able to say that this plan has been received with approval by spokesmen for all factors of the oil industry who have been interviewed.

Protection for American Wood Pulp Producers

EXTENSION OF REMARKS

HON. LEX GREEN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

RESOLUTION OF THE FLORIDA LEGISLATURE

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution recently adopted by the Legislature of the State of Florida:

Whereas the Pine Belt of the South has been developed into one

of the main sources of wood pulp in North America; and
Whereas a great portion of the State of Florida is within the Pine
Belt and there has been attracted to the region large investments

For the purpose of processing southern pine into wood pulp; and Whereas the wood pulp industry in Florida and the United States has been adversely affected by the recent change in the relation between the British, Swedish, and Finnish moneys and the American dollar; and

Whereas the foreign wood pulp producers have obtained thereby an advantage over American producers of wood pulp in the United States market; and

Whereas, by reason of the advantage of foreign producers of wood whereas, by reason of the advantage of foreign producers of wood pulp over American producers of wood pulp, the demand for American produced wood pulp has declined drastically for the past several months and workers in American wood pulp producing mills find their income either reduced or cut off entirely; and Whereas the Federal Government could rectify this unfortunate condition by means at their disposal: Therefore be it Resolved by the senate (the house concurring). That Congress be requested to invoke such monetary clauses in the British, Swedish,

and Finnish trade agreements as may be necessary to protect the American wood pulp industry as well as other industries in competition with goods imported from the said countries, and to take cognizance of the plight of American wood pulp producers: Be it

Resolved, That a copy of this resolution be dispatched immediately upon its passage to each member of the Florida delegation in Congress for their earnest consideration.

Admission of Refugee Children

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Thursday, April 27, 1939

LETTERS AND ARTICLE FROM WASHINGTON POST

Mr. REYNOLDS. Mr. President, I ask unanimous consent that three letters in yesterday's Washington Post, written by Mr. J. H. Patten, Miss Anna E. Hendley, and American Boy, and certain marked portions of an article in today's Washington Post, including marked paragraphs of the President's address before the Fourth White House Child Welfare Conference, be printed in the Appendix of the RECORD and referred to the Committee on Immigration, which has under consideration the so-called Wagner Refugees Resolution.

There being no objection, the letters and the article were referred to the Committee on Immigration, and ordered to

be printed in the RECORD, as follows:

[From the Washington Post of April 26, 1939] GERMAN CHILDREN

To the editor of the Post: Sir, in the April 25 Post news account of the preceding day's hearing on the Wagner so-called "refugee children's" resolution I am misrepresented. It was not I that "warned" that 20,000 children might increase to 600,000 in a few

generations.

generations.

What I said when asked if "600,000 additional persons" ("if steeped in American traditions") "would be a good thing" was that "I do not know" that their addition will be a good thing, but "I will tell you what I think," arguing at great length that they would further increase our unemployment (12,000,000 at present), our relief burdens (30,000,000), our part-time employed (about 20,000,000), and that the memberships I represented were opposed because they feel our population is beginning to recoil upon itself and Lord Macaulay's prophecy in a letter to a friend here in 1857 is being fulfilled. is being fulfilled.

But, more important, I showed that if the Wagner resolution becomes a law it would not necessarily admit a single German child refugee and could result in the admission of 10,000 annually for 1939 and 1940 "German children," all Nazis and no one of them anti-Nazi, or "persecuted, because of race, religion, or the political views of their parents or themselves." The Wagner resolution merely provides for the admission of 20,000 "German children under 14 years," because only that which follows the enacting clause is the law.

clause is the law.

J. H. PATTEN.

WASHINGTON, April 25.

AMERICAN YOUTH

To the EDITOR OF THE POST:

SIR: Will Dorothy Thompson explain more fully what she means by the statement reported in the Post of April 23 in regard to admitting 20,000 German children in this country when she says: "We need young workers in this country and it is a problem that we need to meet a little more intelligently than

we have. We are not going to have a good country with the age group growing as it has been"?

She is also reported as saying that the measure would bring to the United States the kind of young citizens of whom she said it stands in need. What does she means by casting such a reflection on our American youth seeking employment?

ANNA E. HENDLEY.

WASHINGTON, April 24.

No Persecution Here

To the EDITOR OF THE POST:

SIR: As an American boy may I ask why Dorothy Thompson et al. want to import 20,000 German children? Miss Thompson says that the children imported under the Wagner-Rogers bill

will not become public charges but she is silent on the children of the American slums, the children of the sharecropper, or the Negro children. Are they to become public charges?

I am sure that the people of this country do not want the bill to pass because there are many times 20,000 children in this country with no future. Help the American child. He deserves our help more than the German child.

WASHINGTON, April 24.

AMERICAN BOY.

[From the Washington Post of April 27, 1939]

United States Is Failing Its Children, President Says—Democ-RACY'S FUTURE RESTS ON THEM, WHITE HOUSE CONFERES TOLD

(By Christine Sadler)

Two-thirds of America's future voters are growing up in the one-third segment of the population that is ill-fed, ill-housed, and ill-clothed, delegates to the fourth White House Conference

and ill-clothed, delegates to the fourth White House Conference on Children were told yesterday.

After a full day and evening of speeches focused for the most part on economic and birth-rate inequalities, the delegates—including 500 educators, social workers, and welfare leaders—this morning begin a year's study of ways by which the Nation can extend democratic opportunities to all its young.

LITTLE DONE FOR CHILDREN

During the day the conferees heard:

President Roosevelt declare that lectures on nutrition mean nothing unless there is food for a child to eat and that compulsory school attendance "is one thing and a chance to go to school another."

school another."

Mrs. Roosevelt urge a national viewpoint for consideration of the problem and chide "New York and New England" for being "perhaps too placid" when they look at other parts of the country. Secretary of Labor Perkins assert that economic factors which underlie "the security of home life and conditions which make for freedom of development of the individual" will be emphasized in the year of study.

in the year of study.

Secretary of Agriculture Wallace lament the tendency of some to "condemn whole groups of people as unworthy." The intelligence quotient, he said, is not a matter of the bloodstream but of the economic status.

Numerous speakers compare "all the noise about the old-age groups" with the "little that is being done for children, who are much greater in numbers and more vital to the future of the

country."

Dr. Frank P. Graham, president of the University of North Carolina, lead a southern group which made a plea for support of pending legislation that would provide Federal aid to education. Dr. Isidore Falk, of the Social Security Board, termed children "the economic orphans of our society."

Addressing one of the sectional discussion groups, Dr. Falk declared that in America "the larger the number of children in a family the worse the economic conditions of the family."

When the birth rate begins to decline as rapidly as it has in this country, he said, children become the Nation's most valuable natural resource and the "uneven conditions under which they live is of great political significance."

SEVENTY-ONE PERCENT IN POOR HOMES

Seventy-one percent of the child population of America, he said, is in homes "where the income is inadequate or just barely adequate."

adequate."

"With the country growing so close together by development of transportation and communication, the people can no longer afford to be sectional," Mrs. Roosevelt declared, expressing the belief that one of the great menaces to the future of the Nation is found in "fact that we do not know the country as a whole."

President Roosevelt, speaking in the East Room of the White House, where morning sessions of the conference were held, declared that democracy's success rested not on "territory, financial power, machines, or armaments," but on the "deep-lying satisfaction" of its citizenship.

"We made the assumption." he said, "that a happy child should

tion" of its citizenship.

"We made the assumption," he said, "that a happy child should live in a home where he will find warmth, food, and affection; that his parents will take care of him should he fall ill; that at school he will find the teachers and tools needed for an education; that when he grows up there will be a job for him and that he will some day establish his own home.

"As we consider these essentials of a happy childhood our hearts are warmy with the knowledge that there are many children who

are heavy with the knowledge that there are many children who cannot make these assumptions.

"We are concerned about the future of our democracy when children cannot make the assumptions that mean security and hap-

"This conference and the activities which it initiates furnish an opportunity for us to test ourselves and our institutions by the extent to which they serve our children."

Frank Bane, executive director of the Council of State Govern-

ments, presided over the largest of sectional discussion groups held in the afternon at the Department of Labor auditorium. Other group leaders were: Dr. James S. Plant, director of the Essex County Juvenile Clinic, New Jersey; William Hodson, commissioner of public welfare of the city of New York, and Ruth Andrus, of the University of the State of New York.

EDUCATION TESTS DEMOCRACY

Dr. Graham, speaking in the afternoon, declared democracy is "tested more severely" in the matter of equal educational opportunity than "at any other place." Comparing amounts available for education in various parts of the country, he said:

"We do not have a democracy in America when we put \$220 in

one child's education annually and less than \$20 in another child's. one child's education annually and less than \$20 in another child's.

"The States with the least ability to pay are now paying the highest tax rate for education of their children. If you say you do not believe in Federal aid to education, you simply say you do not believe in equality of educational opportunity in this country."

His words were echoed by Dr. H. L. Donovan, president of the State Teachers College at Richmond, Ky., who declared that the South had to educate one-third of the Nation's children "on one-sixth of the Nation's wealth."

The Right Reverend Monsignor Robert F. Keegan, executive direc-

The Right Reverend Monsignor Robert F. Keegan, executive director of Catholic Charities of the Archdiocese of New York, speaking at the White House, assailed the "freedom of the press" which is abused in "its output of foul magazines, salacious pictures, and perverted literature.'

Homer Folks, secretary of New York State Charities Aid Associa-tion and a member of the original White House Child Conference,

called by President Theodore Roosevelt, declared:

"The economic well-being of the child's family, the assurance of an income sufficient to provide at least a reasonable standard of living as to essentials, is not so much a third factor to be added to health and education, as an indispensable of their realization."

The text of President Roosevelt's address at the White House Conference Children in a Democray follows:

ference on Children in a Democracy follows:

"It is, perhaps, because I happened to be born with what may be called a 'relative mind,' and because I have sought to cultivate that kind of thinking for nearly half a century that I think of this conference in the first instance in terms of the past.

"Child welfare—to use a much misused term—did not enter into the public conscience of any nation until about 100 years ago. And we know from reading Dickens and the literature of his period that the well-being of children in those early days was principally considered from the viewpoints of schooling and of crime

pally considered from the viewpoints of schooling and of crime prevention and the ending of physical cruelty—all interwoven with the sentimentality of the good, the ultra-good, Victorians.

"As time went on, some interest came to be taken in every nation, but still the activities of those who sought the bettering of the younger generation of the moment viewed the problem before them as a problem somewhat apart from the relationship of the younger generation to the broader public weal.

"Even at the time of the first children's conference to assemble in the White House under the leadership of President Theodore Roosevelt in 1909, the conditions that surrounded child life were

discussed more in terms of child life than in terms of the national

MARKS NEW ERA

"This was true to a very great extent in the two succeeding White House conferences, and it occurs to me that this, the fourth conference, marks a new and somewhat changed era.

"It is still our task to bring to bear upon the major problems of child life all the wisdom and understanding that can be distilled child life all the wisdom and understanding that can be distilled from compilations of facts, from the intuitions of common sense, and from professional skill. This conference, like the others, is composed of men and women having a broad range of experience and interest in matters pertaining to the welfare of children. It is our purpose to review the objectives and methods affecting the safety, well-being, and happiness of the younger generation and their preparation for the responsibilities of citizenship.

"But we have gone one step further. Definitely we are here with a principal objective of considering the relationship between a successful democracy and the children who form an integral part of

cessful democracy and the children who form an integral part of that democracy. We no longer set them apart from democracy as if they were a segregated group. They are at one with democ-

racy because they are dependent upon a democracy and democracy is dependent on them.

"Our work will not be concluded at the end of the day—it will only have begun. During the greater part of the coming year the members of this conference, representing every State in the Union and many fields of endeavor, will be at work. We shall be testing our institutions, and our own convictions and attitudes of mind as they affect our actions as parents and as citizens, in terms of their significance to the childhood of our Nation.

CITES PAN AMERICAN TALK

"In an address on Pan American Talk"

"In an address on Pan American Day, 2 weeks ago, I said, 'Men are not prisoners of fate, but only prisoners of their own minds. They have within themselves the power to become free at any moment.' On April 15, in addressing the heads of two great states, I stated that I refused to believe that the world is, of necessity, a prisoner of destiny. 'On the contrary,' I said, 'it is clear that the leaders of great nations have it in their power to liberate their people from the disaster that impends. It is equally clear that their own minds and in their own hearts the peoples themselves desire that their fears be ended.'

"In providing for the health and education of children, for the formation of their minds and characters in ways which are in har-

In providing for the hearth and education of children, for the formation of their minds and characters in ways which are in harmony with the institutions of a free society, democracy is training its future leaders. The safety of democracy, therefore, depends upon the widespread diffusion of opportunities for developing those qualities of mind and character which are essential to leadership in

our modern age.

"Further, democracy is concerned not only with preparation for leadership, but also with preparation for the discharge of the duties of citizenship in the determination of general policies and the selec-tion of those persons who are to be entrusted with special duties. Beyond this, democracy must inculcate in its children capacities for living and assure opportunities for the fulfillment of those

The success of democratic institutions is measured, not by extent of territory, financial power, machines, or armaments, but by the desires, the hopes, and the deep-lying satisfactions of the individual

men, women, and children who make up its citizenship.

CONCERNED WITH WAYS

"We shall be concerned with ways in which the broad chasm between knowing and doing may be bridged over. We shall be re-minding ourselves that all the lectures on nutrition will avail nothing unless there is food for a child to eat; that a law for compulsory school attendance is one thing and a chance to go to school is another. Prenatal instruction cannot assure healthy babies unless the mother has access to good medical and nursing care when the time for the baby's arrival is at hand.

"We know how to budget a family's expenditures; we have undertaken to preserve home life for fatherless or motherless children through the joint effort of the Federal Government and the States. We have made great progress in the application of money and service to the promotion of maternal and child health, the restora-

service to the promotion of maternal and child health, the restora-tion of crippled children to normal physical condition, the pro-tection of neglected children and children in danger of becom-ing delinquent, especially in rural areas, and the elimination of child labor from industries shipping goods in interstate commerce. "Yet, after all has been said, only a beginning has been made in affording security to children. In many parts of the country we have not provided enough to meet the minimum needs of depend-ent children for food, shelter, and clothing, and the Federal Government's contribution toward their care is less generous than its contribution to the care of the aged.

its contribution to the care of the aged.

OUR HEARTS ARE HEAVY

"It is not enough, however, to consider what a democratic society must provide. We must look at our civilization through the eyes of children. If we can state in simple language some of the basic necessities of childhood, we shall see more clearly the issues which challenge our intelligence.

"We make the assumption that a happy child should live in a home where he will find warmth and food and affection; that his parents will take care of him should he fall ill; that at school he will find the teachers and tools needed for an education; that when he grows up there will be a job for him and that he will some day establish his own home.

"As we consider these essentials of a happy childhood our hearts are heavy with the knowledge that there are many children who

cannot make these assumptions.

"We are concerned about the children of the unemployed.
"We are concerned about other children who are without ade-

quate shelter or food or clothing because of the poverty of their parents.
"We are concerned about the children of migratory families who

have no settled place of abode or normal community relationships. "We are concerned about the children of minority groups in our population, who, confronted with discrimination and prejudice, must find it difficult to believe in the just ordering of life or the ability of the adults in their world to deal with life's problems.

"We are concerned about the children living beyond the reach

of medical service or lacking medical service because their parents

cannot pay for it.

"We are concerned about the children who are not in school or

who attend schools poorly equipped to meet their needs.

"We are concerned about the children who are outside the reach of religious influences, and are denied help in attaining faith in an ordered universe and in the father of God.

FURNISH AN OPPORTUNITY

"We are concerned about the future of our democracy when children cannot make the assumptions that mean security and

happiness.

"This conference and the activities which it initiates furnish an opportunity for us to test ourselves and our institutions by the extent to which they serve our children. I look to you for comprehensive review of the problems before us, and suggestions as to practical ways in which we may advance toward our goal.

"More here they of the Federal Government are engaged in the

"Many branches of the Federal Government are engaged in the "Many branches of the Federal Government are engaged in the promotion of the health, education, and well-being of the Nation's children. You will be asked to consider the points at which these undertakings may be strengthened, and the needs for services which cannot be supplied with the resources at hand. But the attention of this conference must not be directed to Federal activities alone, or even to joint Federal and State undertakings. It is the local community which is the focal point for all these programs. Children receive benefits, not in Washington, but in the places where they live.

places where they live.
"The men and women within the sound of my voice, as well as you who are assembled at the White House, are in the larger sense members of this conference. Recommendations will be brought to us in a final session next year. It then will be for all of us to determine the extent to which they will be translated into action. I bid you, the members of the conference, Godspeed in your high endeavor."

EXTENSION OF REMARKS

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

ADDRESS BY HON. THOMAS A. JENKINS, OF OHIO, APRIL 24, 1939

Mr. JENKINS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before a joint meeting of the World's Service Commission and the board of bishops and the Million Unit Fellowship Movement of the Methodist Episcopal Church in Kansas City, Mo., April 24, 1939:

Mr. Chairman, ladies, and gentlemen, in 1924 the Ohio con-Mr. Chairman, ladies, and gentlemen, in 1924 the Ohio conference honored me by sending me as a delegate to the general conference. At that time I did not appreciate the great honor that was being conferred upon me for the reason that I had never seen a general conference. Nobody who has not seen a general conference in action can really appreciate its importance as an influence in world affairs and as a factor in building the Kingdom of God. of God.

while my work during much of my adult life has been as a lawyer and as a member of what is generally considered the greatest legislative body in the world, where I have had contact with many of the brilliant men and women of the Nation, I feel like saying here what I have said at other places—that the personnel of the general conference of the Methodist Church will equal in ability and true worth any group with which I have ever come in contact. Especially is this true of those in whose hands and upon whose hearts has been placed the responsibility of leadership. I only wish that every Methodist preacher in the land could have a glimpse at this great organization when it is at its best. I have encouraged many ministers and laymen to visit the general conference. conference.

conference.

I make it a rule to spend a part of 1 day at our annual conferences. I know most of the ministers in the Ohio conference. They sometimes joke me as to why my presence at the conference. I tell them that I come so that I may keep up on my political technique, for there is no place in the world where you can learn the fine points of politics better than at an annual conference—and I understand the general conference itself is not altogether oblivious of the workings of this American pastime.

This great unification conference will mark a great event in

This great unification conference will mark a great event in the history of the Methodist Church. To those who have planned

This great unification conference will mark a great event in the history of the Methodist Church. To those who have planned and prayed for this unification goes the grateful praise of Christendom. The church divided over a great national problem. I remember a great address delivered by a colored minister at the general conference at Springfield, Mass., when he said that his people were responsible for the separation of the church and that if it were necessary for his people to prostrate themselves as a mat over which the two churches might walk to union again they would gladly do it. His address was one of the stirring incidents of that conference.

It is generally conceded, I think, that the two greatest institutions in the world are organized society, commonly called government, and the church. It is not necessary for my purpose to decide which is greater. Government protects the church and its activities, and without the church and its moral influence Government might perish from the earth. There is a remarkable coincidence in the development of these two great institutions. Many times across the centuries we find them functioning together under one leadership and again great battles have been fought to keep them separate. History records the terrible crimes gether under one leadership and again great battles have been fought to keep them separate. History records the terrible crimes committed in the name of each. But the germ from which government grew is not the germ from which the church grew. The germ of government is agreement. The germ of the church is the still small voice of conscience which is the divine inheritance of all human beings. From agreement over the use of the watering places back in the gray dawn of history men regulated their conduct for the benefit of each other so that each might have water for his family and his flocks. They agreed to a rule of action which bound all. The best definition of law is that it is a rule of action. From agreement came law. From law came government. From government came recognition of human rights and human liberties. From the still small voice of conscience came human liberties. From the still small voice of conscience came moral conviction and love. From these came sacrifice and an expressed belief in a divine leader. From this came a belief in monotheism and in life after death. From this came Christianity and the present church.

Government has come a long way and so has the church. Government today guarantees man his inalienable rights of life, liberty, and the pursuit of happiness. The church meets its responsibility more nobly than at any time in her long noble career.

We live under the greatest government in the history of the world. The church has reached its highest achievement and usefulness here in these United States of America. As a humble member of the greatest lawmaking body in the world, in the greatest government in the world, let me bring greetings to you, the representatives of the greatest church in the world in session to plan for the greatest program in her history.

The subject assigned to me is The New National Scene and Our Responsibility to Build a Christian America.

The subject assigned to me is the New National Scene and Our Responsibility to Build a Christian America.

It is only natural that different people will see different pictures in the same national scene. I shall look for those scenes that have some relationship to government and to the church.

I am not one of those who thinks that everything done in Wash-

I am not one of those who thinks that everything done in washington is wrong. I think that the high character and high purpose of the men and women who constitute the legislative branch of the Government are as high now as at any time. They are as high as they were when I went to Congress 15 years ago. Character is the basic essential of a good legislator—it is more essential than ability.

Things have changed mightly since the days of Washington or the days of Lincoln. These changes have developed new and changing scenes. The only great factor in any problem, be it one of government or one of personal conduct, that has not changed is human nature. Change of times and circumstances gives human nature an opportunity to react differently and we sometimes think it may have changed a little.

These changed a little.

These changes have come from many sources and for many reasons. For instance, when a new administration comes into power it is always expected to make some drastic changes. With many voters desire for a change is a guiding principle in their voting. Anything just so it is a change. A President elected by reason of a great public urge for a change finds his task more difficult than if he

great public urge for a change finds his task more difficult than if he had been elected on a real issue.

The World War left its impression on our national life. It is very doubtful whether the good derived from our participation in the World War equals the bad effects we have suffered. The World War has truly changed our national scene. There is no question but that it has complicated our foreign relations in many ways. It has made it more difficult for us to carry on commercially. It has compelled us to protect ourselves against reprisals. Even the money that we loaned foreign nations has complicated rather than facilitated our business relationships. The friendly alliances that we made have been more than matched with the unfriendly alliances that have arisen against us. While there appeared no reasonable way by which been more than matched with the unfriendly alliances that have arisen against us. While there appeared no reasonable way by which we could have escaped entering the World War, we cannot help feel sometimes that if we had heeded Washington's Farewell Address when he said, "Why by enterweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, or caprice" we might not now be in our present dilemma with reference to the European situation.

Probably the most remarkable changes are those that have come with improvements in transportation and the means of communication. These changes have come practically in one generation. They have brought with them so many related changes. For instance, the telephone has changed the manner of doing business and has given employment to many people. The automobile put men to work and has brought to us good roads. Good roads have brought with them a terrific drain upon the public treasury. The brought with them a terrific drain upon the public treasury. The principal items in the budget of any State or county are roads and schools. The school budget has increased by reason of the consolidation of schools, which in turn has come by reason of better roads and fine school busses. Do you know that more people have traveled more miles in the last 40 years than all the people in all the world traveled before that time? Has it ever occurred to you that the average mode of travel, the horse, which many of you used in the "horse and buggy" days, was the same mode of travel, no faster and no better than the mode used by Abraham when he rode out of Ur of the Chaldees? Washington in the Revolution traveled as did Caesar. Until the advent of the automobile you and I traveled as did these ancients.

as did these ancients.

These tremendous benefits have brought tremendous obligations

to the Public Treasury.

These changes of transportation and communication contributed directly in bringing another great change into the business activities of the world. I refer to the expansion of private credit. Wild expansion of credit, both public and private, brought on the stock market crash in 1929. The terrific deflation of values that followed the crash of 1929 paralyzed business, from which paralysis it has never recovered.

Mr. Hoover tried to stem the tide, but the onrush was irresistible. When the new President came to power he tackled the situation vigorously. His plan, as we now look back at it over 6 years, seems to have been:

Reform business and punish malefactors of great wealth by a redistribution of their wealth through taxation.
 Relief to those who need until the reformation could be

effected.

3. Rehabilitation when reformation had been accomplished.

It is not appropriate that I discuss these plans extensively, but it may be entirely proper to point out that unemployment and relief are still with us and present most distressing national scenes. The Government's borrowings in order to carry on relief of various kinds have accumulated until the Nation is carrying the heaviest load of debt under which any nation ever staggered. This debt is increasing at the rate of nearly \$10,000,000 per day. There are those who believe that the present plan has not been successful. Their program is that reprisals against business should cease and that steps should be taken to advance the national income and that business be encouraged again so that it might resume its normal activity, thereby absorb unemployment and reduce the demand for relief.

This depression has had its drastic effect upon the activities of the churches and all other eleemosynary institutions in that it has dried up the fountain springs of charity, with the result that endowments and contributions that once flowed freely have been practically stopped. So the church probably as much as any part of the national life has suffered quite as much from this unfortu-

of the national life has suffered quite as much from this unfortunate national scene as any other group or organization.

The President, in his efforts to redistribute the wealth and to reorganize business and agriculture, ran counter to the Supreme Court. After the adverse decisions by the Court on the N. R. A. and A. A. and other similar regulatory measures, the President proceeded to remedy the situation as he saw it by attempting to enlarge the Court. You are familiar with this history and I shall not dwell further on it, except to point out to you that it was really one of the great events in the history of the Republic. It is a national scene which will be considered for many years in the calculations of those who deal directly with the Government.

the calculations of those who deal directly with the Government.

When Congress apparently thwarted the will of the administration with reference to attempted reorganization of the Court, the administration then proceeded to attempt to curb the power of the Congress by reorganizing practically all the departments of the Government. Congress asserted itself and rejected the reorganization proposal.

ganization proposal.

The failure of the administration in these two signal instances has brought a new national scene to the front, which scene, I think, is very important. It has reestablished Congress as the real bulwark of the rights of the people. The church, as well as all other people and organizations, may now safely count on the Congress as being of more power and influence in governmental affairs than it has been for many years.

There are those who claim that true wealth comes only from two sources, to wit: From the ground and from the skill and ingenuity of man. From the ground comes the raw materials and the crops. From the ingenuity and skill of man comes business and employment. They claim that the spirit of the Mayflower was the spirit that stood for principle through hardship, if necessary, and not for plenty through charity if available. They claim that the spirit of revolution was liberty and freedom through war and pestilence, rather than easy economic freedom from a tryrant. They believe that the spirit of the ploneer was self-reliance at the expense of solitude and its attendant dangers. They claim that those who built up this country were men of They claim that those who built up this country were men of courage and conscience rather than men who considered personal comfort the fulfillment of life's purposes.

The spirit of those who built up the country is still alive in the land and in due season it will again manifest itself.

There is another national scene just in the making. Nobody knows how that picture will look until it has been finished. Congress and the Nation are now at a high pitch because of the European situation. Europe is again a seething cauldron of hate and distrust. Public sentiment and the sentiment in Congress and distrust. Public sentiment and the sentiment in Congress are almost unanimous against war. All sensible people realize that if war is declared in Europe it might be difficult for us to keep from being drawn into it. It does seem, though, that we ought to be careful not to thrust ourselves in. Neither by indiscreet conversation or by overt act should anything be said or done that will implicate our country in this controversy.

It seems now that the world is waiting the decision of Hitler. It is most unfortunate that any one man has within his power to determine whether the world shall be permitted to live in peace or whether grim-visaged war shall stalk the world and death and destruction shall be its portion.

peace or whether grim-visaged war snan stant death and destruction shall be its portion.

There is much loose talk about democracies standing together.

We must not permit ourselves to be grouped indiscriminately must not permit ourselves to be grouped indiscriminately that claim to be democracies. The founders of our that we were We must not permit ourselves to be grouped indiscriminately with countries that claim to be democracies. The founders of our Republic were very particular to let it be known that we were not to be a democracy. They wanted it to be known that we were to be a republic. All democracies are not republics. And I am sorry to say that some republics lack the essentials of wholesome democracies. Ours is a live, potent republic. Our Constitution guarantees our liberties, protects our rights, and shoulders upon us responsibilities which we cannot and do not wish to shift as do some of the irresponsible democracies of the world.

world.

We must not permit ourselves to be again drawn into a world conflict to save the same democracy for which we made the world safe 20 years ago. Of course our people should have a right to express themselves with reference to war. On the other hand, the people, through the Constitution, have already decided how the question of the imminence of war should be met. They have placed that responsibility on Congress. Personally, I have not lost one whit of my confidence in these early processes. I feel confident that the American people may rest assured that their best interests are going to be safeguarded to the last extremity. There is no question in my mind that when the Congress acts it will act in consonance with the public conscience. James Monroe and John Quincy Adams, in their Monroe Doctrine, and following the example of the great Washington, gave us an appraisal of the European situation which we should never overlook. They said, "Our policy in regard to Europe * * * is not to interfere in

the internal concerns of any of its powers * * to cultivate friendly relationships with it * * * and to preserve those relations by a frank, firm, and manly policy, meeting in all instances

the just claims of every power, submitting to injuries from none." In Washington now the Congress is giving attention to a change in the neutrality laws. I cannot dwell extensively on these details, but I feel that the people can trust the Congress to uphold the dignity of the country in all matters of "cash and carry" and in matters where it is suggested that the President and Congress "name the aggressor." I am inclined to the view of many able Senators and Congressmen that we had better take no action

matters where it is suggested that the Freshert and congress
"name the aggressor." I am inclined to the view of many able
Senators and Congressmen that we had better take no action
toward changing any of our neutrality laws now at this critical
time for it might tend to precipitate action. If war does come,
we can easily meet the situations as they arise with such legislative enactments as may then appear to be necessary.

Another question that is agitating Congress and the country
is the aftermath of the unfortunate developments of matters
purely within the power and authority of the German Nation.
I refer to the admission into the United States of 20,000 refugee
children. This is a program that lends itself easily to sympathetic propaganda. The great heart of America has gone out to
welcome to our shores all oppressed people everywhere; but in
these latter years we have been forced to change our policies in
this respect. I have well defined views on this proposition but I
shall not afflict you with them. I will only say that we should
not allow our sympathies to get the better of our judgment.
Twenty thousand children do not represent the distressed children of the world. There are more than 20,000 terribly distressed
children of native-born Americans in each of many of our large
cities who need the tears and the sympathies of our people. Tears
and sympathies can be showered upon them without increasing
the danger of involving our country in a war the result of which
no one dares hardly to contemplate.

What is the place of the church in this imminent war crisis?
Have you noticed that nobody, especially Hitler or Mussolini, or
Daladier or Chamberlain, has ever mentioned God as a factor in
this world crisis? Surely God, who sees the sparrows fall, knows
that the world is on the verge of a calamity which if started
may even go so far as to destroy civilization itself. If I were a
preacher, therefore, I think that I should preach one sermon at
least on the verse, "Be still and know that I am God." You will

the bow, and cutteth the spear in sunder; he burneth the chariot in the fire.'

in the fire."

"Be still and know that I am God."

The Good Book says that "Beautiful upon the mountain are the feet of him that bringeth good tidings." Far be it from me to assume or offer advice to this group which is recognized for its proficiency in all matters pertaining to the church activities. Being a Member of Congress, I hope I can bring you good tidings that the Congress of the United States now, and always, will be anxious to grant every reasonable request from church people. We Congressmen are accused of keeping our ears to the ground. The indictment is well placed. We serve a constituency, and this cannot be well done unless we know what they are thinking about. You represent the best interests of all Americans from a general standpoint and you are the special representatives of millions of Methodists. You have a right to recognition from all ing about. You represent the best interests of all Americans from a general standpoint and you are the special representatives of millions of Methodists. You have a right to recognition from all public servants. Your purpose is the same as the purpose of every Congressman should be, to render service to your fellow men. The Government and the church working together—who can prevail against them? We are the greatest country in the world. We do half of all the business done in the world; we have more gold buried than the rest of the world owns. We know the present, but we do not know the future. The present is ours, the future is not ours. We own the present and the past. Our present is rich and our past is even richer. Probably the richest thing that any nation possesses is its national memories. They are richer than mines of gold, fields of corn, or the cattle on a thousand hills. They are more ennobling than our schools, our colleges, or our cities filled with the treasures of art or the trophies of war. They are more of a security to us in times of trouble than even our armies and our navies. If I were to ask you what is the richest possession of Massachusetts, you might answer "her mills and her looms," but her richest treasure is Bunker Hill and Plymouth Rock. Our Nation could survive without her mills but not without Plymouth Rock and Bunker Hill. So I might ask you with reference to the possessions of the various States. Each is rich in its national memories. The riches of this great west is shown in hundreds of places where monuments are erected in proof of the indomitable courage of the pioneers who just a short time ago evolved an empire from rolling prairies and wooded hillsides. The past is safe, our present is pleasing. who just a short time ago evolved an empire from rolling prairies and wooded hillsides. The past is safe, our present is pleasing, and with a militant church in all denominations working freely,

the future is assured.

In the midst of wars and rumors of wars, let us take comfort in Kipling's words:

The tumult and the shouting dies, The captains and the kings depart, Still stands that ancient sacrifice— A humble and a contrite heart.

The Agriculture Program

EXTENSION OF REMARKS

HON. ORVILLE ZIMMERMAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

LETTER FROM THE FARMERS' EDUCATIONAL AND COOPERATIVE UNION OF AMERICA

Mr. ZIMMERMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following open letter from the Farmers' Educational and Cooperative Union of America:

THE FARMERS' EDUCATIONAL AND COOPERATIVE UNION OF AMERICA, Oklahoma City, Okla.

To the Members of the Congress of the United States and the Committees on Agriculture and Forestry Composed of Members of the Congress:

The situation confronting American agriculture has become increasingly acute in recent months. An already bad situation has become progressively worse, with the immediate future promising little in the way of even temporary relief.

The present agricultural program has failed to achieve its stated graph for recent which are experient to both Members of Congress

The present agricultural program has failed to achieve its stated goals for reasons which are apparent to both Members of Congress and the participating farmers. The failure of Congress to keep faith with its implied promises as contained in the Agricultural Adjustment Act of 1938 by appropriating funds for full parity payments has nullified whatever possibility there might have been for successful operation of the act. Nor does it appear probable that Congress will provide for such appropriations in the future from year to year.

That the Members of Congress are aware of the distress existing in all branches of agriculture is evidenced by the multiplicity of

in all branches of agriculture is evidenced by the multiplicity of legislative measures pertaining to the situation introduced in this session. It is our opinion that some of the measures proposed merit careful consideration; it is our further opinion that no measure yet proposed is either adequate, practical, or safe.

measure yet proposed is either adequate, practical, or safe.

One of the measures designed to provide for a sweeping attack upon the problems besetting American agriculture has been carefully considered by the Senate and House Committees on Agriculture and Forestry during public hearings. We refer to S. 570 and its companion measure in the House of Representatives, both commonly referred to as the cost-of-production bill.

As a national farm organization composed of actual farmers who derive their livelihood from farming operations, we beg leave to present (1) our opinions relative to S. 570, and (2) our suggestions as to the type and scope of legislation necessary to measurably meet the present acute situation.

Unintentionally, perhaps, it has been implied on numerous occasions that the Farmers Educational and Cooperative Union of America supports the measure designated as S. 570 and popularly referred to as the cost-of-production bill. Such inferences have not been authorized and are wholly without foundation in fact. On the contrary, the Farmers Union, while in hearty accord with announced goal of the measure, emphatically opposes the mechanisms suggested to achieve the goal. Further, the Farmers Union, during national legislative conferences of the body and during full meetings of the board of directors of the completion has reserved. meetings of the board of directors of the organization, has re-peatedly vigorously denied that the undesirable and drastic mecha-

nisms proposed would achieve the stated objectives of the measure. Our opposition to S. 570 is based, we believe, on sound and reasonable grounds. We outline herewith for your consideration

cur major contentions on the subject:

1. No safeguards are provided in the measure for the family size farm, the cooperative farming association, and the tenant operator. Should any degree of success be attained under its operations, the undesirable trend toward corporation and day-labor

farming would be greatly accelerated.

The farmers of the United States will look with great disfavor upon any measure which fails to specifically safeguard and protect the family size farm and the tenant operator.

In spite of testimony to the contrary already presented to the committees, the facts definitely indicate that the corporation operator has an unwholescene and antisocial adventage over the smaller. ator has an unwholesome and antisocial advantage over the smaller unit. Only those appallingly ignorant of the true conditions existing in an increasingly mechanized agricultural economy would hold an opposite view.

2. The measure would centralize authority in the Secretary of Agriculture to a degree never hitherto contemplated nor proposed. Even a casual perusal of the provisions of the measure reveals that the powers accorded to the Secretary are indeed amazing. While the Secretary of Agriculture has been accused on many occasions by leading proponents of S. 570 of exercising despotic powers over the American farmer, S. 570 in its practical operations

would make him a dictator in both name and fact. The measure provides for an all-too-perfect pattern for authoritarian control of our agricultural population.

3. The degree and scope of regulation and regimentation necessary to make such a measure operative far exceeds anything yet proposed for a democracy and to the Congress. The ultimate operations of the measure would involve such sweeping bureaucratic control over all persons and agencies engaged in the production, marketing, processing, and distribution of agricultural commodities as to require almost complete nullification of our traditional concept of democracy.

In fact, one of the witnesses who testified most volubly for the measure during committee hearings has freely and publicly stated his admiration for the agricultural programs employed in Fascist states. We do not believe that the instruments of fascism can

states. We do not believe that the instruments of fascism can operate favorably in a democracy. Neither do we believe that democracy can be strengthened and preserved by instituting the

democracy can be strengthened and preserved by instituting the very measures which have proved so well suited to the operations of the totalitarian state. These truths should be self-evident.

4. The measure would require the farmer to turn over to the Government all surplus products; such surpluses would be sold by the Secretary of Agriculture at world prices and he would return to the farmer the net proceeds of such sales, if any, after all costs of administration have been subtracted.

The obvious effect of such a program would be to subsidize for-eign consumers at the expense of our own people, millions of whom are even now unable to purchase their requirements at current

ruinous prices.

ruinous prices.

We have no desire to establish as the permanent policy of the Unitral States the subsidizing of aggression by providing much-needed cheap food and fiber to nations even now planning or actively engaging in world conflict. Neither do we desire to reduce at the expense of our own people the living and manufacturing costs of foreign nations, thus making possible self-destructive unfair competitive advantages in world trade.

5. Simply establishing a price does not necessarily mean that buyers will be readily available with adequate purchasing power to absorb the volume needed for domestic consumption. Unfortunately, buyers cannot be coerced into buying when purchasing power is not adequate to meet the price demanded. In other words, price alone constitutes only half of the problem in buying and selling transactions. S. 570 blandly ignores this obviously fundamental fact.

Except by weak inferences and unsupported sophistries, witnesses for the measure have failed to make provision for subsidized consumption of surplus agricultural commodities by the underpriviliged people of the United States who today lack purchasing power to provide an adequate diet. Neither does the measure take into consideration shifting consumer demand for various products nor does the measure provide for carrying supplies over the full 12-month period of each year. Unfortunately, our entire annual agricultural production is not consumed the instant it is marketed and processed.
6. The measure fails to provide adequate and effective differentials

as to the many grades and varieties of each commodity included in its sweeping provisions. The tendency to lump together with happy abandon all grades and varieties of each commodity and

happy abandon all grades and varieties of each commodity and establishing a similar price for each is a wholly untenable position. Concurrently, we do not believe that any rigid price-fixing formula can deal reasonably and efficiently in this respect. The task of fixing prices for the multitudinous grades and varieties of each commodity by a central price-fixing authority, taking into consideration the day-by-day shifting of consumer demand would require a degree of wisdom and a gift of prophecy not at present possessed by any mortal or bureaucratic aggregation of mortals.

7. Inasmuch as S. 570 explicitly applies only to agricultural com-

possessed by any mortal or bureaucratic aggregation of mortals.

7. Inasmuch as S. 570 explicitly applies only to agricultural commodities actually entering into the channels of interstate commerce, intrastate traffic in such commodities remains outside the effective scope of the measure. The obviously natural result of such an oversight would be the erection of 48 separate nations within the United States insofar as agricultural prices are concerned. The most casual perusal of the provisions of S. 570 makes this fact self-avident self-evident.

8. The police force necessary to enforce the provisions for regulation and regimentation outlined in S. 570 staggers the imagina-tion. How extensive bootlegging and policing would become is far beyond that envisioned by the proponents of the measure.

To make S. 570 effective, the Secretary of Agriculture would become the head of the greatest aggregation of policemen yet assembled, with the possible exception of the police forces of the totalitarian states so frequently and so fondly referred to by one of the leading proponents of the measure.

9. S. 570 is so full of loopholes and is so poorly drafted that, even if it were enacted into law, farmers would never receive more than the paper promise of cost of production. The mechanisms required to make its stated purposes effective are left to an uncomfortable degree to the realm of imagination of the agricultural fuehrer provided for under its terms.

The courageous fight for cost of production which farmers have waged these many years would be sent up a blind alley and the movement would be discredited by the confusion, chaos, and failure that would necessarily result. Though labeled "cost of production," the complicated contraption offered to farmers as a means of attaining the announced objective of the measure would fail utterly and the movement for cost of production would be blown to bits. S. 570 represents complete sabotage of a worth-while movement representing the hopes and desires of millions of American farmers. We believe that the Members of Congress can learn a great deal about the hazards and the futility of a general price-fixing scheme by studying the experiences of the rice growers with such a program. Even under the most favorable circumstances price fixing failed in the case of the rice industry. Practically all the contentions outlined above were found to apply in the price-fixing experiences of the rice growers in their extractions of the rice growers in their extractions. ences of the rice growers in their attempt to produce, market, and sell their product by edict. We believe that those who have indicated support for S. 570 would do well to read the statement presented to the Committee on Agriculture and Forestry by Mr. Homer L. Brinkley, general manager of the American Rice Growers' Cooperative Association.

For the reasons herein outlined, and for other reasons too numerous to permit elaboration, we have no choice but to oppose the enactment of S. 570. We recognize and appreciate the sincerity of many of the sponsors and proponents of the measure. We trust that we shall have the wholehearted support of the sincere advocates of cost of production in furthering legislation which, we believe, will accomplish the announced objective of S. 570 without including its highly objectionable features including its highly objectionable features.

As an alternative to all proposals heretofore submitted for the consideration of Congress, the Farmers' Union is prepared to recommend a program which will attain cost of production within the logical framework of democracy and not copied verbatim from the agricultural policies of the totalitarian nations.

Briefly our proposals which will be a proposals and the control of the c

Briefly, our proposals, which will shortly be introduced for the consideration of Congress in proper form, include the following:

(1) The market price for agricultural commodities and their many grades and varieties should be permitted to seek their natural level as determined by consumer demand in the course of normal marketing operations in established commercial channels.

(2) A minimum price per commodity unit equal to cost of production or parity, whichever shall be greater, should be deter-mined by the Department of Agriculture in conjunction with and by the advice of a board composed of producer, consumer, and governmental interests.

(3) Marketing allotments should be allocated to farmers on the basis of historic production, taking into consideration production trends, such allotment taking into consideration the total annual disappearance of each agricultural commodity designated.

(4) Income certificates equal in number to the marketing allotment and based in value on the difference between the market price

and the cost-of-production price or parity, whichever shall be the greater, shall be issued to each producing farmer; the number and value of the income certificates should be determined by the previously mentioned board representing producer, consumer, and governmental interests.

(5) The income certificates should follow the units marketed and

(5) The income certificates should follow the units marketed and should constitute an integral part of each transaction in the designated commodity up to and including the processor, at which time the certificates should logically be canceled.
(6) Adequate protection should be afforded for the family-size farm, cooperative farming associations, and the tenant operator through limitation of the marketing allotment and/or downward graduation of the value of the income certificates according to the size of the farming unit involved.
(7) Elimination of production control, except insofar as sound farming practices provide such control.
(8) Continuance and establishment of a genuine soil-conservation program completely divorced from commodity-control pro-

program completely divorced from commodity-control pro-

(9) Continuance, extension, and improvement of crop-production

insurance.
(10) Provision for subsidizing consumption by needy American consumers

(11) Administration to the greatest possible extent by actual farmers democratically elected.
(12) Separate and special treatment of each commodity where circumstances and variable factors require such separate and special

The program briefly outlined above will, we believe, provide a practical and sound approach to the grave agricultural situation. It will accomplish with a minimum of regimentation and a maximum of democratic control the objective desired by all farmers, namely, cost of production.

We shall be prepared to submit our proposals for the consideration of Congress and in proper form within the near future. We are convinced that the Members of Congress will recognize the sincerity and the soundness of our proposals and will assist us in rectifying a situation which demands immediate and sympathetic attention.

THE FARMERS EDUCATIONAL AND COOPERATIVE UNION OF AMERICA. JOHN VESECKY, President. JAMES G. PATTON, Director.

Signed in the presence of and with the approval of the following State officers present in Washington, D. C., during a conference presently in session:

Tom W. Cheek, President, Oklahoma Farmers' Union; Peter Loran, President, Texas Farmers' Union; Glenn J. Talbott, President, North Dakota Farmers' Union; K. W. Hones, President, Wisconsin Farmers' Union; Paul Erickson, Secretary, South Dakota Farmers' Union; Morris Erickson, Director; Emil Loriks, Director; M. R. Miller, Director; Geo. A. Nelson, Director. Keep America Out of War

EXTENSION OF REMARKS

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1939

ADDRESS OF HON. ARTHUR CAPPER, OF KANSAS, BEFORE THE MARYLAND STATE DIVISION OF THE KEEP AMERICA OUT OF WAR CONGRESS, APRIL 20, 1939

Mr. KNUTSON. Mr. Speaker, on the evening of April 20 it was my privilege and pleasure to hear a most thoughtful and timely address on the subject of keeping America out of war, which was delivered by Senator CAPPER, of Kansas, before the Keep America Out of War Club at Baltimore, and I ask unanimous consent to have it inserted in the RECORD.

Senator CAPPER is one of the Nation's outstanding apostles of peace. In his numerous publications and in addresses in the Senate and elsewhere Senator CAPPER has rendered yeoman service in promoting peace and good will among the nations of the earth.

His address was as follows:

Mr. Chairman, I deeply appreciate the honor of appearing this

evening in support of the worth-while objective of the Keep America Out of War Congress and its affiliated organizations.

I appreciate also the opportunity to appear on the same platform with my good friend Congressman Harold Knurson, of Minnesota, one of those valiant Members of Congress who had the courage in 1917 to yote their honest convictions.

1917 to vote their honest convictions.

Congressman Knurson was one of those who voted against the declaration of war against Germany on April 6, 1917. We know now that he was right, and that the great majority at that time was wrong.

That war very nearly ended democracy in Europe. The next war very likely will end the existence of the few remaining democracies in the Old World. And if we allow ourselves to be propagandized into participation in it we run the serious risk of sacrificing much of the individual liberty that we have so far maintained in our republican form of government.

of the individual liberty that we have so far maintained in our republican form of government.

We should have learned our lesson from 1917 and what happened to us and to the world then. I hope that we have. Especially I hope that our leadership has learned a lesson from the results of that "war to end wars," as it was called at the time.

You know, as well as I know, that the World War was not a war that ended wars. Instead, through the Treaty of Versailles, with its impossible provisions, the Great War to end war only has bred more wars—perhaps a bigger war.

The war to end wars no more ended war than did the war to make the world safe for democracy promote the cause of democracy. It is not my purpose tonight, my friends, to discuss war as a means of settling disputes on its merits. Personally, I do not believe in war. Every nation which took part in the World War lost more than it gained in that conflict. All nations and peoples which participate in the next war probably will also lose more than they gain. War is a threat to civilization.

But we are here tonight to consider, not the merits of peaceful negotiations as compared to the demerits of war as instruments of national policy. We are here to consider how America can keep out of foreign wars in which we have no business.

I favor adoption of the war-referendum amendment to the Constitution with 13 other Senetors.

I favor adoption of the war-referendum amendment to the Constitution with 12 other Senators. I would leave to the President and to Congress all of their present powers to wage and declare war to defend the United States or any of its possessions, or even the defense of any part of the Western Hemisphere against outside aggression.

But when it comes to taking part in foreign wars—sending our boys overseas again to fight other people's war—I say that before this Government participates in a foreign war the people themselves should have the chance to say whether they want to take part in

that foreign war or not.

The people—the plain, everyday, common people—fight the wars.

The people pay for the wars when and after they are fought.

I say the people who do the fighting and the dying and the paying ought to have the say whether we wage war or not, except in

Ing ought to have the say whether we wage war or not, except in self-defense, as I already noted.

Another price of peace is to prohibit loans and credit advances to warring nations. If we invest a great amount of money or credit in the war being made by a foreign nation, the time will come when we must go to war ourselves to protect that investment.

One price of peace is to mind our own business and not try to run the affairs of other nations, not even by giving them too much advice.

Meddlesome Matties are warmakers, not peacemakers.

Keeping America out of war is today a live question. It is a big job. It is our job. And we should leave no stone unturned that will help us in the task of keeping America out of war.

We live in a troubled world, a world full of doubts and fears and

We live in a troubled world, a world full of doubts and fears and hatreds. This is particularly true of the Old World. And unfortunately there are those in this country, some from the highest motives in the world, others from less worthy motives, who would have the people of the United States take on the fears and hatreds of the Old World and precipitate the United States into the maelstrom of world politics, world intrigue, and world conflicts.

It looks as if the Old World again has gone war mad.

Central Europe is on the march.

Germany and Italy have rebelled against the boundary lines which were fixed in the Treaty of Versailles. They are changing those boundary lines. They threaten to change more boundary lines.

Britain and France naturally want the United States to fight with them to hold the boundary lines of Europe and Asia and Africa in the interest of England and France.

I say trying to settle those boundary lines in Europe is no job for the United States of America.

I will go farther than that. I say it is none of our business. It would be an impossible task for the United States to settle the boundary lines of European countries, even if that were advisable.

I know there are those in the United States who are obsessed with the idea that we have a rendezvous with destiny to attempt some such fantastic feat—but I believe most Americans realize

that such ambitions are just delusions of grandeur.

Let us look at the matter from the other angle. Do we want the nations of Europe coming over here and trying to fix the boundary lines of nations either in North America or South America?

Emphatically, we do not. We have a Monroe Doctrine directed against any such proceeding

We have a Monroe Doctrine directed against any such proceeding and we are going to stick to it.

Now, my friends, I ask you, have we any more business going over to Europe to settle boundary lines than Europe has coming over here to settle boundary lines?

It seems to me there is only one logical answer to that question. Uncle Sam should keep out of Europe.

Now, I want to be perfectly frank. In a conflict between England and France on the one hand and Germany and Italy on the other, my sympathies are with England and France. The democracy of both England and France is somewhat tainted, it is true, with more than a dash of imperialism. There is not a genuine democracy anywhere in Europe as we know democracy in this country.

But I abhor the dictatorships and their methods. I abhor the Jewish pogroms, the destruction of personal liberties, the entire subjugation of the individual to the state, which these dictatorships

subjugation of the individual to the state, which these dictatorships

represent.

represent.

And I share with the great majority of Americans the feeling of righteous indignation against the barbarities inflicted upon China and the Chinese by Japan and the Japanese. My sympathies are with China. I do not for one minute condone the atrocities practiced by any nation, anywhere.

But I say this is a good time for the United States to stop, look, and listen, rather than to attempt to tell the rest of the world what to do, at the imminent risk of thereby blundering into a war in which we have no business.

It is my judgment that the more we face the world situation.

into a war in which we have no business.

It is my judgment that the more we face the world situation realistically—the less we face it emotionally and hysterically—the better it will be for us, and, in the long run, the better for Europe and the rest of the world.

Reading history casually and studying the map of central Europe—all Europe—at different periods, it does not look to me as if we can hope for anywhere near permanent peace in central Europe unless practically all the states in this area are federated into one nation. into one nation.

Perhaps that process now is going on, though in a way that is abhorrent to us. I do not know. Neither do you. Nor is it at all likely that anyone else knows.

But I do feel, and feel strongly, that trying to settle those boundary lines in Europe, trying to prevent such a federation, is no job for the United States of America.

I will go further than that. I say it is none of our business. I say Uncle Sam should keep out of Europe unless our own interests are so vitally affected that we have to go over in self-defense. And I can see nothing in the present situation that carries such an implication. such an implication.

There is no place for anything except realism in foreign relations. England has a foreign policy based on the interests of the British Empire—not on ideologies in Europe. Look at Czechoslovakia. Look back through the history of Europe. England has looked out always for the interests of England.

This is not said in criticism. It is said with approval. That is the only course to be followed in dealing with international

relations.

Let's apply a little realism in looking at the present situation in Europe, entirely apart from our own country's connection or lack of connection with it.

Let us bear in mind that the present situation in Europe is not entirely due, perhaps not even in large part due, to the ambi-tions of either Adolf Hitler or Benito Mussolini, or both of them.

Perhaps a glance at the map of Europe and a comparison of that map with the map of North America may help to explain to many Americans the fantastic and horrible nightmare which is Europe.

When the late World War broke out in 1914, that map was bad enough in the eyes of anyone who could visualize what national boundary lines mean. In a territory two-thirds the size of the United States there were a score or so of sovereign states, most of them densely populated, many of them unable to feed themselves, competing for markets, for raw materials, for supremacy, for existence

The United States was persuaded at that time that to make the world safe for democracy the United States must send an army overseas to aid the empires of England and France crush the im-

perialism of Germany.

We sent our boys overseas 20 years ago. We poured billions and billions of dollars into Europe. We won the war for the Allies.

Then came the Treaty of Versailles. Boundary lines were readjusted—I should say reimposed—as they are at the conclusion of

Did our Allies establish new boundary lines with the idea of promoting the welfare of Europe; of creating a more prosperous and more peaceful and happier Europe?

I say the answer to that question emphatically is "No." The Allies drew up a peace treaty—it might better have been called a war treaty—written for the purpose of breaking up central Europe into more and smaller and weaker states; none of them strong enough to lead a national existence, none of them so weak it did not constitute a threat to its neighbors when economic conditions became unbearable.

The United States Senate wisely refused to sign the treaty, and I am proud of the vote I cast against going into the League of

Instead of 20 nations, Europe west of Russia consisted of 27 nations after the Treaty of Versailles was written. Every nation except the United States among the Allies grabbed off some more territory from Germany and her allies. Seven new sovereign states were created in Europe west of Russia—Poland, Czechoslovakla, Finland, Estonia, Latvia, Hungary, and Lithuania. Serbia became Yugoslavia.

Seven thousand miles of new tariff walls were erected in western Europe. Twenty-seven nations, in an area about the size of the United States, proceeded to restrict trade, to try to gain marketing advantages, to survive in a struggle for existence.

The boundary lines established by the Treaty of Versailles were just plainly impossible, as we look back 20 years. They could be maintained only by force and by the use of continually greater

In Europe today are two imperialistic democracies—England and trance—to whom we are tied by blood relationship and traditional

Trance—to whom we are tied by blood relationship and traditional friendship.

Then we see also two dictatorships with imperialistic ambitions—Germany and Italy—with whom in the past we have had no wars of our own. We joined in one war against Germany; in that war Italy was one of our allies.

Partly in and partly out of Europe is another great nation—Russia, communistic Russia, mysterious Russia. Complicating the situation still more is Japan, in the Orient, striving to become the

England of Asia.

Now, what chance have we of straightening out that mess? I sk the question in all seriousness. Granting that we would be willing to sacrifice the lives of our young men and billions of money to better world conditions, what hope would we have of succeeding in a situation such as prevails in the Old World? I fear it

ing in a situation such as prevails in the Old World? I fear it would be a futile effort.

The United States wisely, in my judgment, stayed out of the League of Nations. I am proud of the vote I cast in the United States Senate. Now it is being attempted, from abroad and by some in this country, that we step in and do the thing we were expected to have done by joining the League—police the world in the interest of a group of European nations. That's not our

The point I make in connection with what I have been saying is

The United States cannot hope to break into the tangled mess of Old World intrigue, diplomacy, hatreds, jealousies, and economic maladjustments, and straighten things out for the rest of the world. We in the United States have plenty of maladjustments in our own country to straighten out—unemployment, business stagna-

own country to straighten out—unemployment, business stagnation, destruction of farm income, and purchasing power.

It would be far better for us to practice setting our own house in order before attempting to straighten out the rest of the world. I suppose this subjects me to the charge of being an isolationist. To a certain extent that is true. I certainly want the United States isolated just as long as it is possible for us to retain that status from the whirlpool of Old World disputes.

They say we have grown up as a nation. That our economic strength, our manpower, our wealth of natural resources throw upon us the responsibility of taking our rightful place in world affairs—that we should according to this school of thought, take up what Kibling called the white man's burden. I suppose.

what Kipling called the white man's burden, I suppose.

I grant you we cannot base our international relations on the assumption that there is no Europe, no Asia, nor Africa in the world.

But that does not mean that a sound foreign policy for the United States consists in playing the game of any European nation or group of nations.

For 150 years before the War of the Revolution was fought and won the American colonists were pawns in the European game of diplomacy, intrigue, and struggles for territory and power.

The Colonies won more than freedom from Great Britain when they won the Revolutionary War. They won freedom from Europe's disputes over territory and power. That freedom from Europe's conflicts we should retain at all hazards. Except for one brief interlude we have maintained that freedom from Europe for 150 years. I say we should consider carefully before we allow ourselves to be dragged into it again.

I think the first lesson to be gained from what is going on in the Old World today is that foreign policies of any particular nation are based upon the real interests of that nation.

The foreign policy of Great Britain is basically an English foreign

policy

The foreign policy of France is basically a French foreign policy. The foreign policy of Germany is a German foreign policy, just as that of Italy is an Italian foreign policy and the foreign policy

as that of Italy is an Italian foreign policy and the foreign policy of Russia is a Russian foreign policy.

And I say the foreign policy of the United States should be an American foreign policy, based on the welfare of the United States and of the Western Hemisphere.

I say it should be part of the foreign policy of the United States to prevent nations of the Old World from invading the affairs of the Western Hemisphere.

stern Hemisphere.

But I say that after having laid down that policy, and implemented it to make it effective, it would be the height of folly for the United States to go into Europe and embroil this Nation in the very troubles that we have declared they shall not bring over to this

In the light of world conditions, the idea of the United States adopting a British foreign policy or an Anglo-French foreign policy—perhaps I should say a European foreign policy—would be little short of national madness.

I will add that for the United States to adopt a Chinese foreign

I will add that for the United States to adopt a Chinese foreign policy, based on establishment and maintenance of oriental boundary lines, would be equally a sign of national insanity.

We know that the people of the United States want peace. They want peace for themselves. They also would like to see the rest of the world at peace.

The United States fortunately is so situated geographically and from the viewpoint of natural resources and basic economic strength that it can remain at peace as long as its people, and its leadership desire peace and are willing to pay the price of peace.

that it can remain at peace as long as its people, and its leader-ship, desire peace and are willing to pay the price of peace. The fact that we are so situated that it is far easier for us than for the peoples and nations of Europe to remain at peace, to my mind is no reason for our throwing away these natural advan-tages and going to Europe with the idea that by participating in Old World disputes we might bring peace to distressed people of that Old World. that Old World.

that Old World.

As a matter of fact, while we are powerful enough to keep ourserves at peace, we are not in position to maintain peace in Europe, and don't allow anyone to tell you differently.

More than 20 years ago we sent our boys overseas and sent our treasure overseas by the billions of dollars. We were filled with high ideals and enthusiasm, built up by propaganda that we did not recognize for what it was, to fight the war to end war and to make the world safe for democracy.

Instead of ending war, we helped breed the impending European war that the nations of Europe, in self-defense and to serve their own purposes, not our purposes, will endeavor to make another world war if at all possible.

I said a minute ago that the United States can remain at peace if its people and its leadership desire to remain at peace—by paying

if its people and its leadership desire to remain at peace—by paying

the price of peace.

One price of peace is to restrain the natural impulse to rush in and protect some foreign nation from what we regard as an unjustifiable attack by another foreign nation.

Another price of peace is to refuse to be bamboozled by propaganda designed to lead us into participation in European disputes over boundary lines and spheres of influence.

All sorts of pressure will be brought upon public opinion in the United States that we take our part in settling these boundary-line disputes in Europe, Asia, and Africa.

Americans must build up a resistance to foreign and native propaganda or we will find ourselves in hot water again—European hot water—some of these days.

Another price of peace is to resist the temptation—and it will be a strong temptation—to make profit, and they will look like huge profits, from the sale of war supplies, war materials, and other commodities to the warring nations.

Another price of peace is an adequate navy, and adequate army, and adequate air force for defense of the United States and its possessions, and to assist in defense of the Western Hemisphere

against aggression from outside.

I am for adequate national defense, but I am opposed to entering an armament race with the idea of building up a navy for the purpose of participating in foreign wars—that goes beyond national defense.

Another price of peace is to enact stringent legislation to take the profits cut of war. Eliminate the profit from war, and we will take the edge off the enthusiasm for war among a comparatively small but very powerful group of people in this country.

Millionaire war babies are an expensive luxury.

Another price of peace is to strengthen, rather than weaken, the present Neutrality Act. That strengthening, in my judgment, should include restricting, rather than increasing, the power of the President of the United States to formulate foreign policies for the United States. Strict neutrality will go further than any other one thing to keep us out of war.

I say the Congress of the United States, which alone has the constitutional power to declare war, should have the say in formulating foreign policies that may lead toward war. I believe this is fundamental.

Now, just a word about the purpose of the Neutrality Act, and I am strong for strict neutrality, which might as well be designated an antiwar act. Its primary purpose is to shut off various avenues which traveled by the United States or its citizens while other nations are at war would lead the United States into that war.

Neutrality means to abstain from granting favors to one nation and excluding these from another nation. It is not an attempt to balance the scales so that two nations of unequal strength will be made equal. If one nation or a group of nations, because of their geographical position or sea power or economic strength, benefit more than another nation or group of nations from neutrality of the United States, that is not a condition that it is up to the United States to correct.

By all means I hold that the United States should not attempt to designate aggressor nations and then try to assist the victims of such aggression. That is in effect allying ourselves to one side in a

foreign conflict.

am also opposed to the imposition of sanctions against one at an asso opposed to the imposition of sanctions against one nation or group of nations at war. Imposing sanctions, embargoes, etc., amounts to taking part in the war. Sanctions are a dare to the nation against which they are imposed to retaliate if they feel themselves strong enough to do so.

I say again the people of the United States want peace. They do not went were

The people of the United States can have peace, in my judgment, but they must pay the price of peace. If we desire to avoid being entangled in the next major European war, we must do more

being entangled in the next major European war, we must do more than think peace, talk peace, and insist upon peace.

We must avoid saying those things and doing those things which, while not of themselves warlike, lead to war.

Above all, we must learn in the United States to mind our business in international affairs; learn that it is not our job to run the world, but it is our job to attend to our own business at home.

And again I insist, my friends, that we have no business trying to settle the boundary disputes among England, France, Italy, Germany, Russia, and a score of lesser European nations. It is just out of our sphere, no matter who may think we have a rendezvous with destiny somewhere in France. with destiny somewhere in France

Let us provide an adequate defense for the United States and for the Western Hemisphere against attack—but not attempt to defend the Rhine in Europe or the island of Guam in the Orient. I am also strongly opposed to any secret assurances being given to other nations that the United States will back them in case of

to other nations that the United States will back them in case of war. If we are to enter into any alliances—and I am absolutely opposed to entangling alliances—better have them open, aboveboard, and ratified by the Congress.

Better still, adopt the war-referendum amendment, and serve notice that no official or set of officials can pledge this Nation to go into other nations' wars until the people themselves have had a chance to say what they want done.

My friends, I say this is a good time not to go abroad looking for trouble—there is too much trouble there to be had for the looking, and we have enough trouble of our own right here at home. Helping the farmer save his farm from foreclosure, getting jobs for the 10.000,000 unemployed in the cities, and making it jobs for the 10,000,000 unemployed in the cities, and making it possible for them to earn a decent living, and balancing the Government's Budget is enough to keep all of us busy for a while.

Still a Soldier

EXTENSION OF REMARKS

HON. JOHN C. SCHAFER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

ARTICLE FROM THE POTTSVILLE (PA.) REPUBLICAN

Mr. SCHAFER of Wisconsin. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Pottsville (Pa.) Republican of Wednesday, April 26, 1939, entitled "Still a Soldier.'

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pottsville (Pa.) Republican of April 26, 1939] STILL A SOLDIER

Congressman Fenton is to be commended for the firm stand he has taken with the Workers' Alliance, an organization formed among W. P. A. employees, who picketed his home and staged a march upon it in their demand that he vote for increased W. P. A. grants. It is beside the point that the officials organizing this demonstration were censuring him for something in which they were entirely in error, for Dr. Fenton had voted favorably on the very proposition they accused him of voting against.

There is entirely too much of these attempts at intimidation and force. There is entirely too much timidity in meeting these demonstrations that are a constant threat to peace and safety. demonstrations that are a constant threat to peace and safety. There is being fostered the idea that if a public representative acts according to his conscience and his judgment that those who differ with him have the right to threaten and intimidate him—for picketing of this type and a publicly planned mass demonstration can mean nothing else but intimidation. The W. P. A. workers showed their good judgment by ignoring the mass demonstration planned, since only a few turned out.

If it reaches the point where public officials regulate their conduct according to the size of the demonstration or the character of the threats, veiled or open, then there is no longer a government of law and order and reason but one that is regulated by might alone. If we are to accept this principle, then the next

might alone. If we are to accept this principle, then the next step natural to expect will be rival demonstrations to overwhelm the other demonstration, which again means government by force and bloodshed, a type of government that once regulated the savage

It is fully realized that the situation has not arrived at that stage and probably never will; but these demonstrations that have recently become all too common are leading in that direction.

Two years ago there was a march on the State Senate at Harrisburg to force the enactment of a bill and the demonstrators took charge of the senate chamber, damaged it, intimidated many of the senators, waved red flags, and otherwise acted in a way entirely foreign to American customs and ideals.

Congressman Fenton says he does not intend to be intimidated by an organization whose officers are an organization which have Communists as officers and wants to have no official dealing with anything or anybody smacking of communism. Even if they are not Communists the principle is almost the same.

When his country needed him Dr. Ferron answered the call and wants the blood cooled but of Ferron.

went onto the blood-soaked battlefields of France. He intends to perform no less patriotic peacetime service at Washington and his red-blooded stand in this instance is an inspiration to other Members of Congress and State legislatures and to public officials and good eliterate in general good citizens in general.

We have not reached the point where might is going to dominate our country or have the Stars and Stripes tacked beneath a swastika or a revolutionary red banner. Let the soldier Congressman know that you are with him 100 percent.

H. R. 3576, Creating the National Iron and Steel

EXTENSION OF REMARKS

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1939

Mr. BURDICK. Mr. Speaker, in support of H. R. 3756, I desire to set forth some important facts with respect to the steel industry which will shed some light on the importance of Government ownership of this important natural resource. I would not be interested in the Government ownership of anything outside of a natural resource or in an industry dealing strictly with the necessities of life, and then only because I do not believe it is ethically or morally right for any individual to secure a natural resource or a necessity which millions must have in order to live, and permit a private individual to take complete command of such an enterprise and operate it for his own profit and advantage. We have sought to ameliorate the condition of the consuming public by Government regulation, but that regulation has not regulated anything to the advantage of the public but generally to advance the interests of the private operators. The Pittsburgh Cost Plus Act of Congress is a good example of Government regulation.

Mr. Ben Marsh, secretary of the People's Lobby, at my request, has prepared figures on this important industry, which I now insert in my remarks:

> ANALYSIS OF BILL PURPOSE OF BILL

Section 1 states "that the present chaotic system of private ownership and control of the production of iron and steel and the inequitable distribution of the wealth created thereby is unjust, destructive of domestic tranquillity, detrimental to the national defense, and contrary to the general welfare; that the power of the

private owners to curtail production, shut the mills, and discharge their workers at will, and their unfair methods of competition, constitute an obstruction to the free flow of commerce between constitute an obstruction to the free flow of commerce between the States; that in order to promote the general welfare, establish justice, maintain domestic tranquillity, and adequately provide for the national defense, the iron and steel industry should be publicly owned and operated according to a national plan, and that this can best be accomplished by Federal acquisition of the properties engaged in the production of iron and steel and their unification and operation by the Federal Government through instrumentalities created by it for that purpose, with proper regard for the interests and desires of the workers engaged in the industry." industry.

Section 2 defines iron and steel and "the iron and steel industry" to include "properties engaged in the extraction and refining of iron ore and its processing into iron and steel."

Section 3 creates the National Iron and Steel Board, composed of nine members—four representing workers in the industry, to be chosen by them by popular vote, and five representing the public, to be appointed by the President by and with the advice and consent of the Senate—the salary of all to be \$10,000 a year.

It defines the duties of the Board, and permits it "to create by resolution subsciling procedures."

resolution subsidiary boards for convenience of operation and man-

agement.

BASIS OF PAYMENT

Section 4 provides for acquisition of the industry by the Gov-

The Board is to acquire "only the properties of companies which own in whole or in part actual physical properties which are used in the production of iron and steel," not any holding companies. It is to attempt to get these by negotiation, and an agreement with three-fifths of any class of securities is to be binding on all in that class.

in that class

If negotiation fails, the right of eminent domain may be exercised, and the Board is to ascertain from the Reconstruction Finance Corporation and other Government agencies what loans have been made to such companies, and "use the existence of such obligations

made to such companies, and "use the existence of such obligations as a means of acquiring title to the property involved."

The Board is to pay a fair price to the owners, but not only the book value of the properties, but the earnings of each class of securities during the past 10 years, and the probable future earnings under private ownership are to be considered.

Owners are to be compensated by receiving the securities of the Board in exchange for theirs, and the Treasury is to issue bonds at not over 3-percent interest for this purpose.

The interest and amortization on these bonds is to be paid through a "steel nationalization income-tax fund" created by the Board.

This fund is obtained from a special tax on holders of the National Iron and Steel Board bonds, and from the revenues of the iron and steel industry

Section 5 protects the right of workers to organize, "without coercion or interference from the Board or from the Government of the United States," but the Board, or agents thereof, "shall have discretion as to the total number of workers to be employed in each department of each plant in the industry."

Section 6: Operation of the industry.

The Board is to operate according to its annual plans submitted to Congress.

Surplus of the industry, after all costs, shall be paid to the Treasury of the United States.

The Board may adjust production and determine prices at which the products of the industry may be sold.

BRIEF FOR THE BILL

1. Steel is a basic industry affecting all major industries.
In 1937 automobile companies bought 17.4 percent of all steel made, railroads took 12 percent, container manufacturers 9.8 percent; building trades 7.9 percent, export 7.2 percent; oil, gas, and water industries 5.3 percent; machinery 3.8 percent; agricultural implements 3.4 percent; and highways 1.1 percent—together almost seven-tenths of the entire production—all other purchasers took 22.1 percent

22.1 percent.

2. The iron and steel industry is highly concentrated.

In 1934 six companies produced 76 percent of the steel made in the United States; 1,200 customers bought 85 percent of it, and 100 of these bought 42 percent of it.

United States Steel and Bethlehem Steel, with their 250 subsidiary companies, awn 52 percent of the Nation's steel-producing

sidiary companies, own 52 percent of the Nation's steel-producing capacity.

They also own over half of the Nation's iron-ore deposits, vast

coal fields, and much other raw material essential to the operation of smaller companies.

In 1936, of the total steel capacity, United States Steel had 38 percent, Bethlehem had 14 percent, 5 companies had 17 percent, and 192 companies had 23 percent.

Seven companies had about seven-tenths of capacity.

The American Iron and Steel Institute is the clearing house for the 100 steel companies which have 95 percent of the Nation's steel-producing capacity.

3 Steel's rigid prices retain production and steel production are steed producing capacity.

3. Steel's rigid prices retard production and prosperity.
J. P. Morgan stated:
"I have always been taught in a business way to regard the iron and steel industry as an accurate barometer of business conditions,

and, likewise, to believe that no other power would exert as important a bearing on the general prosperity of America."

The iron and steel industry has at least a great power to block production and blockade prosperity.

Low prices for raw material for finished products and for services are essential to general welfare.

Iron Age reports that in 1902 the composite price of finished steel per 100 pounds was \$2.06. In the height of wartime profiteering it soared to \$4.19, then dropped to \$1.94 in 1933, and rose steadily to \$2.56 in 1937. During much of 1938 it was \$2.51.

The price of rails remained at \$28 a ton from 1906 to 1915, went up through the war, and was stabilized at \$43 from 1923 to 1931—

while it is now \$40.

while it is now \$40.

The steel industry has always been the beneficiary of a high protective tariff, and the United States Steel Corporation of ownership of natural resources acquired for a song also, while steel barons wrote the profiteering steel code under N. R. A.

(a) Railroads: In 1937 class I railways, though tracks were badly worn and dangerous throughout the Nation, bought only 1,974,597 tons of rails new and second-hand for which they raid \$22,552,266

tons of rails, new and second-hand, for which they paid \$62,558,266.

The steel industry has refused to reduce its prices on rails.

(b) Automobiles: The cost of steel in a Ford, Plymouth, or Chevrolet is about \$31.50.

A reduction of 50 percent in the price of steel would greatly increase production and sale of cars.

(c) Tin: The cost of steel is a big part of the price of tin cans, and that cost remains practically constant, though cheaper cans would help smash the Bottle Trust, recently exposed by the Senate

Monopoly Investigating Committee.

(d) Construction: Steel is an important item in the costs of most construction, except small homes and other low buildings,

as also of bridges.
Since 1932 the index of average prices of building materials, particularly steel, has been from 6 percent to nearly 15 percent higher than the index of all commodities.

BALANCE SHEETS OF 12 IRON AND STEEL CONCERNS WITH ASSETS OVER \$100,000,000 EACH

The recent report Selected Information on Steel Producers, a W. P. A. project under the direction of the Securities and Exchange Commission, strikingly illustrates that the basic monopoly of the iron and steel industry is ownership of natural resources—coupled, of course, with patents and tariffs.

[The figures for 1937 are in thousands (nearest)]

	Total assets	Land, build- ings, and equipment
American Rolling Mill Co	\$145, 846	\$76, 625
Bethlehem Steel Corporation	715, 810	492, 132
Crucible Steel Co. of America	110, 109 55, 368	83, 695 6, 043

National Steel Corporation	204, 453	134, 272
Republic Steel Corporation	364, 659	247, 223
Tennessee Coal, Iron & Railroad Co	147, 926 1, 918, 729	112, 617 1, 150, 064
Wheeling Steel Corporation	123, 551	73, 849
The Youngstown Sheet & Tube Co	220, 641	133, 883
Total (approximate)	4, 181, 766	2, 652, 230

It will be observed:

Real-estate assets, land and buildings and equipment, of which metal, mineral, and coal deposits and rights-of-way are the major part, are 63.5 percent of the total assets of these 12 great iron and

Real-estate assets and equipment are 60.5 percent (three-fifths) of the total assets of the United States Steel Corporation and 69 ercent (almost seven-tenths) of the total assets of Bethlehem Steel Corporation.

3. The real estate and equipment of the United States Steel Corporation and Bethlehem Steel Corporation are 62 percent (nearly two-thirds) of the total for the 12 concerns.

two-thirds) of the total for the 12 concerns.

They have the big iron ore and coal deposits.

4. The steel industry is inefficient.

Fortune magazine, after an exhaustive investigation, reported:
"The steel industry as a whole is technologically one of the most backward of our major industries," and described its price system as "artificial, wasteful, discriminatory, and noncompetitive."

The introduction of the continuous-strip process does not hold out any hope for consumers under private ownership.

5. Steel industry is overcapitalized.

The United States Steel Corporation in its "Property-investment account" of December 1, 1937, gives the following items of gross property investment:

mineral and manufacturing properties and

equipment	properties and		000,000
Real estate		100,	000,000
Transportation	properties	367,	000,000
		-	

Total __ 2, 271, 000, 000 These include subsidiaries.

The major part of the value of these properties consists of natural resources and rights-of-way.

United States Steel was organized as a merger, with at least \$700,000,000 of fictitious capitalization.

While the alleged investment in the iron and steel industry is claimed to be about \$5,000,000,000, the major part of this represents capitalization of profits and of natural resources.

6. The steel industry profiteers. From 1901 to 1911 the earnings of United States Steel were 12 percent on the total investment.

In 1901 Steel common stock sold from \$24 to \$55, it ran up to \$250, and in 1934 it had a book value of \$170, while it sold for from \$27 to \$50.

In 1927 United States Steel issued a 40-percent stock dividend amounting to about \$203,000,000, and during the World War Bethlehem Steel gave its stockholders two shares of stock for every share they owned.

At the annual meeting of the United States Steel Corporation in 1938, Myron C. Taylor, chairman of the board of directors, reported that during the 10 years 1928 to 1937 the corporation paid dividends on preferred stock of \$252,196,770, and on common stock of \$219,715,683—together \$471,912,453.

It also retired bonds and mortgages and paid a premium thereon

amounting to \$413,407,245.

The following salaries paid chief executives in recent years are reported by the Securities and Exchange Commission:

United States Steel	\$166, 786
Bethlehem Steel	180,000
Crucible	171,000
Jones & Laughlin	250,000
McKeesport Tin Plate Co	225, 417
National Steel	160,000
Republic Steel	140, 778

Bethlehem Steel also set up a bonus plan under which its president, in addition to his salary, received from 1925 to 1930, \$5,431,684.

The United States Department of Commerce, reports these facts about Steel Works and Rolling Mills Products in 1935:

Value of products	\$1,931,000,000
Value added by manufacture	821, 000, 000
Wages (excluding salaries)	440, 000, 000

Average number of wage earners, 359,546.

Labor in steel doesn't profiteer, but through hard experience is learning that collective bargaining without collective ownership doesn't get far.

Consumers have learned that collective kicking doesn't do any good under private monopoly of steel.

7. The proposed method of appraisal and payment helps to equalize cost of public acquisition of iron and steel industry.

The provision that determination of the value of the iron and steel industry shall consider actual earnings during the preceding 10 years and probable earnings under private ownership is appro-

priate for four reasons:

(a) The earnings during the past 6 years are largely due to Federal spending on an enormous scale chiefly through borrowing,

which cannot continue.

(b) From 1930 to 1935 the average annual deficit of the United States Steel Corporation, the master-giant of steel, was 1.18 percent of debt, stock, and surplus, and United States Steel which owns nearly two-fifths of the Nation's steel-producing capacity has the best facilities to maintain profits on its water as well as on its worth.

(c) Under private ownership utilization of capacity becomes more difficult, as production of alloy steel is increasing rapidly—from 647,000 tons in 1914 to 3,032,626 tons in 1937—an increase of nearly

Alloy steel is now about 7 percent of all steel production, but bids fair to be shortly at least one-sixth, with disastrous results to the regular steel industry.

(d) The special income tax upon the holders of bonds of the National Iron and Steel Board, which owners of stocks and bonds of the iron and steel industry get in exchange, is justified because courts almost always allow owners as large a price at least as equity demands.

While about 550,000 individuals own steel stock, and their holdings average about \$1,000, they range from less than \$100 to over \$10,000,000.

The special tax on their income from bonds given for acquisition of the iron and steel industry will reduce the charge to consumers of public ownership of this industry.

of public ownership of this industry.

Since, as J. P. Morgan stated, "no other power would exert as important a bearing on the general prosperity of America" as the iron and steel industry, that industry must be publicly owned, for Uncle Sam cannot permit any industry to hold a pistol at his head.

The iron and steel industry want war.

The American people want peace.

Private ownership leads to war; public ownership will help achieve prosperity, which leads to peace.

Legislation Viewed As Trade Curb—Defects in Law Governing S. E. C. Regarded As Cause of Many of Our Commercial Ills

EXTENSION OF REMARKS

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

LETTER ADDRESSED TO THE EDITOR, NEW YORK TIMES, BY ELISHA M. FRIEDMAN

Mr. THOMAS of New Jersey. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a letter addressed to the editor, New York Times, by Elisha M. Friedman, economist and author, which letter appeared in the New York Times April 16, 1939.

The letter is as follows:

[From the New York Times of April 16, 1939]

LEGISLATION VIEWED AS TRADE CURB-DEFECTS IN LAW GOVERNING S. E. C. REGARDED AS CAUSE OF MANY OF OUR COMMERCIAL ILLS

To the Editor of the New York Times:

The European crisis has tested the mechanism of the New York Stock Exchange under the S. E. C. rules. The Dow-Jones industrial averages of April 8 broke the lows of January and the lows of September 1938. Though London and Paris are certainly more exposed to the threat of war, yet in neither of those stock markets did the April lows even reach the lows of January or September. The figures follow:

Considerable the second of the	April low, 1939	January low, 1939	Septem- ber low, 1938
New York (Dow-Jones, industrials) London (Financial Times, industrials) Paris (Institute Cyclical Research)	121. 44	136. 42	129. 91
	95. 2	91. 4	91. 2
	53. 6	50. 7	49. 2

What a striking phenomenon!
What is wrong with the machinery of the New York stock market? Perhaps the answer may be found in the study of liquidity in the New York Stock Exchange Bulletin of November 1997. liquidity in the New York Stock Exchange Bulletin of November 1937, showing the relative declines in the break of 1929 and 1937. The period from September 4 to November 25, 1929, showed a decline only one-fourth as large as for the break from August 16, 1937, to October 30, 1937, for the same unit of volume of shares sold, namely, 1 percent of the total shares listed. A more recent comparison made by James F. Hughes, New York market analyst, shows the following figures:

Period	(a) Percent of price decline	(b) Shares traded as percent of shares listed	(c) Percent price de- cline to per- cent traded (a/b)
1929: Sept. 3-Nov. 13	47	27. 0	1.7
	40	5. 0	8.0
	20	1. 9	10.5

In other words, the market has been swinging with increasing violence on small volume.

REASONS FOR INSTABILITY

What is the reason for such instability? The singular action of the New York market in contrast to London and Paris and the increasing violence of movement on small volume is due to the changed mechanism of the New York Stock Exchange. The forces that tended to stabilize the market have been eliminated.

Who bought stocks on the decline and sold them on the rise? Surely not the millions of "little people." The mob is always swayed by hysteria for the rise or the decline. Purchases on the

swayed by hysteria for the rise or the decline. Purchases on the way down were made by people that knew the company and had courage to buy. In 1938 the range of General Motors was 53–25 and in 1939 the range was 51–36. The speculator that bought on a scale-down and sold on a scale-up was a public benefactor. The "boob" that bought boldly near the top and sold in fright at the bottom was a public menace. The S. E. C. regulations are designed to punish the former and leave the field clear to the latter. Suckers and amateurs are encouraged. Wise and informed trading is discouraged.

Specifically what factors are responsible for the market in-stability?

1. Under section 16, directors, officers, and large stockholders can-

1. Under section 16, directors, officers, and large stockholders cannot buy on a scale down and sell on a scale up within 6 months without being subject to suit by some disgruntled stockholder or blackmailing lawyer. Therefore these men do not take the risk.

2. Under section 9 of the S. E. C. any floor traders or groups that buy on a scale down and sell on a scale up might be charged with manipulation, regardless of how honest their method or how socially sound their objectives. Therefore they are reluctant to take the risk. A stabilization operation is now illegal.

LONG COMMITMENTS

3. Businessmen not in the foregoing classes who buy on a scale down in a panic and sell on a scale up in a recovery are subject to high income taxes unless the stock is held for 18 months. In the present critical political conditions throughout the world, who is willing to undertake a commitment for an 18-month period? Think what happened in Europe in the past 18 months. He would be rash indeed who would now undertake fresh 18-month commitments. Such tax laws do not apply in England and France. Taxes on capital gains on securities apply only to traders and professionals. They do not apply to businessmen and private investors. Thus the causes of the fundamental defects in the New York stock market are revealed.

However, stabilization is essential. Even the Government recognizes this. It has a stabilization fund for Government bonds. If the Government bond market were subject to similar restrictions

the Government bond market were subject to similar restrictions on stabilizing trades it would probably fluctuate very violently and be as disturbing to public confidence as the fluctuations of the stock market disturb the confidence of private businessmen. Furthermore, the Government also has a stabilization fund to regulate the fluctuations of the foreign suprements the state of the s late the fluctuations of the foreign currencies. There seems to be one law for the stock market and another for the United States Government bond market and the foreign-exchange market.

Stabilization is assential even in mechanical advantage of the state of the st

Government bond market and the foreign-exchange market.

Stabilization is essential even in machinery. A governor regulates the speed of a flywheel. Remove the governor and the speed will fluctuate erratically and cause damage. Stabilization is characteristic of an organism. The heartbeat is stabilized by physiological devices. In case of illness the heartbeat is unstable and fluctuating. The New York market is really sick in this sense. The New York market should function like a well-designed automobile, which takes hills easily and goes down hill under control. Instead, the market in its violent up-and-down movements resembles a kiddie-car, or rather a roller coaster in a circus, with its dizzy rises and frightening descents.

Yet the stock market does not operate in a vacuum. It constitutes the dashboard of American industry. When the market declines, automobile purchases decline, and then follows steel. Factory plans are checked, as in heavy industry. Retail sales decline. The public feels poorer.

The New York stock market cannot face a crisis under the present rules. They were based on the assumption that liquidity

present rules. They were based on the assumption that liquidity is not desirable. However, no other mechanism has been devised to take its place. It is expected to function. But it functions poorly. MARKET LIQUIDITY

The underlying assumption that the market need not be liquid was stated thus by my friend A. A. Berle, Jr., in "Liquid Claims and National Wealth" (pp. 141-142):

"A diminution in the investment demand can be taken care of in part by a lowering in price of the issues offered for sale. Here the practice and the theory part company; for if the investment demand was negligible, the price of any security would ultimately approximate zero. Yet long before the theoretical point of conclusion is reached the machinery would stop. Individuals would not sacrifice their securities, but would elect to regard them as non-liquid to the extent that they were able to do so. They would be withdrawn from ordinary circulation as no longer readily convertible into cash; banks would decline to loan on the security of such stocks and bonds; the market would freeze. In fact, whenever that possibility approaches, the stock exchanges close, as, for example, the New York Stock Exchange did on the outbreak of the war in 1914."

However, is not the fundamental assumption here to be questioned?

However, is not the fundamental assumption here to be questioned? Individuals do not hesitate to sacrifice their securities. Quite the contrary, as the market goes down volume increases. To avoid a collapse the stock exchange is closed by the authorities—but not for lack of business. Indeed, selling by the investor never ceases. In fact, after the stock exchange was officially closed in 1914 a "bootleg" market arose. Liquidity is the essence of a free democratic economy, in which tokens of wealth are privately held in small mobile units, such as shares or bonds.

Apparently theory and fact have collided. Will the theory be revised? The remedy is clear. For penalties, substitute publicity. Woodrow Wilson's "new freedom" was based on "pitiless publicity." This method dates back to the New England fathers, who used the stocks and pillory to expose wrongdoing by the citizens. That has been our time-honored American way. However, is not the fundamental assumption here to be ques-

PUBLICITY FOR TRADING

If we are conducting social experiments, let us be scientific. For a period of 1 year let us relax the restrictions, but provide full and prompt publicity about trading by officers and directors, by floor traders and by corporations buying their own stock. Then let

us see the results in market stability. We can avoid the old evils of willful manipulation, double crossing the public, and secrecy. The objectives of the New Deal were sound. The technique has proved thoroughly unsound.

A revision of the capital gains tax so as to eliminate the time factor or perhaps reduce it to a few months, would act as a stabilizing factor in the market. At best the capital-gains tax is inequitable. It is a case of the Government saying "Heads I win, tails you lose." The Government takes a profit but the speculative stabilizer takes the losses. Why penalize the stabilizer thus?

The New York stock market is now the center of trading for the stabilizer than the results.

The New York stock market is now the center of trading for the entire world. Its erratic gyrations have upset the stock markets of other countries. The New York stock market is a guide to the consumer in making his purchases, to the manufacturer in planning his buying, his inventory, or plant expansion. A sensationally declining market frightens businessmen and destroys confidence.

When the German Stock Exchange was over-regulated in 1896, thin markets and violent fluctuations also resulted. The German law was modified.

law was modified.

Again we have a good American precedent for the repeal of an unwise law. On June 17, 1864, Congress passed a law making it unlawful to buy or sell gold for future delivery. The premium on gold rose from 95 percent on June 18 to 185 percent on July 1. The law was repealed July 2. The next day the premium fell sharply in response. Will history show that the Congress of 1864 had more brains and courage than the Congress of 1864 ELISHA M. FRIEDMAN.

New York, April 14, 1939.

P. W. A.'s Humanitarian Program for Hospitals

EXTENSION OF REMARKS

HON. EDWARD W. CURLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

Mr. CURLEY. Mr. Speaker, a recent release of the Public Works Administration reveals that 962 hospitals have been constructed with Federal assistance since the inauguration of the public-works program. These new hospitals have a capacity of 131,424 beds.

I am informed that 776 of the hospital projects were built by local communities and that 186 of the projects were built

by Federal agencies.

Hospital construction was at its lowest level before P. W. A. furnished funds to assist in replacing obsolete structures. These new buildings have provided facilities which were sorely needed in many towns and cities throughout the country and have undoubtedly helped in reducing the mortality rate.

The hospital facilities made possible under the P. W. A. grant and loan system are operated without profit, which means that they have benefited many persons who would be unable to afford the usual hospital treatment. The grants are made only to public bodies for publicly owned projects.

P. W. A. reports that in 1938 there were 736,689 beds in the country's registered publicly owned hospitals, including specialized institutions, an increase of 110,613 over 1933. They state that the number of bed patients using these hospitals, according to the American Medical Association's Annual Hospital Report, rose from 2,155,539 in 1933, to 2,607,280 in 1938, an increase of 451,742.

It is interesting to note the additional number of beds made available for the various institutions for treatment of specific diseases. We find that 57,027 beds have been made available under the P. W. A. program for the treatment of mental diseases, and that 10,000 additional beds are now available in institutions for the feeble-minded, with 3,045 more for the treatment of epileptics.

The Public Works Administration helped finance projects for the treatment of tuberculosis as well. I am informed that more than 16,000 beds in hospitals and sanitoria costing \$65,374,445 have been provided under the non-Federal program and that general hospital projects account for another 22,401 beds.

In addition to hospital buildings, additional facilities, such as nurses' homes, physicians' residences, laboratories, research buildings, and other hospital utilities have been pro-

I do not know of any more useful work to which Federal funds can be applied. Certainly the Congress can be proud

of this report.

Hospitals and schools are necessary parts of community life. I think the P. W. A., in making possible so many new facilities for learning and healing, has won the respect and admiration of the country. And there remains a great deal to be done. Hospital and school facilities are not yet up to standard by any means. We must continue this program so that all pending projects and others to be submitted may be started and put in operation.

Enactment of the Starnes-Mead public-works bill would

permit a continuance of this worthy program.

We Once Tried Embargoes

EXTENSION OF REMARKS

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

EDITORIAL FROM THE DES MOINES (IOWA) REGISTER OF APRIL 25, 1939

Mr. HARRINGTON. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include therein an editorial by W. W. Waymack in the April 25 issue of the Des Moines (Iowa) Register, entitled "We Once Tried Embargoes." In view of neutrality legislation, this House will soon be called upon to consider, I think, that the views so ably expressed in this article merit the attention and appraisal of the Members of this body.

The editorial is as follows:

[From the Des Moines (Iowa) Register of April 25, 1939] WE ONCE TRIED EMBARGOES

Secretary Wallace, whom Iowans know to be a peace-loving man, and who from his youth has been a supporter of the ideal of a world organized for peace, pertinently called up the experi-ence of Jefferson in connection with American isolationism, in

an address Saturday night,

Jefferson as President "went the limit" in the wise effort to
avoid involvement of our new Nation in the first general war

of our history.

As Secretary Wallace said, "he found that the United States could not stand aloof, no matter how rigid the enforcement of an embargo act."

And the Secretary quoted a letter written by Jefferson in his later retirement at Monticello:

"I had then persuaded myself," said Jefferson, "that a nation, "I had then persuaded myself," said Jefferson, "that a nation, distant as we are from the contentions of Europe, avoiding all offense to other powers, and not overhasty in resenting offense from them, doing justice to all, faithfully fulfilling duties of neutrality, that such a nation, I say, might expect to live in peace, and to consider itself merely as a member of the great family of mankind. But experience shows that continued peace depends not merely on our own justice and prudence but on that of others also." that of others also.

In order really to get the lesson of this, let us recall the

conditions.

conditions.

The United States was young, weak, starting on a precarious experiment of independence and republicanism. The risks of involvement in the Napoleonic wars were obvious and enormous. England, France, and Spain all had vast territorial holdings on our continent, to the north of us, the west, the south. There was danger not merely to our economic welfare but to our very existence as a nation. Jefferson was the man—Jefferson, not Washington—who had really given the advice about avoiding entangling alliances as a necessary safeguard of our insecure nationhood.

And Jefferson, supported at first by a wave of prudent repug-

And Jefferson, supported at first by a wave of prudent repugnance toward involvement, chose the course of economic sacrifice, to the extent finally of a complete embargo on foreign commerce,

as the way to find safety.

As invariably happens when belligerent trading nations are in a life-and-death struggle, the "rights of neutrals" to trade peacefully were increasingly disregarded. It was precisely the same then as during the last World War. "International law" was in both cases, as it is now, a nebulous thing, so unclear as to make frictions lead to tensions and tensions to clashes. It was then, as it is now, subject to "belligerent necessities" based on new weapons or fighting techniques.

or fighting techniques.

The World War gave us fresh illustrations of what that means.

The submarine and the floating mine changed the whole nature of blockades. The peculiar strengths and weaknesses of submarine warfare changed the nature of seizure at sea. The new immensity of warfare itself changed the whole concept of "contraband." But the conflict of interest between the powers at war and the powers that sought to stay neutral developed precisely as in Jefferson's

Our puny Nation in Jefferson's day, well aware of its weakness, nevertheless steadily lost its sacrificial devotion to "turning the other cheek." Actually it got into the European struggle twice, once, briefly, on one side (in the naval clash with France), and once later on the other (in the 1812 War with England).

Our powerful Nation of 1914-17 had essentially the same experience.

Our powerful Nation of 1914-17 had essentially the same experience.

We are still more powerful today. The wave of recoil and of pacifism that swept our country in 1935, just 4 years ago, when Italy attacked Ethiopia, has already weakened significantly. Four years ago we said, in effect, holding our hands up to heaven:
"Never again, never! We shall submit to any sacrifice of pride or of prosperity rather than be drawn in. We shall rivet our resolve by passing immediately a set of neutrality laws, confident that by tying our hands, as Ulysses was roped to the mast while his ship passed the sirens, we shall eliminate the risk."

But our very most ardent isolationists saw to it that the new laws did not wholly tie us. They saw to it that we reserved the right to defend vital "neutral interests." And the laws, designed, anyhow, to keep us out of the last war, not the next, have not fitted new conditions either in Europe or in Asia. They have not coincided with public sentiment. With general acquiescence, they have not in the most important cases since 1935 been even applied.

The country is struggling with the problem now of trying to revise them, and hardly any two congressmen are in agreement

as to how to do it.

We fear, we greatly fear, that the job is impossible—that there is no way of passing a law that will guarantee, or even long impede, the forces tending to draw us into a general war if that develops

impede, the forces tending to draw us into a general war if that develops.

The Register has said before—in 1935, indeed—that:

(1) Economic sacrifices greater even than our most pacific classes would stand would have to be undergone.

(2) Not only "foreign propaganda" but the far more forceful propaganda of our own Leonard Woods and Theodore Roosevelts (with different names, of course) would have to be suppressed.

(3) Freedom of speech and press and even of pulpit would have to be curtailed, lest we form moral judgments as to right and wrong in the conflict, and be swayed by those judgments—lest we even form what we should suppose to be cold, analytical judgments as to how our "national interests" would be affected by victory for one side or the other.

History is all against the naive notion that peace and security on a warring planet is attainable by any great nation through the defensive device of the turtle.

The lesson not merely of all history but specifically of our own history is that up to the very last minute, up to the zero instant itself, we must struggle with all the courage and wisdom we can to see that general war does not happen. If we are not willing to make sacrifices of sloganized traditions for that great end, it will very likely be bootless to advocate subsequent sacrifices to avoid tragic involvement in what we have not adequately tried to prevent.

Disclosure of Interest of Nonresident Aliens in Securities Registered Upon a National Securities Exchange—Summary of Points in Favor of Pro-posed Legislation

EXTENSION OF REMARKS

HON. LYLE H. BOREN OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1939

Mr. BOREN. Mr. Speaker, first it is of importance for the Government to know the extent and character of the foreign ownership of American corporations because many corporations listed upon a National Securities Exchange manufacture or produce articles essential to the national defense or used or usable by the United States Government. Any large foreign ownership in such corporations might carry weight with the management of the corporation. It is also the general welfare of the country to know of any foreign ownership.

Second. Many Americans use the device of having foreign trustees or administration offices purchase stock in American corporations for their benefit in order to evade the tax laws, antitrust laws, or other laws of the United States. The proposed bill in compelling the disclosure of the beneficial owners of securities held in the name of aliens will reveal evasions of this character.

Third. The present Securities and Exchange Act is designed to some extent to reveal to stockholders the persons actually behind the corporation and having large stock ownership in the corporation. The recent growth in the number of shares of stock of American corporations held by foreign administration offices may be indicative that Americans are using this device in order to avoid disclosing their interest in American companies. The bill proposed would prevent this type of avoidance and would supplement the present Securities and Exchange Act.

Expert opinion has said of the proposal which I advance in my bill today:

There is no question but that a statute requiring aliens to disclose their beneficial ownership in securities of domestic corporations is well within the constitutional powers of Congress. It could be sustained on a variety of theories; the right to tax and to prevent tax evasion, to have effective monetary and credit control; to prevent market panics by the disclosure of the potential amount of withdrawal of foreign funds and capital that might suddenly occur in the event of foreign emergencies; to provide for the national defense by the disclosure of the extent of subversive or foreign influence in key industries; to compile statistics under the census power; to regulate foreign and interstate commerce; to supplement existing naturalization and immigration laws, etc. supplement existing naturalization and immigration laws, etc.

War Propaganda

EXTENSION OF REMARKS

HON. FOREST A. HARNESS OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

LETTER FROM RUTH STEED

Mr. HARNESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PORTLAND, IND., April 22, 1939.

Gentlemen of the United States Congress, Washington, D. C.

Dear Sirs: We are Americans. We are against dictators, war, and war propaganda. We believe in government of the people, by the people, and for the people. We still believe in our constitutional rights. We, the people, are the power of this Government. It is time for us to assert our authority.

We are tired of war, and war propaganda. If war must come, we want to know that we will take part only when it becomes necessary to defend ourselves. If we are so unfortunate as to become involved in a war, we pray that God will give us a wise leader. We haven't forgotten such leaders as George Washington and Abraham Lincoln.

and Abraham Lincoln.

We want peace, prosperity, and freedom. We are tired of propaganda and false promises. We believe in patriotism. We want justice and liberty. We want more restrictions on our Government, and less restrictions on us. We want the full value of our Republic, and we want it right now. Do you, our Congressmen, realize the danger into which our Republic has fallen? Have you, our Congressmen, forgotten your power of impeachment and your responsibility to act for the American people? Will you, our Congressmen and servants at Washington, cooperate to bring us peace and prosperity?

Very sincerely yours.

Very sincerely yours,

RUTH STEED.

A Time To Be Pro-American

EXTENSION OF REMARKS

HON. CLARENCE J. BROWN

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

EDITORIAL FROM THE MCCONNELSVILLE (OHIO) HERALD

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the McConnelsville (Ohio) Herald:

> [From the McConnelsville (Ohio) Herald] A TIME TO BE PRO-AMERICAN

Regardless of what may be believed by the administration or along the Atlantic seaboard, it is our firm conviction that 99 out of 100 of the people of the Middle West want Washington to conduct our foreign policies in such a manner as to stay out of a European war if possible. The average citizen out here feels about as enthusiastic over again sending an army abroad as he would if told to cheer for the plague. And why should he not feel that way? How cheer for the plague. And why should he not feel that way? How long has it been since the great disillusionment? Twenty-two years ago we embarked upon a war that eventually assumed the nature of a crusade. It was a holy war to end war—and the nations have been fighting ever since. Out of it grew all of our present-day problems. At the end of that war, which in the final analysis was won by American soldiers, we chivalrously asked no territory, we sought no indemnity, we wanted nothing except that the nations try to live together in peace and amity. Later, when it was sought to compound and settle the war debts, as was pointed out in a recent editorial in the Saturday Evening Post, we were derisively referred to by our British cousins as "Uncle Shylock."

The same influences as those of 20 years ago are again at work seeking to inveigle us into the dreadful vortex of what, if it comes, will be the most horrible cataclysm of history. Should the storm of

seeking to inveigle us into the dreadful vortex of what, if it comes, will be the most horrible cataclysm of history. Should the storm of another world war break, its end is beyond the power of mind to predict. It may mean a collapse of western civilization. It may mean economic and political chaos, a destruction of the present social order, an upheaval which may plunge the world into another period of dark ages. These are gloomy predictions, but the universal ruin which will accompany another European conflagration when the world has not even commenced to recover from the last one is difficult to exaggerate.

the world has not even commenced to recover from the last one is difficult to exaggerate.

Of the age-old dynastic quarrels, boundary-line disputes, and racial hatreds of Europe we know and understand but little. We do know that a history of Europe is a history of almost constant warfare. We know that our great-grandfathers, many of them, emigrated 3,000 miles over a little known sea to an unknown wilderness in order to get away from a Europe which afforded small chance for economic advancement or individual liberty and to escape the almost constant warfare in which they were but the pawns of kings and queens. From the very nature of things we cannot understand the problems of Europe and they do not understand ours. Naturally, our sympathies are with the quasi democracies, France and England, and we can give them our moral support and sell them supplies if they come and get them on the cash-and-carry plan. On the other hand, there is not the slightest support and sell them supplies if they come and get them on the cash-and-carry plan. On the other hand, there is not the slightest obligation on our part to intervene at this time in a strictly European quarrel or to send millions of our young men overseas to fight and die on foreign shores. Our fingers were burned oncelet us not repeat the mistake. Ask yourself what we got out of the last war. Ask yourself what we would get out of the next war. Ask yourself why we should be called upon to maintain the status quo and the balance of power in Europe and why all of our resources should be pledged as a guaranty of the integrity of Britain and France, whose colonial empires in the main were obtained through force. Ask yourself if any European nation would or ever did, other than through selfish motives, help Uncle Sam when he had his back to the wall. Ask yourself if throughout all history any nation which survived did so by any policy other than that of fostering and building a great, strong state which looked after the interests of its own nationals as its first and paramount duty.

Nor is there any logic in trying to again frighten us into war by telling us that it will be our turn next if the axis powers should win. If we arm and prepare, build a strong navy and maintain proper air and all other arms of defense, what nation or combi-

proper air and all other arms of defense, what nation or combination of nations can invade our shores or threaten our existence? It is the same argument which was employed to get us in the last World War—fight now for when Kaiser Bill gets through with France and England it will be our turn next. By assuming a premise which lacks a sound foundation in fact, any conclusion which with france may be arrived at suits the fancy may be arrived at.

If the United States again becomes embroiled in a European mess, it means that as in the last war, we shall assume the major

portion of the financial burden. It means the surrender of all political power to President Roosevelt—and if the past 6 years political power to President Roosevelt—and if the past 6 years have taught us anything, it is that if emergency powers are once surrendered to the present Chief Executive, they will not be returned. It means that the President will, in fact, be a dictator, and that is the end of the Republic. With a huge overhanging national indebtedness brought on by the Roosevelt squanderation policies, it will end in economic chaos. War can and shall be avoided with wisdom in the high places. It cannot be avoided if responsible political leaders continue to intervene, to make inept and silly remarks about totalitarian states, to shriek out their hatred of dictators, and instead of pouring oil upon the troubled waters, but add further fuel to the flame. Why should Mr. Roosevelt or any other member of his administration feel called upon to continuously talk in language which but adds to misunderstanding in foreign chancelries and further rolls the angry waters? This administration has plenty of unsolved problems at home.

standing in foreign chancelries and further rolls the angry waters? This administration has plenty of unsolved problems at home. Why should it meddle into problems as complex as those which now vex Europe? Stay out of war so long as we can have peace with honor. Stay out of war until American interests are directly at stake—and then Americans can, as they always have in the past, be depended upon to defend the flag with the last man and the last dollar. Of all times within our history, now is the most propitious to recall the solemn warning of the Father of his Country in his Farewell Address:

propitious to recall the solemn warning of the Father of his Country in his Farewell Address:

"Europe has a set of primary interests which, to us, have none or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns.

* * Our detached and distant situation invites and enables us to pursue a different course.

* * * Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice? "Tis our true policy to steer clear of permanent alliances with any portion of the foreign world."

In the present crisis let us be not pro-British, pro-French, or

In the present crisis let us be not pro-British, pro-French, or pro-German. Let us be pro-American.

Profits and Advantages in the Plan for Government Monetary Control to the Small Commercial Banks

EXTENSION OF REMARKS

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

RADIO DISCUSSION OF THE MONETARY PROBLEM

Mr. CARTWRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include one of the series known as Congressional Breakfast Talks under the personal direction and supervision of former Congressman Charles G. Binderup, of Nebraska, and also a short letter that preceded this talk. I understand that 600 such letters are mailed out every week the afternoon preceding the radio broadcast to the President and his Cabinet, to the members of the Federal Reserve Board, and Members of the Senate and the House.

I understand the purpose of this organization is to spread monetary knowledge and to coordinate and unite in a national organization all local monetary study clubs of the United States and all those everywhere who are in sympathy with Government monetary control as a step to economic stability. The greatest endorsement of the plan is the fact that Hon. Robert L. Owen, former United States Senator from my State, Oklahoma, is councilor at the head of the advisory council. The Senator is perhaps the Nation's greatest monetary authority in the world today.

The letter and radio program are as follows:

DEAR COLLEAGUE: I am reminding you of a few minor benefits of our plan for Government monetary control—constitutional money.

It makes the banker sleep better at night, for he knows that when he wakes up in the morning his key will still open the bank's door. In the twenties over 16,000 bankers woke up and

found their keys were out of date and worthless. The sheriff

had the right one

It makes the depositors sleep better at night, for they will know that when they wake up in the morning their signature is still good on their checks. In the twenties over 50,000,000 depositors woke up and found their signature was out of date and worthless. The bank examiner's was the right one.

and worthless. The bank examiners was the right one.

It will make the borrower rest better, for he will know, when he wakes up in the morning, that the bank, where his credit is good, will still be open and that the name of the payee has not been changed from that of the local banker to that of the bank department. In the twenties over 50 millions woke up and found their established credit with the local banker was worthless. The bank receiver was the right one.

ss. The bank receiver was the right one.

And it will make the home and farm owners sleep sound for they will know with the dawning of other days they will still own their homes, and that it is worth more than the mortgage. In the twenties half the home and farm owners in the land woke up and found that their deed did not determine ownership, and

was worthless. It was the mortgage that was the right one.

Our local banks should be owned by home people. They understand the resources of the community, and know the people who are most able to manage the many enterprises.

These matters will all be discussed in our congressional breakfast talk Tuesday morning, April 25, at 8:15, over station WOL. Listen in Listen in.

Respectfully,

C. G. BINDERUP.

CONGRESSIONAL BREAKFAST TALK, APRIL 25, 1939

Mr. BINDERUP. With profound respect we extend our morning greetings to our President Roosevelt, his Cabinet, Governors of the Federal Reserve Board, Members of the Senate and House of Representatives, and others, and in a spirit of appreciation to WOL for this privilege of broadcasting our message to the Nation relative to the people's constitutional right to coin their own money and control its value, thus to relieve unemployment and bring back preparity. back prosperity.

bring back prosperity.

I am pleased to introduce our guest speakers this morning who will take part in our Congressional Breakfast discussion: Senator Frazier, of North Dakota, coauthor of the Frazier-Lemke farm refinance bill, and the cost of production to the farmer, plus a reasonable profit; and Congressman Angell, of Oregon, a stanch apostle for the people's right for Government monetary control and substantial old-age pensions. I am proud to introduce two stanch progressive Republicans, who believe a party platform is a holy covenant with the people and not merely scraps of paper. I am going to ask Senator Frazier to open our discussion this morning.

Senator Frazier, First, Congressman Binderup, I wish to con-

Senator Frazier. First, Congressman Binderup, I wish to congratulate you and your Constitutional Money League of America for the great work you are doing in this campaign of monetary education, for I believe you have organized the greatest monetary educational campaign that has ever been undertaken.

Mr. Angell. Mr. Binderup, in one of your last congessional break-fast discussions you discussed the problem of hoarded money. I think this should be better explained as the question is asked every day, "But how are you going to make money circulate?" The Federal Deposit Insurance Corporation has lately stated that \$17,126,-000,000 is lying idle in dormant bank deposits, and the Federal Reserve Board speaks of four and a half billions in excess reserves in the banks. All money which merely exists but does not circulate is therefore just dead money.

Mr. Binderup. Yes; that is an important question. We had this for our subject in one of our recent congressional breakfast dis-We had this roter subject in one of our recent congressional breaknast cliss cussions, but as this is a baffling question and a very important matter, I think it would be well to go over this in part again. Hoarding is caused definitely by a fluctuating price level. I would like to stress your statement, Congressman Angell, because it is most important that we all understand that hoarded money does not function as money and therefore is not money any more than a dead horse is a horse. It is velocity which determines. The a dead horse is a horse. It is velocity which determines. The thing which encourages hoarding is the profits made by hoarding. Senator Frazier. But, Mr. Binderup, don't you also think that

hoarding is caused by fear as well as profit, fear of losing money by investing it? For we don't know when the Federal Reserve banks will instruct member banks to take our money away from us by compelling us to come in and pay up our notes and refusing to make new loans, which I think is about the most vicious system any nation ever had.

Mr. BINDERUP. Yes, Senator; you are right. I must admit both of these factors enter into the reason for hoarding money, but, nevertheless, it is a fluctuating price level that encourages and breeds hoarding. But under our Government monetary control breeds hoarding. But under our Government monetary control plan we maintain a price level by adding to our money supply when people hoard their money, and the price level consequently falls below the 1926 price level and by taking money out of circulation if at any time prices go above the 1926 price level. Therefore, there is no longer profit in hoarding, nor is there any fear of private interests tinkering with our money system overnight. So, by a stable price level, we will have eliminated both factors that create hoarding—fear or profit.

Mr. ANGELL Then, under your plan, Congressman Binderup, I

Mr. Angell. Then, under your plan, Congressman Binderup, I suppose you would repeal the law which is known as the undistributed-profits tax, would you not? For under your plan for governmental monetary control, in case corporations or private

parties would like to keep a few hundred thousand dollars or a parties would like to keep a few hundred thousand dollars or a few millions laid aside as a sinking fund for expansion in factories or business, this would not interfere with your money supply nor your price level. In other words, if they wanted to hold out a billion dollars on an average, under your monetary control plan you would just issue a billion dollars more, as you would always issue enough money to keep up the price level of 1926.

Mr. Binderup. Exactly. That is another added advantage of governmental monetary control. I think any concern should keep plenty of money on hand, and if a few thousand concerns should keep a few million each in reserve for a business reverse, under our plan no serious complication would occur, for the more undistributed profits they carry, which means only dead money.

undistributed profits they carry, which means only dead money, the more new money the Government would issue to keep up to the ceiling, the 1926 price level.

Senator Frazzer. In the solving of this great money question, I have long ago determined that one reason why it has not been solved is lack of understanding of just what constitutes money. Most people seem to think that money is a debt a Nation owes and that it should be redeemable in some tangible thing. They don't stop to consider that money should never be redeemable in anything that takes it out of circulation. People don't seem to realize that money is only a measuring stick for services and the products of labor, that it is merely a convenience in exchang-ing goods and services. It is strange, isn't it, when for over 50 years we have demonstrated with millions of greenbacks and United States notes, which are only receipts for goods and services rendered, that they are a million times better than money which is redeemable in something with an intrinsic value which can be controlled by private interests, such as gold certificates, or Federal Reserve notes. If there is available labor and natural resources and a demand for the goods, then there is no more reason for not supplying these goods for want of money than there would be for a man with plenty of money in his bank starving to death

because he had run out of check blanks.

Mr. Angell. Another thing I would like to ask you. As with your monetary-control plan we would be able to keep a scientific control of money, I suppose you favor a balanced Budget, do you

Mr. Binderup. Certainly. There is no reason why we should not always have a balanced Budget.

Mr. Angell. And you favor immediate lowering of taxes, do you

not?

Mr. Binderup. By monetary control we would immediately expand our money supply up to the 1926 price level. That would mean we would practically double values and cutting our taxes approximately 50 percent, as it would double the tax base and double the national income. Doubling values would make it twice as easy to pay taxes.

twice as easy to pay taxes.

Mr. Angell. Mr. Binderup, what do you think of W. P. A.?
Would you advise continuing this plan?

Mr. Binderup. Congressman Angell, let me quote as an answer to your question a statement by the First Lady of the Land, Mrs. Roosevelt. I think hers is the perfect reply to your question, and when Congress recognizes the truth of what she said, we will at least he important to begin to company to start to your roady.

Roosevelt. I think hers is the perfect reply to your question, and when Congress recognizes the truth of what she said, we will at least be in a position to begin to commence to start to get ready to do something fundamental in Congress. I quote Mrs. Roosevelt from an Associated Press article dated February 22, as follows: "Unemployment cannot be relieved by the election of political parties." And I agree. No, it isn't political parties that count so much. It's the men in the parties that count. The question is, "Are they devoted to great principles? Are they statesmen or just politicians as the term is usually understood?"

Further, Mrs. Roosevelt said, speaking of social security and relief measures, that these were merely "stopgaps" and not fundamental answers. Again I say, right! We have been laboring in Congress for over 6 years and the Republicans for years before us while they were in power, under the false impression that we could actually bring back prosperity with these "stopgap" measures. Again Mrs. Roosevelt said that W. P. A. and National Youth programs will not solve the problem but with these, quoting her directly, "We've bought ourselves time to think. That's what we've done * * "She concluded with this statement: "We've bought ourselves time. Is it going to be worth while? I believe in the things which have been done, but they do not answer the fundamental question." Still quoting Mrs. Roosevelt: "We have been afraid to face the fact that this is an economic problem." Isn't this a splendid statement coming from the First Lady of the Land?

Senator Fazzer. That was a splendid explanation of the New

roblem." Isn't this a splendid statement coming from the First Lady of the Land?

Senator Frazier. That was a splendid explanation of the New Deal program. But in 1933 our Nation was at the lowest ebb. Relief was necessary at once and we did the right thing with our W. P. A. and P. W. A. and C. C. C. and all of the many plans for distributing a little purchasing power. Perhaps Mrs. Rooseveit was right when she said that in this we were only buying ourselves time to think. But we have been thinking now for 6 long years without solving the problem, and why? I'll tell you why. It was because we were afraid to fight the money power. We knew that the farmers and workers were entitled to their share of the National income; that farmers were entitled to a living wage. We knew that some adjustments were necessary if our people were ever going to get out from under their debt burdens. We knew that a great economic question was involved which would mean a bitter fight with the money changers of Wall Street. A way has been pointed out and I hope that the fight along this line can be

kept up, and that constitutional money and Government monetary

control can be established.

Mr. Angell. Few people understand that, as our Nation grows in population 1,000,000 a year, in new industries which means much more, and a raised standard of living for the multitude which means hundreds of millions, we must add new money in the same proportion that the Nation thus expands which necessitates approximately \$2,000,000,000 a year in new money. So let me again explain that one of the most important parts of any monetary plan is that this new necessary money must be expanded among the lower income group thereby immediately to pass into the veins and arteries of trade and commerce to create a consuming and purchasing power. We know that you cannot create prosperity, you cannot make your factories run nor your farms produce to capacity by adding to production. It is consuming power that we must have we must have

we must have.

Mr. Binderup. That is correct, Congressman Angell, but you have forgotten to mention that in failing to make up this entire amount yearly we are now behind over \$18,000,000,000 which must be gradually added to our money supply before we can attain the 1926 price level. So our monetary plan provides first, that we shall pay \$50 per month to all old needy people over 60 years of age and to widows, orphans, cripples, blind, and invalids, according to need, not to exceed \$50 per month. This means, according to the Social Security Board estimate, that it would take about \$1,602,000,000 a year. We would divide this sum among the 12 Federal Reserve banks which belong to Uncle Sam under our plan. So approximately \$125,000,000 would be deposited in each bank represented by a United States bond, that is a bond issued by Uncle Sam payable on demand to himself; in other words, just evidence of the credit extended for a specific purpose to a specific bank. to a specific bank.

words, just evidence of the credit extended for a specific purpose to a specific bank.

Senator Frazier. Now, that statement may sound rather visionary to some, but there really is nothing new about it. We are doing the same thing now, that is, checking against Uncle Sam's bond. The only difference, as I see it, is that the bonds would be in our bank instead of Wall Street, and the interest Uncle Sam would pay on the bond would be payable to himself. Thus we would not be paying Wall Street millions annually for the privilege of checking on their banks.

Mr. Binderup. In other words, we would have Government monetary control and constitutional money. And then, may I add, Senator Frazier, in further explanation, after having placed Uncle Sam's bond for \$1,602,000,000 cut into 12 pieces, I in each bank, we would say to the Social Security Board, "Here is a check book. Check against Uncle Sam's own credit in your own regional Government bank for all recipients of social security. We can do this without it costing us a penny, and we are giving this money away now. The only change necessary is to give to the old, needy people instead of giving it to the House of Morgan, and the old, needy people will dry their tears and God will bless a Nation who is benevolent to its old folks. But let us consider it from a purely business standpoint. It pays a good profit.

Mr. Angell. Mr. Binderup, some people seem to have the idea that you would put the banks out of business or make the profits in that business so low that it would be impossible for them to continue.

Mr. Binderup. That is absolutely erroneous. We are fighting the

continue.

Mr. Binderup. That is absolutely erroneous. We are fighting the greatest battle ever fought for the small commercial banker. The small commercial banks of the Nation are one of our necessary business institutions. Let me give a few of the ways in which the banks would profit under our plan. In ordinary times it is reasonable to estimate that a dollar changes hands once a week or 50 times a year. Thus the \$1,602,000,000 in pensions would create no less than \$80,000,000,000 in transactions yearly. The average sized check is \$7 and the average charge a bank makes for handling a checking account is 3 cents a check. Thus the banks would make for cashing checks alone approximately \$345,000,000 sized check is \$7 and the average charge a bank makes for handling a checking account is 3 cents a check. Thus the banks would make for cashing checks alone approximately \$345,000,000 yearly. Estimating that only two-thirds of the recipients of oldage pensions would open a bank checking account, even that would make approximately 2,000,000 new bank checking accounts. A charge by the bank of \$1 a month for each checking account would make them \$24,000,000 annually, and this, together with the 3-cent charge for cashing checks, would make a total of \$369,000,000 a year. We have in the United States 15,000 banks which would make on an average \$25,000 each year to every bank in the Nation. And, remember, this is new business to the banks created by the old-age pensions. Now, while I think these potential profits sound enormous, let every banker estimate his own profit and he will be surprised at what it means to expand our money supply from the bottom among the lower-income groups.

Mr. Angell. But the profits to the banks are much more than this. There are 3,339,000 old needy people. Their expectancy of life, according to the American Table of Mortality, would be 10 years. Thus, we have immediately established an income, a consuming and purchasing power over 10 years, of no less than \$20,000,000,000. What does this mean to the banker? It means that we have established a credit among the lower-income group so the bankers, knowing that these have a guaranteed income, will lend them billions to build little homes and improvements. Thus you have taken the dormant money which the Federal Popositi Insurance Composition tell us about ond mut it is the little in the content of the Deposit Insurance Corporation tell us about and put it into circulation.

Mr. Binderup. Yes; and there is much more profit to the banks which we will tell about in our next Tuesday morning breakfast

J. Sterling Morton

EXTENSION OF REMARKS

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

AN EDITORIAL FROM THE GRAND ISLAND (NEBR.) DAILY INDEPENDENT

Mr. CURTIS. Mr. Speaker, Nebraska gave to the world not only Arbor Day but gave to the United States one of its outstanding Secretaries of Agriculture. In order to further honor the memory of J. Sterling Morton, I wish to insert in the Record an editorial from the Grand Island Daily Independent, at Grand Island, Nebr.

[From the Grand Island (Nebr.) Daily Independent]

Sterling Morton, of Chicago, grandson of J. Sterling Morton, made an interesting comment Saturday on present-day Government

spending.
"Today," said Morton, "the Department of Agriculture spends each week at least as much as it spent during the entire 4 years my grandfather was Secretary. Perhaps this ray of light on the expenditure of one governmental department may furnish a clue as to where to look for the real cause of our depressed economic condition, our taxes, and ever-recurring deficit."

Morton related that his grandfather Secretary of Agriculture

Morton related that his grandfather, Secretary of Agriculture under Cleveland, returned to the Treasury about one-fourth of the

money appropriated for the Department.

If anyone in Federal Government circles returned any such amount to the Treasury these days, Secretary Morgenthau would suffer a heart attack.

A Nonpartisan Tariff Program in the National Interest

EXTENSION OF REMARKS

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Tuesday, April 25, 1939

ADDRESS BY LYNN R. EDMINSTER APRIL 20, 1939

Mr. HILL. Mr. President, I ask unanimous consent that the address delivered by Lynn R. Edminster, Special Assistant to the Secretary of State, before the League of Women Voters of Minneapolis on April 20, 1939, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

1. CONDITIONS WHICH LED TO THE TRADE-AGREEMENTS PROGRAM

Let me begin by refreshing your recollection of the conditions which existed when the Trade Agreements Act was passed in 1934. For 4 years international trade had been in a state of collapse, and in many respects the situation was growing worse. Rising trade barriers and increasing trade discriminations were an extremely important phase of a general state of international economic maladjustment which had completely undermined the world's economic life, thrown millions out of employment, and led to progressive economic and social deterioration in all countries. Far from escaping from this general dilemma, the United States are reveal to be one of its chief victims. Between 1929 and 1929

Far from escaping from this general dilemma, the United States has proved to be one of its chief victims. Between 1929 and 1932 our foreign trade fell, in value, by more than two-thirds, with the result that we were not even holding our own in a world trade which was rapidly declining. From 81 billions of dollars in 1929 our national income had fallen to 40 billions in 1932. From 10.5 billions our farm cash income had shrunk to 4.3 billions.

It was obvious that a reopening of the channels of trade was essential if the foundations for sound and stable recovery were to be laid. It was likewise clear that the United States, by virtue of its position in world economic affairs and as a matter of enlightened self-interest, was best situated to assume the initiative. And it was equally manifest that any program undertaken by the United States, if its results were not to prove abortive, must

be one which would foster the gradual removal of excessive trade barriers throughout the entire world and hence a gradual rebuilding of the whole structure of world trade. Any other program would have been ill conceived and short-sighted in the extreme. The response to this situation was the Trade Agreements Act. Adopted in June 1934 for a period of 3 years, and renewed in 1937 for another 3-year period, the act has now been in effect nearly 5 years. Agreements have been concluded with 20 countries. These 20 countries have accounted in recent years for nearly 60 percent of our entire foreign trade. That the agreements are playing a vital role in reopening the channels to increased trade is a matter with our entire foreign trade. That the agreements are playing a vital role in reopening the channels to increased trade is a matter with respect to which the evidence is overwhelming.

Nevertheless, there is dissatisfaction in some parts of the country on the alleged ground that the interests of certain industries have been sacrificed in connection with tariff concessions which we have granted to this or that country. Other industries are apprehensive lest their interests be adversely affected by some future trade agree-ment. From these two sources has come a great deal of the driving

ment. From these two sources has come a great deal of the driving force for proposals now pending in Congress which would either repeal the act in its entirety or require that all trade agreements be subject to ratification by the Senate or approval by the Congress. The pending proposals serve to focus attention at this time on the whole philosophy and record of the trade-agreements program. In appraising the program in the light of these proposals it seems to me that there are two basic questions to be answered. First, does the trade-agreements program, both in conception and in execution, accord fully with the letter and spirit of our cherished institutions of government? In other words, is it in harmony with the principles of constitutional, representative government? Second, is the program meeting the practical test of satisfactory performance—which means, is it serving the broad interests of the Nation as a whole?

2. IS THE TRADE-AGREEMENTS PROGRAM BEING ADMINISTERED IN A CONSTITUTIONAL AND DEMOCRATIC WAY?

In considering the first of these questions—whether the program, as conceived and executed, is in harmony with letter and spirit of our form of government—the first issue that naturally arises is whether it is constitutional. While that must always be a matter for final determination by the courts, I would like to observe, in passing, first, that the act was very carefully drafted with a view to bringing it within recognized constitutional principles; second, that in 1934, when the act was passed, and again in 1937, when it renewed, Congress gave careful study to the question of constitutionality and concluded that there were ample precedents for such legislation; and, third, that up to the present time no successful challenge has been made in the courts,
But even though constitutional, there still remains the question

of whether the Trade Agreements Act is in harmony with the spirit of our democratic institutions—and that is what I want more par-

ticularly to discuss.

On this subject, let me say, first of all, that the Congress which passed the original act, and the Congress which later renewed it, must surely have been convinced that the act does meet this It, must suriely have been convinced that the act does meet this test, else they would never have passed it. Unless at some future time Congress arrives at a different determination, it must be assumed that the law meets this test. At the same time, however, it must be recognized that Congress is the sole judge of this matter and that if, on this or any other ground, it sees fit to repeal or modify the existing law there is no authority to challenge it except that of the people themselves.

Meanwhile let us examine for ourselves whether this test is

Meanwhile, let us examine for ourselves whether this test is met. To answer this question, let us first inquire whether it is in accord with the spirit of democratic government that the Congress should lay down a general tariff policy, under such formulas and rules of procedure as may be deemed essential, and then leave to the Executive the carrying out of the details, namely the adjustment of the actual rates of tariff duty on thousands of articles in accordance with the broad requirements of the

law. This, of course, is what the Trade Agreements Act does.

The answer is, I think, clearly in the affirmative. So intricate and complex have become the problems of modern government that sheer concern for the preservation of democracy has com-pelled increasing recognition by legislatures of the virtual neces-sity of confining their functions more and more to determinasity of confining their functions more and more to determination of general policy and establishment of broad rules of guidance for its execution, while leaving the details of administration to experts in the executive branch or in special boards or commissions set up for that purpose. What is important, from the standpoint of safeguarding democratic principles, is not avoidance of such delegation of powers. What is vital is that the authority conferred should be carefully delimited and that the fundamental control should continue to be vested in the law-making body. Subject to the further proviso that the delegated authority is exercised in a fair and democratic manner, and not arbitrarily and unreasonably, there is surely nothing in this state of affairs which is at variance with democratic principles. On the contrary, it is the only way in which representative government can function under modern conditions.

The authority conferred in the Trade Agreements Act and the

The authority conferred in the Trade Agreements Act and the manner in which it has been executed both fall safely within these bounds. The act very definitely lays down the objectives to be sought, the administrative procedure to be followed, and the limits of authority which must be observed. The purpose of the act is stated to be "expanding foreign markets for the products of the United States * * *." As to procedure, it requires that "Before any foreign trade agreement is concluded * * * reasonable

notice of the intention to negotiate an agreement be given, in order that any interested person may present his views

* * *; and before concluding such agreement the President
shall seek information and advice with respect thereto from the United States Tariff Commission, the Departments of State, Agriculture, and Commerce, and from such other sources as he may deem appropriate."

The limitations upon executive authority are likewise definite. No duty may be increased or decreased by more than 50 percent. No article may be transferred between the dutable and free lists. The maximum duration of the agreements before they can be terminated on no less than 6 months' notice, is limited to 3 years. And since the delegation of power to the President to enter into and proclaim agreements is also limited to a 3-year period, there is full opportunity for regular legislative review of both the policy and administration of the act.

In the administration of the act the utmost caution has been

exercised in keeping within these prescribed limits of authority. Particularly has there been solicitous concern, in evolving detailed rules of procedure, to assure that all interested parties shall have every reasonable opportunity to present their views, and, further, to assure that the testimony offered shall be carefully digested and weighed in reaching a decision in any given case. Moreover, in assembling and analyzing the relevant facts I doubt whether, in the entire history of our Government there has ever been a finer illustration of whole-hearted and effective collaboration between the interested agencies of the Government.

3. THE PRESENT PROGRAM AS COMPARED WITH THE PREVIOUS TARIFF ADJUSTING

But surely, if it is fair to ask how the Trade Agreements Act meets the test of democratic government, it is equally fair to ask how the method of tariff making, which preceded it, meets this same test. To this the best answer I have seen anywhere was made by Senator Capper in 1934, during the debate on the enactment of the Trade Agreements Act, when he said:

"As a matter of fact, if the job is only to revise the tariff schedules, if bargaining with other nations is left out of the picture, our experience in writing tariff legislation particularly in the post-

"As a matter of fact, if the job is only to revise the tariff schedules, if bargaining with other nations is left out of the picture, our experience in writing tariff legislation, particularly in the postwar era, has been discouraging. Trading between groups and sections is inevitable. Log rolling is inevitable, and in its most pernicious form. We do not write a national tariff law. We jam together, through various unholy alliances and combinations, a potpourri or hodge-podge of section and local tariff rates, which often add to our troubles and increase world misery. For myself, I see no reason to believe that another attempt would result in a more happy ending." (Congressional Record, 73d Cong., 2d sess., vol. 78, pt. 10, p. 10379.)

It is idle for anyone to point out that the Hawley-Smoot Act which was so patently the outgrowth of this chaotic tariff-making process was an expression of the will of the majority of the people as reflected in the vote in Congress. For the answer to this is clearly implied in Senator Capper's statement that "we do not write a national tariff law" but instead, "through various unholy alliances and combinations, a potpourri or hodge-podge of section or local tariff rates." Moreover, when it comes to consideration of the national interests as a whole, it is pertinent to observe that the President is also an elected representative—indeed, except for the Vice President, the only elected representative whose constituency is the entire Nation.

In view of the economic situation which prevailed in this course.

stituency is the entire Nation.

In view of the economic situation which prevailed in this country following the adoption of the Hawley-Smoot Act, a condition which was aided and abetted by that act, any intimation that this wholly discredited tariff legislation subserved the true interests of democratic government can be characterized only as extreme irony. The failure of government and the lapse of a nation into a long-systemed period of economics and social cries is itself. into a long-sustained period of economic and social crisis is itself an invitation to subversive movements which would undermine and destroy democracy. After all, substance is more important than form; the successful functioning of government for the welfare of the nation as a whole, without sacrifice of the main essentials of democracy, is what really matters.

4. PROPOSALS TO REQUIRE SENATE RATIFICATION

In the light of such considerations as these I cannot believe In the light of such considerations as these I cannot believe that the majority of the American people would wish to go back to the old system of tariff-making which Senator Capper so well described. But what about the pending proposals to require ratification of trade agreements by the Senate or approval by Congress? Would not such a requirement be more in harmony with democratic principles than the present method, while still leaving the trade-agreement system intact?

The past experience of this country with regard to reciprocal-tariff arrangements furnishes no evidence to justify the hope that the matter would work out in that way. Quite the contrary. The reciprocity treaties which were actually ratified and which entered into effect in the United States during its whole history entered into effect in the United States during its whole history have been only three in number, and these were all of a special character and with countries with which the United States had close geographic or political ties, Canada in 1854, Hawaii in 1875, and Cuba in 1902. From 1844 to 1902, 10 other reciprocity treaties were negotiated under the general treaty-making powers of the Executive, but not a single one became effective. Equally instructive is our experience under the specific statutory provision for reciprocity treaties contained in section 4 of the Tariff Act of 1897; under this section 12 reciprocity treaties were negotiated, but not one even came to a vote in the Senate; they all died in committee. died in committee.

In marked contrast to this record of fruitless attempts at reciprocity treaties requiring Senate ratification is the history of executive agreements negotiated under prior authorization by Congress but not subject to subsequent ratification. procity agreements were entered into and made effective under the Tariff Act of 1890, and 14 similar agreements were concluded with 9 countries under the express authority of section 3 of the Tariff Act of 1897. Under the Trade Agreements Act now in force, 21 trade agreements with 20 countries (including a second agreement with Canada) have been negotiated and have gone into

Critics of the present system sometimes point out by way of con-Critics of the present system sometimes point out by way of contrast that many foreign countries require ratification, with the inference that for this country not to do so is to fall behind others in the matter of adherence to democratic principles. But such suggestions are wholly misleading. In most of the countries which require ratification it is practically certain to be forthcoming. Many countries put the agreements into effect provisionally without awaiting ratification, as in the case of the United Kingdom and Canada under our recent agreements. Even where this is not done, ratification has usually been fairly prompt by the countries with ratification has usually been fairly prompt by the countries with which the United States has made agreements. It is pointless to compare the situation in the United States with that in such a country as the United Kingdom, as is sometimes done. Such comparison entirely overlooks the cardinal fact that, under the parliamentary form of government, with the Cabinet members them-selves leaders of the majority in Parliament, and with the continu-ance of the ministry in office at stake, ratification is almost certain

so occur.

So much, then, for the first test of the program which I mentioned at the outset, namely, whether it is in harmony with our fundamental principles of government. I come now to the second test—the test of practical performance and of further potentialities. I have already reminded you that the 20 trade agreements concluded to date have been with countries accounting for almost 60 percent of our foreign trade. On many hundreds of items tariff duties and other types of trade restriction have been either reduced or bound against further tightening. duced or bound against further tightening.

There is no way in which the effects of trade agreements can be definitely isolated from other factors affecting the course of trade. All statistics are subject to qualification. For those persons who realize the shortcomings of the figures it is perhaps sufficient simply to know what common sense tells us, namely, that when effective barriers to trade are reduced, it is easier for trade to flow than it was previously. For those who must have figures, however, it is worth noting that in the 2-year period 1937-38 our exports to tradeagreement countries were 61 percent greater than in the two pre-agreement years 1934-35; whereas our exports to nonagreement countries increased by only 38 percent.

It will simplify further discussion if we look at the achievements and possibilities of the program from the standpoint of major groups affected.

5. EFFECTS OF TRADE AGREEMENTS ON AGRICULTURE

First, farmers. Agriculture as a whole in this country has a direct and vital stake in this program by reason of its great de-pendence upon export markets for disposal of the large surpluses it produces in excess of domestic market requirements.

Mere listing of the direct concessions obtained on farm products would fill a small-sized booklet. Two agreements alone—those which went into effect on January 1, 1939, with the United Kingdom (by far our largest foreign market for farm products) and with Canada—contain concessions on more than a quarter of a billion dollars worth of farm exports. In addition, the concessions obtained on nearly \$400,000,000 worth of nonagricultural products in these two agreements alone will convey some idea of the indirect in these two agreements alone will convey some idea of the indirect in these two agreements alone will convey some idea of the indirect benefits that should come to agriculture through stimulation of purchasing power in our cities for products of the farm. The decline in our total exports to Canada from around \$900,000,000 in 1929 to less than \$250,000,000 in 1932 illustrates what is at stake. In the first 2 years of our first agreement with Canada (which went into effect on January 1, 1936) our exports increased to that country, as compared with the 2 preceding years, by an annual average of \$128,000,000 or hy 42 percent.

\$128,000,000 or by 42 percent.
Studies have been made which leave no doubt of the beneficial effects of the concessions obtained in stimulating exports. One study, taking account of the first 16 agreements negotiated (and therefore failing to include the vastly important agreement with the United Kingdom), shows that our exports of farm products to these 16 countries increased by \$102,000,000, or 55 percent, between the fiscal year 1935–36 (when only three agreements were in effect throughout the year) and 1937–38. On the other hand, exports of farm products to the nonagreement countries increased by only \$20,000,000, or 3 percent, during the same period.

There has been a great din in the past about farm imports. This

has been characterized by amazingly dishonest use of statistics in an attempt to make it appear that agriculture was being injured and that trade agreements were in no small part responsible for this alleged injury. You will remember the agitation about increased agricultural imports in 1937, agitation which carefully concealed the fact that nearly half of these imports were of a type not even produced in this country and the further fact that the increase was due almost wholly to two factors, drought shortages and economic recovery. ery. You will also remember the agitation about cattle and cheddar cheese which followed the signing of the first Canadian agreement—to the effect that imports would flood the country and ruin the American market. I have discussed these things fully on other occasions, and my remarks are all a matter of public record. I merely wish to say in passing, first, that analysis of the facts has disclosed the baselessness of all such charges; and second, that those who have thus sought to stir up opposition among the cattlemen, the dairymen, and other farm groups are not, in my opinion, serving the real interests of the Nation, of agriculture, or even of the very groups on whose behalf they assume to speak.

6. EFFECTS ON INDUSTRY AND LABOR

Industry and labor comprise another vast group. Even in manufacturing industry alone, a much larger proportion of the total than is commonly imagined is engaged in the production of typically export in large quantities. Automobiles and trucks, farm and industrial machinery of many types, office appliances, sewing machines, radio apparatus—such is but the beginning of a long list that emphasizes the dependence of a great part of our manufacturing industry upon export trade. would require many pages even to list, much less to evaluate, the great range and variety of concessions which we have obtained on behalf of such industries.

I have been examining some figures recently which I find extremely interesting in connection with this matter of the relation tremely interesting in connection with this matter of the relation of the tariff to industry and labor. The census lists nearly 50,000,000 persons in the United States as being "gainfully occupied." By process of elimination it appears—as nearly as one can estimate it—that not over 2,500,000 workers are employed in industries, or branches of industry, which are within the range of effective tariff protection. By this I mean industries engaged in producing things that tend also to be imported in sufficient quantities so that tariffs can have any substantial effect upon prices of the domestic article. That is to say, probably not over a third of the workers in manufacturing industry—or 5 percent of the number of "gainfully occupied" people in the United States—come within this group.

Nevertheless, it is obvious that this is a large body of workers; and it goes without saying that the possible effects of tariff changes upon their interests must always be a matter of serious public concern. The real issue is not that. The real question is: What kind of a general tariff policy is in the interest of the workers in these industries?

these industries?
Certainly an embargo-tariff policy is not in their interest. The Hawley-Smoot experience is proof positive of that. There are no benefits to either capital or labor in such industries from a tariff policy which spoils their domestic market. If tariffs which are so as virtually to eliminate imports of competitive and semicompetitive articles could have saved such industries, then surely they should have fared better than all the others during the years immediately following the adoption of the Hawley-Smoot Act. I deliberately refrain from singling out particular industries in this connection; but I think it can safely be said that the condition of the supposedly "protected" industries after 1930 was little, if any, better than that of the rest.

7. EFFECTS ON CONSUMERS

A third major group that I want to mention is everybody—in his capacity as a consumer. Here, surely, is the universally gotten man"—and woman.

I need hardly remind you that, in the framing of tariff legislation in the past, the interests of consumers as such have usually been conspicuous for their absence from consideration. And yet

everybody, as a consumer, is benefited by a liberal trade policy and is a victim, in greater or less degree, of embargo tariffs.

It is somewhat futile to attempt to express in statistics the aggregate burden of the tariff to consumers—if for no other reason, because so much of the burden takes the form of deprivation return them. tion rather than of actual money expenditure. Even the most superficial analysis of the problem, however, leaves no doubt that the absolute amount of the burden is staggering. That it falls most heavily on those least able to pay is well known. A program which works toward the moderation of excessive and unreasonable tariff protection is directly in the interest of our 130,000,000 consumers

8. PEACE AND TRADE UNDER NORMAL CONDITIONS

Finally, there is the interest that all of us, as a group, have in this program from the standpoint of its relation to peace.

this program from the standpoint of its relation to peace.

The present world situation is one which calls for sober reflection on the part of everyone. The continuous piling up of armaments throughout the world and the surcharged atmosphere in which the world goes on living from day to day are a menace and a burden the seriousness of which it would be impossible to exaggerate. The diversion, on an enormous scale, of the energies of nations from peacetime pursuits to the building of armaments—however justified it may be in the case of particular countries on grounds of defense—is surely unfortunate from the standpoint of the people of every land. Instead of this vast storehouse of energy being used to raise living standards, the world is confronted with the spectacle of its use for the piling up of weapons of mass destruction of property and of life itself. While this situation of political insecurity and of wholesale diversion of of mass destruction of property and of life itself. While this situation of political insecurity and of wholesale diversion of human energy continues, there can be only retrogression and increasingly imminent disaster.

There is still time to reverse the fatal course of recent years

There is still time to reverse the fatal course of recent years and months and to start back along the road to peace and constructive human endeavor. The way is still open to that gradual resumption of healthy economic and other relations between nations which is essential to genuine and sustained prosperity and to the well-being of peoples everywhere. In this situation the tradeagreements program is all-important. It represents almost the only sustained effort being made anywhere in the world today to

reconstruct international economic relations on a sound and permanent basis. As such, its implications far transcend in importance the immediate commercial value of the agreements, great though that is

That armaments have continued to increase and the danger of war remains ever present does not in the least impair the validity of this approach. No responsible person has ever contended that the trade-agreements program is an effective and an immediate guaranty of world peace irrespective of all else. The fact remains, however, that restoration of a healthy flow of international trade is essential to the creation of those conditions of economic security and well-being throughout the world which make for peace and order within nations and hence between nations. In that sense, the trade-agreements program does strengthen the foundations of

world peace.

The broad goal toward which the trade-agreements program points is the rebuilding of the world's economic life, with all that this means for human advancement everywhere. In this great enterprise all of us have a tremendous stake.

Public Welfare

EXTENSION OF REMARKS

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, May 1, 1939

RADIO ADDRESS BY HON. THEODORE F. GREEN, OF RHODE ISLAND, APRIL 21, 1939

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Record a radio address delivered by the junior Senator from Rhode Island [Mr. Green] on April 21, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow citizens, it is good to be home again, even though it be for only a couple of days. It seems like old times for me to be talking to you over WEAN. While, naturally, my time in Washington is taken up mostly with matters of national and international importance, yet somehow I find the time to keep in touch also with matters here at home.

There are a couple of home matters about which I want to talk frankly. You, I know, are as deeply interested in them as I am. Years before I held public office I took an active part in trying to get the State authorities, the Governor and the general assembly, to show a deeper interest in our public-welfare institutions and to reform both their physical conditions and their administration which were in many respects deplorable. It was one of the greatest satisfactions of my administration as Governor that I was able to accomplish this. The State institutions at Howard and at Wallum Lake and at Exeter were provided with new buildings to such an extent that from being among the very worst equipped institutions of the sort in the country, they are now among the very best. Buildings and physical equipment, however, are only means to an end. They are means enabling intelligent, trained directors of the work of these institutions to put into effect their plans for the proper custody, improvement, and cure of the inmates

and patients.

While the physical equipment is important, it cannot be used to advantage without the human element, which is after all even more important. For that reason, I was greatly gratified when as Governor I was seeking a man to direct these institutions to find in Dr. John E. Donley a man standing at the top of his profession, with wide book learning and human experience, eager to help solve the problems of these institutions, and willing to undertake to reorganize and administer them according to modern ideas. I assured him that he would have full control of these institutions and directed that no politics would be allowed to interfere with his administration for the benefit of these unfortunate wards of the State. When Dr. Donley resigned, my successor, Governor Quinn, appointed in his stead Mr. Edward P. Reidy, who had had long practical experience in public-welfare work and was at that time the efficient director of public aid for the city of Providence. He, too, was a man who had never held political office, was a member of no political committee, and a man who would not dream of allowing politics to determine any of his actions in the administration of these institutions.

was a man who had never lead pointed once, was a member of no political committee, and a man who would not dream of allowing politics to determine any of his actions in the administration of these institutions.

So you can perhaps understand with what mixed feelings of disappointment and indignation I learned that the present Governor had supplanted Mr. Reidy by a man without any special qualifications for this position, and in striking contrast to Dr. Donley and Mr. Reidy. The appointee, Mr. Sorrentino, is not a physician nor a social-service worker. He is a jeweler. He was one of a committee

of five who solicited campaign contributions for the ticket in the last election headed by Mr. Vanderbilt. So a member of the Republican State central committee is now also the director of the State department of social welfare. I suggest that this kind of dual office holding is the most objectionable of all, because the wards of the State, whose happiness, health, and even life depend upon good administration of these institutions, may be at stake. It may be inadvisable to let one man draw two salaries. It is far worse to have him serve two masters whose interests are divergent. I trust Governor Vanderbilt will see the propriety of asking Mr. Sorrentino to give up one of these positions; and since he seems eminently qualified for membership in the Republican State central committee and not at all qualified for being director of the department of public welfare, I respectfully suggest that the latter be the position he be requested to give up.

Another appointment which shows the same regrettable attitude toward the public service is the appointment of a member of the new civil-service commission. It is universally admitted that the success of any such movement must depend upon the commission being free from political affiliations, so that the public, as well as those immediately affected by its decisions, may have confidence in its fairness and nonpartisanship. But Governor Vanderbilt has appointed as a member of the civil-service commission a man who has been active in party politics and is the present city solicitor of the city of Cranston. This is another example of dual officeholding about which we heard much in the last campaign. It may not be as serious as the other case, but it more directly violates both campaign pledges and the proposed amendment to the State constitution. Since Mr. Day seems better qualified for the position of city solicitor of Cranston than for the position of chairman of the civil service commission, I respectfully suggest that the Governor request his resignation of the latter office.

Time flies and I cannot at this time give you further illustrations of this regrettable deterioration of the State government, but I hope for various reasons that my visits home will be more frequent in the future and that I may have the opportunity to discuss this matter further.

further.

There is a matter of great local importance and at the same time of even greater national importance in which I have been privileged to serve both my State and my country and about which I want to speak. That is the selection of Quonset Point as a great national naval air base for the northeastern part of the country. I have been working on this matter for a long while—almost ever since you sent me to the Senate. Most of this work has had to be done quietly by personal interviews, but now and then the matter has come before the public as, for instance, when a year ago last June I brought a congressional delegation by airplane to fly over Narragansett Bay to inspect various possible sites.

The first definite official commitment to the plan for Quonset.

The first definite official commitment to the plan for Quonset Point was when the naval board, headed by Admiral Hepburn, made a report in which Quonset Point was mentioned as one of the recommended future naval air bases. It seemed to me, however, that for various reasons preparatory work on that project should be undertaken promptly. So I introduced in the Senate an amendment to the bill which Senator Walsh had introduced, carrying into effect the Hepburn report. My amendment provided that Quonset Point be included in the bill, and for that purpose added \$1,000,000 to the amount authorized. Later Representative Sandager introduced a copy of my amendment in the House of Representatives. There were again many conferences and hearings. As a result, a week ago yesterday Senator Walsh reported from the Senate Committee on Naval Affairs, with the unanimous approval of the committee, including Senator Gerry, who worked for it there, and also with the approval of the Navy Department, a redraft of the act which added to the projects authorized to be undertaken at once "Quonset Point, R. I., \$1,000,000 for acquiring privately owned land," and also authorized the Secretary of the Navy to accept "title in fee simple to land or other realty at or near the vicinity of Quonset Point, R. I., to be used as a naval air base." Day before yesterday this bill passed the Senate without a single negative vote. Yesterday it passed the House of Representatives without a single negative vote. I have no doubt it will be signed by the President, and then Quonset Point, R. I., will have been established as the great northeastern naval air base of the United States. This \$1,000,000 is simply to cover the cost of acquiring the privately owned land which will be needed in addition to the National Guard camp which the State, under Governor Vanderbilt, has already voted to give the Nation. The preliminary estimates for the cost of this development calls for the expenditure of over \$21,000,000, and even after completion it will provide work fo

western shore of Narragansett Bay what the Newport torpedo station means to the eastern shore.

But my fellow citizens, you do not, I suppose, imagine that this result could have been accomplished without overcoming very many difficulties of all sorts: Some of them formidable, like the claims of rival locations, others irritating like the firmly set minds of some naval officers and still others humorous like the opposition of local conservatives who oppose everything new. You may recall one typical example. It was an editorial in the Providence Sunday Journal of last January 29, entitled "Pork or Priority." Let me read you a few extracts in case you did not commit this masterpiece to memory. It begins:

masterpiece to memory. It begins:

"Senator Green's effort to amend the \$65,000,000 Walsh-Vinson
naval bill by directing immediate establishment of an air base at

Quonset Point is another example of his readiness to spend other

people's money at every opportunity."

May I interrupt the quotation by stating that I don't see why this money isn't as much mine as any other citizen's. Furthermore, I don't see why I am spending it any more than all the other Senators, and the Representatives who voted for it, too. In

other Senators, and the Representatives who voted for it, too. In a later paragraph it goes on:

"Senator Green's action places pork-barrel psychology above considerations of priority in providing for the common defense. It can be explained only by excessive eagerness "to get something" for his State because a great deal of Federal money may be made available for defense. He displays little statesmanship in his short-sighted view of the entire national picture."

I must plead guilty to my interest in trying "to get something" for our State of Rhode Island. I think it very fortunate that I can do this at the same time that I render our country a great service too. Naval experts, not only of America but of the world, have declared Narragansett Bay one of the greatest natural harbors anywhere. It is a natural naval and air base. Furthermore, it is right at the heart of the manufacturing and commercial establishments of this country. If, which God forbid, some day some European powers shall cross the Atlantic and attack this country, the logical point of attack is Narrangansett Bay. The holding of this as a base would be the most formidable threat to our national security which an enemy could offer. So this is a matter of national as well as local importance.

There are many worse—because more effective—newspaper arti-

matter of national as well as local importance.

There are many worse—because more effective—newspaper articles than this, which almost every public man has to learn to expect. For that reason, I must advise budding statesmen of all parties to cultivate a sense of humor. If he doesn't get anything for his State he will be criticized as incompetent or lacking in interest and therefore unpatrictic. On the other hand, if he does get something for his State, even if incidentally doing a great deal more for his country, he will be held up to opprobrium, and will be accused of sacrificing the national interest for a "mess of pork." That is, he will be so accused by so much of the press as is blinded by partisanship. But I have too much confidence in your friendly support to think that you will now share the attitude of that paper—any more than you shared it when the same paper opposed me for advocating loans for the erection of much needed State buildings.

Oh, well, we all make mistakes, even those who tell editorial writers what to write.

Labor Day Address

EXTENSION OF REMARKS

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES Monday, May 1, 1939

. SHERMAN MINTON, OF INDIANA, SEPTEMBER 5, 1938 ADDRESS BY HON.

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by myself at the Labor Day ceremonies held in Boonville, Ind., September 5, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of organized labor, their friends, ladies, Mr. Chairman, members of organized labor, their friends, ladies, and gentlemen, gathered here today are representatives of the men and women who work for a living. Here also are gathered many men and women who ask only the right to work and can find no employment. This presents in its dual aspect one of the most important problems before the American people today, namely, the right of workers to protect their right to work and the right of men and women to a job. No one could be more sympathetic to this problem and its solution than I, the son of a laborer.

My earliest recollections of life are as a small boy litting in Craw-

My earliest recollections of life are as a small boy, living in Craw ford County, Ind., where my father worked as a laborer on the bridge gang of the old Air Line Rallroad, now the Southern Railway. As a young boy, I worked in a factory 10 hours a day for dollar, and many days I didn't get to work at all, and at other times I worked long hours of overtime for the same pay. I remember one time when I was only a lad of 15 I went to work in a factory at 7 a. m. one Friday morning and worked all day and all night Friday and all day until 11 o'clock Saturday night, and without rest or sleep. So I know what is meant by child labor, long hours, and poor pay. I know, too, what it is to be without a

Since the days when I started out as a laborer 34 years ago, great changes have come over this land, where men work for a living.

Time was when a man lost a job and times got hard, he could pick up his family and move west, with a chance to develop and prosper with the growth and expansion of an ever-widening frontier. The surplus of workers was absorbed in the development of the frontier as it crept across the continent. That day is gone forever. The frontier has disappeared, and today when men and women turn from the barren wastes of the wind-swept Dust Bowl or the crowded slums to seek a new beginning in a new land to the west they find no welcome and no chance to pioneer a new start. They are met at the border of States and turned back, or herded into camps for refugees. The romance of the covered wagon and the hearty pioneer subduing a wilderness as he marched toward the

the hearty pioneer subduing a wilderness as he marched toward the setting sun is gone forever.

Right here in the hills of southern Indiana, within a few miles of this spot, over a hundred years ago, came a poor family from Kentucky to take up their home in the wilderness. With them came a lad, strong of body and clean of mind, in whose sad, wistful eyes was reflected the dream of a sturdy race, and in whose heart, seared by hardship and privation, was the love and understanding of the common people. Here he spent the days of his boyhood, here he laid the foundation of his imperfect education, here in these hills as a little boy he stood beside the open grave of his mother, who was laid to rest on the hillside in a rude coffin, fashioned by who was laid to rest on the hillside in a rude coffin, fashioned by the hands of himself and his father. Grown to young manhood, he found himself frustrated in the struggle for existence, and he he found himself frustrated in the struggle for existence, and he turned his face westward again and moved to and settled upon the more fertile acres of Illinois. From there he went forth to assume the leadership of his country in a great struggle to free men and women workers from the shackles of slavery. Now, men, women, and children by the millions go each year to these shrines, stretching from the humble log cabin in Kentucky, to that sacred grave in southern Indiana, to that majestic shrine on the banks of the Potomac in Washington, to pay tribute to a man of the humble working people, who led a nation through the hell of the Civil War, that men and women might enjoy the fruits of their own labor, and others may not be pressed down by the evil of competition, with men and women bound to slavery. He lives today enshrined in the hearts of men everywhere, in a love apart, vouchsafed to no other man. He is known to history as the Humanitarian of the other man. He is known to history as the Humanitarian of the Ages-Abraham Lincoln.

The abolition of slavery in America marked an epoch for labor. The abolition of slavery in America marked an epoch for labor. Human slavery was the primitive labor relation. From primitive days until recent years, men with power used it to enslave their fellows. Such slaves had no rights which the law of the land recognized. Feudalism came after universal slavery and men and women were bound to the soil, and when the land was sold, these men and women passed with the deed to the land. Being a part of the soil, they had a value, and that carried with it a recognized right to a job at least. Then came free enterprise, and the so-called right of the worker to sell his labor for a price, but always on the terms of the system under which he lived, and his relation in that system was that of a servant to his master. Always his labor was system was that of a servant to his master. Always his labor was demanded by a master and the worker in the abject role of a servant. In that aspect and in that relationship, the law of the land was In that aspect and in that relationship, the law of the land was developed, always giving paramount consideration to the right of the master, who owned property. Property was held only by free men, upon which they employed successively slaves, vassals, and servants. The relationship of master and servant probably was all right while this was an agricultural country, and a country of small-business men, where the employer knew his men and dealt with them as individuals. A simple relationship of that kind permitted a laborer to contract for his hire, and if he did not like the price offered for his labor, he could go west and find a place in the

with them as individuals. A simple relationship of that kind permitted a laborer to contract for his hire, and if he did not like the price offered for his labor, he could go west and find a place in the ever-expanding development of the frontier.

Then came the new development in business and that of the great corporations and integrated industry, when men controlling enormous wealth, not of their own, but of countless stockholders, sat around the table as directors of the corporations they did not own, and employing thousands of workers they did not know and, too often, cared nothing about, except as they were able to employ them at a big profit. Then it was that men and women were no longer able to meet their boss, and bargain with him about their wages and working conditions. They became a number, and not an individual. They became in the words of the "boss," another one of "my men." They became by force of circumstances, more and more tied to their communities by ties of family, home, and the burden of moving, and could no longer seek their home in another place. Workers were then hired, as unorganized servants of the great corporations, representing thousands of stockholders, whose money was invested in the corporations controlled by a board of directors, that bargained collectively on behalf of the stockholders. The corporation, itself, enjoyed the right to organize and bargain collectively, and they did. They claimed and exercised the right to hire and fire a man at will, and claimed and exercised the right to hire and fire a man at will, and after using the best years of his life, to turn him out to shift for himself in his old age, or, perhaps, broken in health or body by industrial accident, or the wear and tear of his employment, his services were no longer acceptable, and he was released from employment to bear the burden, with the assistance of society,

of the industrial wastage of his life.

The time has arrived, with the maturity of great corporate structures, hiring thousands of men, to permit the men to do what the corporations have always done, that is, bargain collectively by representatives of their own choosing. When a board of directors of a great corporation meet and transact any business,

they are acting collectively for the stockholders. Why shouldn't labor exercise the same right to collective bargaining, through representatives of their own choosing? It is idle to talk of the representatives of their own choosing? It is idle to talk of the individual worker exercising his so-called constitutional right to contract with his employer for his labor. What chance would a mere workman have to get to the office of the management of the United States Steel, the Pennsylvania Railroad, or General Motors, to talk about wages and working conditions? Since the corporation used representatives to bargain for the stockholders, who were too numerous to run the business themselves, why shouldn't the laboring men and women, numbering hundreds and thousands, be permitted to choose their own representatives to bargain for them?

pargain for them?

There is not and never was any good reason why labor should not organize and bargain collectively, but the employer had the power over his workers to prevent them from organizing. Business controlled government from Governors, Presidents, legislatures, and Congresses, to the courts themselves, not by corrupt methods necessarily, but by controlling the political machinery and electing to office men who thought like they did and would do their bidding. When workers tried to organize, their employers fought their organizations and discharged the workers from their jobs for joining organizations and locked them out and blacklisted them so they could not get jobs elsewhere. Indeed, there was a time when the employers were successful in putting upon the statute books laws which made it a crime for workers to organize. The courts of this country have recognized the right of labor to organize and the right of labor to strike to enforce its demands, but the courts have also recognized the rights of the employer to fire lock out and blacklist. recognized the rights of the employer to fire, lock out, and blacklist a worker because he belonged to a labor union. Yes; and after the legislatures recognized the right of labor to organize and made it legislatures recognized the right of labor to organize and made it an offense to fire a man because he was a member of a labor organization the courts held that this was an interference with the right of free contract and nullified the law. They even went further and upheld the "yellow dog" contract, in which a man to get a job had to agree not to join a union. That was not all. Labor organizers and union men were charged in the newspapers with being Communists, Socialists, and anarchists, and their meetings were broken up the effects of the law and their men beginning tilled. by officers of the law and their men beaten and sometimes killed and their strikes broken by the aid of troops. There never has been a labor movement in this country that the reactionary papers did not charge the workers with communism and socialism.

When the first labor organizations were formed among the rail-

when the first labor organizations were broken up by police-read workers in Chicago their meetings were broken up by police-men who fired into their crowds. The armed troops rode down the strikers and their leaders were arrested and sent to prison, while the reactionary newspapers cried: "Communism" and "Socialism." But the railroad workers carried on the fight and today railroad labor is the best organized, best disciplined, and today railroad labor is the best organized, best disciplined, and among the most intelligently led in the country, and there seems to be no problem they cannot set down at the table with the railroad executives and solve. While the railroad workers have succeeded, after years of hard fighting, in producing as fine an organization as labor could wish, industry and a large percentage of the employers in industry have kept up the fight against labor's right to organize. And in this enlightened age we have the rugged individualists, like Tom Girdler, fighting the right to organize by employing spies to spy upon the workers and report them for union activities so they may be fired, employing thugs and gunmen armed with tear gas and machine guns to oppose the right of workers to organize. Fifty percent of all the strikes in this country are caused by the opposition of employers to the right of the workers to organize.

while the right to organize and bargain collectively is pretty generally recognized today, and paid lip service by the "Tom Girdlers" and the reactionary statesmen who do his bidding, it must be remembered that it was only by the continued fight of organized labor that this right was recognized at all. Spied upon by their fellow workmen, discharged and locked out for belonging to a union, slugged and shot by thugs, ridden down by troops, and denounced as un-American and Communists has been the unhappy lot of organized workers in the days gone by. Such tactics are still in use, as evidenced by the story told by the investigation being conducted by Senator La Follette's committee.

With the coming of the present administration to Washington the attitude of Government toward the worker changed. The right to organize and bargain collectively was not only recognized as a

the attitude of Government toward the worker changed. The right to organize and bargain collectively was not only recognized as a right, but that right was protected by law. The Wagner Act not only recognized the right of labor to organize, but it outlawed certain unfair labor practices that had heretofore been used effectively by the employers in defeating organization. Upon its passage the Wagner Act was denounced by the employers and the Liberty League lawyers. Fifty-nine of those Liberty League lawyers signed an opinion to the effect that the Wagner Labor Relations Act was unconstitutional and advised their clients, the employers of labor, to disobey the law. Everyone had declared it unconstitutional, except the Supreme Court, which had the final right to pass upon its constitutionality. For 2 years this law was fiaunted by the employers, and by the injunctions they obtained its operations were suspended for 2 years. For 2 years business had flaunted the law and refused to obey. Finally, after a reversal of form, after a complete about face, the Supreme Court declared the act constitutional; and no sooner was this law held to be valid than the tutional; and no sooner was this law held to be valid than the representatives of big business began to cry for its repeal, or its amendment, before the law had even had a chance to work. Mind

you, no one today, not even Tom Girdler, denies the right of labor to organize and bargain collectively. But the significant fact is that every law that is enacted for the purpose of protecting this

that every law that is enacted for the purpose of protecting this right is attacked by certain reactionary employers of labor, who attempt to nullify the force of its provisions.

I know, and you know, that the great majority of employers of labor in this country are not only willing to recognize the right of labor to organize and bargain collectively, but they are willing that this right shall be protected by law. In other words, the great majority of the employers of labor today are enlightened and approve of the objectives of organized labor. It is not for them that laws are written. You do not need laws for the great bulk of employers of labor in this country. Laws are needed to take care of the Tom Girdlers, for it must be remembered that it is written in the Bible itself that the law was not intended for the honest man. That is to say that the honest man, and that includes the overwhelming majority of the employers of labor, doesn't need any law to keep him from taking advantage of the workers. It's that small minority of chiseling Tom Girdlers that makes it necessary to have protective measures enacted into law.

If there are needed changes in the Wagner law, which has been

to have protective measures enacted into law.

If there are needed changes in the Wagner law, which has been called by labor leaders, the Magna Carta of Labor, let them come from the friends of labor. For my part, I will look with suspicion upon any proposals sponsored by the reactionary representatives of such labor-baiting organizations as the National Manufacturers' Association, and the reactionary statesmen who do their bidding. As far as I am concerned, if the Wagner law is to be amended, no Tory Senator will dictate the amendment. The Wagner Act is here to stay, and labor and its friends will resist to the last ditch the efforts of reactionary labor-baiting organizations and reactionary statesmen in their efforts to wreck this charter of free workers. Labor will no longer be satisfied with lip service to its right to organize and bargain collectively. It will insist that this right be preserved and protected. It will insist that the right of the workers to bargain collectively is as essential to labor as the same right is to the employer. Since the enlightened employers of labor, and that includes the great majority of businessmen, accept the principle of collective barmajority of businessmen, accept the principle of collective bar-gaining, and the right of workers to organize, we may expect to see disappear more than 50 percent of all of the causes of strikes. Opposition to the right to organize caused 50 percent of all strikes.

Opposition to the right to organize caused 50 percent of all strikes. The principle which the Wagner Act embodies is sound. It is accepted by worker and employer as sound. The law must be administered to carry out its laudable purpose. If it is not being so administered, steps must be and will be taken to correct any errors along that line. We seek justice to the workers by this act, and not injustice to employers. But, in the administration of this law, it must be kept in mind that it is the worker who is to be protected from the unfair practices of certain employers. Since the Wagner Act was held to be constitutional and began to function, labor disputes and strikes have decreased by 75 percent. No wonder intelligent businessmen, who want to be fair with their

No wonder intelligent businessmen, who want to be fair with their workers, welcome the enforcement of the Wagner Act and the guaranty it carries to workers of the right to organize and bargain collectively by representatives of their own choosing, just as the corporations do.

It seems to me that it is a sign that promises well for future labor relations when we note that down in the hills of bloody Harian County, Ky., where labor's right to organize has been more cruelly and brutally resisted than anywhere in the country, the operators of the coal mines and the representatives of the miners recently sat down together and entered into an agreement which everyone hopes will bring peace to bloody Harlan. If this can be done in Harlan County, it can be done anywhere. Let us hope and pray that the example of Harlan County may be followed elsewhere in the land.

I have heard it said, and so have you, that businessmen would be glad to bargain with the unions, but they are not responsible. That, it seems to me, is an excuse that does not excuse. What do they mean by being responsible? Do they mean, can a union be sued like a corporation? The answer is yes. Ask the United Mine Workers and the Bedford Stone Cutters. Of course, they can be sued. That has been the law since Chief Justice Taft wrote the opinion in the Coronado Mining case, and it is now carried into the new Federal cutter. rules of civil procedure, and is the law in every Federal court in the United States today.

When Lincoln emancipated the Negroes he did not abolish slavery. All over this country, in sweatshops in the North, and mills and factories in the South, slave wages have been and are being paid. For years we have talked about protecting American labor from the cheen labor of foreign countries. I believe in that labor from the cheap labor of foreign countries. I believe in that, and so does organized labor, but organized labor looked about it and and so does organized labor, but organized labor looked about it and saw that we were at the same time importing that cheap labor here and maintaining sweatshops and slavery economy within our own borders. They sought to stop, and did stop the importation of cheap labor, and then they turned their attention to the exploitation of labor by the sweatshop slavery economy that prevailed throughout the Nation. Let me give you an example of what this slavery economy means to the manufacturer who wants to be fair with his workers: I had a small furniture manufacturer here in Indiana tell me that he was paying the spray-gun operators, spraying the varnish on furniture, a minimum of 40 cents per hour, 8 hours per day, while his competitor in a southern State paid 8 hours per day, while his competitor in a southern State paid Negro women in his factory doing the same work, 6 cents an hour, for 10 hours.

Lincoln was right, this country cannot survive half slave and Lincoln was right, this country cannot survive half slave and half free. I do not mean to intimate that this disparity of wage scales exists only between the North and the South. I know, and you know, that sweatshops exist and child labor is exploited in the North. It was because of this that organized labor demanded that industry in the Nation must be on a parity as to wages, with some differentials for natural advantages, and workers everywhere should be entitled to a decent wage. This evil was so apparent that we were compelled in the last session of Congress to pass a wage and hour bill to drive out child abor slave and sweatshop labor. hour bill, to drive out child labor, slave and sweatshop labor,

within the borders of our own country.

Not only is it the fair and humane thing to do, but it is necessary in order to spread employment and provide more jobs for the worktrs who are being displaced by the technological advancement and the employment of machinery. Instead of business putting men to work, it has been putting machines to work and men out of work. Industrial organization has developed so that speed on the production line calls for young men, and a man over 45 years of age finds it almost impossible to get a job. Our modern machinery of business not only displaces workers but it scraps them at an early age, and that, taken with the disappearance of the frontier, accounts for the unemployment in the country today. The problem of the unemployed we will have until we can find some way to provide for the distribution of the goods and produce we can produce, and which we need but haven't the money to buy. That is our problem. It is one of distribution. We have the resources and the manpower to produce the wealth, but we cannot distribute the wealth we produce. The wealth of the Nation cannot be distributed without a greater distribution of the wherewithal to acquire that wealth, namely, the money, and when we look about us we discover the inequitable distribution of the wherewithal to acquire that wealth, namely, the Government of several billions of dollars for recovery and relief. What was the result? We found that in the last few years by the Government of several billions of dollars for recovery and relief. What was the result? We found that in the end the bulk of this money had gotten back into the pockets of the people who already had money, while the masses of the people received a bare subsistence in the meantime. In other words, the farmer, by his benefit payments, pulled the International Harvester Co. from a loss of \$7,582,879 in 1932 to a profit of \$29,760,372 in 1936. Today a farmer pays almost twice as much for a binder as he paid in 1914. By the expenditure of the money for relief and re within the borders of our own country.

Not only is it the fair and humane thing to do, but it is necessary

were increased largely, and the salaries of executive omcers increased enormously.

By these practices the great monopolistic corporations of the country have taken too much from the consumer and laborer to pay to capital and management. Ways and means must be found to provide a more equitable distribution of the wealth of the Nation. We all know that we cannot go on spending Government money by the faithful to require or more than the salaries of executive to the salaries of executive control of the salaries of executive or provide and the salaries of executive control of the salaries of executive or provide and the salaries or provide and t we all know that we cannot go on spending Government money indefinitely to provide employment, but we are not going to stand by and permit good American citizens to starve while others loll in the lap of luxury. Relief expenditures will go on until business can take on the load of employing more men and sharing more equitably with them the profits from the wealth they jointly

We must not face with too much optimism the future unemployment situation. With the frontier gone and efficiency in production, both in the factory and on the farm, increasing yearly, we must expect millions of unemployed. Get this picture: In all manufacturing industries combined the amount produced by each hour of labor in 1934 was 25 percent greater than in 1929. What manufacturing industries combined the amount produced by each hour of labor in 1934 was 25 percent greater than in 1929. What does that mean? It means if our population and condition had remained the same, one-fourth of all the men in industry would have been without jobs, displaced by improved machinery. In a rough way that is the picture. In 5 years of the depression, labor per hour produced 25 percent more than in the previous years. So the depression feeds upon itself. The same thing is true in agriculture. The output per worker in agriculture has increased 41 percent between 1910 and 1930, and that, too, in the face of the fact that the farmer has not used but a small part of the labor-scaping devices explicitle for use on the farm.

saving devices available for use on the farm.

The rapid increase in labor productivity in agriculture affects opportunities for employment of city workers on the farms. On

opportunities for employment of city workers on the farms. On the other hand, rapid increase in labor productivity in the factory affects opportunities for employment of farm boys in the factories. Employment depends, therefore, on an expanding volume of consumption of basic agricultural and industrial products which calls for a constantly increasing standard of living. This means the rules of the game must be changed. Monopoly that maintains extortionate prices must be destroyed. More consideration must be given to how many human beings can be gainfully employed. There has been overemphasis on dividends and salaries to management. This will illustrate what I mean; In 1929 there were 36,000 families in the country that had as much income as to management. This will illustrate what I mean: In 1929 there were 36,000 families in the country that had as much income as 11,000,000 families. The 36,000 had purchasing power but not consuming power. The 11,000,000 had consuming power but not the purchasing power. We must have purchasing power widely distributed if we are to distribute the wealth we can produce and keep labor in factory and on the farm employed.

Confronted as we are with these perplexing problems it behoves labor and employer to counsel in fairness together. More important still is the necessity for labor to bring peace in its own household. You cannot win your objectives by dividing your forces. By such tactics you confuse your friends and encourage your enemies.

On this Labor Day let labor and its friends resolve to work for better relations among labor and with your employers, but never sacrificing or yielding your fundamental rights to live by your labor at a fair wage that will entitle you to have the comforts of life, some of its luxuries, a home for your family, education for your children, and security for your old age. To these things labor is entitled—less it will not accept.

There'll Be No War

EXTENSION OF REMARKS

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES Monday, May 1, 1939

EDITORIAL FROM WASHINGTON DAILY NEWS OF APRIL 12, 1939

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Washington Daily News of Wednesday, April 12, 1939, entitled "There'll Be No War."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of April 12, 1939] "THERE'LL BE NO WAR * * *"-BEAVERBROOK

"THERE'LL BE NO WAR * *"—BEAVERBROOK

The British are famed for their bulldoggedness. Prime Minister Chamberlain, we are told, is now seeking a "last-minute" understanding with Premier Mussolini in the hope of averting war.

Accordingly, Mr. Chamberlain doubtless is now in for a new barrage of sarcasm and derision from various parts of the world, including some from the United States. For among us there are those who, though safely remote from Europe's potential battlefields, never tire of jeering at Britain and France for not rushing into war against Germany and Italy.

We do not share in this sport. We refuse to accept the defeatist view that war is inevitable. Patently, the situation is critical, but we cling to the hope that an honorable understanding can still be reached—an understanding which will leave all concerned free, the democracies and the Fascists alike, to live their own lives and be governed according to their own desires.

We hope Mr. Chamberlain can and will find a way out, for many reasons. One is that war would leave our world a shambles

we nope Mr. Chamberiain can and will find a way out, for many reasons. One is that war would leave our world a shambles in which our own democracy might be trampled along with the rest. Another is that with peace there ought to come a new surge of world prosperity, which of itself would do more to advance democracy and retard totalitarianism, both Red and Fascist alike, than any other one thing we could mention. Compared with these the rest of the ressons are comparatively unimprotent.

allke, than any other one thing we could mention. Compared with these, the rest of the reasons are comparatively unimportant.

"With peace," Lord Beaverbrook told Roy W. Howard in Paris, "there must be a wave of prosperity." Of course, he went on, that prosperity would be due in some measure to Government expenditure exceeding by a good, big sum the collections from taxation. Hence, if you wish, "you may call it false prosperity." Nevertheless, "the people will all have more money to spend," and that should make for better times.

Thus we find Britain's leaders, right up under the guns, talking and working for peace and prosperity while we, over here, are letting the jitters get us down. Whether there's going to be an early war we frankly do not know. But it is certainly worth noting that Lord Beaverbrook—veteran of the World War and one of the best posted men in Europe—hopefully and categorically gave it as his opinion that "there isn't going to be any" just now, while we, on this side of the Atlantic, are acting as if the day of judgment were already upon us. already upon us.

already upon us.

Furthermore, the Canadian-born publisher-peer indicated that in the event of war he and other British leaders are not expecting America to cast her lot with the European democracies.

For our own good, we should try to be as plucky and as optimistic "over here" as the dangerously exposed Britons are "over there." This does not mean that we should blind ourselves to the realities. It does mean, however, that neither should we spend our time in a torture chamber of fear—fear of tomorrow's terrors which may never come.

During the World War the British had a slogan: "Business as burning the world war the British had a slogan: Business as usual." They are endeavoring to live up to it now, though the empire's capital could be reached by Hitler's bombers in 90 minutes. Surely, with 3,000 miles of salt water between us and Europe, we ought to do as much.

So, let's get on with the job.

Imports and Exports

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

Mr. REED of New York. Mr. Speaker, the New Deal administration, after lowering our tariff rates by means of trade agreements, has made the important discovery "that nations of the world that pay better wages and work shorter hours immediately are faced, because of the barter system, with loss of trade because aggressors can and do work their people longer hours and pay lower wages." It is a pity that this obvious truth did not dawn upon President Roosevelt before he insisted upon opening our market to the products of the world to the injury and, in many cases, the ruin of our domestic market for our own products. I submit two tables to show how rapidly foreign nations are taking advantage of the Roosevelt good-neighbor policy.

Imports of farm products

Vice President Garner

EXTENSION OF REMARKS

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES Monday, May 1, 1939

ARTICLE FROM COUNTRY GENTLEMAN

Mr. SHEPPARD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Recorp an article published in the May 1939 number of Country Gentleman entitled "What Texans Call a Man." The article gives a most interesting and vivid description of the personal traits of our beloved Vice President.

There being no objection, the article was ordered to be

printed in the RECORD, as follows:

[From the Country Gentleman for May 1939] WHAT TEXANS CALL A MAN (By E. H. Taylor)

All polls of public opinion show John Nance Garner ranking highest in public favor after President Roosevelt. In places where people happen to meet and talk, the interest always steps up when his name is mentioned. Stories about him, mostly apocry-

phal, are growing in number.

The silence that he has maintained since March 4, 1933, is a matter of much curiosity and discussion. There is always news in the simple living habits he and Mrs. Garner follow in Washington, a city noted for its social life and its late hours of retiring and getting up. People wonder why, as soon as his official duties permit, he hurries back to Uvalde, Tex., population 5,436, and stays there until Congress convenes again.

Gossip credits him with occasional remarks that are flavored with the picturesque language and plain sense of those who live close to earthy realities. These are never personally verified or denied. But the public has come to identify him with a certain candor and saltiness of expression. Another strange fact whets the interest. Although no opinions of his have been heard over

the interest. Although no opinions of his have been heard over the radio or read in the newspapers for 6 years, his reputation for good judgment and his influence have steadily risen.

This is all the more remarkable because a Vice President is usually the country's No. 1 forgotten man. It demonstrates pretty conclusively that JOHN NANCE GARNER is a distinct personality, with qualities and characteristics that defy obscurity.

Anybody who is around him a while will agree with that all the way and be willing to go some distance further. One reason is that JACK GARNER is just naturally himself, with no frills on. You don't have to remove any rind to get at the meat of what he says. For example, the reason why he goes back to Uvalde just as soon as he can is very simply told. While he enjoys it all, he gets tired of the press of people and things that crowd official life. Besides, he likes it back home. it back home.

the public is familiar with pictures of the stocky man, with the magnitudinous set of bushy white eyebrows, who presides over the dignified Senate. It has seen other pictures of him, as a jovial figure at the Jackson Day dinners, or in white tie, tailed coat, and the rest of the formal attire when he and Mrs. Garner are entertained by the President and Mrs. Roosevelt and when they entertained by the President and Mrs. Roosevelt and when they entertained by the President and First Lady once a year.

Those are not the pictures nor the type of Garner "full dress" with which Uvalde folks are familiar. They know the same man but in a battered cowman's hat, a shirt as often without a tie as with one and a baggy-kneed pair of old pants. A man who knows and calls them all by their first names and gets the same in return. And, as Paul I. Wellman wrote in the Kansas City Star after visiting Uvalde: "John Nance Garner may be the Vice President of the United States to the rest of the world, but to a group of intimates in Uvalde he is any one of a number of gleeful, disrespectful, unprintable but endearing epithets couched in the rich respectful, unprintable but endearing epithets couched in the rich vernacular of the Southwest."

vernacular of the Southwest."

They are his fishing and hunting cronies. When he gets back home, 4 or 5 days of resting and "puttering around" usually follow; and then one of them hears the announcement, "It's about time to go fishing." Four in particular are chosen companions: Ross Brumfield, who has a garage; Ben Franklin, another garageman; Mon Fenley, a well driller; and "Whit" Whittington, a carpenter, "I like to fish because I can relax and get the quiet I want," explains the Vice President. "Maybe it's just sitting on the bank or fishing out of the boat; either way I get what I want, which is quiet as much as fish. And then there are other things I like about it."

Undoubtedly among those other things is the well-thing.

Undoubtedly among those other things is the unhobbled language and company of men who will "cuss him right back," with the same affectionate grin. And somewhere among those other

things is the chance to cook. For the Vice President is reputed to

things is the chance to cook. For the Vice President is reputed to do most of the cooking on these trips. He is no mere skillet-and-coffeepot cook, either, but fixes up and bakes his own mixture of bread and is an expert at broiling steaks or preparing a stew.

The sort of deference he receives from these intimates of the fishing and hunting trips in indicated by a story the Vice President, himself, tells. He and "Whit" Whittington had been in the habit of getting their live bait together. But he got tired of wading around and seining for minnows. So he suggested that he get a Mexican to handle his end of the job, remarking that the Mexican probably could do it as well.

"Yes; and a damned sight better," was "Whit's" reply.

probably could do it as well.

"Yes; and a damned sight better," was "Whit's" reply.
Fishing trips mean not just 1 day's outing, usually, but a camping trip of several days. Nothing is fancy about the camping outfit except the boat. It consists of a car of 1930 vintage, a rather ancient trailer, and a tent taken along for insurance against rain. The boat, though, is a real humdinger, and there are several stories about it. This is the Vice President's:

"My son, Tully, sent up to Maine and got it. Paid \$85 for it. Like a lot of young folks, money didn't mean as much to him as it does to some of us who've had to grub it out. A boat like that would be too much of an extravagance for me. But when Tully left home I just naturally fell heir to it and, anyway, I didn't like to see a boat that cost that much lying around and not being used."

being used."

Mrs. Garner's version is different.

"That is the story Mr. Garner always tells," she said. "Why,
Tully hadn't had the boat but 2 days when Mr. Garner and Ross
Brumfield loaded it onto their car and they have kept it ever

The Vice President's hunting companions say that he is an excel-The Vice President's hunting companions say that he is an excellent shot, that if there are any deer or wild turkey around he is pretty sure to be represented in the bag. But, they add, it isn't the hunting that he seems to enjoy so much as just "gettin' out." Not many know that back of his love for the Uvalde country and the outdoor life it provides him is the story of a young man restored to health. In his early 20's and just after he had finished reading law, his doctor told him that he had tubercular tendencies and would have to go to a drier climate if he expected to live. That was how he came to Uvalde.

"I wouldn't have given six-bits for the whole place when I went."

That was how he came to Uvalde.

"I wouldn't have given six-bits for the whole place when I went there," he remarked. "And now I can't get back fast enough."

Practicing law in those days in a still little-settled country meant such things as riding horseback 87 miles to Rock Springs. It meant sleeping outdoors, for the trip took 2 days. The Vice President still likes to "curl up under a tree" when out fishing and the night is clear. The outdoor life has paid huge dividends. A good deal more than the cowman's hat he invariably wears suggests the rawhide fiber of the range. His legs are hard and strong and his hunting companions are willing to bet that he can walk an uninitiated visitor into the ground. Two days before he returned to Washington last winter he walked 8 miles over typical ranch country.

"It isn't so much the exercise that I enjoy as seeing things, such as armadillos, chaparral hens, and wild turkeys," he explained. "I like to sit down on a log and rest a while about every half mile, but I couldn't find a doggone log on this whole ranch. I told the man who owns it, 'You've got one of the best huntin' places in the State of Texas and one of the poorest to set down in.'"

JOHN GARNER has the feeling for land of men who have always JOHN GARNER has the feeling for land of men who have always lived close to it. He likes elbowroom, too. The Garner home at Uvalde occupies 8 acres, with the house shaded by fine old live-oak trees. There is another 80-acre place a quarter of a mile from town with a good bearing pecan orchard on it. Last year he bought two pleces of range land, one 14,000 and the other 11,000 acres. No doubt many people who read about it wondered at the reasons.

11,000 acres. No doubt many people who read about it wondered at the reasons.

"A man ought to have his eggs in more than one basket if he can," is his explanation. "I wanted to distribute my operations and the risks. No one can know for sure in this world what will happen. But land is permanent. It stays there if you know how to take care of it, no matter what changes there are."

His love for the kind of life Uvalde affords him is as real as the man himself. Few know it, but two Presidents have offered him lifetime lobs on the bench.

lifetime jobs on the bench.

"I suppose every lawyer looks forward to a judgeship," he said, "and I'm no different in that respect. But it would have meant pulling up stakes and having to live in a city, and I figured it just wasn't worth that to me."

Some years ago the citizens of a large Texas city offered to present

Some years ago the citizens of a large Texas city offered to present him and Mrs. Garner with a fine home if he would go there to live and represent that district in Congress. The offer met the same kind of response as those made by the two Presidents.

He not only likes country life but a country district also. When he was in the House, one of the congressional redistricting plans would have divided up his old district and given him a good-sized city constituency. He fought against it like an unbusted bronco and finally got his way.

A PREMIUM ON COMMON SENSE

"I was honest about it," he confesses. "I told those fellows, "There isn't a danged one of you wants to stay in Congress as bad as I do. If I can have the same kind of folks in my district as I have now, I can keep on coming back.' And I did until they stuck me with this job. For 12 years I never did a lick of campaigning, even to writing a letter or personally asking anyone to vote for me. The best kind of a district a man can have is one made up mostly of country folks. If they come to believe that he is honest and dependable and is trying his best to serve their interests and the Nation's, they will stick by him. They're pretty good judges of character and have a habit of using common sense."

The high store the Vice President sets on this last quality is well known. An observation regarding it came out during a discussion of a book he had been reading, Hugh Marshall Fraser's Democracy in the Making.

"Those earlier Americans didn't know as much as we do now but they were helped out by having a lot of common sense," he said. Why isn't it so prevalent now? "Becoming too technically educated" and "being in too much of a hurry to take time for some hard thinking" are two of his explanations.

Conditions and events have swung over a wide arc since he entered the House in 1903. But the caliber of Congress, he feels, remains consistently high.

"Some have come her who lacked in qualifications and come have

remains consistently high.

"Some have come here who lacked in qualifications, and some by means that were not justifiable," he remarked. "But men do not stay long in Congress unless they have some particular quality that stay long in Congress unless they have some particular quality that fits them to be there. Character, ability to render service, being the kind of man who can be depended upon—all of these count. If a man lacks these things he generally doesn't stay long."

As a Member of the House, minority leader, Speaker of the House, and Vice President, John Nance Garner has had an unusual opportunity to observe the relative merits of men in public life. What is the best equipment for public service?

No immediate comment was forthcoming. The man with the prodigious white eyebrows instead walked back and forth across the big office a couple of times. The answer, though, was worth waiting for well worth keeping on one of the open shelves of a

waiting for, well worth keeping on one of the open shelves of a

person's memory.

"The art of handling men is one of the greatest gifts of statesmanship, one of the most important assets of a public man," he said slowly. "It consists of holding men to you by winning their respect and affection. Then if, in addition, a man has ability he becomes a very strong leader."

He paused for a moment, then went on.

"Nature has something to do with it, of course. Just as a beef animal may have some outstanding characteristics that others of "Nature has something to do with it, of course. Just as a beef animal may have some outstanding characteristics that others of the same breeding will not; or as a particular race horse will have both speed and staying qualities, so some men will have the natural qualities that fit them for public leadership. These can be brought out, developed, and accelerated by use and experience. Our elective system, with its local and State offices, its State and National legislative bodies, provides an excellent training school as well as the machinery for selecting the capable from the other kind as they prove themselves. But, of course, the voters have to do their part."

One does not have to talk with many Members of the Senate or veterans in the House to hear mentioned, in reference to Jack Garner himself, some of the very qualities of which he spoke. As Par Harrison said: "If anyone ever had the respect and affection of all 96 Senators, he has; no matter what their politics may be." One of the Republicans over in the House, whose service antedates 1932, recalled: "Jack was certainly a gadfly to us when he was minority leader. We never knew what stratagem he would resort to because he knew them all. But if he ever gave us his word, there was no further worry about what he would do."

When this last remark was repeated to the Vice President he chuckled and said: "Well, my daddy told me, 'Son, always tell the truth and be a gentleman.' I don't know about the gentleman part, but I've always tried to keep the other. If I give you my word and don't keep it, I think you'll be the first one ever to have that happen to him. But I don't go around giving it too freely."

ELOQUENT SILENCE

Perhaps it is the sum of all these things, plus the rare personality that he is, which accounts for the influence attributed to John Nance Garner. Whether he possesses it or how he uses it, no one will learn from him. But here and there something can be picked up that may cast some light on the matter.

"One reason why he gets along so well with Members of the Senate is because he never gives them original advice," remarked one Senator. "He may invite them over to his office or wait until they drop in. Then, in the talk that follows, the subject he is interested in usually comes up and he has a chance to offer his opinion. And when he does, so far as my experience goes, he talks sense."

What John Nance Garner's opinions are upon current political issues, events, or personalities are kept strictly within official confines. This policy has occasioned a vast and varied lot of conjecture. It has given rise to many comments such as this one not long ago in an Iowa weekly paper: "The most eloquent note in the country today is the silence of John Garner." Numerous explanations have been suggested, but the reason has remained one of the country's foremost unsolved puzzles.

"I don't wonder that people find it hard to account for," said the Vice President, and the look of familiar Garner humor appeared. "Six or eight years ago there wasn't a more vociferous cuss in the whole country than I was. Why I was holding press

conferences twice a week and carrying on about Republican mis-management and the combination of Morgan, Mellon, and Mills— sometimes throwing in Mammon for good measure."

A MYSTERY SOLVED

"But someone had to do it. We didn't have much of an organiza-tion then and no one in particular to speak for the party. So I took over the job and used whatever ammunition I could find handy. over the job and used whatever ammunition I could find handy. Maybe all that talking did some good, but it sure didn't make me popular with some folks. You remember, after the nomination, how many good people fairly shuddered at the thought of anything happening to Franklin Roosevelt and having that 'wild man from Texas' take his place.

"Now, look what keeping your mouth shut does for a fellow's reputation. Nobody any longer thinks that I've got horns and a forked tail. I'm getting credit for a lot of respectable things now, whether I deserve it or not. Maybe there's something to that old saying that 'silence is a virtue of the wise.'"

The real explanation of his silence goes back to an occasion after the election of 1932. He was asked by the newly elected President

the election of 1932. He was asked by the newly elected President to come up to see him at the Roosevelt home. During their conferto come up to see him at the Roosevelt home. During their conference Mr. Roosevelt remarked that he had not been in a position to keep close to affairs in Washington in the 12 years since he had been Assistant Secretary of the Navy. The Vice President, he said, could be of help to him under the circumstances. He said he would want Mr. Garner to sit in the Cabinet meetings and be prepared, then and at other times, to give the President the benefit of his judgment and experience in legislative matters.

JOHN GARNER'S answer was that he was willing to carry the skillet and preform early of the precessory drudgery while they were in

JOHN GARNER'S answer was that he was willing to carry the skillet and perform any of the necessary drudgery while they were in camp together in Washington. He would give his opinion and advice whenever it was asked for, and it would always be the truth as he was able to see it. But if the arrangement was to work out as it should it meant he would have to get into the background and stay there. He would have to keep his mouth shut publicly, make no speeches, and give no interviews. Although he was then national committeeman from Texas, he would ask for no appointments. There was a solid delegation of good Democrats from Texas, anyway, and they could attend to such business. But if his opinion were asked on appointments he would give it as on the other matters. the other matters.

COUNTRY-TOWN HOURS

Such is the explanation of his silence. He has always given "the Such is the explanation of his silence. He has always given "the boss" his honest opinion whenever he was asked for it. He has had nothing to say publicly for the record of any political significance, and he has made no speeches. Some of the highest officials in the party have asked him to do so. He has got up and said some inconsequential things on occasions. But they were not John Garner speeches. As he has often said when he makes a speech, "it has got to have guts in it."

One conspicuous test of the Vice President's rule of no speech making was at the recent commemoration of the one hundred

making was at the recent commemoration of the one hundred and fiftieth anniversary of Congress. The committee on arrange-ments asked him to deliver an address along with the President, the Chief Justice, and the Speaker of the House. But he refused to do so even in honor of the body that he had so long loved and

served in.

No one recalls hearing the Vice President ever comment on the promise he made or the subsequent consequences of it further than to say, "I think I had a flash of intuition."

than to say, "I think I had a flash of intuition."

The scrupulous living and working habits he imposes upon himself have acted as a buffer against invitations to make speeches. Weekday evenings are usually spent in reading, finishing up with a couple of games of rummy with Mrs. Garner. He gets 8 or 9 hours of sleep regularly, retiring at what is just the shank of the evening for many Washingtonians. And he follows country-town hours in getting up. At 7: 15 each morning the elevator is waiting at the seventh floor of the hotel where they live to take Mr. and Mrs. Garner down to breakfast. Mrs. Garner down to breakfast.

INSEPARABLE TIES

"The elevator boy is so used to our being prompt," relates Mrs. Garner, "that one morning recently he said to us, 'You're 2 minutes late.' And sure enough we were. I had taken time to do some things I had neglected the evening before, but I never dreamed he would notice our being only 2 minutes late."

One gets from Mrs. Garner the information that the Vice Presi-

dent is a very temperate eater also, with a liking for a glass or two of milk at each meal. "Of course, I don't know what he eats when he's out camping down home," she hastens to add.

"Down home" means as much to Mrs. Garner as it does to her husband. "I'm really happiest when we get back there and I can enjoy our own house and the flowers and the shade of the live-oak trees in the yard," she tells you.

The inseparable closeness of the ties between John and Ettle Rheiner Garner has long ceased to be a matter of Washington com-

ment. She has had charge of his office ever since he first came to Washington as a juvenile Congressman. The same early hour finds them going to work together every morning.

"I learned stenography as a girl," Mrs. Garner tells the story.

"My brother and I were left orphans. He remained on the ranch

and I went to work in town. Then Mr. Garner and I were married and some years afterward he came to Congress. We had a little money and we didn't know whether he would be reelected. A Conmoney and we didn't know whether he would be reelected. A Congressman was allowed only one clerk then, and so I acted as his secretary, brushing up on the pothooks and loops I had almost forgotten since our marriage. Each term in those earlier years we didn't know whether he would be returned to Washington. So I kept on as his secretary. In time I became used to it and I suppose he came to depend on me. In fact, it got so that I knew his reactions to his mail so well that he only needed to write an indicative sentence on a letter and I could fill out the body of his reply." She smiled and added "even to the cuss words."

THE GARNER WAY

The names of Mr. and Mrs. Garner seldom appear in the society columns. "Although I like people, I really don't care for social activities or formalities," she explained. "So my continuing to help Mr. Garner in his office doesn't mean the sacrifice that some might think. It is his life and I am glad to share it with him."

They pay no attention to "nasty" letters or the derogatory references that are the lot of all people in public life. But Mrs. Garner is still sensitive to them

erences that are the lot of all people in public life. But Mrs. Garner is still sensitive to them.

They have one son and a small granddaughter. Though it goes back some time, a story in relation to the son is worth while telling. He was just finishing college when the United States entered the World War. Congressman John Garner had voted to declare war. On his way home that evening he did some thinking. His vote had meant putting millions of other farmers' sons in uniforms. How about his own boy? By the time he had got to where he lived then his mind was made up. Tully was called in and this was the substance of the conversation that followed: followed:

"Son, how do you feel about this war we declared today?"

"Son, how do you feel about this war we declared today?"

"I want to go, dad."

"Hell, it isn't a matter of wanting to go. You're going. And don't ask me for help of any kind. I might be in a position to give it, and I don't want the temptation."

That is the Garner way. The wheel of personal responsibility turns full circle so far as he is concerned. Perhaps that, better than anything else, explains his keen interest in the present and future of the Democratic Party. For, certainly, after his country and family, the Democratic Party is next in his affections. It as given him many years of honors and trust and places of responsibility. No one believes more intensely than he does in its historic principles and their power for the country's good. Under those circumstances one understands how he feels and what he means when he asks, "Why shouldn't I have something to say about the Democratic Party?"

when he asks, "Why shouldn't I have something to say about the Democratic Party?"

If one should draw a conclusion, wholly unsupported by any statement to that effect, it would be that the post which ranks first in John Garner's heart is Speaker of the House. A regretful note comes into his voice when he recalls that, had not the political fates intervened, he would have occupied it longer than any other man in our history—longer even than his political foeman but boon companion, Nick Longworth, or his old friend, Champ Clark

but boon companion, Nick Longworth, or his old friend, Champ Clark.

"It can be a position of the greatest power and influence, when circumstances and the nature of the man holding combine to make it so," he said. "I have seen a Speaker of the House virtually take a President by the throat—one of the strong Presidents—and make him knuckle down. But it is a power, like all the others under our form of government, that should not be abused but used only for the furtherance of sound legislation."

The Vice President's reading is wide, and he always ships a lot of books home to Uvalde. He likes two things in books he reads. One is plenty of references to show that the writer has delved deeply into the available sources of information. The other is simple language.

deeply into the available sources of information. The other is simple language.

"I never use anything but simple words myself," he remarked, "and there are usually plenty enough of them for you tell what you have to say. When a man is able to think about them in simple terms, some of these large problems may come down to the same size."

But back of his simplicity of language and manner—perhaps

because of it—is a deep capacity of language and mainer—pernaps because of it—is a deep capacity for penetration and analysis. "He is the only man I know of in Washington who can literally figure out a tax bill on his cuff," remarked a member of the Senate Finance Committee. "I have seen him make a very close calculation of the returns from a proposed tax measure when the experts themselves had nothing to go on."

One would like to know more about such matters, as well as

One would like to know more about such matters, as well as numerous other interesting things. But they are outside the limits of a purely personality story.

It was almost time for the Senate to convene. The Rev. ZeBarney T. Phillips, chaplain of the Senate and a handsome figure of a man, came into the office. He put an arm affectionately around the Vice President's shoulder, while he gave his own estimate of him to the visitor. It may not be permissible to quote anything but a chaplain's prayer. But what he said echoed the verdict that Uvalde iolks long ago arrived at: "He is what Texans call a man."

Cape Henry Pilgrimage

EXTENSION OF REMARKS

HON. COLGATE W. DARDEN, JR. OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

ADDRESS BY HON. R. WALTON MOORE, APRIL 30, 1939

Mr. DARDEN. Mr. Speaker, it is with pleasure that I submit for the RECORD the splendid address delivered on yesterday by a distinguished gentleman, a former Member of the House of Representatives, R. Walton Moore, counselor of the Department of State, at Cape Henry, Va., the afternoon of Sunday, April 30, 1939.

seior of the Department of State, at Cape Henry, Va., the afternoon of Sunday, April 30, 1939.

President Roosevelt, whom I have the honor of representing, deeply regrets his inability to be here himself this afternoon. I know how sincere is his regret, because in my contacts with him I have had so much evidence of his keen interest in the history of Virginia, his wide knowledge of conditions in the State, and his concern for the prosperity and happiness of its people.

We are here at Cape Henry commemorating a most significant event. The unfading importance of that event was officially recognized by the Government of the United States last year when legislation was enacted incorporating in the Colonial National Historical Park the plot of ground on which stands the granite cross. The act of Congress refers to the colonists who came here as having founded the first permanent English settlement in America. What a long and brilliant record Virginia has had as being first in so many of the undertakings and achievements that has marked the development and progress of America.

At or near the very spot where we are gathered landed some of those who sailed from England in three small vessels, the Sarah Constant, the Godspeed, and the Discovery, names never to be forgotten. They were under the command of Admiral Newport, and brought to this shore, without counting 40 or 50 hardy sailors, 104 colonists. Here they ended a long, uncomfortable, and perilous voyage, and faced the equally perilous and uncertain task of building a structure of civilization in a wilderness containing not a single white inhabitant. What was back of them they knew; what was ahead of them was wrapped in the future's misty veil.

Some time before the voyagers left England the London company had obtained a royal charter that contemplated the creation of a colony in that extensive part of America called Virginia. When the vessels set sail from England the parent company had selected and commissioned a council to conduct a government. Ways and means

commission. mmission. We now know how elaborate the instructions. They were equivalent to a sort of blueprint of the course the government and the individuals were expected to pursue. But the instructions and the names of the members of the council were secreted in a sealed box.

secreted in a sealed box.

With reference to the character of the adventurers and of the principles of the government they were to found and carry on, I quote the noted New England historian, Channing. He speaks of the early Virginia colonists as "the first heroes of American history." Denying that the Mayflower compact was in any way the constitution of an independent state, Channing says that the Virginia commission and instructions provided "in reality a constitution of government." And commenting on the royal charter issued by James I, from which the project sprang, he has this to say: "It was even more memorable for its constitutional declarations than it was for the assertion of English claim to a share to say: "It was even more memorable for its constitutional declarations than it was for the assertion of English claim to a share of the New World." He cites the declaration that the colonists and their posterity "shall have and enjoy all the liberties, franchises, and immunities within any of our other dominions to all intents and purposes as if they had been abiding and born within our realm of England or any other of our said dominions." And, later, Channing mentions the assembly of 1619, held at Jamestown, as the mother of the American representative legislature

Jamestown, as the mother of the American representative legislature.

The little fleet set sail from Blackwall in East London in the dead of winter—on December 19, 1606. I do not find definite evidence, except for the poet Drayton having addressed an ode to the voyagers, and that the Bishop of London preached a sermon in St. Paul's commemorating their departure, that putting into effect the plan that was to so largely shape the destiny of America and England stirred any great public attention, although it may be assumed that officials of the London company and the relatives and friends of the colonists gathered on the banks of the river Thames to bid them farewell. We cannot fail to remember that in the Tower of London, which overlooks Blackwall Sir Walter Raleigh the Tower of London, which overlooks Blackwall, Sir Walter Raleigh

was then a prisoner; that he had the title of first Governor of Virginia and that the London company took over his conceptions and ideals

There were then no weather prognostications and it could not be anticipated that the vessels would be detained until the beginning of the new year. The detention was caused by a storm that compelled the vessels to take refuge at a fairly protected point called the Downs on the Kentish coast. It is a curious fact as mentioned by an old writer, that at Cape Henry the land shows "white hilly sand like unto the downs."

Many years ago, on a first visit to England, complying with a promise to the Richmond Dispatch (now the Times-Dispatch) to make some investigation and write some articles on Virginia origins, I ignorantly assumed old newspaper files would be available containing the story of the expedition. I discovered, however, on visiting the British Museum, that in that day there were no regular publications resembling modern newspapers that reported current events, and I could not find in any of the irregular and meager publications that had been preserved any notice whatever of the departure of the fleet.

Then the only maps were very crude and imperfect and not

whatever of the departure of the fleet.

Then the only maps were very crude and imperfect and not marked by lanes of travel across the Atlantic, and the instruments of navigation were very primitive. Any method of a vessel ascertaining its longitude was unknown. The fleet by sailing southward added hundreds of miles to a more direct course and encountered violent storms. By the violence of one of these storms the vessels of the fleet temporarily lost touch with each other. How wonderfully striking is the contrast between movement over the Atlantic now and movement over the Atlantic then! Since then the Atlantic has become a well known and exactly mapped ocean; since then the science of meteorology has been developed; since then swift steamers have been largely substituted for slow-moving sealing vessels. And in my own life, in the life of one man, means of communication have come into use that are of utmost value to the mariner—the cable telegraph, the radio, and the transocean telephone. Incidentally it may be mentioned that we are now on the verge of systematic trans-Atlantic aviation service similar to the service in effect across the Pacific between California and the Philippines. I can tell you from my own experience the large Philippines. I can tell you from my own experience the large airplanes that are being used are in their operation and accom-

Philippines. I can tell you from my own experience the large airplanes that are being used are in their operation and accommodations highly satisfactory.

Heading northward the little vessels finally reached the Chesapeake Bay and sighted land here before sunrise the morning of April 26, 1607. That was their first view of their Virginia destination and the accounts written by some of them show how attractive was the prospect that spread out before their gaze. They perhaps began to share the conviction expressed by a writer of that period that Virginia is the goodliest land under the canopy of heaven.

On the date mentioned at least a score of the colonists landed on this shore and went a few miles inland. As they returned they suffered an attack by the Indians in which two were injured, one fatally, which, except for a man dying in the West Indies, was the only death that occurred before the expedition reached Cape Henry. That same evening the sealed box was opened which contained the names of the members of the Virginia council and the instructions that had been prepared for their guidance. One of the colonists who did not go ashore because of being held under arrest on a charge of mutiny was John Smith. Subsequently he was tried at Jamestown and acquitted by a jury—the first jury trial that took place in America. It was an ironical circumstance that Smith, who was held in custody at the time of the landing here, had been named a member of the Virginia council, as was revealed when the box was opened, and that he afterward played such an important and determinative part in the affairs of the new colony.

There is a mass of literature pertaining to the expedition that new colony.

There is a mass of literature pertaining to the expedition that made everlastingly famous Cape Henry, which was named in honor of King James' oldest son. More than one writer has dealt with the question as to what prompted the adventure, and to that question there have been a variety of answers. It is perhaps enough to say that when a world or part of a world is unpeopled by civilized inhabitants it does not in vain beckon adventurers. That there was beyond the ocean a vast area without white men was a fact that stimulated the English spirit in "the spacious days of Queen Elizabeth" and her successor.

That era witnessed such an awakening in England as has hardly before been paralleled in any similar stretch of time. Those who came here, several of them men of prominence, were the contemporaries of Englishmen, whose greatness in nearly every field of thought and activity, which is proof of the extraordinary quickening of the English spirit, will be remembered through the centuries. Among them were great sallors like Sir Francis Drake, who were not only ready but anxious to dare fate on all the seven seas. There is a mass of literature pertaining to the expedition that

were not only ready but anxious to dare fate on all the seven seas. Drake died only about 5 years before the little vessels dropped anchor here. In the field of literature there was Shakespeare, who did not die until 1616. In the field of science and law there was Lord Bacon, who did not die until after the institutions of government, with the first legislature on this continent meeting at Jamestown, were firmly established. In the field of statesmanship there was Burleigh, who largely shaped the policies and activities of the English Government under Queen Elizabeth, who died as late as 1598. The English have always been a daring race, and they were never more daring than in that period when their courage and faith were exemplified by those who came to Cape Henry. They were, of course, not prompted by a merely adventurous spirit. They were convinced that the true interests of their country called for the occupation of the land to which the great Queen had given the name Virginia. They believed that should they be successful, Virginia might furnish the gold and other resources in which England was deficient and that new routes of commerce to the South Sea might be opened up. Furthermore, it was their belief that Virginia might afford an outlet for the surplus population of England. In addition, it was their belief that from Virginia as it developed a curb might be placed on the arrogance of Spain, the most sinister enemy of England, bent on extending its power in the west. They were also impelled by a definite desire to Christianize the savages who were ignorant of the religion which in those days held the undoubting faith of even the most reckless

those days held the undoubting faith of even the most reckless men. There was with them a spirital leader, the Reverend Robert Hunt, who planted the first cross here and who, having the respect and reverence of all, was a shining light to the settlers.

Outstanding among those who arrived here 332 years ago was John Smith. Some critics have endeavored to discredit the veracity of his writings in which are set forth his numberless experiences, but my belief is, and if time permitted this point might be argued at length, that he was not only very able but a man of character, who was incapable of the conscious misrepresentation with which he has been charged. What a remarkable career was his before coming to Virginia! Not satisfied with the quiet of the country life in England, he went to the Continent at the age of 16, the same Ing to Virginia! Not satisfied with the quiet of the country life in England, he went to the Continent at the age of 16, the same age that the later Virginian, George Washington, the greatest of Americans, leaving school began his amazing career. Except for a brief return, Smith remained on the Continent 10 years. In Europe war was not then the exception but nearly constant and universal. Nations, groups, and individuals seemed to regard war as the natural Nations, groups, and individuals seemed to regard war as the natural and inevitable condition. In the latter part of the same century in which the Virginia colonists started from London, Machavelli, the Italian philosopher and statesman, wrote a book in which he expressed the deliberate opinion that war is the only proper business of a ruler. In such a turbulent period no man could be a pacifist, and least of all Smith, whose strength and ardor marked him as a fighter among fighters, prepared to match his courage and skill against whatever enemy he might meet and to endure any adversity. There is no opportunity now to follow the romantic

skill against whatever enemy he might meet and to endure any adversity. There is no opportunity now to follow the romantic career on the Continent of the young Englishman and tell the story of the wars on land and sea in which he took part, of the vicissitudes through which he passed, the suffering he endured as a prisoner, and his narrow escapes from death.

There is time to mention only one of the incidents in which he figured while on the Continent. Participating in the war against the Turks in the Balkan country, which is now the scene of so much trouble and uncertainty, he volunteered to fight in hand-to-hand combat with individual soldiers chosen by the Turkish commander. Smith was the victor in the three duels, and the device on his coat of arms recalls how all of his adversaries succumbed to his valor. That was in Transylvania, then and until 1918 a vice on his coat of arms recalls how all of his adversaries succumbed to his valor. That was in Transylvania, then and until 1918 a part of Hungary, now a part of Rumania. The incident is remembered in that portion of Europe. The Hungarian Minister in Washington has discussed it with me, and recently there has been published in an issue of the National Geographic Magazine an article by an American traveler, whose reference to the incident is illustrated by a picture of the town near which it occurred. It was a prince of Transylvania who awarded Smith his coat of arms. When on that first visit to England of which I have spoken, I went into the St. Sepulchre Church, which is in the heart of London, and stood on the stone in the aisle that covers Smith's grave, I saw there lifted on a rod several feet above the pavement of the aisle the coat of arms showing the three Turks' heads.

When Smith returned to England, still well under 30 years of age, he was not content with an easy and several life in England.

he was not content with an easy and serene life in England. He engaged actively in the Virginia project and was one of those foreengaged actively in the Virginia project and was one of those foremost in raising funds and securing enlistments. Recognition of his unusual qualities and of the value of the services thus rendered led to his name being included among those appointed to compose the Virginia council. I believe he was the youngest of the six members. You know more than I of how in the years after the landing here he was conspicuously and usefully identified with the life of the colony. I think of him now as a man who was not life of the colony. I think of him now as a man who was not willing to pursue beaten paths, but whose originality and wisdom turned him toward new ways. Adopting a now-a-day term, I think of him as a leading liberal in that far distant time when he incurred the hostility of many who did not perceive that liberalism is an essential element of genuine conservatism. If I would, I could not ignore the feet that this year, day, April 20, is the provided in the control of the feet that this year, day, April 20, is the provided in the control of the feet that this year. ignore the fact that this very day, April 30, is the one hundred and fiftieth anniversary of the inauguration of General Washington as the first President of this Republic, which would not have been

as the first President of this Republic, which would not have been established without his leadership as a revolutionary liberal in the struggle for independence and for a popular system of government. Here was the beginning of the life of the Virginia colony, which was to become the most populous and influential of the Thirteen Colonies stretching along the Atlantic coast. When the ties between the Colonies and the mother country weakened, except for Virginia military and political leadership, the whole course of events in America would have been different. Except for that leadership the Colonies that were converted into States loosely held together under the Articles of Confederation might not have adopted a constitution and put in operation a government that is now the most resourceful and powerful in the world.

People viewing present conditions on both sides of the ocean who incline to despair should turn to the history of the generations since the English expedition landed here and realize that at every step there have been tragic occurrences. There have been at every step there have been tragic occurrences. There have been many wars, one of which for 4 years swept Virginia like a devastating fire. There have been problems of enormous magnitude pertaining to our foreign relations and our domestic conditions, some of which seemed almost impossible of solution. It would require hours to even outline the great and manifold difficulties that have had to be overcome. In that connection I think of the remark of one of the Greek philosophers that "difficulties are noble." What he meant is that a noble quality marks the struggle to conquer difficulties as man continually, though sometimes very slowly, advances on the unending road of human progress and improvement.

The colonists that came here were not only daringly courageous

and improvement.

The colonists that came here were not only daringly courageous but they were resolutely hopeful, and it is the spirit of unceasing hope that has inspired the development of Virginia and America. At this hour when such institutions as our own are being discarded by some nations and menaced in other nations, we may repeat the final sentence of James Bryce's great werk on Modern Democracies: "Hope, often disappointed, but always renewed," says Bryce, "is the anchor by which the ship that carries democracy and its fortune will have to ride out the latest storms, as it has ridden out many storms before * * * democracy will never perish until after hope has expired."

I should like to conclude these very imperfect remarks by this observation: There was no woman in the company that reached Cape Henry. But it is due mainly to the earnest efforts of the

observation: There was no woman in the company that reached Cape Henry. But it is due mainly to the earnest efforts of the women of this region—members of the Assembly of Tidewater Virginia Women—that there was enacted the legislation under which the Government of the United States has taken over this First Landing Dune at Cape Henry. All who visit this place as the years pass on will think, as we are now thinking, of an event that will be remembered so long as our Government exists, so long as people thrill to the recollection of a marvelous example of human heroism.

Austin, Tex., Celebrates 100 Years of Liberty and Progress-Pontifical Field Mass Brilliant Event, Drawing More Than 10,000 Worshipers-President Roosevelt Sends Greetings and Urges America in These Critical Times to Turn More Eagerly toward Divine Guidance

EXTENSION OF REMARKS

HON. LYNDON B. JOHNSON OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

Mr. LYNDON B. JOHNSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am happy to have the opportunity to include three documents from the Austin Catholic Centennial Celebration for the city of Austin, Tex., on Sunday, April 23, 1939.

The city of Austin, the capital of the great State and empire of Texas, was founded 100 years ago, in 1839.

In thanksgiving for this century of progress and liberty, 10,000 Texans assembled at House Park for a pontifical field Mass, celebrated by His Excellency Most Reverend Christopher E. Byrne, D. D., LL. D., Bishop of Galveston. The presiding prelate was His Excellency Most Reverend Arthur J. Drossaerts, D. D., LL. D., the archbishop of the venerable see of San Antonio.

Chairman of the clergy committee for this brilliant celebration was my friend, Rev. James J. O'Brien, C. S. C., pastor of St. Mary's Church at Austin.

President Roosevelt sent his greetings to the celebration, and they were read both before the Mass and at the State dinner which followed, and was attended by the Governor and a large delegation of State and city officials and visiting officials from many sections of the country.

PRESIDENT REMINDS NATION OF NEED FOR DIVINE GUIDANCE THE WHITE HOUSE. Washington, April 17, 1939.

Rev. James J. O'BRIEN, C. S. C., Chairman, Clergy Committee, Pontifical Mass, 209 East Tenth Street, Austin, Tex.

DEAR FATHER O'BRIEN: I am grateful to the Austin Catholic Centennial Committee for the kind invitation to attend the celebration which you are planning to carry out in Austin on next Sunday, April 23, and regret exceedingly that circumstances prevent my

acceptance

Our forefathers from earliest times, wherever they settled, made generous provision for the institutions of religion. Due to their faith and vision and sacrifice, we have a rich spiritual heritage out of the past. The world has as great need for religion today as at any time in its history, and celebrations such as yours emphasize the recognition of that need and man's dependence upon the

I trust that the forthcoming celebration will be an inspiring event, and I shall greatly appreciate it if you will extend to all who participate my hearty felicitations and warmest personal

greetings.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

HERITAGE OF THE MISSIONARIES REAPED IN PEACE AND PROGRESS APRIL 14, 1939.

AUSTIN CATHOLIC CENTENNIAL COMMITTEE,
Rev. J. J. O'Brien, Chairman, Clergy Committee.
MY DEAR FRIENDS: It is a source of regret to me that I cannot

be with you on this great occasion in celebration of the first century of liberty and progress for Austin.

Nevertheless, I am with you in spirit, and I wish to join my thoughts with yours as you pay tribute both to our Commonwealth and our capital city.

Surely no celebration of a Texas anniversary would be complete without a fitting remembrance of the magnificent contribution of without a fitting remembrance of the magnificent contribution of the Catholic Church to the pages of its history. By the efforts of the ever-faithful missionary father, the cross has inevitably arisen above the sword of conquest. And by the courage and sacrifice of the men and women who have followed the pioneers, our civiliza-tion has been infused with the truths and precepts of the Redeemer of mankind.

The gem-like missions we cherish are monuments to these souls. The stories of their lives of privation, hardship, and sacrifice are also monuments. But the greatest monuments stand in all of us as individuals and collectively as Texans, reaping today the fruits of their labour.

With greetings and kind remembrances, I am, Sincerely,

LYNDON B. JOHNSON.

SERMON BY THE VERY REVEREND JAMES W. DONAHUE, C. S. C., Ph. D., FORMER SUPERIOR GENERAL, CONGREGATION OF HOLY CROSS

Your excellencies, very reverend and reverend fathers, distinguished guests, my dear brethren, a century ago this month, on the 15th of April 1839, the commission of five named by the Texas Legislature to purchase land for the new capital site of Texas reported to President Mirabeau B. Lamar that they had purchased some 7,000 acres of land on the east bank of the Colorado Rivery, near the footbulk of the Colorado Rivery. rear the foothills of the Colorado Mountains, where a start had previously been made to found the town of Waterloo. President Lamar appointed Edwin Waller as agent to establish and organize the new capital. The site was almost a wilderness, only two families, those of Harrell and Hornsby, residing on the land. There were no settlements north of it on the Colorado, and the nearest communities to the postback to the Postagores. communities to the northeast, on the Brazos, were 60 miles away. San Antonio was 84 miles to the southwest with no settlements between, and there were only a few families on the Colorado between the site and Bastrop.

Waller laid out the land in lots and streets and selected a site of the colorado streets and selected as the colorado selected sele

for public buildings. The lots were then sold at auction and soon the wilderness was the scene of intense activity. Lumber was transported from Bastrop, 35 miles away. Carpenters and laborers

were set to work building a town.

TOWN BECOMES REALITY IN 6 MONTHS' TIME

Within 6 months after the site was selected, the town was a reality. It consisted of a large building for the meetings of Congress, a two-story frame "President's Mansion," a number of board hotels, and log houses for the departments and for residences. These were supplemented by a number of tents and other temporary places of abode. The new capital, in accordance with the law creating it, was named Austin, in honor of Stephen Fuller Austin, "Father of Texas," and on the first Monday in November 1839, the Fourth Congress of the Republic of Texas began its sessions in Austin. By that time it was a community of about fifteen hundred people.

It is a far cry from that little community of fifteen hundred souls dwelling in tents and log huts at the outposts of civilization, in a wilderness of prowling tribes of Indians and thundering herds of buffalo to the fair and friendly city which with her violet crown queens our mighty Commonwealth of Texas today. Rightly do we pause during this centenary to lift our hearts in gratitude to God for a century of favors material and spiritual; for gratitude has ever characterized the noble heart. Rightly do we recall with profoundest gratitude the century of progress, and above all, the century of liberty, civic and religious, with which God has blessed us.

AUSTIN'S "CAUSE OF RIGHT AND LIBERTY" STILL HELD BEFORE WORLD Within 6 months after the site was selected, the town was a

AUSTIN'S "CAUSE OF RIGHT AND LIBERTY" STILL HELD BEFORE WORLD

The lover of liberty looking out upon the world today is appalled as he beholds the most fundamental and inalienable of human rights ignored, abrogated, and trampled upon in nation after nation. As citizens of this great Commonwealth dedicated in the words of

its father Stephen F. Austin, to "The cause of right and liberty," as citizens of the greater Nation "conceived in liberty and dedicated to the cause that all men are created equal, that they are endowed by their Creator with certain malienable rights, that among these are life, liberty, and the pursuit of happiness," and finally as chil-dren of Jesus Christ, God, and man, humanity's Redeemer who saved us not only from the tyranny of Satan but from the tyranny saved us not only from the tyranny of Satan but from the tyranny of pagan government as well, what more appropriate or useful task can we propose to ourselves this morning than to consider the sacred rights we enjoy as well as the equally important fact that liberty as understood in America is the child of Christianity which has ever been her nursing mother and without whose protection she is at the mercy of every Herod that lust for power or other passion may loose upon us.

passion may loose upon us.

This task should appeal in a very special manner to the Catholics of Austin, as they recall that within 6 months of its transfer from Houston to Austin the Legislature of Texas unanimously voted to restore to the "chief pastor of the Catholic Church of Texas the churches of San Fernando, The Alamo, La Purissima Concepcion, San José, San Juan Capistrano, San Francisco de la Espada, Goliad, Victoria, and Refugio, with their lots not to exceed 15 acres," property which had been secularized by the Government of Mexico.

Mexico.

Nor will Texas forget that the Very Reverend Father John Timon, prefect apostolic, who brought to President Lamar the Catholic claim for justice, carried with him from Christ's vicar, Gregory XVI, letters which were practically a recognition of the independence of the Republic of Texas.

When the founders of Texas drew up the constitution of their new nation they attached to it a bill of rights which, in conformity with the American tradition, guaranteed to its citizens all the liberty that anyone can reasonably claim whether as a human being or as a citizen. The natural rights thus guaranteed may be summarized as those of life, liberty, marriage, and property. They included freedom of religious worship, equality before the law, freedom of speech, freedom of the press, freedom of assembly, freedom from unreasonable search and seizure, the right to a speedy and impartial trial and the right to private property.

right to a speedy and impartial trial and the right to private property.

For 100 years we have enjoyed these sacred rights. Let us ask ourselves this morning if we value them aright. Have we not as heirs of the Christian inheritance taken them for granted? Do we understand that it has taken centuries of teaching and struggle for Christianity to establish and safeguard them? Go read the story of the pagan state and understand that before Christ's coming there was no limitation to the power of governments. Pharaoh or Caesar, it made no difference, his power over his subjects whom he owned, body and soul, was unlimited. Writes Lord Action:

Acton:

"The ancients understood the regulation of the power better than the regulation of liberty. They concentrated so many prerogatives in the State as to leave no footing from which a man could deny its jurisdiction. What the slave was in the hands of his master the citizen was in the hands of the community. The most sacred obligations vanished before the public advantage. The passengers existed for the ship." (History of Freedom and Other Essays.)

CHURCH HOLDS LIGHT OF TRUTH TO GUIDE ALL BUILDERS

Well and truly has Francis Leiber written in his work on Civil Liberty and Self Government:

"We observe that the priceless individual worth and value which Christianity gives to each human being by making him an individual responsible being with the highest duties and the highest privileges, together with advancing civilization, developed more and recre the idea of individual rights and the idea of protecting them." more the idea of individual rights and the idea of protecting them" (edition 1859, p. 50).

There is profound truth in S. H. Butcher's observation: "Not until man was rescued out of the kingdom of Nature and taken up into the commonwealth of God and into personal relations with the divine Being could he be more than the member of a social organism or an instrument for attaining the ends of the state. Then only did a universal morality become possible and the idea of personality receive its full content." (Some Aspects of Greek Gonius)

Genius.)

It was Christianity teaching the existence of God, the Creator, Redeemer, and Sanctifier of man, of man destined for supernatural and eternal life; it was Christianity teaching the essential equality and value of all men—black, brown, red, white, and yellow—that laid the foundation and reared the temple of human liberty as we of the western world have known and treasured it for centuries. From Christianity's fundamental teachings followed the existence of that natural law governing man's relations with God and man, that natural law which antedates all human laws and all human society, which gives to human laws their sanction, and which no government may limit or abrogate without committing a crime against God and man. Freedom from the tyrant as from Satan was brought to humanity by Jesus of Nazareth, the eternal Son of God, and Mary's Son.

CHRISTIANITY STORY OF BATTLE FOR RIGHTS

The story of Christianity is largely the story of this battle for human rights against the insolence of power unregulated by

For these rights, Peter and the Apostles laid down their lives. In their defense Christians for 300 years joyfully faced martyrdom and crimsoned with their blood every amphitheater of the

As the centuries unroll we see Peter's successors resisting now Alaric, now Attila, now the Hohenstaufens, even as in our own day and hour the intrepid Pius XI of holy memory fought to his dying breath the mad and monstrous leaders of the renascent pagan states. The Fathers, Ambrose, Augustine, Chrysostom and Gregory and their successors defended those same rights in their writings and in their defense fearlessly resisted tyrants like Theodosius as did Ambrose or for them endured exile as did Chrysostom.

as did Chrysostom.

Liberty as we Americans understand it stems not from the pagan philosophy of Rousseau and the French revolution, but from the ancient English tradition which is only one species of that liberty found in every one of the nations won to the religion of Jesus Christ. That liberty may vary in its details being colored by racial and national differences but as to essentials it is always the same based as it is on the same natural law and the same fundamental philosophy and theology.

Remember that it was Stephen Cardinal Langton, Archbishop of Canterbury, who rode at the head of the English barons to Runnymede to wrench from the resisting hands of the tyrant John that

mede to wrench from the resisting hands of the tyrant John that Magna Carta which is the basic charter of so many of our most sacred liberties. It was Bellarmine and Suarez, the first a saint and doctor of the church, both echoing the teaching of Aquinas and the greatest of the medieval thinkers who consecrated their brilliant intellects to refuting the Stuart heresy of the divine right of kings.

PRECIOUS DOCUMENTS SPEAK LANGUAGE OF CHRISTIANITY

It was from this glorious Catholic tradition that the immortal Edmund Burke, defender of the liberties of our Colonies, as well as Washington, Jefferson, Hamilton, James Wilson, and the other signers of the Declaration of Independence and our Constitution,

signers of the Declaration of Independence and our Constitution, drew their inspiration. Consciously or unconsciously they all speak the language of Christianity. Both the Declaration of Independence and the Constitution of the United States are declarations of principles rooted in the very foundation of Christian civilization. We who gather about this altar today are no strangers in the halls of liberty. We glory in the memory of our martyred ancestors, who in every century since the foundation of Christianity have died that liberty might live. And, which God forbid, should tyranny ever lift its monstrous head in this our land, should it ever dare to touch with sacrilegious hand the rights of our citizens, Catholic or non-Catholic—we march, as Langton did to Runnymede.

to touch with sacrilegious hand the rights of our citizens, Catholic or non-Catholic—we march, as Langton did to Runnymede.

For a century of liberty and progress we thank the Triune God this morning, offering to His adorable Majesty the Lamb that was slain on Calvary's Hill, Him "whom the Father heareth always." We offer our holy mass, not only in thanksgiving but also that God, in His loving kindness, may bless us in the future as in the past. We pray for all the citizens of Texas, regardless of race or creed, recognizing them as our brothers, as children of a common Father whom Jesus Christ purchased at a great price.

We take this happy occasion to offer them in Christian charity the right hand of fellowship. May Austin ever be the friendly city where men and women of every race and creed live united in the

where men and women of every race and creed live united in the bonds of charity. Through the intercession of His immaculate and Virgin Mother, may the spirit of Him who said, "My little children, a new commandment I give you, that you love one another as I have loved you," abide with us forever.

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

ADDRESS BY HON, WILLIAM GEORGE BRUCE AND EDITORIAL COMMENT

Mr. KEEFE. Mr. Speaker, the State of Wisconsin and its port cities on Lakes Michigan and Superior have for more than 20 years fought for deep-water navigation to the markets of the world.

The products of our farms and factories seek only equality in the battle of competition with products from other parts of our Nation. We ask no favor, but we want the removal of artificial discrimination. We want our place in the sun. We are determined to secure it. We seek to injure no one, but we are determined to permit none to injure us.

It has been our settled and official State policy to advocate and work for the completion of the Great Lakes-St. Lawrence seaway. In that fight over the years the Honorable William

George Bruce, of Milwaukee, has been chairman of our Wisconsin Deep Waterway Commission, an official State body. Mr. Bruce is 83 years of age, is president of the Milwaukee Harbor Commission, honorary president of the Great Lakes Harbors Association, and vice president of the National Seaway Council; he is one of our State's leading citizens, and a leader in industrial, civic, and religious activities.

No man can speak with a firmer and more certain voice on the waterway needs of Wisconsin and our port cities than Mr. Bruce. Recently he spoke in Sheboygan and Port Washington, both port cities in my congressional district, in answer to attacks made by sectional interests against the construction of the Great Lakes seaway.

Herewith are excerpts from his talks, together with two editorials from the Sheboygan Press, one following the initial attack on the seaway, and the other following the answer made by Mr. Bruce:

ADDRESS BY HON. WILLIAM GEORGE BRUCE BEFORE THE SHEBOYGAN ROTARY CLUB, SHEBOYGAN, WIS., AND KIWANIS AND ROTARY CLUBS, PORT WASHINGTON, WIS.

The State of Wisconsin has officially and aggressively advocated the construction of the Great Lakes-St. Lawrence seaway for more than 20 years. Every Governor and every legislature and all political parties have during that time joined with municipal naviga-tion, and business leaders to obtain deep-water navigation to the markets of the world so badly needed by the products of our farms and factories.

That the policy of the State of Wisconsin over the past 20

years will continue to be our policy until we attain success is clearly and definitely demonstrated by the fact that in this very session of our legislature a memorial was passed after committee study asking continued negotiation by the President and Federal officials to the end that our present isolation may be relieved as quickly as possible.

officials to the end that our present isolated his acquickly as possible.

Why does Wisconsin want deep-water navigation? Why do other Great Lakes States want deep-water navigation? Why have leaders of municipal, agricultural, and industrial groups fought for years for the completion of what is the greatest project now before this Nation?

SEAWAY IS NATURE'S GIFT

We want freedom and parity to the markets of the world. We we want freedom and parity to the markets of the world. We want equity for our farms and factories; we want employment opportunities for our working people. These are represented in the construction of the Great Lakes-St. Lawrence seaway and we would be recreant to the trust we owe future generations if we failed to fight to develop what is admitted to be the greatest inland ocean in the world.

inland ocean in the world.

Deep-water navigation is now available over 90 percent of the distance from the head-of-the-lakes to the mouth of the St. Lawrence. Nature gave us this great stretch of water and because of its values in dollars-and-cents savings to the public, it has been developed and deepened over the years. Here on the Great Lakes is the only highly developed industrial civilization in the world at a distance of a thousand miles from ocean depths. This fact—and the added fact that great cities have developed out here—is due solely to the transportation facilities of the Great Lakes.

It is a known and admitted fact that transportation makes cities. Navigable waters makes great cities. Great Lakes water transport is the cheapest transportation in the world. In addition, we have in great numbers the other required factor in that picture, namely, men to capitalize these advantages and make them produce for the national good.

them produce for the national good.

Outside of a very few sectional and selfish interests, the Great Lakes are a unit today just as they have been for more than 20 years. We insist that a great national loss is being incurred by failure to develop the short stretch of the river that needs development. The cost of developing is far less than the loss incurred through neglect. The Great Lakes save more to the national freight bill each year than the total cost to our country for the completion of our seave. completion of our seaway.

ENCIRCLEMENT HARMS MIDWEST

Nature gave us this great water artery and left to us to deepen and develop only one short stretch in the international section of the St. Lawrence River. If all of that route were wholly in either Canada or the United States, it would have been developed for the public good years ago. Here in this country we have constructed great artificial waterways at great cost, and yet this natural route remains uncompleted.

Why? Find the answer to that question and you have the entire reason why isolation is forced upon 40,000,000 people in the great Midwest country. New York City maritime interests are opposed, of course. Why? They form the tollgate through which we have paid tribute for passage of our goods. Their iron ring has confined great industries to the Atlantic coast, to the great detriment of our people out here. Sanctimoniously, New York and Boston and Philadelphia and Baltimore tell us they oppose because they do

not want to subject us to the dangers and damages of foreign commerce; that giving us deep-water navigation will open us to trade with all the world. It will—and we want that ability for the products of our farms and factories. If foreign commerce is dangerous to the Midwest, it follows that it must be equally damaging to the Atlantic coast. But if it is so good that the Atlantic coast is fighting to retain its monopoly, we insist on our inherent right

is fighting to retain its monopoly, we insist on our inherent right to participate in the benefits.

Certain forces in Chicago, the Mississippi Valley, and New Orleans oppose our logical ambition, but why? They do not like the proposed treaty with Canada because in it both countries agree to recognize the Supreme Court decree curtailing the so-called Chicago diversion of Great Lakes waters. In addition some of these groups want to force the Great Lakes to send their products to the ocean via the New Orleans gateway. We want to use all gateways, and we will use all, but we continue to insist on our right to have deep-water navigation to the Atlantic Ocean.

ONLY SELFISH INTERESTS OPPOSE

Certain coal interests are opposing our ambition on the false claim it will give our market to foreign coal. Such is not, of course, the case; that is not an actual threat because this Nation can give domestic coal all the protection it needs. Coal is in no different class than any other commodity.

The same is true as to the importation of foreign ores. Raising a smoke screen on coal and foreign ores and using them as objections the contraction of the contraction

a smoke screen on coal and foreign ores and using them as objections to the construction of the seaway is a specious effort and will be unavailing as soon as the false claims are subjected to the sunlight of knowledge. Only selfish interests oppose. Representatives of certain lake-navigation interests expressed to you recently their opposition to the seaway. They are chasing shadows; their business, the business on which they have grown great through the navigation values of the Great Lakes, is port to port, and they must know that foreigners cannot compete with them in that operation. Existing Federal legislation is a full and

them in that operation. Existing Federal legislation is a full and complete answer to their claims and fears.

The railroads have expressed opposition, yet no group will derive greater benefit than the very railroads that now oppose this great national project. The seaway will not compete objectively with the railroads; it will complement that great arm of transportation. The railroads must recognize, and I am sure they do, that commodities are carried on the Great Lakes at the remarkably low cost of 1 mill per ton-mile. This is in contrast, but one-tenth of the average cost by rail. What transportion facility can compete with the Great Lakes? And, why should not our entire Nation receive the greatest possible benefit from this remarkable facility? It is a blind act to keep the Lakes blocked and its benefits from all the people of our Nation.

A MONUMENT TO GENIUS AND WISDOM

The Nation knows that our railroads are great because of the carriage of the products of our farms and factories. Yet, which of our cities would be great today were it deprived of the values of the Great Lakes? If that be true—and it is—how can it be

of the Great Lakes? If that be true—and it is—how can it be claimed seriously that a full development of the Great Lakes will do ought but benefit the refiroads.

In all charity, we say that opposition to the proper and economic development of the seaway is based on strictly selfish interest or on misunderstanding. No project has received greater study, and no project has received greater commendation. President after President, regardless of political affiliation, has favored it. Every Federal agency charged with studies of any part of it, has approved it and recommended that it be constructed. Two great nations—Canada and the United States—have made treaty engagements looking to its construction. Formal ratification by legislative bodies of the two countries alone remains.

Never was a time more opportune for the construction of this great project. It will free the Midwest, but more than that, it will give employment to great numbers who today badly and sadly need work. Here is a project, sound from every view point, to which relief funds can be devoted, that will stand for all time as a monument to the genius and wisdom of our present national

as a monument to the genius and wisdom of our present national leaders.

[From the Sheboygan (Wis.) Press of February 24, 1939] SHORT-SIGHTED POLICY

Recently L. C. Sabin, of Cleveland, Ohio, vice president of the Lake Carriers' Association, discussed the St. Lawrence seaway, opposing it in a vigorous argument before the Rotary Club.

There are always two sides to a question, and Mr. Sabin raises the argument of the invasion of foreign goods to the detriment of home trade. You can always raise that question and get a hearing, but what are the facts? The St. Lawrence deep waterway doesn't make the tariff. Those are instrumentalities entirely divorced from the question. If we are going to take care of unemployment, if we are going to build a great nation, we must be prepared to ship to the four corners of the earth. True, we can expect that we will receive shipments of foreign goods that we be prepared to saip to the four corners of the earth. True, we can expect that we will receive shipments of foreign goods that we need in return. The idea that the grain and coal markets of the United States are to be ravished by opening our doors to seagoing vessels is a bugaboo presented by railroad interests to freighten the people.

We are landlocked, we are at the mercy of the railroad interests, and we will continue at their mercy until we have water transportation. Let us frankly say right here that is a very short-sighted policy on the part of the railroads to try to block a worth-while project like the St. Lawrence seaway. Railroads, if they are alert, will do more business to seaports with additional outlets. Shipments that are barred because of the expense today hold grains and other commodities within a small area.

Let us take for example the products of our canning companies, and Wisconsin is a great canning State. California, Washington, and Oregon can ship their canned commodities by boat to New York cheaper than we can by rail, and as a result we have lost the New York market and for that matter the eastern market. What applies to canned goods applies to other commodities as well.

The United States and Canada are negotiating a treaty at this time, and this is an eleventh-hour attempt to kill off an opportunity to reach the markets of the world, the biggest protesters being the railroads. There are innumerable articles that we do not manufacture and which we need in the United States; and

not manufacture and which we need in the United States; and the lower the freight rate the better it is for industry.

On the other hand there are a great many things we manufacture that other nations need, and lowering the freight rate will give us an opportunity in the markets of the world. The railroads were very short-sighted years ago in letting the truck lines undermine their business. They failed to awake until it was too late. The same was true of their passenger service until they modernized. they modernized.

We are living in a new age and the railroads, if they will keep pace with the times, can increase their business and make it profitable. If they look ahead they can help themselves and help the individual in opening the markets of the world for the advantage of agriculture and industry. If they block it they are holding back recovery and they are hastening the day of their own demise own demise.

What a wonderful sight it would be to see an ocean liner coming into Sheboygan and taking the products of the farm, our cheese, canned goods, and the like, and carrying them to points of outlet at a rate on par with that paid by those of the west coast.

[From the Sheboygan (Wis.) Press of March 28, 1939] ST. LAWRENCE WATERWAY

Back in February L. C. Sabin, of Cleveland, Ohio, vice president of the Lake Carriers' Association, discussed the St. Lawrence sea-

of the Lake Carriers' Association, discussed the St. Lawrence seaway, not from the point of advantages, but he claimed that it is of little or no value to the country.

Yesterday William George Bruce, president of the Milwaukee Harbor Commission, gave the facts in a ringing address that was appealing to every individual who realizes the advantage of shipping by water as well as rail.

Ever since the days of the first meetings twenty-odd years ago, Mr. Bruce has been a dominant figure in this waterway fight. In the first instance Mr. Sabin as well as the railroads were favorable to the St. Lawrence waterway. Then came an order from the east, and overnight railroads that had been favorable to the plan became opponents. It was not of their own choosing, for the

east, and overnight railroads that had been favorable to the plan became opponents. It was not of their own choosing, for the western railroads, everyone of them, stand to share in the profits of an increased lake traffic. However, there are big interests at work, eastern interests, coal and steel interests, and they are trying now to mislead the public.

What we would like to see is a debate between Mr. Sabin and Richard F. Malia, of Milwaukee, executive secretary of the Great Lakes Harbors Association, and held in the city of Sheboygan. Too many times the people do not get the full information. When Mr. Sabin talked here in Sheboygan he enthused listeners and it has taken all this time to get the other side from Mr. Bruce. The things Mr. Sabin said about tariffs and the shipments of foreign goods to the injury of an American market have long since been "shot into a cocked hat" by statements originating out of Washington and Canada.

We would suggest a great evening meeting sponsored by the

ington and Canada.

We would suggest a great evening meeting sponsored by the Rotary, where each side would be given an hour to present the case. It would be a profitable evening and we would then have arguments pro and con. Where would you find a better place to have a debate than right on the shores of Lake Michigan here where the deep waterway will serve its greatest purpose?

Despite the opposition that has been raging for years and the lack of interest of some who ought to be on the firing line, we are willing to predict that in the short space of 2 or 3 years we will find the treaty ratified and the St. Lawrence waterway made a reality.

we will find the treaty ratified and the St. Lawrence waterway made a reality.

No railroads or big interest are going to stop the people from getting the advantages of this new transportation. This waterway besides having a great commercial advantage, will put the United States in a position where we will be better able to meet and combat any warring nation that may see fit to take advantage of the United States. From every viewpoint the St. Lawrence waterway is an American waterway deserving of the support of every loyal American citizen.

The address of Mr. Bruce was a masterly plea for a waterway that will release Wisconsin, Minnesota, Michigan, and Midwest States from a landlocked position.

Classification of Certain Federal Employees

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

H. R. 4190 AND LETTER FROM CIVIL SERVICE COMMISSION

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of H. R. 4190, together with a copy of a letter sent by the Civil Service Commission to the chairman of the Civil Service Committee of the House.

[H. R. 4190, 76th Cong., 1st Sess.]

A bill to permit classification of certain unclassified employees of the United States by noncompetitive examination

Be it enacted, etc., That section 7 of the act entitled "An act to regulate and improve the civil service of the United States," approved January 16, 1883, as amended (U. S. C., title 5, sec. 638), is amended by adding at the end thereof the following new sentence: "Any laborer, having an unclassified status, who has completed not less than 5 years' satisfactory service in the employ of the United States, may, under such rules and regulations as the President may prescribe, be promoted to the position of classified laborer through noncompetitive examination."

> UNITED STATES CIVIL SERVICE COMMISSION, Washington, D. C., April 17, 1939.

Hon. ROBERT RAMSPECK, Chairman, Committee on the Civil Service,

Dear Mr. Ramspeck: In compliance with your request in letter of March 15, 1939, I am pleased to present our views on H. R. 4190, a bill introduced by Representative McCormack, "To permit classification of certain unclassified employees of the United States by noncompetitive evanination." noncompetitive examination."

noncompetitive examination."

Section 7 of the basic Civil Service Act, approved January 16, 1883, provides, "* * nor shall * * any person merely employed as laborer or workman be required to be classified hereunder; * * *." Accordingly, in the exercise of power conferred by section 1753 of the Revised Statutes, the President has from time to time issued regulations to govern the employment of unclassified laborers in the executive civil service. Section 1 of these regulations authorizes the Civil Service Commission to apply them to such cities or parts of the executive civil service as it may deem proper. The application of labor regulations is dependent on the demand for full-time laborers and an available supply for recruitment purposes. At the present time, labor regulations are in effect at Washington, D. C., and the larger cities, including the headquarters of each civil-service district, besides a number of establishments under various Federal departments and bureaus such as arsenals, navy yards, veterans' hospitals, etc.

Applicants for unclassified laborer are rated upon their physical ability to perform manual labor as determined by physicians des-

Applicants for unclassified laborer are rated upon their physical ability to perform manual labor as determined by physicians designated by the Commission. To receive a rating of 100, a man must measure at least 68 inches in height, must weigh at least 150 pounds, must be able to lift, shoulder, and easily carry a mail bag and contents weighing 125 pounds, or more, if required, except in certain localities where a waiver of the sack-lifting test has been authorized by the Civil Service Commission, and be free from physical defects. To receive the maximum rating of 100, a woman must measure at least 64 inches in height and be free from physical defects. The sack-lifting test is omitted for female (charwomen) and boy laborers. (charwomen) and boy laborers.

(charwomen) and boy laborers.

At places where the labor regulations are not in effect, unclassified laborers are hired by the appointing officer without examination of any kind. This type of employment is largely of a seasonal nature or of intermittent duration and the number of appointments greatly exceed those effected under the labor regulations. The proposed bill would permit such laborers, as well as persons appointed under the labor regulations, after an aggregate of 5 years' service, to be promoted noncompetitively to classified-laborer jobs.

At the present time the prohibition is the Cart.

At the present time the prohibition in the Civil Service Act of 1883 against the classification of laborer positions constitutes an artificial barrier within an organization for promotion such as does not exist in private industry. The Commission, therefore, is favorable to legislation which will remove this barrier in proper

The merit system established by the Civil Service Act involves open competition, and open competition is also provided for in the labor regulations promulgated by the President and applied by the Civil Service Commission in those localities where it believes competition is practicable.

Combining these two basic principles of open competition for entrance to the service and noncompetitive promotion thereafter leads the Commission to recommend that H. R. 4190 be amended by inserting the words "and having been appointed under the labor regulations" immediately after the word "status" appearing in line 7 of the bill as introduced by Representative McCormack on February 15, 1939. With this change the Commission is favorable to the proposed legislation.

Very sincerely yours,

HARRY B. MITCHELL, President.

National Youth Administration

EXTENSION OF REMARKS

HON. THOMAS A. FLAHERTY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

ARTICLE FROM THE LONDON TIMES

Mr. FLAHERTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the London Times:

[From the London Times]

THE NATIONAL YOUTH ADMINISTRATION IS YOUNG AMERICA'S AT-TEMPT TO SOLVE THE PROBLEMS OF UNEMPLOYMENT ON COOPERATIVE

In the United States, as in most of the industrialized countries of the world, problems faced by youth have been intensified during the past 7 or 8 years. Mass-production methods have led to an increase in blind-alley jobs and trade depression has caused unemployment. Unemployment has operated by reducing family resources which might have been spent on education and by restricting the opportunities of youth. It has been estimated that 28 percent of American unemployed are between the ages of 16 and 25. But the problem is not merely one of unemployment. A generation is growing up self-conscious, restless, and explosive, seemingly forced to rebel against an economic and social system which does not appear to have enough room for it.

The demands of the young are not unreasonable. They want a chance to earn a living, to marry at a mating age, to attain education, to understand the functions and principles of government. Specific deficiencies have been the most important factors in the creation of this problem. There are not enough jobs to employ the youth who need them and want them; the educational system is not adequate in size or scope to prepare multitudes of young people for the opportunities that are available; there is a gap, measured in years, between the time a youth leaves school and the time he finds a permanent job. During this period society completely abandons him and delinquency reaches its peak. In the United States, as in most of the industrialized countries

AN ATTEMPT TO FIND A SOLUTION

completely abandons him and delinquency reaches its peak.

AN ATTEMPT TO FIND A SOLUTION

The National Youth Administration was created to find a solution, or a partial solution, for these shortcomings in American social and economic life. In the spring of 1935 Mrs. Roosevelt, who is by training and practice a social worker and a teacher, summoned a group of 30 unemployed youth of New York representing a cross section of city life. With the help of Government officials practical suggestions of their needs were worked out. Many of these suggestions were passed on to the President, who, in June 1935, by Executive order, set up the National Youth Administration. It is an open secret that the suggestions of Mrs. Roosevelt's conference were used as its basis. The scheme to a large extent expressed the will of those who were to take part in it; it represented youth's own contribution to the meeting of its own needs. This characteristic was retained by inviting the cooperation of the American Youth Congress, a federation of nearly 1,000 youth organizations, which claims to speak for most young Americans.

N. Y. A., as it is popularly called, has three main objectives. It provides funds for the part-time employment of needy school, college, and graduate students between 16 and 25 years of age to enable them to continue their education (the student-aid program). It provides funds for part-time employment and training on work projects of young persons, chiefly from families on relief, between 18 and 25 years of age, the projects being designed not only to give work experience but to benefit youth generally and the communities in which they live particularly (the works-project program). It provides for persons between 16 and 25 years of age placement and guidance centers, which inform them of the conditions and requirements of various industries.

Before 1935 there was no extension system of juvenile-employment exchanges as in England, and the guidance and placement centers were to fill this gap. They serve to link the la

tries to encourage and help young people to accept positions as apprentices. It has also prepared a study of American industry which gives a picture of its growth and decline, its natural distribution, the kinds of skill required, and the conditions of work. The student-aid and the works-project programs have various common assumptions. It is demoralizing to be given money for nothing; if possible, relief must be earned. But work done must be constructive work for the benefit of the school or community of which the worker is a member. Also it must be work which be constructive work for the benefit of the school or community of which the worker is a member. Also it must be work which would not have been undertaken without the help of Federal funds. It must be paid for at normal rates. Participation in all these schemes is voluntary. Student aid may be given to high school or college students who are thought to be capable of profiting by continued education but who could not alone afford to remain at school or college. It is available only in schools not run for profit. In 1937 student aid cost the Federal Government \$72 a student a year, and enabled over 300,000 students who would not otherwise have done so to continue their education. Professors, masters, and students are almost unanimous in their approval of the scheme; the only general criticism is that it does not reach enough pupils.

The N. Y. A. students show themselves, according to inquiries made by Ohio University, on the average, scholastically superior to their fellows. Some of these youths have won first-rate intellectual distinction; an N. Y. A. student at the Dakota University has won a Rhodes scholarship and is now at Oxford. The work done by them in payment for their education has been of great value to the communities of which they are members. They have been assigned to such branches as research surveys and statistics, laboratory assistance, assistance in public nursery schools and bealth deportments ground and haiding maintenance.

value to the communities of which they are members. They have been assigned to such branches as research surveys and statistics, laboratory assistance, assistance in public nursery schools and health departments, ground and building maintenance. In many cases the work has proved so interesting that other students have helped voluntarily. In the schools the wisdom of making aid conditional on work was at first doubted. Now, however, the scheme wins general approval; not only has the work been of educational value in itself but it has increased the self-reliance of the student. Where it has taken the form of clerical work it has also been of immense value to teachers. According to one school principal, many teachers have been able to complete new sets of notes for the first time in 15 years.

The work projects are sometimes confused with the Civilian Conservation Corps camps. But these camps come under a different Government department; they give full-time work with no additional training; they cost a great deal more than work projects; and they are in all cases residential. Nevertheless, they bear a superficial resemblance to some of the work-project schemes. The latter fall under two main heads: Those which are residential and designed primarily to provide training and those which aim at fulfilling useful social functions where education and training are incidental. In the residential training many experiments in

are incidental. In the residential training many experiments in cooperative living are carried out and there is as much self-government as possible. The centers are often in the Southern States, where the sons of tenant farmers, poor whites, and Negroes are taught scientific farming methods and horticulture to enable them to put their land to its most constructive use. Engineering and building centers are being undertaking in the North.

But it is the nonresidential schemes which are really typical of N. Y. A. Under them thousands of young people are providing community service, playing fields, bus shelters, and road improvement. Boys build a country school or a club, girls make swabs in a hospital; boys mend school furniture; girls cook lunch for rickety school children. school children.

In New Haven, W. Va., N. Y. A. members, with local citizens, are In New Haven, W. Va., N. Y. A. members, with local citizens, are constructing a community center which will be a meeting place for every kind of recreational and educational activity. The spirit and enthusiasm of the townspeople are shown by the voluntary civic help given N. Y. A. when it is needed. As a matter of general policy attempts are made to get youths who are not on relief to join in the schemes, thus avoiding treating the unemployed as an alien group.

WORK AND TRAINING

WORK AND TRAINING

For every hour spent on a work project there is provision for an hour's educational or vocational training. The work is paid for at normal wage rates and is in all cases noncompetitive. In March of last year 154,851 young people were engaged under this scheme at a cost of \$242 a year each to the Federal Treasury. Though the expense of maintenance on a work project is considerably higher than that of student aid, it is only about one-fifth of the cost of keeping a youth at a C. C. C. camp.

These work projects cannot create jobs in private industry, and during the 1937-38 recession the number of young people leaving N. Y. A. for private employment declined sharply. But experience on a work project can and does give a youth the ability to hold a job, and, what is perhaps as important, the assurance that he has earned his pay. A country supervisor in Virginia said: "There's something I can't just define about it, but when you see boys and girls who never had a chance before learning to do something actually making something that other people will use, changing their own habits, developing toward one another a sense of responsibility, you decide maybe there's something more to a job than a pay check."

One of the most significant features of N. Y. A. is the pioneer spirit pervading it. Among the administrators at Washington as among the young people employed on the projects there is an

spirit pervading it. Among the administrators at Washington as among the young people employed on the projects there is an enthusiasm and drive most impressive to the onlooker. Undoubtedly this spirit and the acknowledged success of the scheme are

due to members of youth organizations having themselves been consulted. N. Y. A. is a young America's contribution to social progress, an attempt to solve the problems of unemployment and misemployment on constructive, cooperating lines. It is an experiment of great social significance. Although it cannot remedy all the evil, it has given work, training, or education to over 1,500,000 persons. Already it seems to have justified the belief of President Roosevelt, who said when he instituted the program: "The yield on this investment should be high."

More on the St. Louis Memorial

EXTENSION OF REMARKS

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

Mr. LAMBERTSON. Mr. Speaker, at long last a Member of the House of Representatives has taken the floor to defend Mayor Bernard Dickmann and the memorial promoters of St. Louis.

If the truth about the Jefferson National Expansion Memorial and its promotion is a slander to the mayor of the city of St. Louis and those of its citizens who have been active in attempting to secure \$22,500,000 from the Federal Treasury for this project, then I expect to slander those people again today by presenting additional documentary evidence and facts which I feel sure will convince even the most skeptical person that this whole scheme was conceived to deceive and is based upon fraud and corruption.

To go back to the beginning of the scheme, let me recall to the older Members of this body, and this may be news to the defenders of Mr. Dickmann, the way the House of Representatives was led into approving the joint resolution creating the United States Territorial Expansion Memorial Commission.

The joint resolution creating the United States Commission was approved by the House of Representatives only after assurances by the gentleman from St. Louis [Mr. Cochran] that the Commission would not come to Congress at some later time for funds for the memorial in St. Louis. It was the understanding, as I remember, that the memorial contemplated was to be built after the plans formulated by the Commission, but with money raised through private sources and not by allocations or appropriations from the United States Treasury.

If this promise had been carried out, so far as I am concerned my voice would not be raised here today. But what

Almost immediately after the Commission was authorized by Congress and the act was signed by the President, the memorial promoters began a campaign, not to raise funds for a memorial through private sources, but to get the money from the Government.

The promise not to come to Washington for money was lightly cast side, but a huge promotional fund was raised in St. Louis by the Jefferson National Expansion Memorial Association, of which Mayor Bernard F. Dickmann was honorary chairman and Sidney Maestre chairman of the finance committee.

By February 27, 1935, the promoters had raised \$90,877 and were still collecting. No report has ever been made to the people of St. Louis or the public of how much money was collected or to what uses it was put.

But the promoters had a good organization, and they held meetings and luncheons for several weeks preparing the ground work for a raid on the Treasury of the United States.

At this time I will insert for the record a bulletin to campaign organizers, issued on February 27, 1935, by Sidney Maestre, the banker of St. Louis, which speaks for itself. I make no implications against the integrity of purpose of these men, but I cannot forget the promise made on the floor of this House, that this was to be a privately financed

undertaking. About the only thing that was privately financed was the promotion, as far as I have been able to determine from the record.

JEFFERSON NATIONAL-EXPANSION MEMORIAL ASSOCIATION. St. Louis, Mo., February 27, 1935.

BULLETIN TO CAMPAIGN ORGANIZATION-TOTAL REPORTED TO DATE, \$90.877

We had the largest attendance at any of our luncheons this noon—also a 31-percent larger report than last week.

The next report luncheon will be held at the Missouri Athletic Association, Wednesday, March 6, 1935, 12:15 p. m.

Several prospects for gifts attended the luncheon today and after the meeting signed subscription cards. If you have any first-class prospects you think should attend next week's luncheon, be sure and bring them, for they will get the right idea by seeing

be sure and bring them, for they will get the right idea by seeing what others are doing.

Brochures for good work done in the campaign were given to the following: S. S. Adams, Russell E. Gardner, Felix E. Gunter, James P. Hickok, John M. Robertson, Dr. Horace W. Soper, Clarence M. Turley, Albert Wagenfuehr and the firm of Wolf & Pollack. More brochures will be given out at next week's luncheon in recognition of work done in the campaign.

We still have prospects that should be taken care of. If you can help, please call up headquarters and you will have a choice of some desirable cards that have not been taken. If you have not solicited all the cards which you have selected, please do so before next Wednesday.

before next Wednesday.

While the response to solicitation has been favorable, there have while the response to solicitation has been tavorable, there have been inevitable delays in many cases because of the fact that action must be taken by boards, committees, and nonresidents. We hope that the work already done in the first part of the campaign will show real results in the next report.

Sincerely yours,

SIDNEY MAESTRE.

Now, during the time the promoters were raising their promotional fund they were also assuring the businessmen of St. Louis that they did not contemplate a bond issue or assessments of property owners through the creation of a benefit district. Let me read a letter of February 25, 1935, by Sidney Maestre, the banker.

JEFFERSON NATIONAL-EXPANSION MEMORIAL ASSOCIATION, St. Louis, Mo., February 25, 1935.

To the campaign organization:

Some of those working in the campaign have suggested that it would be helpful to have present at the luncheon prospects who do not understand just what is being attempted in raising the expense fund.

For instance, some have the idea that there will be a benefit district—others that a bond issue is contemplated—and so on. As a matter of fact, the Jefferson National-Expansion Memorial Association is trying to get this money without assessments or bond

our next report luncheon is at the Missouri Athletic Association, Wednesday noon. If you have any prospects that you would like to invite to that luncheon and who have not subscribed, bring them up. Before doing so, however, please notify us at Central 8377 so that ample provision can be made for their attendance. Also, please get in all the pledges you can before or at the luncheon. We want to make a first-class report this week.

Sincerely yours,

SIDNEY MAESTRE.

The St. Louis people were perhaps wondering where the money was coming from for a \$30,000,000 memorial. The promoters knew they would have to get it some place. Whom were they attempting to deceive?

They had promised not to come to Washington and they were promising, also, not to go to the taxpayers of St. Louis. But this promise was as lightly cast aside as the first one. At the very time they were making these promises they were laying the groundwork in Jefferson City to get through an enabling act to allow the city to issue bonds for the project, and the mayor was preparing the stage to have a city ordinance passed authorizing a special election for the exact purpose of getting the taxpayers of St. Louis to foot, at least, a part of the memorial cost.

Meanwhile the real-estate men were busy spreading the gospel on the river front. In fact one of them boldy advertised for salesmen with business experience. The advertisement in the local newspaper said:

Salesmen opportunity. River-front project going through. Men wanted with business experience. Wolf-Pollack, 211 Olive, Main

A salesman who answered that advertisement, informs me the real-estate firm told him everything was all fixed. The

businessmen would have to move and that all a salesman would have to do was contact the firms in the area and find out how much space they would need, and the firm of Wolf-Pollack would find the space. This seemed strange to the salesman, who had in his pocket the letter from Washington, saying the project was under examination.

So the salesman organized the citizens' nonpartisan committee and started an investigation of the whole promotion. It is from the documentary evidence of the citizens' nonpartisan committee that I based my opposition to the project at first, but from the hundreds of letters I have received from St. Louis citizens and from a personal investigation, I feel that the Members of Congress will be more susceptible to deception than were the people of St. Louis unless they become fully acquainted with the facts. These I propose to present.

From February 27, 1935, down to the latter part of July 1935, the promoters were very active. In fact one of their activities was the filing of an application with the Public Works Administration for a loan and grant amounting to \$21,015,000. This will be found in the records as Missouri Application No. 1006.

On August 8, 1935, Leona B. Graham in reply to a letter addressed to the Secretary of the Interior by Paul O. Peters, of St. Louis, replied as follows:

FEDERAL EMERGENCY ADMINISTRATION OF PUBLIC WORKS, Washington, D. C., April 8, 1935.

Mr. Paul O. Peters,
1819 Thurman Avenue, St. Louis, Mo.

My Dear Mr. Peters: This is to acknowledge your letter of August 4, addressed to the Secretary of the Interior, protesting against the proposed Thomas Jefferson Memorial application, MO1006, requesting a loan and grant of \$21,015,000.

The above application is still under examination by the Public Works Administration. Your comments will be duly considered in conjunction with our study.

in conjunction with our study.

Sincerely yours,

LEONA B. GRAHAM, Executive Assistant, for the Administrator.

Now while this application was under examination, what was happening in St. Louis?

The promoters were most shamefully misrepresenting this project to the taxpayers and the voters. If it is a slander to say that a project amounting to \$30,000,000 was grossly misrepresented by the promoters, then here is the evidence.

On August 27, 1935, the following letter was distributed and even mailed out by the memorial promoters over the signature of W. C. D'Arcy, the head of an advertising agency in St. Louis. Let me read this letter:

JEFFERSON NATIONAL EXPANSION MEMORIAL ASSOCIATION,

JEFFERSON NATIONAL EXPANSION MEMORIAL ASSOCIATION,

St. Louis, Mo., August 27, 1935.

The question of forward St. Louis is up to you!

September 10 is an important date in the life of your city. It is a challenge to the vision, citizenship, courage, and judgment of every St. Louisan. On that day you will have a privileged opportunity as a voter to help your city take the biggest step forward in its history—to vote "Yes" and scratch "No" on the \$7,500,000 issue of bonds to reclaim the river front with the erection of the Jefferson National Expansion Memorial.

That St. Louis can fail in this opportunity to increase its civic

That St. Louis can fail in this opportunity to increase its civic values, relieve unemployment, and become forever a national shrine at such low cost to the city is unthinkable. You and those who rely on your voting judgment can send St. Louis forward—by voting "yes" and scratching "no" on September 10.

Here are the facts on the Jefferson National Expansion Memorial.

(1) It will create a magnificent memorial and national park from Third Street to the river between Eads Bridge and Poplar Street, an area of 37 blocks, which is now an unsightly and largely economic loss to the entire city. It will be done at an amazingly lower cost than will probably ever again be available to the citizens of St. Louis for adding value and beauty to their city.

(2) It is a project involving the expenditure of \$30,000,000, of which the Federal Government will provide, without cost, \$22,000,500,000, and St. Louis is only asked to furnish the \$7,500,000 proceeds of this important bond issue—an opportunity to get \$1 back for every 25 cents we put in. The United States Government puts

up \$3 to our \$1.

(3) This project is part of the administration's \$4,800,000,000 works fund. To be frank, that money is going to be spent in this country somewhere, and the whole Nation will have to pay for it. If St. Louis doesn't get its share, some other part of the country will, and St. Louis will have to pay its proportion with nothing to show for it. Passing this bond issue will give St. Louis some of

the benefits of this national expenditure; will relieve the city's unemployment burden; and will establish a civic asset for genera-

tions to come.

(4) The Federal Government has already approved the project of the St. Louis plans for the memorial. Your vote "yes" will and the St. Louis plans for the memorial. Your vote "yes" will clinch it. When completed, the United States Government assumes all expenses of its maintenance for all time to come. There will be no charges or operating costs against the city.

(5) St. Louis will be fully and legally protected in every way

in completing the memorial project.

What it means to St. Louis and to you:

(1) The world's greatest memorial will stand at the doorway of your city—a national shrine of international interest for all time, to attract people from everywhere to our city—to signalize forever the place of St. Louis in the Nation's historic past and in its greater future.

greater future.

(2) St. Louis has 30,000 families on relief—already a costly drain on the city's purse. Passing this \$7,500,000 bond issue means jobs for 5,000 men; restores them to self-support and self-respect; drastically reduces the city's employment relief problem—an immediate and money-saving benefit to you. The Central Trades and Labor Council, representing 70,000 St. Louis workers and more than 40 other business and trade organizations, have already said they will vote "yes."

(3) The bulk of the entire \$30,000,000 will be spent here—bring-profits and business for St. Louis firms, using St. Louis goods

(3) The bulk of the entire \$30,000,000 will be spent here—bringing profits and business for St. Louis firms, using St. Louis goods and materials, and creating more purchasing power by making work for the now idle manpower of St. Louis.

(4) It will enhance property values in a district where they have steadily fallen year after year. It will reclaim an unsightly and increasingly uneconomic section of the city to new use and enjoyment for all. It should promote new growth of the city toward and around this section, preventing the gradual abandonment of river front property which has been going on for years. To say that this project will injure any business or class of business is ridiculous. The memorial will be only a few blocks long. The St. Louis river front is 25 miles long with ample and better locations at no higher rentals, and with equal or better transportation facilities for any and all businesses now located in this cramped and forsaken quarter. quarter.

quarter.

(5) It will provide an unparalleled educational and cultural impetus to the thinking of the whole city—an inspirational and uplifting force to the present generation and, more important still, to the young generations not only of today but of the future.

What it will cost you as a taxpayer:

(1) Figure this out yourself: Right now you are paying taxes to support the unemployed of St. Louis. And you are going to have to keep on doing it with nothing to show for it, when, and if you get through paying. This bond issue relieves that burden, but gives you and your city something no city in the world can match. What's more, the Federal Works fund of \$4,800,000,000 is going to be spent in this country for similar propositions somewhere. No matter what it's spent for, St. Louis must pay its share. Then why shouldn't St. Louis share in the benefits?

matter what it's spent for, St. Louis must pay its share. Then why shouldn't St. Louis share in the benefits?

(2) The cost of the bond issue will be 3 cents a hundred-dollar assessed valuation, with a slight increase after 10 years. That means that if you own \$5,000 in property the cost of this improvement for your city will be less than the cost of 10 gallons of gasoline a year. What a small price to pay to practically relieve unemployment here, to bring \$30,000,000 in business to St. Louis, and to establish in your city a permanent, useful monument that will stand out above those of any city in the world.

Don't forget that Forest Park, O'Fallon Park, and Carondelet were once opposed by many because of expense. Try to picture your city today without them and all they mean to its people. Here's your chance to vote for progress, to vote for your own interests, and your city's future.

It's your city—every dollar you vote for on September 10 brings

It's your city—every dollar you vote for on September 10 brings St. Louis three dollars more from the Federal Government. Can you, can St. Louis business, and St. Louis workers say "no" to this proposition? Vote "yes"—scratch "no" on the September 10 bond issue election, and work among your friends to get it passed.

Sincerely yours,

What do you think of this letter? Does it sound square? No, indeed. But to get back to what was happening in St. Louis from August to September 10, 1935, the date of the special election.

During all of August and the first 9 days of September the promoters were exceptionally busy. They were promising the people almost everything under the sun. For the Negro workers they promised 6,000 jobs at a minimum wage of \$3.50 per day for unskilled labor. This was good votecatching bait. But it was not enough, as I will presently show.

From the forum and over the radio, speakers promised the Government had pledged \$22,500,000 for the project. What was the fact?

On September 6, Col. Horatio Hackett, in a telegram to the Taxpayers' Defense Association, denied that any allocation had been made to the project for which the P. W. A. examining engineers had reported:

This project has social desirability but cannot be classed as a public necessity.

On the day before the election Mayor Dickmann called the city employees and ward heelers together and in a brief speech declared:

The obligation and the responsibility is in our hands. Any pussyfooting and backslapping, any idea of not wanting to pull in harness with me is at an end. We know who is working in each precinct. We don't know how each of you got your job, who endorsed your application, but every one of the city employees will be checked after the election and I don't mean maybe.

That was the ultimatum delivered to several thousand city employees by the mayor of St. Louis for whom the defending Member has the deepest respect and appreciation. How much respect can you Members of this House have for a politician who puts the heat on the city employees in this high-handed and dictatorial manner? Nothing worse could have happened in Soviet Russia. And the election results show the effect of Mr. Dickmann's ultimatum to the city hall employees. The votes were not counted as cast. The ballot boxes were stuffed and the result made to order-for men have to eat and jobs were scarce in 1935-and they still are in Missouri. But with all of his bluster and bluff and threats the honorable mayor could not carry his own ward or precinct for this bond issue and has never been able to carry a bond issue in St. Louis from that time to this.

You are all acquainted with the election scandals in St. Louis. With the exposé made by the St. Louis Post-Dispatch. Now, what was the position of these honorable gentlemen who promoted this river-front enterprise? Did they raise their voice or hand in protest? No. They sat silently by and kept right on promoting. But the citizens' non-partisan committee did not sit idly by. They got action. They helped expose the frauds. They helped get the indictments of the guilty persons. And although over 130 were indicted for election irregularities, and although several judges and clerks of election had confessed their part in the steal, not one single man has ever been convicted or served a day in jail so low has justice sunk in St. Louis, the home of Mayor Dickmann and these memorial promoters whom I have allegedly slandered. It was only last Thursday the St. Louis Post-Dispatch carried the headline story Last Vote Fraud Case Ends in Acquittal-Freeing of Four Wipes Out 140 Cases Without a Conviction That Stuck.

Now, St. Louis is a big city. It has been generously dealt with by the Federal Government. It has received funds for all kinds of projects. And it will not be slandering the city to tell you that, under the leadership of Mayor Dickmann, the deficit for the last fiscal year was over \$3,300,000. And now the memorial promoters want to start the memorial to honor Thomas Jefferson. They propose to begin the honoring by buying up 40 blocks of commercial and industrial property, 39 blocks of which have so far been appraised at \$6,510,071.

The one block still to be appraised is probably the most expensive one in the entire district. It is occupied by people who employ a large number of men and women and will probably eat up the balance of the \$6,750,000 they tried to get approved by a quarter to twelve amendment to the Interior appropriations bill for 1940.

Mr. Speaker, there undoubtedly will be other efforts to get congressional appropriations for this St. Louis memorial scheme. At some future time I will present additional facts if necessary, to expose some other features of this promotion which I feel sure will be most interesting to you all. I trust the money of the promoters is about used up and that the allocation by Executive order will be allowed to revert to the Treasury to provide employment in St. Louis and elsewhere on projects that have more than social desirability to recommend them and which are not tainted with fraud and corruption.

Works Progress Administration

EXTENSION OF REMARKS

HON. PEHR G. HOLMES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1939

Mr. HOLMES. Mr. Speaker, the figures herewith show that during the first 6 months of 1938, from January 1 to July 1, the W. P. A. spent \$786,855,935.39, or an average of \$131,142,655.89 per month.

During the second 6 months of 1938-from July 1 to and including December 30-the W. P. A. spent \$1,095,443,354.87,

or an average of \$182,573,892.47 per month.

You will note that during the second 6-month period of 1938 the average increased expenditures amounted to \$51,-431,236.58 more per month than they did in the first 6-month period of 1938.

On January 1, 1939, there was an unexpended cash balance of approximately \$314,000,000, which balance paid the Federal expenditures on Work Progress Administration operated projects for the months of January and February. Only \$2,000,000 was used from the additional fund of \$725,000,000 Congress appropriated in February of this year to continue relief during the balance of the fiscal year, namely, the months of March, April, May, and June. Accordingly, \$723,-000,000 allows an average expenditure of \$180,000,000 for each of these 4 months.

Bear in mind that the W. P. A. in January of this year spent \$169,729,356.41, while in January of 1938 the cost of W. P. A. was only \$97,578,330.24. In February of this year W. P. A. spent \$147,119,824.41 as compared with an expendi-

ture of \$100,333,703.05 in February 1938.

In his Budget message the President recommended an additional appropriation of \$725,000,000 as sufficient to carry W. P. A. through until June 30, 1939. Then a little later, without submitting any data or figures to show the reason why an increase was necessary, the President asked for an additional appropriation of \$150,000,000, making the total figure he desired for the balance of this fiscal year \$875,000,-000. Congress voted an increased appropriation of \$100,000,-000 over and above the \$725,000,000 originally requested, thus making available an average of \$205,000,000 per month for use during the 4 months from March 1 to June 30, 1939. In other words, the W. P. A. has \$25,000,000 more available to spend for each of the last 4 months of this fiscal year than the average monthly expenditure over the period from July 1 to December 30, 1938, which average was a little over \$182,000,000.

The week ending October 29, 1938, just before election, shows 3,245,260 persons on the W. P. A. rolls, and for the same month of October the W. P. A. expenditure was a little

over \$191,000,000.

As of December 31, 2 months later, and after election, the W. P. A. roll had dropped to 2,989,976, but the expenditures had increased to over \$197,000,000-255,284 less persons on the W. P. A. rolls and over \$6,000,000 increase in expenses. All this happened before the Seventy-sixth Congress convened on January 3 of this year.

The week ending January 28 of this year shows the rolls were further reduced to 2,895,464-349,796 persons less than the peak on October 29. However, from January 28 to March 11 of this year the W. P. A. rolls again increased by

31,000 persons.

With an average of \$205,000,000 a month to spend for each of the next 4 months it would seem to me there is no occasion for ruthlessly dropping from the W. P. A. rolls deserving, needy persons, nor of curtailing projects, to throw the whole burden of relief on the local communities.

WORKS PROGRESS ADMINISTRATION, Washington, D. C., March 24, 1939.

The Honorable P. G. HOLMES.

House of Representatives, Washington, D. C.
MY DEAR MR. HOLMES: In response to your request by telephone,
I am attaching two tables showing the number of persons em-

ployed and Federal expenditures on projects operated by the Works Progress Administration in the United States as a whole, and in the State of Massachusetts from January 1938 to the latest date for which figures are available.

If I can be of further assistance to you please do not hesitate to let me know.

Very truly yours,

CORRINGTON GILL, Assistant Administrator.

Federal expenditures on Works Progress Administration operated projects, Jan. 1, 1938, through March 1939 (United States and Massachusetts)

Effects of Trade Agreement With Cuba on American Vegetable Growers

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 25, 1939

Mr. CELLER. Mr. Speaker, in an extension of his remarks in the House of Representatives on March 20, 1939. the gentleman from Florida [Mr. Peterson] described what he apparently believed were some of the results of concessions on certain fresh vegetables granted by the United States in the trade agreement with Cuba. He painted a distressing picture-the Florida vegetable growers were represented as losing their market to Cuban peons; greenhouses were apparently being torn down all over the United States. It was implied that 386 greenhouses in Massachusetts had been destroyed due to this trade agreement which permits fresh vegetables to enter the United States at lower rates during winter and spring months. I am surprised that the gentleman did not suggest that some of the penthouse vegetable gardens of Park Avenue had been destroyed by the Cuban agreement.

It is difficult to tell where the gentleman obtained the impressions on which he based his statements. An investigation indicates that the Government departments do not have such facts available; legitimate trade organizations state that they have not compiled such data. It was found at the Tariff Commission that greenhouse-vegetable growing was in existence about 40 years ago in Massachusetts. Surely it would require a flight of imagination to trace the effects of

trade agreements that far back.

Now, in connection with these trade agreements it would seem to be about time that someone raised his voice for the benefit of consumers arising from lower tariffs. Have we become so producer-minded that we give no thought to the opposite or demand side of the picture? If half of the things we have said against the Hawley-Smoot Act are true, then the great consuming public must be paying millions annually to tariff beneficiaries. I believe the Cuban agreement has been of substantial benefit to consumers without greatly harming the producers of winter vegetables.

With regard to Florida, the facts show that ever since the Cuban trade agreement went into effect there has been a steady expansion of the winter-vegetable industry. Prices, income, acreage, and production have all been generally higher since the agreement than before it. The careful limitation of the duty reductions to months when domestic marketings of fresh vegetables are slack has minimized the competitive effects of the increased imports from Cuba. Meanwhile, American consumers have been able to obtain these important and nutritious foods during the periods when domestic supplies are inadequate. Domestic growers have in turn benefited from the stimulus to consumption which is imparted by a year-round supply of fresh vegetables at reasonable prices.

With regard to the hothouse vegetable industry, it is almost impossible to get accurate price and production data. If failures and bankruptcies are as prevalent in the hothouse industry as the gentleman from Florida [Mr. Peterson] would have us believe, they are probably due more to the rapid growth of domestic producing areas in Florida, Texas, Arizona, and other regions, than to competition from Cuban vegetables. Certainly, there is no basis in fact for such a statement as "33 greenhouses were torn down in Ashtabula, Ohio, this past summer because they could not compete with imported vegetables from Cuba."

In the trade agreement with Cuba the United States reduced its duties during specified months on tomatoes, potatoes, green peppers, lima beans, cucumbers, eggplant, okra, and squash. In each case the reduced duties applied only during specified winter or spring months when few of these products are harvested in this country.

The gentleman from Florida [Mr. Peterson] centered his attention upon two of these vegetables-tomatoes and cucumbers.

The growing of tomatoes and cucumbers in Florida has been generally more profitable since the trade agreement with Cuba than previously. With regard to tomatoes, a memorandum prepared in the Department of State and dated November 8, 1938, states:

The most important of the six vegetables here considered, both in the value of the Florida crop and in imports from Cuba, is tomatoes. The Florida tomato growers have enjoyed generally higher prices and enlarged incomes since the Cuban agreement. The estimate for the total value of the Florida tomato crop for 1937–38 is \$8,571,000. This represents a gain of about 40 percent 1937-38 is \$8,571,000. This represents a gain of about 40 percent over the average income of \$6,128,000 for the three seasons immediately preceding the agreement with Cuba. Income since the agreement has been substantially above the preagreement average in every season except 1936-37, when excessive rain and insect damage caused extremely low yields and poor quality. Prices have also been generally higher in the post-agreement period, although they are estimated much lower for 1937-38, due to the record domestic production in that year.

Improved prices have been accompanied by a steady expansion

domestic production in that year.

Improved prices have been accompanied by a steady expansion in the acreage planted to tomatoes in Florida. The average planted acreage in the 4 post-agreement years was 41,226 acres, an increase of 37 percent over the 3-year pre-agreement average of 30,000 acres. Production of tomatoes in Florida has shown parallel gains, increasing spectacularly in 1937-38 to almost twice the pre-agreement average. Production in the four seasons since the agreement with Cuba has averaged 3,341,750 bushels, or 34 percent greater than the average production of 2,494,733 bushels for the three seasons previous to the agreement. to the agreement.

The United States duty on tomatoes imported from Cuba was reduced in the agreement with that country from 2.4 cents to 1.8 reduced in the agreement with that country from 2.4 cents to 1.8 cents for the 3 months from December to February, inclusive. Imports of Cuban tomatoes have increased substantially since the agreement, but they have tended to concentrate in the reduced-duty period when Florida production is slack. The study made by the Bureau of Agricultural Economics states that in the preagreement period about 68 percent of our imports of Cuban tomatoes were received in these 3 months, whereas since the agreement 180 percent have been received in this period. Imports in the 80 percent have been received in this period. Imports in the months in which the duty reduction does not apply have shown The greater part of the Florida tomato crop is shipped in the months of March and April. A little less than one-fourth is shipped during the reduced-duty period. The competition afforded this part of the Florida production by Cuban imports is, moreover, limited by the fact that the Cuban product usually sells at a higher price. Furthermore, reduction of the duty did not lessen the differential between these prices. During the four seasons immediately before the agreement became effective, the prices of Cuban tomatoes at New York averaged 68 cents per bushel above the Florida product, whereas it averaged 89 cents higher in the two Florida product, whereas it averaged 89 cents higher in the two following seasons.

In considering the effect of the Cuban trade agreement on Florida cucumber growers the same memorandum states:

on Florida cucumber growers the same memorandum states:

In 1937–38 Florida producers of cucumbers enjoyed their most prosperous season in the seven for which comparable statistics are available. The total value of that year's crop reached a new high of \$1.048,000, which is 47 percent above the average value of the Florida cucumber harvest in the 3 preagreement years. Acreage and production were also well above the preagreement average.

Imports of cucumbers from Cuba gained slightly in the first three seasons following the agreement, but fell sharply in 1937–38 to just over 100 cars. Average seasonal imports for the four seasons since the agreement have been about 121 cars, as compared with an average of 127 cars for the three seasons preceding the agreement.

an average of 127 cars for the three seasons preceding the agreement.

There is almost no competition between Florida and Cuban cucumbers since they are harvested in distinctly different seasons. About 90 percent of our imports of cucumbers from Cuba arrive in the 3 months December to February, inclusive, the period for which the duty was reduced in the Cuban agreement. Only 5 percent of the Florida crop is marketed in these months.

No governmental statistics are available which give definite information concerning the progress of the hothouse industry since 1934 in its production of tomatoes and cucumbers.

From the attached table, which shows imports of tomatoes from Cuba in the 3 months during which the reduced duty now applies, it is clear that December is a highly unrepresentative month.

Again, the attached table shows that the use of the single year 1933-34, when imports were abnormally low, gives an inaccurate picture. When the 3 years prior to the trade agreement are used as a basis for comparison, we find that imports of cucumbers have declined slightly since the agreement went into effect.

It is always fallacious to consider the results of trade agreements from one side only. When exports to Cuba are brought into the picture, it will be seen that wide benefits extending to every State in the Union have been received from the Cuban agreement.

From all available evidence it can safely be said that since the Cuban trade agreement the Florida winter-vegetable industry has expanded appreciably and has been more prosperous, American consumers have enjoyed a more adequate supply of fresh vegetables during the winter months, and United States exports to Cuba have been powerfully stimulated. The agreement has in addition been a notable contribution to improved Latin-American good will.

Mercy Killing Suggested for Aged on Relief

EXTENSION OF REMARKS

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

Mr. PATMAN. Mr. Speaker, Wednesday, April 12, the Washington Post, a newspaper published here in Washington, D. C., contained the following headlines preceding a news item:

Mercy killing suggested for aged on relief. Retired Army major proposes euthanasia "to save money."

After these startling headlines, the following excerpts appeared:

Euthanasia—or "mercy killing"—was suggested as a solution of the relief question for persons past 70 or 75 years of age at the regular meeting of the Washington Society for Philosophical In-quiry in the new National Museum yesterday. It was put forward by Maj. Edward L. Dyer, United States Army, retired, treasurer of

by Maj. Edward L. Dyer, United States Army, retired, treasurer of the society, who gave yesterday's talk.

"I realize," he said, "that many religions would be against it. But I think perhaps if euthanasia were good and humane and would really be a mercy, this is a case where one of the Ten Commandments—that is, "Thou shalt not kill'—might be modified.

"I don't advocate taking everyone on the relief rolls and giving them a shot," he said, "but euthanasia should be considered in cases of old age where the persons are no use to themselves or any one else. Society is finding so many ways to spend money, this might be a way to save it."

The major pointed out exceptions made to the commandment

The major pointed out exceptions made to the commandment against killing in case of war and in case of the automobile. "Nearly 40,000 are killed in the United States every year on account of the automobile," he argued.

Members of the society sided both with Major Dyer and against him in the ensuing discussion.

Dr. Edward E. Richardson, professor emeritus of philosophy at George Washington University and pastor of the Congress Heights Baptist Church, who has been president of the society for the past 29 years, also opposed Major Dyer's arguments.

"Where are you going to draw the line?" he asked. "I've passed 60 and I don't think they've any right to kill me off. Some people have done fine work when they've been 100. And where are you going to draw the line in killing off the unemployed? Would you start killing all the Democrats?"

As I stated in my remarks on the floor, April 12, 1939, I do not share the views of Major Dyer and consider the suggestion one of the most inhuman, unmerciful, and un-Christian proposals that has ever been advanced in connection with a social or economic problem.

Maj. Edward L. Dyer, who is reported to have made this cruel suggestion, receives \$243.75 a month retirement pay from the Federal Government and, in addition, he is entitled to many other benefits that are furnished free to him by the Government. The records disclose that he has been on the Government pay roll practically all of his adult life. These good old people whom Major Dyer suggests should be put to death simply because they are not physically able to carry on for themselves have worked and paid the taxes which made possible Major Dyer's life income. These aged people have helped to build this country in time of peace and furnished the manpower to save it in time of war. Instead of entertaining any such cruel, inhuman suggestion for a moment, we should consider availing ourselves of the counsel and advice of these aged citizens. They are ripe in years of experience and knowledge. We should draw on their wisdom. It occurs to me that the W. P. A. could well consider a project that would make it possible for the aged people to assemble in every locality a certain time each week or month or at stated periods for the purpose of discussing public and other questions and giving the younger people the benefit of their wisdom and advice.

The Canning Industry and Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1939

Mr. BUCK. Mr. Speaker, for the last week or so apparently in an effort to discredit Secretary of State Cordell Hull's program of reciprocal-trade agreements as an effective instrument to rebuild America's foreign commerce, the gentleman from New York [Mr. Reed] has been inserting in the Record a number of short statements dealing with these agreements and their supposed effect on various industries of our own country. I had not paid any considerable amount of attention to them until I happened to notice in the RECORD of March 30 a brief item with reference to the canning industry. Coming as I do from California, the State that produces most of the canned fruit in the United States and a very large proportion of the canned vegetables, I naturally checked this item. The percentage figures which are used in this article are not supported by any statistical table which I have been able to find. In fact, the statistical comparison between 1929 and 1937 is totally fallacious.

The Trade Agreement Act was only enacted in 1934. Its design was to rebuild America's shrunken foreign commerce. The shrinkage occurred between 1929 and 1934, therefore 1929 figures are of no value whatsoever. To measure the results of the program, comparison should be made against 1934 and not against 1929, when foreign trade moved more freely. Analysis of authentic statistical data revealed quite a different picture than the one to which attention was called

in the article to which I refer.

Concessions on canned fruits were obtained in all 16 trade agreements in effect prior to January 1, 1938. Exports of canned fruits from the United States in 1937 compared to 1934 to the 16 trade-agreement countries increased 105 percent, against an increase of only 14.5 percent to non-tradeagreement countries.

Concessions on canned vegetables were obtained in 14 of the 16 trade agreements. I shall submit as part of my remarks the Government figures on the United States exports of both canned fruits and vegetables in 1934 and 1937. figures as to exports of canned fruits speak for themselves. On their face, statistics relating to canned vegetables may seem to indicate a less favorable result. However, two important factors which the gentleman from New York [Mr. REED] did not reveal supply the reasons for this seeming unfavorable result.

Following the enactment of the Smoot-Hawley Tariff Act Canada retaliated by taking severe measures to exclude American processors from Canadian markets. Three of America's vegetable processors were forced to build branch canneries and employ Canadian labor in order to maintain their Canadian markets. Now, remember that in 1929 United States exports of canned vegetables to Canada were valued at \$3,305,000. By 1934, as a result of the migration of this industry to Canada, these exports had dropped to a mere trifle of \$53,000. This has been brought back to the sum of \$204,360 in 1937; yet the opponents of the trade program continue to deride the efforts to rebuild America's lost foreign trade, which are being pursued through the efforts of Secretary Hull, even while they should know that the Smoot-Hawley Act brought about the above result.

The second important factor disturbing foreign markets in trade-agreement countries for American canned vegetables was the French devaluation of the franc. California asparagus planters had, through persistent efforts, established a very large French market for the product. Devaluation of the franc so decreased the demand for asparagus, a luxury product in France, that production dropped to 40 percent.

The following tables, to which I have referred previously, show the exports of canned fruits and canned vegetables to countries affected by trade agreements, comparing the year 1934, when the program was enacted, to 1937, the last year for which complete figures are available:

United States exports of canned fruits

	1934	1937
Total, all countries	\$17, 303, 740	\$21, 063, 872
Total, trade-agreement countries	1, 381, 298	2, 830, 975
Cuba	106, 479	235, 250
Belgium	255, 383	525, 357
	3, 310	2, 576
HaitiSweden	139, 824	263, 888
Brazil	2, 940	7, 199
Canada	132, 951	410, 666
Netherlands	301, 363	480, 092
	59, 877	96, 899
		7, 019
Honduras	5, 269	
Colombia	3, 082	269
Guatemala	1, 898	2, 847
France Nicaragua	352, 162	723, 106
	3, 769	7, 448
Finland	6, 403	30, 746
Costa Rica	3, 157	7, 185
El Salvador	3, 431	30, 428

United States exports of canned vegetables

	1934	1937
Total, all countries. Total, trade-agreement countries. Cuba. Sweden Brazil Canada Netherlands. Switzerland Honduras Colombia. Guatemala France Nicaragua	\$3, 286, 863 1, 333, 728 75, 662 55, 558 12, 301 52, 893 137, 980 147, 601 23, 200 9, 401 3, 667 798, 444 7, 213	\$4, 571, 387 1, 278, 550 204, 360 101, 892 14, 215 79, 349 194, 945 140, 571 20, 697 44, 432 9, 546 430, 966 8, 738
Finland	2, 808 3, 508 3, 492	12, 580 8, 290 7, 969

I may add that an attack on the reciprocal trade agreements program purportedly on behalf of American canneries comes with particularly bad grace when these same canneries have wholeheartedly and continuously endorsed the program. Surely they know, and the farmers who raised the fruit and vegetables they buy know, the truth about the situation.

The American Pottery Industry

EXTENSION OF REMARKS

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

ARTICLE FROM THE WHEELING INTELLIGENCER

Mr. SCHIFFLER. Mr. Speaker, under leave to extend my remarks in the Appendix of the Congressional Record I include the following brief article which was printed in the Wheeling Intelligencer and associated Ogden papers, written by their Washington correspondent, Mr. Charles Brooks Smith.

My purpose is twofold: I wish to record in this way my pride in being the chosen Representative in the Congress of a district in which is located the largest pottery in the world, at Newell, W. Va., and second, to pay tribute in this way to the master potter whose genius created it, the late W. E.

I wish to add that in the great Wheeling industrial area, which lines both banks of the Ohio River, embraced within the boundaries of the First Congressional District of West Virginia and the Eighteenth Congressional District of the State of Ohio, ably represented here by my distinguished colleague and personal friend, the Honorable EARL R. LEWIS, is located the Gibraltar of the pottery industry of the United States of America.

The article is as follows:

[From the Wheeling Intelligencer]

Washington, April 28.—There is an exhibition of American pottery products in the main foyer of the Department of Commerce Building under the auspices of the United States Potters' Associa-Building under the auspices of the United States Potters' Association. It was meet, proper, and appropriate that Mr. John S. Dowsing, tariff counsel for the association, should formally invite Representatives Schiffler and Edmiston, of West Virginia, and Lewis, of Ohio, to come and see it, because their 3 congressional districts produce more pottery products than any other 3 of the 435 congressional districts. They were posed for the camera in the foreground of reproductions of some of the world's famous pieces of ceramic art and some of the best American originals. A native soup tureen from Wheeling's great industrial area doesn't detract from the pictured grace, elegance, and beauty of a Congressman, the finished photographs proved.

So many things of both foreign and domestic origin enter into

the finished photographs proved.

So many things of both foreign and domestic origin enter into the fabrication of pottery products, it somehow looks to a layman, with a smattering of information about it, that a manufacturer who makes an outstanding success of it must indeed be a business genius. Such a one was the late W. E. Wells, who built his own monument in the largest pottery in the world at Newell, W. Va. The history of American pottery is the story of the flercest kind of a struggle with world competitors for supremacy in its own market. It is going on now as never before. Obviously the question of customs or tariffs enters into the economy of pottery in a way vital to the survival of the pottery industry on a black-ink basis. A master potter must not only know how to turn out a set of dishes and a replica of a Grecian urn such as inspired Keats to write an immortal replica of a Grecian urn such as inspired Keats to write an immortal ode, but he has to have the stern realities of production costs the world over, shipping prices on land and sea, tariff rates in the four corners of civilization—in sum, a knowledge which is approximately encyclopedic and universal.

In this mood we remembered the late Wells of Newell, the only master potter of our acquaintance who appeared to have everything required to make a smash success in this line of industry. We recalled his many times before the House Ways and Means Committee, when it was puzzling over the complications involved in framing a tariff law. He was recognized as a tariff expert in his line; a fair-minded and unselfish man; a sound counselor and adviser. fair-minded and unselfish man; a sound counselor and adviser. Consequently his relations with the committee were always pleasant and mutually helpful. We remembered something else which, it seemed to us, would the better explain Wells of Newell to the new generation, who, whizzing past the great plant in their autos, give no inquiring thought to the man who put it there—and kept it there. We reached off the shelf volume II of the hearings on tariff readjustment held in 1929. We found the quotation wanted, on page 1278. Here it is:

"Mr. COLLIER. What does most of your raw material consist of?

"Mr. Wells. China clays from North Carolina, Tennessee, and Florida, and Cornwall, England; filint from Pennsylvania; feldspar from Maine and Canada: white lead from Colorado: and paris white

from Maine and Canada; white lead from Colorado; and paris white from the Dover Cliffs of England. Gold is our most expensive product. It comes from Alaska and Africa. Colors come from every place in the world; natural gas from the bowels of West Virginia. ginia; the casks that we pack it in from staves that come from Missouri; straw from Ohio; and so forth.

"Mr. COLLIER. How much imported clay do you use. How much

"Mr. Collies How much imported clay do you use. How much imported raw material as compared with your domestic clay?

"Mr. Wells. With respect to china clays, which represent the most essential ingredient in pottery, we get about 40 percent from England and 60 percent from America, because England produces in Cornwall certain clays that have qualities which no American clays the We hear them; there there is the contract of the clay has. We have to mix them.

"Mr. Collier. You are not advocating an increase of duty on that clay, of course, for your raw material?

clay, of course, for your raw material?

"Mr. Wells. Here is what happened. Under the Underwood bill that clay was assessed at \$1.25 a ton duty, specific. Under the Fordney-McCumber bill it pays \$2.50. It was exactly doubled, and there was no competition in this country. It is our pure raw material. I do not like to talk on a low tariff on our raw materials and a high tariff on our finished products, but you have it.

"Mr. Collier. Are you asking for a reduction of that \$2.50?

"Mr. Wells. No, sir. That is up to the importers and the domestic producers."

LXXXIV-App-111

Read What Woodrow Wilson Said in 1914—Are We | California Conference of Deans of Men Goes on in a Similar Situation Now?

EXTENSION OF REMARKS

HON. THOMAS M. EATON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

Mr. EATON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to quote from the pen of a great American, Woodrow Wilson, a man I greatly admired because he was my President during those years when I was growing from boyhood to manhood. Then, too, when in the Navy during the war I looked to him not only as President but as my Commander in Chief.

He was highly respected by all the Navy lads and looked

upon as one capable of directing our activities.

Mr. Raymond Moley, in News Week of May 1, calls attention to the words of President Wilson written August 19, 1914. It might be well for Members of Congress to weigh these words now in the light of happenings overseas. Mr. Wilson speaks:

The effect of the war upon the United States will depend upon what American citizens say and do. * * * The spirit of the Nation in this critical matter will be determined largely by what individuals and society and those gathered in public meetings do and say, upon what newspapers and magazines contain, upon what ministers utter in their pulpits, and men proclaim as their opinions on the street. * *

It will be easy to excite passion and difficult to allay it. Those responsible for exciting it will assume a heavy responsibility, responsibility for no less a thing than that the people of the United States, whose love of their country and whose loyalty to its Government should unite them as Americans all, bound in honor and affection to think first of her and her interests, may be divided in camps of hostile opinion, hot against each other, involved in the war itself in impulse and opinion if not in action. * *

My thought is of America. I am speaking, I feel sure, the earnest My thought is of America. I am speaking, I feel sure, the earnest wish and purpose of every thoughtful American that this great country of ours, which is, of course, the first in our thoughts and in our hearts, should show herself in this time of peculiar trial a nation fit beyond others to exhibit the fine poise of undisturbed judgment, the dignity of self-control, the efficiency of dispassionate action; a nation that neither sits in judgment upon others nor is disturbed in her own counsels and which keeps herself fit and free to do what is honest and disinterested and truly serviceable for the peace of the world. * * * for the peace of the world.

Shall we not resolve to put upon ourselves the restraints which will bring to our people the happiness and the great and lasting influence for peace we covet for them?

Mr. Moley draws this conclusion, and I quote him:

As applied to the present situation, they should not prevent Americans from protesting the internal horrors of Hitler's intolerance. But they should prevent our meddling in the question of international adjustments of the map of Europe. There is a distinction here—a distinction we are being urged over and over again to forget. War threatens not because democracy has been attacked. There is no scintilla of evidence that Britain and France are concerned with the defense of abstract democracy. War threatens because of a struggle over old territorial seigures. cause of a struggle over old territorial seizures

As that war threatens we should have held ourselves, as Wilson implored, as "the one people ready to play a part of impartial mediation and speak the counsels of peace and accommodation, not as a partisan but as a friend." Instead, we are found underwriting, by implication, international obligations which do not concern us and defending a status quo which for 20 years every reasonable man has known to be unwise, unjust, and inevitably subject to revision.

I believe that this country ought to do much more than it has I believe that this country ought to do much more than it has done to care for those who are seeking asylum here from oppression abroad. I should like to see the bill before Congress that would authorize the admission of 20,000 refugee children become law as swiftly as possible. But the place to lavish our protective care, the place to give concrete demonstration of our love of humanity and democracy, the place to exhibit the "dignity of self-control," or self-restraint, of peaceable, dispassionate action, should be within the Western Hemisphere.

I commend the above for each Member's close study and consideration.

Record as Favoring Continuance of N. Y. A. Program

EXTENSION OF REMARKS

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

LETTER FROM THE CALIFORNIA CONFERENCE OF DEANS OF MEN

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks I am convinced that it is important to bring to the attention of the House the following letter from the officials of the California Conference of Deans of Men dealing with the college aid program of the National Youth Administration.

America has always prided herself in maintaining equality of oportunity for her citizens. We have never had any more important place where this equality of opportunity should be upheld than in our educational opportunities. It is important to the preservation of our democracy, it is fair, that the N. Y. A. program be continued.

A great many worthy young people who would otherwise have had to be searching vainly for employment have been kept busy at their college work because of this program.

I think Mr. Aubrey Williams and his associates are to be congratulated on the splendid work that they have done.

The letter from the California Conference of Deans of Men follows:

APRIL 19 1939

Hon. Jerry Voorhis,

United States House of Representatives, Washington, D. C.

Dear Mr. Voorhis: The California Conference of Deans of Men, at its annual meeting in San Diego, on April 14, was much concerned with the report that the N. Y. A. college aid program might be discontinued after the present school year. We are all actively engaged in the administration of the program in the colleges and universities of the State, and we are impressed with its importance and value. We feel very strongly that its discontinuance at this time would add greatly to the economic problems confronting the college students of the country, and consequently reflect unfavorably upon the general economic and social welfare of the Nation.

We respectfully urge you to do your utmost to continue this service in whatever form and whatever auspices seems most efficient and desirable.

Very respectfully yours,

ELMER C. GOLDSWORTHY, University of California.
MITCHELL PIRIE BRIGGS. Fresno State College.

Neutrality

EXTENSION OF REMARKS

HON. LEE E. GEYER OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

RADIO ADDRESS BY HON. LEE E. GEYER, OF CALIFORNIA, APRIL 27, 1939

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on April 27, 1939:

Friends, this week hundreds of thousands of American citizens are speaking to and for the people and the Government of the United States. We say we want peace for the world. In part this is a selfish desire. What some call "other people's wars" have too long shadowed our own lives with fear. We say we want security for the United States. Without national security there can be no peace. The conquest of nations and the enslavement of peoples breed new and destroy the structure of international justice on which

enduring peace must rest.

I am glad to add my voice to the American chorus which this real range of add my voice to the American chords which this week proves to the world that we are a great Nation, united in support of our great leader, Franklin D. Roosevelt. I thank the National Broadcasting Co. for this opportunity to join in the program of "Peace and Security Week." The modern invention of radio truly serves the cause of democracy, giving the people of our far-flung continent the free forum of the air in which to express their

flung continent the free forum of the ar a "canned" expression will for peace.

We did not arbitrarily choose this week for a "canned" expression of American opinion. History chose it for us. History faced us with a grave national emergency. History demands of us that we decide now the crucial issue of peace or war. Our own destiny is at stake, and perhaps the destiny of all humanity as well.

In a few short hours another voice will assault the ears of the world. The voice of a man who has proved himself the enemy of his own nation, of neighbor nations, and the enemy of peace

world. The voice of a man who has proved himself the enemy of his own nation, of neighbor nations, and the enemy of peace itself. There are those who say that this man will decide the issues for us. There are those who say that it is "none of our business" whether he decides for war or for peace.

In my opinion this is an un-American doctrine. I agree with President Roosevelt that we are not the helpless prisoners of destiny. I do not believe that the most powerful nation on earth must wait to learn its fate by short wave from a madman across the water. I believe that the decision rests with the Government and the people of the United States and that we still have it in our power to decide for peace. To shirk the responsibility of making that decision is to surrender our dignity as a sovereign people.

people.

Less than 2 weeks ago President Roosevelt spoke for the awakened conscience of America. He explored the dangerous illusion that cur moral fiber is so warped and weakened that we are no longer able to tell the difference between right and wrong. He challenged Rome and Berlin to state their intentions. He told them, "Unless you mean to attack your neighbors, there will be no war."

In that historic message President Roosevelt named the aggressor nations and put the burden of responsibility squarely up to them. We have heard too often in the past few years that to "name the aggressor" would be an act of war. But when the President of the United States named the aggressors and haled them before the bar of world public opinion—the whole world greeted him as a champion of peace. President Roosevelt cleared the moral atmosphere and dispelled the fog of lies behind which the warmakers mobilize pion of peace. President Roosevelt cleared the moral atmosphere and dispelled the fog of lies behind which the warmakers mobilize against world peace. In the name of a great nation and a united people he declared that the United States is not stricken with moral

pecple he declared that the United States is not stricken with moral blindness. It is not "neutral" between justice and lawlessness. It is not "neutral" between peace and war.

But though the President put the United States on record as an ally of peace and justice and an implacable enemy of lawlessness and war—by statute we remain bound to an unmoral "neutrality." Within the next few weeks the Congress of the United States will revise the law which since 1933 has made us an accomplice of aggression and war.

How do you want that law revised? Tested in the acid of expensions are stated in the acid of expensions.

of aggression and war.

How do you want that law revised? Tested in the acid of experience, neutrality legislation has failed tragically. It has made the United States a munitions dump for Japan, delaying the complete embargo against the Japanese war machine, which alone would protect our interests in the Far East. It made us a party to the Rome-Berlin-Franco conquest of Spain and opened a highway to the war axis from Spain to our own continent. This so-called neutrality legislation was a silent partner at Munich, when Czechoslovakia was betrayed. And now it weighs against us in the delicately balanced scale that wavers between war and peace. cately balanced scale that wavers between war and peace

cately balanced scale that wavers between war and peace.

The present neutrality law runs directly counter to the President's peace message. In the opinion of that die-hard proponent of strict neutrality, Senator Borah, it is in conflict with American public opinion. We are not neutral, says Senator Borah. We have made up our minds. We have already taken sides.

Yes; we have taken sides. We side, as we have sided throughout our history, with a free and independent United States, with justice and peace. We are no longer neutral in fact. We must cease to be neutral in law.

neutral in law.

Because I came to believe that legislative neutrality was a menace Because I came to believe that registative neutrality was a merace to national security and peace I introduced in the House of Representatives an amendment to the so-called Neutrality Act. This amendment is identical with the one introduced in the Senate by Senator Thomas of Utah. It prevides that in the event of war the President may, with the consent of Congress, exempt the victim of aggression from embargo while continuing an embargo against the aggressor. the aggressor.

All that I claim for my amendment is that it in principle estab-All that I claim for my amendment is that It in principle establishes the right of the United States to distinguish between and an antion that abides by its solemn covenant. It is an American policy, for it bases its distinction solely on adherence to a treaty entered into with the

United States.

Some of the groups and distinguished leaders who are participating in Peace and Security Week support the Thomas-Geyer

amendments. Many would prefer some other legislation or outright repeal of the Neutrality Act.

I am not a special pleader for my own bill. I am a special pleader only for peace and national security.

In the interests of peace I want to see the United States Government free to throw its moral and economic weight against war and the makers of moral transfer exists. the makers of war. I want to see it put an end to the suicidal practice of stoking the war machines of the enemies of peace and its

the makers of war. I want to see it put an end to the suicidal practice of stoking the war machines of the enemies of peace and its own security. I want the United States to trade with those nations which defend peace by defending their own independence. I believe there are methods short of war to prevent war—and I want the United States to use every one of those methods.

All my adult life I have been a teacher, and my thoughts turn now to the young people of America. My own two sons, hundreds of my former pupils, millions of American boys I have never seen—for them the issue before Congress is a matter of life and death. We who insist on drastic amendment or outright repeal of the present Neutrality Act are often called "warmongers." But I trust the clear vision of youth to see that peace is threatened by aggression and that it is those who would put no obstacle in the path of aggression who are opening the way to war.

War today is not ballyhoo and it is not a "hysterical smoke screen to hide the domestic failures of the New Deal." War is a grim reality. It has darkened the lives of hundreds of millions of people. Its shadow will continue to spread—unless we act to stop it. We must effectively amend or repeal the Neutrality Act before we shall be free to act for peace.

Who threatens the peace of the world and the security of the United States? President Roosevelt? Or that other voice, the voice of systematized aggression and brutal conquest?

That voice will speak again before tomorrow breaks. And we may be sure it will again try to hide its own guilt by calling our Government and our President "warmongers."

But the last word does not belong to the voice of gangsters, aggressors, and barbarians. The last word belongs to us, and to the peace-loving pecple of the world.

Speak that last word now—this week—before a world cataclysm

aggressors, and barbarians. The last word belongs to us, and to the peace-loving people of the world.

Speak that last word now—this week—before a world cataclysm interrupts your speech. Speak to the Congress which is the servant of your will. Speak to your neighbors, your friends. Speak to all the organizations of the people in your community. Say you want the neutrality law effectively amended or repealed outright. Say you support the foreign policies of President Roosevelt and Secretary Hull. Say America will put its whole moral and economic weight in the way of aggression and war.

"America hates war. America wants peace." Speak to America and for America. Speak and decide for peace!

Child Welfare

EXTENSION OF REMARKS

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

Mrs. O'DAY. Mr. Speaker, to one who is deeply interested in the conservation of our great national resources it is a matter of wonderment that so much concern is felt for the preservation of our forests, our soil, our wildlife, our parks, our waterways, and so little is felt for the most precious asset of the United States of America-our children.

On comparing departmental appropriations one is forced to conclude that Congress still labors under the old delusion that as a child is born its mother at that moment becomes miraculously endowed with all necessary knowledge as to

what is needed for its future well-being.

Such belief may account for the debate that took place on the floor of the House when the request was made for a very modest appropriation for the Fourth White House Conference on Children as instituted by Theodore Roosevelt and continued by Herbert Hoover and Franklin Delano Roosevelt. It was contended that such a conference was not needed.

It took place, however, last week and was attended by delegates from every State in the Union, excepting Idaho and Wyoming, and by delegates from Alaska, Puerto Rico, and far-away Hawaii. There was a large attendance.

Of the great value of this conference the New York Herald Tribune has this to say:

THE WHITE HOUSE CONFERENCE

The child of today and the place he will take in the world of quisition of new equipment. This should be in addition to normal House Conference on Children, which held its first session yesterday in the East Room, where President Roosevelt made an eloquent plea for a broad national program for child welfare. At this year's conference, as might have been expected, the emphasis is upon democracy—that concept of democracy which is beset by grave questionings in some quarters and by direct threats in others

Much of the matter under discussion was hardly new, and the ideas advanced so far are not particularly novel, and yet no one could deny the tremendous underlying importance of the subject matter. Getting away from the usual generalities, the special task of the conference this year is to determine the minimum needs for the rearing of children to be adequate citizens; to measure those services now being rendered and in what ways they fall short, and to recommend how these shortcomings may be over-The dream, of course, is for suitable provision for child health and training to be adapted to all circumstances and conditions in this country, and for every child. An inspiring dream

and a large order.

As Mr. Homer Folks, the sagacious and far-seeing secretary of the State Charities Aid Association of New York, remarked, this conference is looking not to the immediate future necessarily, but rather to 1980 or thereabouts. And we do not even know for sure whether at that remote time there will be such a thing as a democracy. We can only hope and plan as wisely as vision and resourcefulness will permit. As Mr. Folks put it: "Somewhere within these United States, within the last few years, was born a child who will be elected in 1980 to the most responsible office in the world, whose incumbent lives here. We cannot guess his name or whereabouts. He may come from any place and from any social or economic group. He may now be in the home of one of the soft-coal miners, or in the family of a sharecropper, or quite possibly in the home of one of the unemployed, or in a family migrating from the Dust Bowl, or he may be surrounded with every facility, convenience, and protection which money can buy. Very likely his home is on a farm. Even Dr. Gallup, with his poll, can give us no light on his whereabouts."

Since we cannot pick that child, the best we can do is to make provision for every child. Perhaps even in times like these something approximating this noble purpose can be attained. conference is looking not to the immediate future necessarily, but

Necessity for a Large-Scale Railroad Rehabilitation Program in the Interests of National Industrial Recovery

EXTENSION OF REMARKS

HON. LEE E. GEYER OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

Mr. GEYER of California. Mr. Speaker, the great railroad industry in the United States is the heart of our national economy and in its present condition of stagnation contributes to the instability of the whole economic structure of the Nation and greatly tends to retard general industrial recovery. Because of mismanagement, overcapitalization, the effects of competition, and the general industrial depression, the railroads have fallen into a serious financial crisis. The total capitalization of all the railroads in the country is nearly \$23,500,000,000. This staggering amount is equal to about 60 percent of the total national debt in the United States, or, in other words, about \$180 each for every man, woman, and child in the country. The most convincing evidence that the railroads cannot carry this overload of capital is the fact that the railroads representing one-third of the total mileage of the country have already defaulted on their interest and principal and are in receivership or bankruptcy.

RECOVERY HELD BACK BY PRESENT PLAN OF MANAGEMENT

The focus of attention of the railroad managements in recent years has been almost exclusively on the attempt to maintain payment of their capital charges at all costs. In pursuit of this policy railroad management has laid off several hundred thousand employees in the past few years. it has attempted to cut wages, it has increased freight and passenger rates, it has reduced railroad service, it has drastically curtailed capital expenditures for maintenance work and for needed equipment and supplies, it has gravely neglected the maintenance of its physical properties and has let its power and rolling stock, roadbeds, and buildings deteriorate to a dangerous degree—all of which measures tend to aggravate the railroad financial crisis and to make worse generally the service provided by the railroad industry. The result of all this, aside from its unfavorable effect upon the railroads themselves, has been to restrict industrial output generally, to drive down the purchasing power and living standards of the railroad workers, and to deepen the depression or hold back recovery.

The need for greatly increased railroad expenditures for rehabilitation work and for equipment and maintenance, both for the sake of the railroads and for the good of the whole national economy, has been recognized repeatedly by the various bodies which have investigated the railroad situation in recent months.

EQUIPMENT AND ROLLING STOCK IN BAD SHAPE

The President's Committee of Three-Splawn, Eastman. and Mahaffie-which reported at the end of March 1938, made as their first recommendation the use of Government funds as loans to the railroads for the repair and purchase of rolling stock and shop equipment. Their report showed that at the end of 1936 about three-quarters of all freight locomotives were more than 17 years old and badly in need of complete overhauling or at least half of these should be replaced at once. More than three-quarters of the switch locomotives were then also more than 17 years old and a third of these need replacement. About 45 percent of the freight cars were found to be more than 20 years old, and most of these require heavy repairs or should be replaced with modern units, to the advantage of both the public and the carriers. The committee was also of the opinion that a return of traffic to the level of the fall of 1937 would disclose a car shortage in the country.

The emergency board which reported to the President on the wage-cut proposal in the fall of 1938 reported as follows on this question:

Expenditures for maintenance, which from 1921 to 1929 averaged about \$2,000,000,000, fell below a billion in 1932 and 1933 and in 1937 stood at \$1,322,302,738, a drop of 36 percent from the average level of the period 1921 to 1928. * * * How far these expenditures have been consistent with those necessary minimum expenditures required for safety this record does not disclose.

Expenditures for maintenance tell only a part of the present needs of the roads. * * * Purchases of materials and supplies have noticeably lagged behind earlier years. Whereas from 1923 to 1930 the amounts spent for this purpose ranged from \$1,038,500,000 to \$1,738,703,000, since then they have fallen as low as \$445,000,000 in 1932, rising to \$803,421,000 in 1936, to \$966,383,000 in 1937, and then dropping to \$277,846,000 for the first 6 months of 1938. * * Equipment purchases fell off sharply in 1931, 1932, and 1933, dropping from the 1930 figure of \$328,269,000 to \$73,105,000, \$36,371,000, and \$15,454,000, respectively. In 1937 they had returned to \$322,877,000, a level exceeded in the last 16 years only in 1923, 1924, 1925, 1926, and 1930. But despite this fact, there remains a great need for new equipment. for new equipment.

INTERSTATE COMMERCE COMMISSION RECOMMENDS GREATER EXPENDITURE FOR REHABILITATION OF ROADS

On November 1, 1938, the Interstate Commerce Commission, in its annual report, again brought up the subject of larger expenditures for rehabilitation work on the railroads. The report reads in part:

A considerable number of locomotives and cars and much shop machinery could be replaced with modern equipment if funds were available, with entire certainty of gain, and the same can be said of various changes in track curvatures and gradients, and in rails ties and ballast. ties, and ballast.

ties, and ballast. * * * *

The future seems to hold opportunities, among others, for electrification of lines with a high density of traffic, for other improvements in motive power, for reduction in the weight of equipment as special steels or other metals are further developed, for widespread use of containers interchangeable with highway and water carriers, for the use of small gas-propelled or other motive-power units for branch-line service, and for the development of light, attractive, and comfortable self-propelled cars for short-haul passenger service. senger service.

REPORT OF COMMITTEE OF SIX

Still further discussion of this question is to be found in the report of the Committee of Six, published last December 23. This committee's finding was:

During the 8 years, 1923 through 1930, they (the railroads) expended a total of \$6,741,000,000 for capital improvements. An average of a billion dollars a year can justifiably be expended in further modernizing and improving their properties, including acquisition of new equipment. This should be in addition to normal

expenditures for maintenance. The resulting gain in employment would extend beyond the railroads to all those engaged in producing and manufacturing railroad supplies and materials.

In the face of this mass of expert testimony as to the need for a widespread rehabilitation program on the railroads and the far-reaching benefits that would accrue from it, no one can deny the expediency of initiating such a program at this time.

The railroad unions and other people's organizations have often pointed out that the railroad crisis can only be solved when the railroads become Government owned and democratically operated, provided such Government ownership is based upon a drastic reduction in present overcapitalization of the railroads and of their vast fixed charges, and the fullest protection of the jobs and improved wages, hours, and working conditions of the workers.

Pending the time when the railroads are taken over by the Federal Government, it is urgently necessary that measures be taken through a national program of rehabilitation of the industry to stabilize the employment of the workers, to put the part-time and unemployed railroad workers back to work, increase their purchasing power, giving them a better pension system, and to provide improved transportation service at lower rates to the shippers, farmers, and traveling public. The American people have a right to demand and to get better and cheaper transportation service from the railroads. And a continuation of the present situation means to render the railroads increasingly unable to furnish any such efficient transportation.

The rehabilitation of the railroad industry is a national necessity. A Nation-wide program of railroad rehabilitation will be a big step in the general New Deal industrial recovery program to stimulate business on the railroads and in all other industries.

To bring about these benefits to the farmers, shippers, and traveling public, to the small investors, the railroad workers, and the American people generally a national railroad rehabilitation program should be undertaken along the following lines:

COMPLETELY OVERHAUL ALL RAILROAD PROPERTIES

(1) Rehabilitation of the railroad properties, with the aim of a general all-around improvement of the physical condition of the railroad plant and equipment—the complete overhauling and repairing of power and rolling stock; replacing antiquated locomotives and freight and passenger cars with new and modern equipment; the electrification of the railroads, especially in the terminals and switching districts; repairing and building up of the roadbeds; repairing and construction of terminals, stations, bridges, roundhouses, and shops; the installation of new safety signals and safety measures; the double tracking of main lines of single-track roads. This program of rehabilitation and improvement in railroad plant and equipment, requiring the expenditure of several billion dollars, will stimulate reemployment of laid-off railroad workers and make for recovery on the railroads as well as in industry generally. Such improvement of the railroad properties will also cheapen transportation and lay the basis for lower freight and passenger rates; it will make possible more expanded, frequent, better, and faster service to which the American public is entitled, and will regain for the railroads the maximum of passenger and freight traffic to which the railroads are best adapted, and will prevent this traffic from being shifted to less efficient forms of transportation.

ELIMINATE GRADE CROSSINGS

(2) Elimination of grade crossings: The elimination of the very numerous grade crossings in the United States is likewise a national necessity. These grade crossings annually cause the deaths of thousands of autoists and pedestrians. Moreover, they slow up transportation and interrupt the normal life and business of hundreds of American cities. The elimination of grade crossings will require the construction of hundreds of new bridges and viaducts, the laying of new steel, and the elevation or depression of railroad tracks in many cities. The Railway Engineering Association, 1924,

estimated that to eliminate all grade crossings in the United State would cost twelve and a half billion dollars. The abolition of the grade-crossing evil will not only make enormously for public safety and convience but will also furnish employment for hundreds of thousands of idle workers throughout the country. It will furthermore stimulate all the communities along the railroads, provide a huge volume of railroad traffic, and give a powerful stimulus for recovery in all branches of industry.

IMPROVE CONDITIONS OF RAILROAD WORKERS

(3) Improvement of the conditions of the railroad workers: Any program of railroad recovery to be effective must be based upon the economic factor of stabilizing employment in the industry, restoring to service these men laid off and strengthening the purchasing power of the great mass of railroad workers, through the protection of their wages generally and the raising up of the poorer paid groups; the establishment of a guaranteed minimum working force of at least 1,400,000 employees in the railroad industry; no consolidation at the expense of the workers' jobs; protection of union agreements, collective bargaining, and the right to strike; complete abolition of company unionism; the inauguration of such measures as train limit and full crew laws; 2 weeks' annual vacation and 10 days' sick leave with pay; more adequate pensions for retirement by reducing the age limit and increasing the amount of pensions; improved unemployment insurance and relief, and the eventual establishment of the 6-hour day for all railroad Putting the unemployed back to work and workers. strengthening the purchasing power of the railroad workers will tend to stimulate every section of the national economy. The railroad workers should not support any so-called program of rehabilitation which does not have as its foundation the complete protection of their jobs, wages, and working conditions. They must especially oppose pending legislation in Congress which in any way opens the door to consolidations that will result in throwing large numbers of them out of employment.

METHOD OF FINANCING AND CONTROL

(4) Method of financing and control: The foregoing program of railroad rehabilitation and recovery should be financed as follows: (a) By Federal loans: Federal loans shall be made only upon the iron-clad guaranty that these funds are to be used solely for railroad rehabilitation and not to pay fixed charges and dividends, the Government shall require that the loans stand as first mortgages on the railroad properties and that Government representatives be placed on the railroad boards of directors to see that the loans are properly utilized; (b) by railroad company appropriations: the railroad companies shall be required to furnish a large share of the funds necessary to rehabilitate the railroad industry, by reducing their overcapitalization and cutting down their bond interest rates, by setting aside adequate sums to maintain the railroads at the necessary high level of efficiency, and so forth; (c) by State appropriations: in the grade-crossing elimination work the various States and cities involved shall be required to pay an allotted share of the costs, inasmuch as they will be direct participants in the huge benefits arising therefrom; (d) strengthen the I. C. C.: that the regulatory powers of the Interstate Commerce Commission be greatly extended over the railroads and made to include all other forms of interstate transportation.

PROGRAM IN HARMONY WITH THE ROOSEVELT ADMINISTRATION

This program of railroad rehabilitation and recovery is in harmony with the general policy of the Roosevelt administration to increase the purchasing power of the workers and thus to stimulate industry and to further the economic recovery of the country as a whole. The spending of the necessary funds in the railroad industry by the Federal Government, State governments, and railroad companies will create employment in private industry for hundreds of thousands of workers now on W. P. A. and relief, and will give an enormous stimulus to every other industry as well

as to the railroads. Moreover, by producing a more efficient transportation system, it will provide greater safety in travel, lower freight and passenger rates, it will bring back to the railroads much of the traffic which normally should belong to them, more employment and improved wages and working conditions for the railroad workers. The program for railroad rehabilitation and recovery deserves to be supported by all trade-unions, farmers' organizations, shippers' groups, and all well-wishers of the people's prosperity and democracy.

Agricultural Adjustment Administration Program

EXTENSION OF REMARKS

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, April 27, 1939

LETTER OF GEORGE N. PEEK TO RAY ANDERSON

Mr. WOODRUFF of Michigan. Mr. Speaker, inasmuch as the condition of American agriculture continues to present the fundamental reason why we still have 11.000.000 American citizens out of employment and many others on direct relief, I ask unanimous consent to print in connection with these remarks a letter to Mr. Ray Anderson, farm editor of the Cedar Rapids Gazette, Cedar Rapids, Iowa, by Mr. George N. Peek, Administrator of the Agricultural Adjustment Administration in 1933 and later special adviser to President Roosevelt on foreign trade in 1934 and 1935. Mr. Peek is unquestionably the outstanding authority on agricultural economics in the United States today. He not only knows what the agricultural problem is but he also knows what must be done if a solution is to be found for it. The letter I refer to follows. I commend it to the careful attention of every Member of the House and Senate:

MOLINE, ILL., May 19, 1938.

Mr. RAY ANDERSON.

Farm Editor, Cedar Rapids Gazette,
Cedar Rapids, Iowa.

DEAR Mr. Anderson: You have asked me for my conclusions with respect to the A. A. A. program, including and since the time I was Administrator of the A. A. A., which was in 1933. I was special adviser to the President on foreign trade in 1934 and 1935.

adviser to the President on foreign trade in 1934 and 1935.

It seems to me that the whole farm program is tied inextricably to our foreign-trade policy, or lack of one. At present we find ourselves trying to ride two horses going in opposite directions at the same time: (1) Achieving domestic price levels independently of world price levels; (2) internationalism and low tariffs, disregarding living and wage standards in the United States and the rest of the world. This is impossible.

I think I can give you my views best by suggesting a constructive program without unnecessary criticism of what the administration has done or has not done or what it is trying to do now. I will summarize under two general headings "Farm" and "Foreign."

The administration has accepted the principle of control of the farmer's planting ostensibly for the purpose of reducing the supply to the demands of our domestic market. This practice not only has been declared unconstitutional by the Supreme Court but, as demonstrated in 1934 and 1936, cannot insure the desired results as nature determines finally the amount of production from a given

SUGGESTED FROGRAM

(1) Whenever prices fall below parity we should stop the import of competing farm commodities and substitutes therefor and admit them only under a license system. The license fee might be in each case an amount which represents the difference between the

landed cost in the United States and the parity price.

(2) In order to insure more orderly marketing of staples and nonperishable crops and to prevent gluts in the market, commodity loans to farmers on a reasonable basis should be continued and

extended to other crops.

(3) A limited application of the principle of storing excessive supplies and carrying them over to lean years might be undertaken under certain circumstances, particularly when points 1 and 2 are not fully effective.

(4) A surplus-commodity corporation or a similar organization should buy excessive supplies for relief and possibly for trade, particularly with foreign countries.

(5) The possibilities for new industrial uses for farm products now grown and the growth of new products to take the place of those now imported should be fully explored and developed.

(6) A sound soil-conservation program should be followed as dis-

tinguished from the efforts to control production under the guise

of soil conservation.

of soil conservation.

(7) Every reasonable assistance should be given to the development of cooperative marketing. I believe that the farmer will never occupy his proper place in our highly organized economic system until he has the same control over the marketing of his products that industry has in the marketing of its products.

(8) Emphasis should be placed upon marketing rather than upon control of production. I know from my experience in Washington during the first Roosevelt administration that there are markets to be developed. Further, I know the administration prevented many important sales which could have been negotiated to a conclusion. If a manufacturer has excessive capacity, first he makes an effort to sell both at home and abroad at a price that will average in excess of his cost. Failing in this, he makes an effort to an effort to sell both at home and abroad at a price that will average in excess of his cost. Failing in this, he makes an effort to convert a part of this capacity to the production of other products which he can seil. Deliberately cutting his production is the last thing he does. This general principle should not vary much in its application between the farm and the factory, except that the farmer has no control over the marketing system for his production and but little over his production on account of the unknown factors of weather, pests, etc.

(9) Cotton offers a special problem, as normally we export about half of our production. In the case of cotton it may be necessary to pay the farmer a bonus (tariff benefit) in an amount which represents the difference between world prices and parity for the domestically consumed portion of his crop. The funds would have to come from the Public Treasury either from general or special taxation. Similar action could be followed with other export crops if necessary to insure parity prices (perhaps substituting for taxes the equalization fee, as provided by the McNary-Haugen bill, vetoed by President Coolidge in 1928).

It is my view that any legislation existing or contemplated which does not take into consideration the foregoing, but which relies for the suppose of the proposed of the production of the production

does not take into consideration the foregoing, but which relies for its success upon the impossible premise of production control through control of the farmer's planting, should be discouraged and attempted only when all other efforts are ineffective in producing the desired results.

Now as to foreign trade. The administration is headed toward a low-tariff or free-trade policy at a time when our unemployment problem is one of our greatest, without having referred the subject to Congress or to the people of the United States. This is done in the face of the well-known fact that since 1931 other nations have adopted protection to a degree unknown for a century. They have followed a policy of making strictly bilateral agreements on a basis of "quid pro quo." The administration's claim that our program is conductive to world peace will not stand analysis. Foreign trade should supplement and serve our domestic economy. It should not be permitted to dominate it. In short, we should insulate our domestic economy from the ill winds blowing in from any or all corners of the earth.

SUGGESTED PROGRAM Now as to foreign trade. The administration is headed toward a

SUGGESTED PROGRAM

(1) We must open our eyes to what is going on in the outside world, and recognize that foreign trade has become a definite and direct concern of governments. Unless our foreign-trade interests receive backing and assistance similar to that given by other governments to their traders, then we will not be able to compete with them on equal terms

(2) In order to develop consistent and effective foreign-trade policies, the present 50 or more organizations in our governmental set-up dealing with foreign-trade activities should be tied together and should function under a revitalized tariff commission. This commission should in effect be made a permanent board of for-eign trade composed of men experienced in the various fields of agriculture, industry, transportation, finance, and government. These men should come from various sections of the country in order that each section and the country as a whole would be represented.

We need accurate and up-to-date records of our commercial and financial relations with each individual country. We must know how we stand with each country and with the outside world on our trade and financial balances at any given time if we are

to steer our course intelligently.

This work was started more than 3 years ago in the Department of Commerce in cooperation with the subsequently abolished office of Special Adviser to the President on Foreign Trade. It would be a calamitous backward step to neglect to keep these tabulations up to the minute and to fail to make them promptly available to the public.

(4) As international trade cannot move on a one-way street, we should pursue a policy of selective exports and imports. We should send abroad, preferably in manufactured form, particularly those agricultural products which are the backbone of our foreign trade and of our domestic prosperity. We should take in return those raw materials which we need and such other products the importation of which will do the least violence to our domestic economy.

I believe that we should decide for ourselves what imports we will take and in what cusnities and from what countries in every

will take and in what quantities and from what countries in exchange for the goods we choose to send abroad in the national interest. In my opinion, this can best be determined by making individual arrangements with individual nations, country by coun-We should not attempt to apply some blanket formula, such

as a horizontal reduction of our tariffs. It matters little that this be accomplished through general tariff legislation or through generalizing tariff concessions granted under the Trade Agreements Act, as the administration is now doing.

To pursue this policy of selective exports and imports it will be necessary for us to abandon the unconditional most-favored-nation policy, adopted under the Harding administration. We should return to the traditional American policy of extending conditional most-favored-nation treatment only, which prevailed from 1789 to 1922.

As a result of the tendency of free traders in the administration to ignore American interest in the belief they were promoting world affairs, our foreign trade has drifted. Instead of helping agriculture, as intended, the trade pacts have greatly increased the influx of competitive agricultural products and of livestock. Industrial exports, particularly of scrap metals and other war materials, meantime have risen more sharply than agricultural exports and since 1934 American imports have climbed more than American

(5) In the case of foreign countries exercising exchange controls against our nationals, the satisfactory solution of the exchange problem should be made a prerequisite to the negotiation of any general trade agreement. But Secretary Hull and the professors who advise him have repeatedly declined to do so. They say that would be using the "big citick".

would be using the "big stick."

I do not regard reasonable business requirements as coercion.
When our nationals fill their part of a contract and their foreign customers theirs, and the foreign government intervenes, I think that our nationals have a right to ask our Government to act in their behalf. This is a matter upon which only government can act effectively.

I have advanced these general suggestions many times before and

shall probably do so again. Sincerely yours,

GEORGE N. PEEK.

Democracy Can Work

EXTENSION OF REMARKS

HON, ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

RADIO ADDRESS BY HON. ROBERT G. ALLEN, OF PENNSYL-VANIA, ON APRIL 27, 1939

Mr. ALLEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me recently over the radio:

address delivered by me recently over the radio:

The success of a democracy as a political instrument depends entirely on the character and intelligence of the people who live under it. Democracy to be successful must be a positive dynamic force, full of meaning in fact, as well as promise. We Americans can preserve our democracy if we only will. We can make democracy work if we have the determination to do so. Wishful thinking and hopeful talk will not do it. Intelligent action will, and that means that you and I and 130,000,000 other Americans must snap out of our apathy and strive to preserve a system of government which has never been equaled since the dawn of civilization. Our principles of government are unimpeachable. They are founded on the bedrock of universal law. As long as we the people are faithful to these principles we will be happy, prosperous, and will enjoy the security which we all desire. In recent years faithlessness to democratic ideals has brought us to our knees. Now we are alarmed, and rightly so. We must not blame our form of government for this defection, but ourselves. We alone are to blame. Dictators tell us that democracy is decadent.

When they make this statement they virtually say that we the

democracy is decadent.

When they make this statement they virtually say that we the people are decaying; that because of our impotence we are no longer able to govern ourselves. Americans, that is a direct challenge. If we helplessly confirm by inaction these preachments of twentieth century Caesars, we admit that we have sunk to the levels of slaves to be driven, beaten, and exploited. If we pick up the gauntlet, however, and hurl it back into the faces of our traducers, we are justifying the abiding faith in mankind which inspired Washington and Jefferson to build this free Government and Abraham Lincoln to preserve it. We are at the crossroads and we, the people, have to make the choice. If I know the temper of our people—and I think I do—I doubt not which choice it will be.

It is quite impossible to treat this broad subject in 15 short minutes. One aspect of it, however, is of transcending importance,

minutes. One aspect of it, however, is of transcending importance, and I wish to emphasize it this evening. It pertains to our domestic problems, and especially unemployment

The greatest challenge to our democracy today comes from within our own borders and not from some imaginary foe across the seas. Unemployment is our most fearful enemy. It is here on our very doorsteps looming larger and more formidable with each passing month. It is the source of all our political and economic woes. All the battleships and modern aircraft in the world cannot whip it nor can appearant politics such as hump priming nor can it, nor can appeasement policies such as pump priming, nor can sugar-coated palliatives like inflation, nor can a political policy of artificially created scarcity in the face of potential abundance. Unemployment is a critical but not insurmountable problem. We the economic armaments with which we can beat this enemy

Unemployment is a critical but not insurmountable problem. We have the economic armaments with which we can beat this enemy and thereby achieve prosperity for our people. We have in profusion those things for which other peoples are fighting today.

What are they? First, natural resources. We have them in superabundance. No nation on earth with the possible exception of Russia has more. Second, a labor force, skilled and unskilled, to transform these raw materials into consumable goods. We have the best labor force in the world. Third, machinery to augment and perfect the productivity of labor. No country in the world has the mechanical equipment which can equal our own. And fourth, capital. We are the richest Nation on the earth in this respect. We own one-half the world's gold supply and two-thirds of civilization's banking resources. One hour's work in America will buy more food and clothing than in any other nation on the earth. It will buy 12 times more than in Russia, 9 times more than in Italy, and 4 times more than in Germany. The purchasing power of our 130,000,000, people is more than that of any 500,000,000 Europeans or any billion Asiatics. In spite of all this we have one-half as many unemployed persons as all other industrial nations put together. Think of it. With such weapons as our great resources at our command we can annihilate unemployment and low standards of living if we will only learn how to use what God has given us—and that includes common sense. includes common sense.

But instead of that we are literally hamstringing and flagel-lating ourselves. We are committing a heinous social crime by wantonly choking the life out of the most potentially abundant wantonly choking the life out of the most potentially abundant economy the world has ever known. Blindly and without reason we are forcing an unnatural and an unnecessary program of scarcity on our people. We are entrenching unemployment as an established way of life. We are weaving relief into our permanent economic fabric. We are condemning our elderly men and women to an insecure and defenseless old age. We are denying our youth the opportunity to satisfy ambitions and carve out careers. In other words, we are moving in economic reverse. We are applying the brakes to our economic structure instead of the accelerator. Democracy cannot work unless we give it a chance. It definitely won't work unless we, the people, demand of our leaders a sane approach to current problems.

leaders a sane approach to current problems.

The challenge in the situation is just this: We must prove to the world that within constitutional limits we can harmonize conflictworld that within constitutional limits we can harmonize conflicting forces and bring order where chaos now reigns. It is certain
that our Government cannot solve these problems alone, nor can
business, nor can labor, nor can the farmer. Together, however,
they can do it. Today we find the Government pulling in one direction, business in another, labor in another, and somewhere in
between the three we find the poor old farmer. No democracy can
exist for long under such conditions. The leaders of these groups
must be brought together. In a spirit of cooperation and patriotism they must formulate a program compatible with presentmust be brought together. In a spirit of cooperation and patriotism they must formulate a program compatible with present-day conditions. This program will probably call for the abolishment and modification of some existing legislation. It will call for the elimination of onerous taxes. It will call for definite steps to stimulate the flow of capital, which alone will expand business, big and little. This program will require some new legislation which must definitely give due consideration to the technological developments which have made an anachronism of an economic system based on scarcity. scarcity.

scarcity.

It must make possible by legal constitutional methods the full utilization of all our machinery and manpower, to increase production to a point where it will assure to all our people the comforts of life. This legislation must stimulate greater consumption of goods and services by providing necessary purchasing power through productive employment at living wages of those who are now disemployed. We have leaders of intelligence and capacity who could sit down around the council table and develop a program which will prove to the world that democracy can work. By cooperation and coordination such as I have just suggested, we planned our way through the perilous days of the World War. Our democracy is in as grave danger now as it was then. What we did to save it in those days we can do now. Under the Agricultural Adjustment Act of 1934 we subsidized farmers for plowing under crops and killing off surplus livestock. That was an all-time blunder. I mention that act because it is a clear example of legislation which promotes scarcity. which promotes scarcity.

It is the reverse of that procedure which must be encouraged and even subsidized. Agriculture and industry must produce more and then make the increased increment available to all our people. If we want more we must produce more. Plowing under natural resources, plowing under our manpower and our mechan-

cal power is a crime from which there is no escape.

Democracy can work. Democracy is to political economics what Christianity is to religion. Both are based on the spirituality and the majesty of man. America is the best proving ground in

the world to demonstrate the efficacy of democracy. If we Americans cannot make democracy work there is no hope for the peoples of other nations. We, with our great resources and with 150 years of uninterrupted self-government behind us, must set an example for an anxious world to follow.

God and bounteous nature have made democracy possible. The

rest of the job is up to us-the people.

The Wage and Hour Act and the State of Maine

EXTENSION OF REMARKS

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

RADIO ADDRESS BY HON. RALPH O. BREWSTER, OF MAINE, ON APRIL 30, 1939

Whether or not 12,000 men will have jobs in the woods of Maine cutting pulpwood may depend to some extent on what Congress does this next week.

Cutting pulpwood in Maine on a 40-hour week is utterly imprac-Cutting pulpwood in Maine on a 40-hour week is utterly impracticable when Canada and Europe are cutting on a 60- or 70-hour week. Pulp and pulpwood is absolutely unprotected and flows into this country as freely as the ships sail the seas.

Germany has been buying wood in Canada, taking it to Germany, making it into pulp, shipping it to the United States, and selling it here at \$5 per ton below the United States cost of production.

production.

Those sales probably represent deliberate subsidy by the Germans of pulp sales here for reasons of their own, but their effect on Maine is apt to be disastrous. A vigorous protest has been filed with the Treasury by all of us interested in the pulp industry and action has been asked under the antidumping law, which, by the way, we are ourselves violating in our subsidized sales of wheat and cotton.

Bond is now required on all pulp shipments from Germany and Czechoslovakia and careful investigation is being made to determine how much duty may properly be imposed. Sympathetic consideration of our Maine problem is assured by the fact that the Assistant Commissioner of Customs in charge of this investigation is Frank Dow, of Dexter, and he has already been most helpful in the various preliminary moves.

Meanwhile however the constant of the West and Verneral Commissioner of the constant of the West and Verneral Commissioner of the constant of the West and Verneral Commissioner of the constant of the West and Verneral Commissioner of the constant of the Commissioner of the constant of the Commissioner of the constant of the Commissioner of the Commissione

Meanwhile, however, the operation of the Wage and Hour Act in woods operations has threatened to affect very seriously the cut of pulp this spring in the Maine woods. It has been nip and tuck to cover the cost of production in recent years and to increase the cost of American wood by \$1 to \$2 a cord would simply mean that most of the wood would come in from Canada or elsewhere. The mills would have no recourse but to get their wood outside the United States or shut down completely, which would simply throw more men on relief. more men on relief.

If the Government will not protect American producers, one cannot expect purchasers of pulp to pay \$5 a ton above the going price and be wiped out of business by less patriotic competitors, nor can it be expected that Maine mills will quit without a struggle and their first recourse for relief from impossible restrictions must be by resort to foreign wood.

must be by resort to foreign wood.

Elmer Andrews, Administrator of the Wage and Hour Act, who spent 3 years in northeastern Maine and so is familiar with our problems, held a hearing to decide on an administrative order to relieve Maine woods operations from the hours restrictions of the act. Representatives of the Maine pulp and lumber and labor interests made a splendid showing at this hearing.

Meanwhile, Congressman CLYDE H. SMITH, as a member of the

House Committee on Labor, has been successful after a tremendous fight in getting the committee to adopt a proposal to exempt pulp and lumber operations down to the mill from the hours restriction

of the act.

of the act.

This proposal was presented to the House Friday and it is hoped to secure its passage this coming week. I am flying back to Washington Monday morning to be on hand to help, giving up the visit I had planned to Aroostock to deliver the dedicatory address at the new cooperative creamery at Fort Kent on Monday evening, since everyone in Maine, and certainly in northern Maine, is vitally concerned with 12,000 jobs in the Maine woods.

The House last weer put foresty on a parity with agriculture

The House last year put forestry on a parity with agriculture and excluded it from the new wage and hour law, but the Senate struck it out and that has presented the present problem.

Maine has been very fortunate in having Congressman CLYDE H.

SMITH on the Committee on Labor at this time, and he is gen-

erally recognized as one of the strongest and most influential men on the committee on either side. In fact, in the final show-down it was his proposal for amendments that was adopted by the committee over the proposal of a leader of the southern Democrats, and he was entrusted with the responsibility of finally formulating the amendments which are now before the House. This is certainly a

amendments which are now before the House. This is certainly a tribute to the prestige and the influence of a man from Maine. People of Maine have a right to ask what Washington has taught me that will be of benefit to Maine.

Hitler declared recently that "Germany must export or die." Secretary Hull apparently has the same idea for America. For those export markets wars have frequently been fought.

So far as Maine and America are concerned, I am convinced of the wisdom of the opposite policy. I believe that America must protect American industry or perish.

Let us keep out of war by keeping clear of European entanglements and involvements. They have fought over their boundaries for 50 centuries. They may fight for 50 more. American blood must not again fertilize their racial lands.

America paid \$25,000,000,000 for the last war to make the world safe for democracy with discouraging results.

Let us now make America safe for democracy by putting 10,000,000 men back to work on honest jobs.

We insist that Europe shall not meddle in America. The Monroe Doctrine makes that clear. Why, then, should America meddle in

Doctrine makes that clear. Why, then, should America meddle in

The European struggle will arrive far more quickly at an equilibrium among the clashing forces as it has always done before if we do not unsettle the balances by rashly rushing in.

Let us be adequately prepared and dedicate our energies to straightening out things here at home rather than chasing a pot of gold at the end of a European rainbow.

Let us also bear in mind that 531 Members of the Congress are the only officials in America with the power to declare war and their voice is not for war but for tending to our business right here in the United States.

Modern Encirclements, by the Old Gray Squirrel

EXTENSION OF REMARKS

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

Mr. MASON. Mr. Speaker, my bushy-tailed friend jolted me this morning with the question, "Congressman, what does 'encirclement' mean?" I answered my friend as follows: "Webster defines 'encirclement' as 'state of being enclosed, enclasped, embraced.' The world has always thought of encirclement as a protected condition, surrounded by friends, enclosed in loving arms idea. Hitler, however, has recently given it the opposite meaning, such as surrounded by enemies, prevented from realizing desires, blocked off, frustrated. That is a peculiar question for you to ask, Stuffy. What is the big idea?"

Stuffy grinned quite wickedly and chuckled to himself, then enlightened me as follows: "Well, Congressman, I have listened in lately on several 'encirclement conferences.' They were held in the President's study and did not deal with European affairs. They dealt with our domestic political situation and the coming 1940 battle. The President's New Deal advisors are planning an encirclement movement against JACK GARNER. They hope to block him off from the Presidency by creating an alliance of new dealers, labor leaders, radical 'reds,' and northern Negroes. It is a stop-Garner program.

"Within this large encirclement movement several smaller encirclements are going on. John L. Lewis, with the aid of Mme. Perkins and the N L. R. B., is encircling and trying to block off and destroy the A. F. of L. The Communists are trying an encirclement movement upon the industrial unions of the C. I. O. and are having some success with the United Automobile Workers, at least that part not following Homer Martin. Martin, it seems, evaded the encirclement movement. Then, again, the New Deal administration has been maneuvering during the past 6 years to put across an encirclement movement upon business, and almost succeeded before Congress woke up to what was going on. It is interesting to note that the final success of all these smaller encirclements depends to a large extent upon the success or outcome of the large encirclement movement that is aimed at the Garner camp of Jeffersonian Democrats. We are living in an age of circles within circles, and no one knows what the outcome will be. However, each individual American, each minority, each religious group, each political camp, must be eternally vigilant if we are to preserve freedom of action, freedom of thought, freedom of religion, and freedom of speech in this land of ours. We should go back to the "horse and buggy" kind of encirclements, the loving, protecting, helpful kind, and leave the Hitler kind of hatred encirclements to the dictators of Europe."

After rewarding my little friend for his excellent explanation of American encirclements and his advice upon the same, I walked on to the office, thinking about encirclements and encirclements.

Amendment of the Wage-Hour Law

EXTENSION OF REMARKS

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

LETTER FROM DON L. BERRY

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the editor of the Record and Tribune, Indianola,

THE RECORD AND TRIBUNE, Indianola, Iowa, April 22, 1939.

THE RECORD AND TRIBUNE,
Indianola, Iowa, April 22, 1939.

Hons En Jensen,
House Office Building, Washington, D. C.

Dear Ben: I am writing to you, along with other Members of the Iowa delegation, asking your support of the amendment to the wage-hour bill, which is being introduced by John Gwynne, which will exempt from the provisions of the law all newspapers with a circulation under 5,000. The exemption limit now is 3,000, which is too low for a good many papers which are strictly local in their nature. I think this amendment will not be at variance with the spirit and purpose of the law.

Papers of this size are strictly local service institutions, and are in no sense in interstate commerce. The only interstate commerce we have is the few out-of-State subscribers who used to live here and want the home-town news. We do not ask exemption for our job departments when they are engaged in out-of-State work. That would give us an unfair advantage over other printers who must comply with the law. But if we have to comply with it, it gives other printers in localities where they have a reserve supply of laborers on which they can call, an unfair advantage over us. We employ all the printers in this community and give them steady work. We cannot tell the people of the community just when and in what order they must demand their printing in order to enable us to hold our men under 44 hours a week.

When the orders for printing or advertising come in it is our

a week.

When the orders for printing or advertising come in it is our When the orders for printing or advertising come in it is our business to serve the community and take care of them. If we have to pay time and a half for all overtime during peak loads, then we either have to lose money on the job, overcharge the customer, refuse the work, or add to our staff enough printers to carry the peak loads, and then have them all left here on part time under normal conditions. I don't believe it is the purpose of Congress to make any of these things necessary. We can, of course, refuse to accept subscriptions from out of the State, then we might become accept subscriptions from out of the State, then we might become automatically exempt from the provisions of the bill, as I understand it, but I don't believe Congress or even the labor agitators care to deprive former residents of their chance to read the old home news. Yet, if there is no change in the law, it seems that that is probably what we will have to do. The law as it is is totally unfair to papers like our own, which are strictly local yet happen to exceed 3,000 by a comparatively small amount.

We have reduced our circulation and kept under the 3,000 by cutting off a lot of exchanges, yet new local subscribers keep coming in. We can't refuse those. The next move will probably have to be to cut off all out-of-State subscriptions.

With kindest regards I am,

Very truly yours,

DON L. BERRY, Editor.

International Relations

EXTENSION OF REMARKS

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

ARTICLE FROM THE WASHINGTON POST

Mr. SHEPPARD. Mr. Speaker and Members of Congress, now that we have heard Reichfuehrer Hitler's radio address, in which he has definitely rejected the proposal of President Roosevelt to keep the nations out of war, it occurs to me that it has been definitely shown that our future international relations should be viewed with deep concern and particularly where they apply diplomatically or otherwise with dictator-controlled nations.

Our experience in the past has proven beyond a question of a doubt that written agreements have no significance when dictator-controlled governments wish to exercise their

While it is difficult to accept the theory of complete isolation as a Nation, nevertheless until a greater respect for international agreements is evidenced we are almost forced to accept isolation.

Old World intrigue is as much in the foreground today, if not more, than it has ever been in the past and the lack of international stability has created a suspicion among nations that is definitely destructive and the policy of expansion that is being followed by Germany, Italy, and Japan, and the methods they have utilized is not conducive of international security and friendship.

I think the position taken by Norway as indicated by the following news release under date of April 27 from Oslo is self-explanatory and one that is to be commended:

Norway Wants No Guaranty, Leader Says—Pledges Regarded as Prejudicial to Scandinavian Liberty

(By C. J. Hambro)

OSLO, April 27.—On April 14 Lord Halifax, in the House of Lords, and Neville Chamberlain, in the House of Commons, declared His Majesty's Government would feel itself bound at once to lend the Greek or Rumanian Government, as the case might be, all support in its power if the independence of Greece or Rumania should be

threatened in such a way that the Government of these countries considered it vital to resist with their national forces.

Similar declarations have been made in regard to various other states, and it has been suggested both in Parliament and in the press that this new policy of security should be extended to the Scandinavian countries.

So far it is not known under what terms the guaranty has been given; whether it is a unilateral declaration or a reciprocal obligation of some kind. But without in any way reducing the importance of the declarations made in the present emergency, it can no doubt be said that the northern countries have not requested and do not wish any such guaranty, nor have they been approached on this subject.

GUARANTIES AVOIDED

It is the declared policy of all the Scandinavian countries to keep outside any bloc of powers that may be formed and to observe a strict and unimpeachable neutrality. There is also among the people themselves a deep-rooted feeling that guaranties of any kind would be prejudicial to their national independence.

The very idea that the Scandinavian countries should need any special guaranty from any state or group of states is foreign to the northern countries and would seem to imply that they had dangerous national or political disagreements with some nation or other, which is not the case.

All the northern states are members of the League of Nations and

which is not the case.

All the northern states are members of the League of Nations and signatories to the Kellogg-Briand Pact for renunciation of war as an instrument of national policy. It would probably be an exaggeration to state they have today an unconditioned and implicit belief in the collective security built upon the Covenant and the Kellogg-Briand Treaty. But, on the other hand, they do not feel convinced that any special guaranty given by one or more of their cosignatories would materially lessen any eventual danger of agression from an outside power. outside power.

PROMISES DISCREDITED

Of course, the great difficulty of the moment, perhaps the greatest, is the general distrust among governments, states, and nations.

What might be called the international political credit system has completely broken down. No state believes wholeheartedly in any promise given by any other state today. Covenants, pacts, treaties, conventions, and agreements violated on the slightest pretext, and obligations, undertakings, promises, and guaranties unfulfilled have left the world in a state of moral chaos. As states have gone off

left the world in a state of moral chaos. As states have gone off gold so they have gone off their whole system of political responsibilities. It is hardly the opportune moment for inspiring confidence. That cannot be done any longer by words, however beautiful and reassuring. It can only be done by deeds, however modest. The nations have lost interest guaranties on paper. They are not deluded quite so easily as they used to be. They even have a lurking suspicion of slogans and are not convinced that democracy or the reverse is the true touchstone of action taken by great powers. The northern countries are fully aware that an absolute condition for remaining neutral in case of a European conflict must be to arm to such an extent that no attempt on their territories could meet with an immediate success, and to be prepared to defend their independence to the utmost of their power. That is why all four countries, with the consent of all political parties, have voted larger credits for national defense than ever before.

The four nations are also fully persuaded that it will be in the

The four nations are also fully persuaded that it will be in the interest of every country and of the future of European civilization that one corner of Europe should remain neutral if the worst

should come to the worst, and they are convinced that the world is longing for hopes once more and also for plain speech.

That is why the attitude of the President of the United States has been followed with so keen an attention in most countries. has been followed with so keen an attention in most countries. The United States is in a singular position. It has not extended its territories as a result of the war. It does not rule conquered nations. Its great cities and its frontiers are in no immediate exterior danger. Akin to all the nations of Europe and indebted to all of them in spite of war loans, it alone can hope to understand and be understood and to incur a minimum of suspicion.

When the United States unreservedly and openly emerges from the shadows of isolation there will be a possibility of starting upon a fresh era of international cooperation and coordination.

The Townsend Plan

EXTENSION OF REMARKS

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

RADIO TALK BY FULTON LEWIS, JR.

Mr. HENDRICKS. Mr. Speaker, recently there has been much pressure put on me to introduce a petition in the Well of the House to discharge the Ways and Means Committee from further consideration of H. R. 2, which is the Townsend plan. I have declined to do so at this time because I believe the leaders of the House plan to give us a vote on this bill at this session of Congress.

I would like to insert in the RECORD here a brief commentary made by Fulton Lewis, Jr., nationally known news commentator on a coast-to-coast radio network, concerning the probability of a vote on H. R. 2 at this session of Congress. This commentary corroborates my belief in this regard.

Now, you may recall that more than a month ago, I made several reports to you, about some hearings that were held on the Townsend old-age pension plan, and the General Welfare Act—which is somewhat similar—and several other bills, dealing with the general subject of old-age pensions.

The Townsend bill seems to be the one that has the greatest numerical support, throughout the country.

numerical support throughout the country.

Every year, at every session of Congress, a little handful of Congressmen who support these old-age pension programs, put up a battle to get their bill to the House floor, and at least get a record vote on it.

At first, of course, it's necessary to get hearings before the House Ways and Means Committee, and up until this session, they never

had been able to get that.

There has never been a vote on the Townsend bill. That's not There has never been a vote on the Townsend bill. That's not hard to understand. Very frankly, the average Member of Congress does not want a vote on any of these bills. The Townsend plan, for example, is a very troublesome and precarious political issue. The average politician much prefers to talk about it, in vague, broad, and ambiguous generalities.

The Congressmen do not relish the idea of a roll-call vote in the House of Representatives, on which they are pinned down to

one of two positions: "Yes, I am for it," or "No, I am opposed to it," and there never has been a vote on the Townsend plan, or any of these other similar programs.

Up until this session the proponents never have been able to get

so much as a hearing.

But this time it was a little different story. The sponsor of the Townsend bill is a young, wiry, persistent little gentleman from Florida, Representative Joe Hendricks; I doubt if he weighs more than 85 pounds, but he has the tenacity of 85 bulldogs.

Representative Hennarches appealed to Representative Doughton, the chairman of the House Ways and Means Committee, to give the Townsendites and the proponents of these other bills a chance to tell their story at least, and this time the committee decided to do so, with the result that those hearings were held a month ago.

Various witnesses appeared on both sides; the hearings lasted 10 days; the committee heard everyone who asked to be heard, including the tall, elderly Dr. Francis Townsend in person; but then, after it was over, the whole subject seemed to die a sudden death. There hasn't been a word of news or a development of any kind for

And it occurred to me this afternoon that it was only fair to the several million backers of these bills throughout the country to find out what has happened to them and whether they have been

merely pushed away in a pigeonhole, brushed under the edge of the rug, so to speak, in the hope that they'll be forgotten. I talked to Representative Hennancus. He said that is not the case at all; he told me that the leaders on the Ways and Means Committee have informed him that the committee is considering the Townsend bill—and these other programs—in secret sessions, at the present time; studying each one of them carefully. As soon as these secret discussions are completed the committee

will take definite action on them. Mr. Hendricks said that as a matter of fairness and courtesy, he wants to give the Ways and Means Committee every opportunity to carry out that promise. If it fails to do so within a reasonable time, there is one alternative he could take.

He could take.

He could bring his Townsend bill to the House floor by force, in spite of the Ways and Means or any other committee, by getting a petition to that effect, signed by at least 218 Members of the House; but he said he does not want to attempt that method except as a last resort.

Now, with that as a starter, I did some digging of my own among members of the Ways and Means Committee and the Rules Committee and among the House leaders in general this afternoon, to see whether Representative Hendricks is looking at the picture through rose-colored glasses, and this is what I find:

The Ways and Means Committee is studying the Townsend bill and these other similar bills at the present time. They will continue for a week or 10 days more at least, probably longer than that. At the end of that time they will take a vote, and there seems to be a very comfortable majority in favor of sending the Townsend bill—perhaps all of these bills—to the House floor without approving or disapproving them, but with a report that will be unfavorable.

be unfavorable.

Now, after that, it's necessary for the Rules Committee to give its permission for the bill to come up for debate on the House floor (that's true of all legislation). The almost invariable custom is, that the Rules Committee does not give its approval under

such circumstances.

But it seems that the Rules Committee will reverse that custom; it will send these bills to the House floor and allow them to come

it will send these bills to the House floor and allow them to come to debate.

The general leaders of the House have decided that although most of them personally are opposed to the Townsend old-age pension plan—the several million supporters of that plan, throughout the country, are entitled to have the bill brought up on the floor of the House of Representatives—they're entitled to a record vote so they can see how every Member of Congress stands.

So it appears that some time this session the Townsend followers, the old-age pension groups, will get their bill to the floor—they

the old-age pension groups, will get their bill to the floor—they finally will get this record vote in the House of Representatives for which they've been fighting for nearly 6 years.

Gen. Peter Gabriel Muhlenberg

EXTENSION OF REMARKS OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

Mr. ROBERTSON. Mr. Speaker, the Seventy-fifth Congress authorized an appropriation of \$25,000 for the erection at Woodstock, Va., of a suitable monument to the memory of Gen. Peter Gabriel Muhlenberg to commemorate his patriotic services during the Revolutionary War. When that bill was pending in the House I stated that the erection of such a monument would stimulate the patriotism of the youth of the

country. In recent months the life and accomplishments of General Muhlenberg have been the subject of study by the pupils of the public schools of Shenandoah County, and the following letter was written by a seventh-grade pupil to the county superintendent of public schools:

MOUNT JACKSON, VA., April 24, 1939.

Supt. C. C. SHOEMAKER,

Woodstock, Va.

Dear Mr. Shoemaker: Mr. Hepner, our teacher, read a letter from you in which you asked that each school have one of the pupils write you a letter telling what we are doing by way of studying the story of Reverend Muhlenberg and the contemplated

memorial in the near future.

I am writing this letter to advise you that our class has delegated this honor to me, and that we have been studying this sub-

ject in school when I was yet in the lower grades.

The Shenandoah County geography that has been in our schools for a number of years gives a very brief but interesting account of this patriotic incident of Revolutionary days, as well as some other books we have been here in school, and the grades from fifth

other books we have been here in school, and the grades from fifth up to seventh have been studying it for years.

The little pamphlet that Mrs. Massie brought to the schools gives a more recent account of just what progress is being made in this matter, and we have studied it as thoroughly as we could.

I think our Representative, Hon. A. Willis Robertson, has done a splendid work in bringing this matter to the attention of our Government at Washington, and for his untiring efforts to secure the sum of \$25,000 to put it across.

The citizens of the county, who have contributed time and effort, also, deserve the recognition of the people of Shenandoah County and the people of Woodstock, especially, for this fine contribution to their town, but the people of our county, State, and Nation owe the greatest debt of gratifude to the patriotic spirit of Rev. John Peter Gabriel Muhlenberg and the patriotic men who volunteered on that fine Sunday morning to march off to war for the noble cause that gave us our liberty and freedom.

Very respectfully yours,

Guy H. Sager,

GUY H. SAGER, Seventh Grade, Hudson Cross Roads School.

Business and Government Must Cooperate and Each Refrain From Punitive Conduct

EXTENSION OF REMARKS

HON. MILTON A. ROMJUE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

Mr. ROMJUE. Mr. Speaker, I desire to include herein a copy of a resolution introduced by me, as follows:

Whereas it is imperative that the people who are unemployed and who are willing to work should have every reasonable opportunity to secure employment, and only by cooperation between govern-ment and business can persons on relief rolls or unemployed be given employment and private business interests have urged that expenditures for relief be diminished and a few certain groups expenditures for relief be diminished and a few certain groups assert their ability to bring universal prosperity to the country if the solution of the country's problems were left to them, and while the solution of such problems, during the year 1932 and for several years prior thereto, were left to them the greatest depression our country has known was dropped into the lap of the Government, and those who now proclaim their ability to bring Government, and those who now proclaim their ability to bring about prosperity offer no new solution, except to go back to the policies in which they profess their faith, which actually led up to Nation-wide unemployment and almost a total bankruptcy of agriculture and financial institutions and a wholesale loss of jobs and positions to men and women willing and desiring to work, and the only solution now offered to remedy the situation by those who proclaim that if the full management of affairs should be turned back to them is that they will now solve the problem right, which they solved wrong before, professing at the same time that they have lost confidence; and

Whereas their loss of confidence has been present with them

Whereas their loss of confidence has been present with them Whereas their loss of confidence has been present with them since they were put out of power in the management of the Government on March 4, 1933, and their lack and loss of confidence has existed during 6 long years and no program yet offered by them, except that they want affairs turned back to them without asserting or setting forth any specific program that they profess to execute and the "loss-of-confidence group" has persistently asserted that the credit of the Government is being and was almost actually destroyed as early as 1933 and 1934, and notwithstanding such assertions the United States Government credit is as strong today as ever before in the history of our country, since its own securities are selling on the market far above par and many of the "loss-of-confidence group" are making their investments in said securi-

ties, and while we deplore the troubled conditions now existing in ties, and while we deplore the troubled conditions now existing in world affairs, and so far as can be seen not only has the "lack-of-confidence group" not lost faith in the Government as shown by their investments in the securities of the United States Government but the nations of the world who are troubled with rumors and threats of war are sending their gold and treasures to the United States of America, believing it to be the safest governmental institution on earth: Therefore be it

Resolved, That the people of the United States have not lost faith in their great leader nor in the fundamental principles of

faith in their great leader nor in the fundamental principles of their Government, and while reasonable enough and fair enough not to claim perfection in the administration of public affairs, it is the desire of the Congress of the United States to expedite em-ployment as much as possible and to refrain from the expenditure of public money so far as it can reasonably be done; and be it further

Resolved, That the Congress of the United States proposes to business institutions who have expressed their lack of confidence, that for every man to whom they will give employment the Federal Government will promptly remove from the pay rolls and stop the expenditure of public funds, and that the industrial concerns who have so assertedly stated that they have lost confidence, furnish to the Government the number of men that they will give em-ployment to for at least a period of 6 months at a reasonable wage or salary, and for an equal number that are employed by them the Government will withdraw their names from its employment and

There necessarily must be cooperation between industry and business interests of the United States and the Government itself. It is not expected that any business interest or enterprise will always be perfect, neither should it be expected that the Government in all of its activities be without error. The people of the United States are blessed by having the greatest Government on earth, and taking it all together there is no government anywhere better managed and more responsive to the will and wish of the people than is our own Government of the United States.

There is nothing so easy to do as to be abusive and criticize. I have known many a man who did not know how to run his own business at all, but knew exactly how to run everybody else's. If one chooses to look back over the history of this Government, they will find in proportion as little to criticize as the average person would find in regard to the management of his own business or own life's conduct. Great fortunes have been made and builded up in America the like of which has not been duplicated in any nation or in any combination of nations on earth. Many of these business enterprises have succeeded largely on their own merits, judgment, and management, and many have reached their peak through the processes which they have followed under the guidance and protection of favorite legislation. Many a fortune has been made by industries that were fostered and nurtured by an extraordinary high tariff protection, and that element of business reached the zenith of its power under the administration of President Hoover and a limited group had become so powerful that they influenced the writing of such a high tariff wall that they destroyed the agricultural interests of our country and pulled the roof down upon business in general. For some time President Roosevelt and the Democratic Party have been trying to bring things back to a common level. It is at least as much the duty to help the poor and weak up as it is to bring the strong and powerful down to a plane of equity and justice.

No right-thinking man wants to see any honest and legitimate business treated unfairly. On the other hand, no rightthinking man wants to see men, and whole families sometimes, unemployed and without work, food, and with scanty clothing. So in adjusting the problems that confront the country there must be demonstrated a spirit of cooperation.

I understand there is now meeting in the Nation's Capital representatives of industries and large business enterprises and chambers of commerce. I hope they may devise some plan that they may follow that will lead to better cooperation with the Government itself. Unfortunately, there happens to be here and there men identified with big business and even holding high political positions who can find no other avenue of pretended helpfulness other than to condemn and criticize. World affairs are in a grave situation. It is hoped and expected that the United States may honorably remain free from war; and in view of the very serious situation of world

affairs, it should be plain to every unprejudiced mind that the United States in all of its business interests and those who represent them should cooperate in every fair and reasonable manner, not only to maintain an honorable peace but to maintain a proper relationship among all of its people, including their business relationship. Perhaps what is needed most at this time is a spirit and willingness to lend a helping hand and to be cooperative rather than to be condemning everything. The group or faction or even a nation that thinks everybody and everything is wrong but itself eventually finds that it has not chosen the path either to happiness, contentment, or success. False propaganda and misrepresentation should give way everywhere to clear thinking and honest endeavor, and a willingness to cooperate and a desire first to be helpful rather than to be critical will prove beneficial. Those who indulge in the policy of helpfulness rather than that of vindictiveness will be the happier and more successful.

The "Emergencies" Become Permanent Under the President's Reorganization Plan

EXTENSION OF REMARKS

HON. GEORGE H. BENDER

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

Mr. BENDER. Mr. Speaker, President Roosevelt has taken the bull by the horns with the first proposal for a comprehensive reorganization of Federal agencies. Under his regrouping the Treasury Department will be renamed the Budget Bureau, and the activities of the Central Statistical Board and the Central Statistical Committee will be conducted under direct White House supervision. Our present National Resources Committee and our so-called Employment Stabilization Office, which is now part of the Department of Commerce, will similarly move over into the Budget Bureau; and the financial rearrangement will be completed with the naming of one of the President's yet to be appointed six Executive assistants to act as contact man between White House and Treasury.

So far, so good. But we speedily leave the realm of judicious reorganization and enter the field of controversy. The President has proposed a new Federal Loan Agency, and in it he suggests the lumping of the Reconstruction Finance Corporation, the Electric Home and Farm Authority, the Disaster Loan Corporation, the RFC Mortgage Co., the Federal National Mortgage Association, the Federal Home Loan Bank Board, the Home Owners' Loan Corporation, the Federal Savings and Loan Insurance Corporation, the Federal Housing Administration, and the Export-Import Bank of Washington. Here is something new. When the E. H. F. A. was set up, when the F. H. A. was created, when the Export-Import Bank was born, it was certainly contemplated that their existence was to be limited to the period during which they were necessary. To consolidate these agencies into a new department is clearly an effort to "freeze" them into permanence. As independent arms of the Federal Government, their activities were open to public scrutiny at all times. Their policies were reviewable, their expenditures were available for examination, their personnel was a matter of public record readily accessible to all who were interested. Once these independent emergency groups become fused in a large, well-concealed department, they will become permanent organs of the Federal Government. Make them part of a staff which is certain of its job, and it will take political dynamite to pry them loose from the Federal pay roll.

But there is still worse in the President's reorganization set-up. We are to be given a new Federal Works Agency. Within it will be embraced W. P. A. and P. W. A., both independent organizations at present, the Bureau of Public Roads, the buildings branches of the Treasury Department and the National Park Service, and the United States Housing Authority.

By consolidating those groups, the President will create a situation in which the most notorious spending agencies of the Nation will be perpetuated. The President's rearrangement, it should be observed, does not contemplate the desirability of eliminating the distinction between P. W. A. and W. P. A. It does not consider the frequently urged suggestion that the United States Housing Authority be replaced by some Federal consulting group which will have as its purpose the encroachment of private housing developments rather than the direct construction of publicly financed slum-clearance projects.

No matter how benevolent the President's intentions may be, there can be no reasonable doubt of the inevitable results of the proposed reorganization. Spending agencies designed for emergency purposes only will become fixtures of our National Government. The effort to correct abuses within the existing framework of our relief administration will be completely forgotten in the excitement necessarily attendant upon the establishment of a new governmental division. We shall be right back where we started from this spring when Congress insisted upon a thoroughgoing investigation of W. P. A. activities. The thousand and one difficulties which always accompany the transfer of Federal business from one agency to another will take up so much time and effort that the hearty enthusiasm for a complete revamping of our direct relief W. P. A. organization will be dissipated. And as a result of all this regrouping, there is nothing to indicate the economies which shall be achieved upon which the Nation or Congress may rest a decision.

To all appearances, the major result of the consolidations proposed by the White House will be the perpetuation of emergency" agencies long after their usefulness is outlived. When the United States Supreme Court killed the N. R. A., back in the first administration of Franklin Delano Roosevelt, most of our people believed that the N. R. A. administrative staff speedily ceased its activities. Yet as late as last year, there were still scattered employees in the service of the dead Blue Eagle. If we elevate W. P. A. and P. W. A., U. S. H. A. and E. H. F. A., D. L. C. and E. I. B. to the dignified status of departmental divisions, the taxpayers of the Nation may resign themselves to a long, hard pull. A huge personnel, administrative, supervisory, as well as the recipients of direct aid, will become vitally interested in assuring their permanent retention of staff positions. Advocates of civil-service extension will insist upon extending the provisions of their pet measure to emergency relief personnel.

We are indebted to the White House for its explicit message. The President's proposal has given us concrete evidence of the purposes to which the new reorganization powers are to be put. They will be used, not for the sake of economy, for the paring down of the huge Federal expenditures which have piled upon our Nation the greatest debt within the history of mankind, but rather for the perpetuation of a bureaucracy which will resist every effort to restore our finances to normal levels to the last man.

Relief Appropriations

EXTENSION OF REMARKS

HON. RAYMOND S. SPRINGER

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of March 29:

[From the Washington Evening Star of March 29, 1939]
UP TO CONGRESS

It is disheartening, although not unexpected, to find Mr. Roosevelt opposing substantial reforms that have been suggested as

means of reducing relief costs and improving the efficiency of relief administration. The President's position, as disclosed in his message asking for \$1,477,000,000 for the Works Progress Administration during the next fiscal year, is particularly discouraging in that it leaves the entire burden of devising a more economical method of administering relief—if there is to be any such saving—to Congress. This is a matter in which a President should take the lead, but Mr. Roosevelt, apparently convinced of the desirability of the present system despite its demonstrated shortcomings, refuses even to consider a trial of alternatives.

consider a trial of alternatives.

It is true, of course, that the President is asking only \$1,477,000,000 for next year and that about \$2,250,000,000 will have been spent for W. P. A. by the end of this fiscal year. This reduction is based on the assumption that W. P. A. employment will average only 2,000,000 next year, as compared with an average employment of about 3,000,000 persons this year. While it is to be hoped that Mr. Roosevelt is correct in this estimate, the industrial outlook as a whole makes it appear optimistic and suggests the possibility that a deficiency appropriation may be sought before the year is over, as has been the case in the past.

In any event, a reduced appropriation based on a restriction in

In any event, a reduced appropriation based on a restriction in the scope of W. P. A. activity because of improving business condi-tions does not go to the heart of the difficulty. So long as unem-

tions does not go to the heart of the difficulty. So long as unemployment continues to be a major problem the cost of relief will continue to be disproportionate to the results secured until there is a drastic change in the present system of meeting this emergency. The principal change suggested has been that we return to a cooperative system of relief, in which responsibility for administration would be left to State and local authorities, assisted by grantsin-aid from the Federal Government. This could be worked out so the Central Government would retain adequate supervisory power to protect its interests. It is, in fact, the method now being followed in a few classes of relief activity.

In specifically opposing this change Mr. Roosevelt said he believes it has "as many disadvantages as there are political units in the

It has "as many disadvantages as there are political units in the Nation." But until the President sees fit to make a more con-Nation." But until the President sees it to make a more convincing statement as to the precise nature of these "disadvantages," the impression will persist that the W. P. A. is more of a pump-priming device than a relief agency. If that is the case, Congress must be prepared to assume the entire responsibility for seeing to it that relief funds are used for relief purposes and nothing else.

Ohio-Lake Erie Canal Should Be Abandoned As Extravagant and Unnecessary

EXTENSION OF REMARKS

HON. PAUL W. SHAFER OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

EDITORIAL FROM PITTSBURGH POST-GAZETTE

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I wish to include an editorial from the Pittsburgh Post-Gazette in opposition to the proposed Ohio-Lake Erie Canal. The editorial follows:

[From the Pittsburgh Post-Gazette]

There is now in the hands of the Rivers and Harbors Committee There is now in the hands of the Rivers and Harbors Committee of the House of Representatives a recommendation by Army engineers of a proposed canal from the Ohio River to Lake Erie. Hearings to determine the merits and defects of the plan, previously called for April 11, have been indefinitely postponed. In the meantime, however, it is in the public interest to examine the project. The engineers' report calls for the construction, at present of a portion pale of the canal extending from the Ohio River to Struth.

The engineers' report calls for the construction, at present of a portion only of the canal, extending from the Ohio River to Struthers, just outside the city of Youngstown. Construction of the remainder of the canal to Lake Erie would be postponed until experience had proved whether the first stages were practical. Youngstown, Ohio, would be practically the sole beneficiary of this canal, and it would not even be of any great advantage to general industry there, but only to one or two large plants, which would be able to take advantage of the cheaper transportation of

To build even the first step of the canal would cost the tax-payers of the Nation at least \$42,000,000, according to Army estimates. The cost of the whole canal, according to the same esti-mates, would be \$207,000,000. Interest charges during construc-tion and the cost to local taxpayers would increase this to \$240,-000,000. Furthermore, equipment, terminal facilities, dredges, and other necessary expenses incidental to the canal would have to be

provided, bringing the total to over \$300,000,000.

In addition to the tremendous expenditure of public money, which ought not to be made under present conditions even if the

canal would be useful, there are numerous other objections to it. It is estimated that more than 22 million tons of freight would be diverted annually from the railroads and that over 8,600 railroad employees would be thrown out of work as a result.

employees would be thrown out of work as a result.

The canal, however, would be closed by ice at least 3 months each year, so that it would be necessary for the railroads to maintain their lines despite these heavy losses. Everyone is familiar with the plight of the railroads; to place this added burden on the shoulders of those which would be directly affected is not comprehensible. The talk that such a canal would be good for defensive purposes in case of war is just pure rot.

However, railroads and railroad workers will not be the only sufferers. The coal industry in this section of the country is another field that would be seriously affected.

Naturally, a decrease in revenue for the railroads will mean a consequent decrease in the present heavy Government taxes paid by roads. The canal will therefore place a further burden on the taxpayer through this loss in revenue to the Government, which is estimated at \$2,000,000 annually.

Nor is the general experience with canals such as to warrant this tremendous investment—with interest and amortization charges of \$12,000,000 each year and maintenance costs estimated at \$2,000,000 annually, which the taxpayers of the Nation would have to take care of.

The National Resources Committee, in a report to the President, has cast serious doubt on the practicability of the canal. As a result of this report, Mr. Roosevelt has ordered further investigation of the project. It is to be hoped that when the House committee comes to consider the recommendation of the canal now before it, it will refuse to commit the Government to the project, which is unwise from almost every point of view.

The Railroad Problem

EXTENSION OF REMARKS

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES Tuesday, May 2 (legislative day of Monday, May 1), 1939

RADIO ADDRESS BY HON. BURTON K. WHEELER, OF MONTANA, MAY 1, 1939

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a speech delivered by the Senator from Montana [Mr. WHEELER] on the railroad situation and legislation affecting transportation in the United States. The speech was delivered over the radio on the Forum of the Washington Star, at 8:30 o'clock p. m., on May 1, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In speaking to you tonight on the Washington Evening Star pro-

In speaking to you tonight on the Washington Evening Star program may I be pardoned for diverting your attention from European affairs and war hysteria long enough to discuss one of our major economic problems at home. It is one which has commanded the front pages not for days, not for weeks, but for months and even years. Its importance can hardly be overestimated. It is a national problem of the first degree.

The President of the United States, recognizing the gravity and the importance of the railroad problem, has twice during the past year appointed committees to study it. Those committees reported, and the President transmitted their conclusions to the Congress. The recommendations of the President's committee have furnished the bases for the general transportation legislation introduced by Senator Truman and myself in this Congress. We have introduced four bills; one deals with regulation of competing forms of transportation, one with reorganization of insolvent roads, one with waste of railroad funds in ventures outside their own business, and one with railroad holding companies.

When the Interstate Commerce Commission was created in 1887

ness, and one with railroad holding companies.

When the Interstate Commerce Commission was created in 1887 it regulated, as its name indicates, interstate commerce. The railroads were then and for years later a virtual monopoly in the transportation field, But today other forms of transportation flourish, and the railroads are subjected to vigorous competition from both motor vehicles and water carriers. The Congress has encouraged the construction of fine highways which the trucks can and do use. We have appropriated millions of dollars for such purposes. Likewise, Congress has aided water carriers with huge appropriations from the Treasury of the United States for the purpose of dredging harbors, canalizing rivers, and otherwise encouraging, with public funds, the growth of water transportation.

It has been requested and urged by many that the railroads be subsidized out of the Public Treasury. But the Congress has refused, and wisely in my judgment, to do this. It is true that the railroads are the most vital unit of our transportation system, Notwithstanding their importance, the railroads are not entitled to any special privileges. Neither should they be made to suffer any discriminations.

discriminations.

The transportation bill which Senator Truman and I have introduced and which we hope the Senate Committee on Interstate Commerce will recommend for passage this week is neither drastic nor radical. It is designed to modernize, codify, and clarify the present law. It seeks to extend regulation by the same and single agency to all competitive forms of transportation, but with recognition of the inherent advantages of each, and with due consideration for the public interest. tion for the public interest.

This will give to the carriers unified and fair regulation. It will insure for the public, coordinated transportation service.

Regulation of all competitive forms of transportation by a single agency, the Interstate Commerce Commission, is reasonable. President Roosevelt, in his message to Congress on June 7, 1935, urged the passage of legislation which would have accomplished this objective. If railroads are to be regulated, certainly their competitors should likewise be regulated. This bill is so drawn that each form of transportation is to be regulated, not for the benefit of any other form of transportation but for the public benefit of any other form of transportation, but for the public interest. This country is committed to regulation of transportation. There are those who believe that Government regulation is wrong, but the Nation is committed to that golicy. If, therefore, it is proper in the public interest to regulate busses and trucks upon the highway as Congress has done, and to regulate the railroads, what excuse can be offered for not regulating all other

forms that compete with them?

Some water carriers have appeared before the Senate committee in opposition to the enactment of the bill. They fight it because they do not want regulation. They say there is no public demand. There is a demand, a demand for a national transportation policy and even-handed justice for all, regardless of whether they be small or great. This bill seeks to do that.

The bill uses in part the language of the Interstate Commerce Act, and in part the language of the water-regulation bills of 1935 and 1937. It has been carefully drafted and thoroughly scrutinized, not only by members of the Interstate Commerce Committee of the Senate but also by experts from the Interstate Commerce Commission.

The rate-making rule, with all its safeguards of the public interest, has been retained. The bill plainly says that in pre-scribing a rate for one carrier the Commission is to consider only the effect of that rate on that particular mode of transportation. Properly administered, this should mean for better and cheaper transportation.

The Senate committee has been considering this bill in executive session and has eliminated provisions to which there were meritorious objections. As it emerges from the committee it will be a constructive and modern piece of regulatory legislation.

Another major railroad problem that has been commanding the attention of the Senate Committee on Interstate Commerce is the challenge to do something constructive about those railroads that are in the financial hospital—receivership or bankruptcy. A large proportion of the railroads, while outwardly in good physical health, are able to continue as going concerns only because they

are in the case of receivership or bankruptcy courts.

To the consumers of transportation service the railroads are so many miles of steel rails, so many locomotives, so many boxears, passenger cars, stations, and terminals. In the securities markets,

however, the railroads are so many bonds, so many shares of stock, so many interest coupons, and so many dividends.

These stocks and bonds make up the financial structure of the -just as the rails, cars, and locomotives make up their

physical structure.
When a locomotive breaks down, it is taken into the shops for When a railroad's bonds break down the financial struc-That repair process is referred to as reorganization.

At the present time, companies operating more than 75,000 miles, or roughly one-third of our entire railroad mileage, are in acute

financial distress.

The burden of the financial structure of these companies on their physical structures has been so heavy that their physical structures were unable to produce enough cash to pay the interest on their bonds.

The effect of this unfortunate situation is no private or local matter—it extends directly or indirectly to every member of the public. The problem is a national problem of first magnitude. The figures run into box-car numbers. The debt and stock of these bankrupt railroads exceed five and one-half billion dollars.

The number of persons directly employed by them exceed a quarter of a million workers.

But the consequences of this financial distress do not stop with the securityholders and employees directly affected—they extend to the passengers and shippers, the industries that supply rail-roads with equipment and supplies, insurance policyholders, the securities market—to every factor in our economic system, and to the Government itself.

Our whole economy is sensitive to the financial stability of the railroads. For this reason adequate procedures and standards for financial rehabilitation of the insolvent railroads are matters of

national concern.

The purpose of bankruptcy or receivership reorganization is to restore the railroads to financial health. Unless really sound financial structures are provided by these reorganizations the consequences to our national economy will be dangerous.

Try as we may, we cannot escape the facts. We cannot escape the fact that roads unsoundly capitalized will find themselves under relentless pressure to skimp on maintenance of their physical structures, with the result that efficiency and even safety will be jeopardized. We cannot escape the fact that the quality of service available to the public will also suffer from the railroads' financial inability to keep abreast of technological improvements. We cannot escape the fact that railroad labor, and labor in general, will be adversely effected. Industrial relations will be disturbed, will be adversely affected. Industrial relations will be disturbed; labor desires to maintain an adequate volume of employment with wages at an appropriate level; but railroad managements, if bur-dened by unsound capital structures, will feel compelled to take the opposite tack.

It takes no financial wizard to realize that the rails, the coal, the cars, and tools which the railroads would be able to buy, if given sound financial structures, may well make the difference between prosperity and depression for the several important industries whose chief customers are railroads.

dustries whose chief customers are railroads.

Here is a problem that calls for the best statesmanship at our command. The lessons of the past have been bitter—but they have been real. Our entire railroad history has been one of recurring cycles of insolvency, reorganization, further insolvency, and further reorganization. The process has been one of fees for bankers and lawyers and then failures. The result has been temporary makeshifts doomed to collapse—makeshifts foisted on the investors and the public at terrific expense and unpardonable extravagance. Worst of all, these reorganizations in spite of their cost have completely failed in what should have been their primary purpose—sound financial structures for the railroads.

The unhappy truth is that these reorganizations which failed so miserably were not infrequently engineered and perpetuated on the public by scandalous methods. The receivership scandals in this country are now matters of common knowledge.

With one-third of our railroad mileage now in bankruptcy, and

With one-third of our railroad mileage now in bankruptcy, and much more of it on the verge of bankruptcy, it would be reckless indifference to tolerate in the future a repetition of temporary makeshifts and unsound reorganizations.

What we are trying to accomplish in this bill is to reorganize the insolvent roads on the basis of what can reasonably be expected for them in the way of future earnings.

The problem calls for realism and realistic methods. All impartial students of the problem realize that a financial structure which is out of gear with the earning power of the property is

doomed to failure.

For the purpose of creating a sound financial structure, it makes no difference what was at one time invested in the road—what it originally cost, what it would cost to reproduce, or what anyone claims its abstract value to be. The controlling question

is: What can the property earn to support its capital structure?

It would be tantamount to fraud to create worthless securities in reorganizations, securities that cannot be supported by earnings. That would be simply creating tokens for stock-market

speculation.

Our bill seeks to measure the earnings that can reasonably be expected in the future by the experience of the past over a period of years. Anyone who claims that the future average earnings will be greater than the history of a past period of years should be required to prove his contention with evidence.

Railroads cannot be reorganized on mere hopes.

Wishful thinking is no substitute for earnings.

Wishful thinking is no substitute for earnings.

Reorganizations cannot succeed if they are based on claimed values that have long since disappeared in a realistic sense, and on business that has long since been lost to the railroads, never to return. A reorganization based on a sound judgment of earning power destroys no values; creates no losses. It simply recognizes the facts, including the unpleasant but nevertheless inescapable fact that values based on original cost or even reproduction cost just don't exist without earning power to support them.

One of the most discouraging facts of the present time is the hysterical fear that is blocking progress.

Fear seems to be the governing factor in our lives. There can

Fear seems to be the governing factor in our lives. There can be no hope of progress on that basis. Nor can we legislate for the public good if fear continues to be the guiding policy of those who appear before committees of Congress to oppose legislation which we have under consideration. At this very moment an effort is being made to block constructive railroad legislation with a lobby of fear. In the past there have been all sorts of lobbies used in an effort to influence Congress. But the hysterical lobby of fear today is a new technique to impede progress, and if successful, will mean not only the defeat of progress but a return to the evils and the abuses of the past.

I do not want to burden you with the technical phases of the I do not want to burden you with the technical phases of the bill relating to railroad reorganizations. But I do want to mention one important part of our program—the establishment of a special centralized railroad reorganization court. This would be a court of three expert judges, appointed by the President with the advice and consent of the Senate. The court's sole function would be to deal with the reorganization of insolvent railroads. That would be its sole responsibility and its reputation would stand or fall on the way in which it did that job. The creation of such a court would offer real opportunities to master the problems of railroad reorganizations that have plagued our entire railroad history. It would place responsibility for avoiding the abuses and scandals of the past where that responsibility cannot be escaped. The establishment of such a court was recommended by two committees appointed by the President to consider the

by two committees appointed by the President to consider the problem, and the President passed that recommendation on to Congress. We are trying to effect such a program, and we will, unless the lobby of fear is the victor.

In conclusion let me say we do not offer this legislative program as a panacea for the railroads, but I do claim it is a step in the right direction. The railroads need what every business in this country needs today—more business. The way to get more business for the manufacturers, better prices for the farmers, is to put the nine or ten million unemployed to work at good wages so that they can travel and buy what the farmer and the manufacturer has to sell. Every effort of this Government as well as every effort of private industry should be directed to this end. Devotion to this Nation and intelligent selfishness on our part demand this policy. demand this policy.

A Generous Peace

EXTENSION OF REMARKS

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Tuesday, May 2 (legislative day of Monday, May 1), 1939

ARTICLE BY DR. JOSEPH F. THORNING

Mr. TYDINGS. Mr. President, I ask that there be printed in the Congressional Record an article by Dr. Joseph F. Thorning entitled "A Generous Peace," having to do with the settlement of the war in Spain.

There being no objection, the article was ordered to be

printed in the RECORD, as follows:

[From the Catholic Review, Baltimore, Md., April 28, 1939] A GENEROUS PEACE

(By the Reverend Dr. Joseph F. Thorning, chairman, department of social science, Mount St. Mary's College, Emmitsburg, Md.)

or social science, Mount St. Mary's College, Emmitsburg, Md.)
In an editorial (March 30, 1939), instinct with sympathy and
rich human understanding, the New York Times suggested that
"a generous peace is the best hope of reuniting Spain."
This peace, conceived in terms of generosity, should be extended
to the United States—and it should operate both ways. Those
who had the confidence in the military genius of Generalissimo
Francisco Franco have an obligation to bear themselves modestly
in what is undoubtedly an hour of triumph for an admired and
admirable leader.

in what is undoubtedly an hour of triumph for an admired and admirable leader.

On the other hand, magnanimity is not to be considered an exclusive prerogative of the victors. There is an obligation on the critics and enemies of Generalissimo Franco to do their best to merit generous treatment. Within Spain this will be no great problem. A regime of social justice, coupled with liberty under the law, will in all probability continue to attract Spanish hearts to a love for the soldier-statesman.

Outside Spain it must be observed, regretfully, there is little or no disposition to accept the verdict of arms as final. The keynote of the maintained leftist opposition to Christian Spain was sounded by Prof. Fernando de los Rios in his swan song to the American people.

According to this discredited diplomat the American Friends' According to this discredited diplomat the American Friends. Service Committee was "the only religious group which, organically as such, worked continuously among my countrymen throughout this tragic struggle, bringing them words and deeds of pure Christianity."

throughout this tragic struggle, bringing them words and deeds of pure Christianity."

This is a slander upon Christianity as well as upon Spanish Catholics. The latter, working as volunteers to the number of 400,000, organized and operated the Auxilio Social, whose beneficent labors have often been described and pictured in the pages of the religious press. This is the hour to reemphasize the fact that the cause of the Auxilio Social, although an instrument of the national will and the Franco state, was the direct offspring of the Christian spiritual and moral revival which accompanied the national movement and which, like the armies in the field, received the blessing as well as the organized support of the Catholic bishops, priests, and lay people.

Admirable as was the humanitarian work of the American Friends' Service Committee, it does not bear comparison, either in scope or in wealth of self-sacrifice, with the magnificent development of the Auxilio Social, which is still serving the material and spiritual needs of millions. In the "calm analysis of history" this good-neighbor policy of the followers of Generalissimo Franco will neither be forgotten nor minimized. If we are to enjoy a generous peace, it is time for American columnists and newspaper editors to bestow a word of commendation upon the most truly Christian and charitable organization that emerged from the bloody

Christian and charitable organization that emerged from the bloody crucible of war.

Nor is the cause of a great-hearted peace served by pure inventions such as the Gestapo nightmare invoked out of thin air by Mr. Manuel Chavez Nogales. By what principle of ethics does a metropolitan journal like the New York Herald Tribune (March 29, 1939) foist upon the public a story written in Paris by an ex-publicist for the Madrid leftist regime? This writer admittedly has never seen a German or Nazi agent in rightist Spain. An article like that in the Herald Tribune is no contribution to peace, good will, understanding, or friendship. Rather it is tendentious, inflammatory, and destructive, if not designedly aimed to provoke indignation or reprisal. indignation or reprisal.

Let no patriotic American citizen be deceived. All the pleas for moderation, truth, magnanimity will be addressed to the head of the new Christian Spain. The calumniators, traducers, and jeal-ous, infuriated haters of Spain's first soldier are banded together in a conspiracy against the truth in what we trust will be a futile

ous, infuriated haters of Spain's first soldier are banded together in a conspiracy against the truth in what we trust will be a futile effort to blacken his reputation as a statesman before he shall have enjoyed half a chance to complete his superb social, civic, and humanitarian program.

Walter Karig (who early in January 1939 distorted the record with respect to the South American survey undertaken by His Excellency James Hugh Ryan and the Reverend Dr. Maurice S. Sheehy, of the Catholic University of America) returned to the charge with a vicious piece of anti-Franco propaganda to the effect that "the real master of the Iberian Peninsula is Hitler."

Smarting under the lash of just analysis and brimming over with bitterness with the frustration of his hopes for the victory of atheistic materialism in Spain, Mr. Karig, who no more than Manuel Nogales has any first-hand knowledge of the situation, is able to secure publication for his pious leftist fabrications in the Newark Evening News (March 31, 1939).

As an office of good citizenship we Americans, whether Protestant, Jewish, or Catholic, who believe in God, have a responsibility to point out to Messrs. Drew Pearson and Robert Allen, the defeated journalists of the left, that the challenge of "a generous peace" is a two-edged sword. If, as Herbert L. Matthews contended the moment he realized that his side had lost the war, "the resistance will go on—even underground," then every American who loves truth needs to remain on the alert to nail every lie that appears with respect to the aims, tendencies, or programs of Spain's new leaders.

The leftists have lost the war in Spain and in the United States. It is up to the friends of Christian Spain to insure that a "generous peace" will also be a triumphant "tranquillity of order." That is the definition of St. Thomas Aquinas.

Participation In War by the United States

EXTENSION OF REMARKS

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Tuesday, May 2 (legislative day of Monday, May 1), 1939

ARTICLE FROM THE CHARLESTON (W. VA.) DAILY MAIL

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Charleston Daily Mail, of Charleston, W. Va., in a column headed "At This Hour," the article being entitled "Foggy 'Causes.'"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

> [From the Charleston (W. Va.) Daily Mail] AT THIS HOUR-FOGGY "CAUSES"

Prior to 1917, America had fought five wars, and the cause of each is clearly recorded in the history books. In each case any high-school youth can state the "cause" of the war. But in reference to our part in the World War, the answer is not simple. What was the "cause" of the World War—particularly of America's participation in it? A British merchant ship, on which some Americant is the proposed to have taken prosesses was torrecome. can citizens happened to have taken passage, was torpedoed and sunk. But that hardly seemed enough to compel us to go to war. Surely our nationals sailed in the ship of a beligerent, laden with munitions, at their own risk. There was much public clamor about the supposed danger that the Central Powers, if successful on the the supposed danger that the Central Powers, if successful on the western front, would attack us; that it would be "our turn next." This assumption disregarded the fact of our geographic isolation. And this isolation was supposed by George Washington and by statesmen generally of the present day to afford America the best possible protection from foreign enemies.

Withal, in 1917 and 1919 there was a prevalent use of the mystic phrase that we must fight "to make the world safe for democracy." You hear the same talk now. But democracy cannot be made se-

phrase that we must fight "to make the world safe for democracy." You hear the same talk now. But democracy cannot be made secure by force of arms. Yet when we ask, What was the cause of the World War? some are sure to answer "To make the world safe for democracy." Well, if that is so, then we and the Allies certainly

lost the war. Nearly every democracy in Europe disappeared after 1918; and in our country there were never so many hostile forces as now seeking to impair it.

If war comes again in Europe, and if America participates in it, what will be the cause, so far as we are concerned with that war? How will you explain it so that a child of 12 (or any mature person, for that matter) can understand? We think you will be confounded. The answer would not be that we have been attacked and must defend ourselves, for no nation has attacked us. The answer would not be that we are liable or likely to be attacked next by the dictators, for no nation wishes to attack us, and no next by the dictators, for no hatton wishes to attack us, and no nation 3,000 miles away can attack us successfully. What, then, would the answer be? You hear people say that the United States would inevitably be drawn into a European war, but they don't tell us why. Perhaps, if we do go into Europe's war, and your boy of 12 or 15 or even of draft age, asks you for the cause of it all, you will simply say, "It was inevitable" and expect him to understand.

Philippine Oil Deal Between Standard-Vacuum and Quezon Government

EXTENSION OF REMARKS

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Tuesday, May 2 (legislative day of Monday, May 1), 1939

ARTICLE FROM PHILIPPINE-AMERICAN ADVOCATE

Mr. FRAZIER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Philippine-American Advocate entitled "Sevilla Kills Philippine Oil Deal Between Standard-Vacuum and Quezon Government."

There being no objection, the article was ordered to be

printed in the RECORD, as follows:

[From the Philippine-American Advocate]

SEVILLA KILLS PHILIPPINE OIL DEAL BETWEEN STANDARD-VACUUM AND QUEZON GOVERNMENT—STANDARD-VACUUM OIL INTEREST REFUSES AT LAST MINUTE TO DEAL WITH QUEZON UNLESS LEGAL CLAUSE IS INSERTED IN CONTRACT * * * "TO SUSPEND ALL DEVELOPMENT Work if Anyone Challenges Legality of Contract"—President Quezon Folled Rejection by Both Parties "Final"

(Documentary evidence and history of Publisher Sevilla's opposition to the oil contract negotiated by President Quezon now pending before the Philippine National Assembly)

New York City, February 3.—Porfirio U. Sevilla, Filipino executive businessman and publisher of the Philippine-American Advocate, was today advised from the Philippines that the oil contract pending before the Philippine National Assembly for final consideration, was rejected by President Quezon because the Standard-Vacuum oil interest attempted to have inserted in the contract

Vacuum oil interest attempted to have inserted in the contract with the Commonwealth government a clause permitting the Standard-Vacuum Co. to suspend all development work if anyone challenged the legality of the contract.

When this oil deal first came to the knowledge of Publisher Sevilla, last year, he expressed his opposition to this negotiation being conducted by the representatives of the Standard-Vacuum oil interest with President Quezon in an article entitled "Oil Pact Between the Standard-Vacuum and the Quezon Government," which was published in the May 1933 issue of the Philippine. which was published in the May 1938 issue of the Philippine-

American Advocate.
On June 8, 1938, under the auspices of United States Senator

On June 8, 1938, under the auspices of United States Senator Lynn J. Frazier, on behalf of his colleague, Senator Gerald P. Nye, the article was inserted into the Congressional Record of the Seventy-fifth Congress, third session, which we present on page 14 as evidence, exhibit A.

Publisher Sevilla ordered 10,000 copies of this article printed at his own expense. They were distributed in the Philippines under the franking privilege of United States Senator Gerald P. Nye.

As a consequence, after the article was distributed in the Philippines, the way was opened for opposition against the oil contract bill among the members of the Philippine National Assembly as well as the opposition leaders in the Philippines. Publisher Sevilla received letters commending his activities in this particular case. In the month of September, before the Philippine National Assembly adjourned, the oil contract bill was about to be passed under President Quezon's pressure. Quezon did not meet with much opposition at all from the national assembly, and no publisher or newspaper in the Philippines opposed this particular oil contract under consideration. under consideration.

Publisher Sevilla has for some time been observing and studying the progress of the oil contract negotiated by President Quezon with

the Standard-Vacuum interest. On October 3, 1938, the publisher addressed a letter to Mr. John A. Brown, executive chairman and president of the Socony-Vacuum Oil Co. of New York, and a copy of this letter was sent to Mr. Teagle, chairman of the board of the Standard Oil Co. of New Jersey, whose corporate interests own jointly the Standard-Vacuum in the Philippines, which we present as evidence, exhibit B.

OCTOBER 3, 1938.

Mr. John A. Brown,

President, Socony-Vacuum Oil Co.,

26 Broadway, New York, N. Y.

Dear Sir: During the last special session of the Philippine National Assembly a "must bill," known as the oil-contract bill, was enacted, authorizing the President of the Commonwealth of the Philippines to call for bids for exploration and development of the

oil-bearing lands of the Philippines.

It is a matter of public record that President Quezon, on the one hand, and the Standard-Vacuum Oil Co. on the other, had already entered into a prior agreement before the enactment of the so-called oil-contract bill for the manifest purpose of allowing the Standard-Vacuum interest in the Philippines to develop and control the natural oil resources of the Philippines.

I have been urgently requested by leading citizens of the Philippines and associations as well as some members of the Philippine Assembly itself and former members of the defunct Philippine Legislature, to institute legal action in the District Court of the United States for the District of Columbia, after such date a contract is issued to the Standard-Vacuum of New York by President Quezon, of the Philippine Commonwealth, to declare such contract as unconstitutional and invalid and contrary to—

(1) To the provisions of the corporation law, the petroleum act, e mining act, and the internal-revenue and tax laws of the

Philippines.

That the oil-contract bill is contrary to the aforementioned existing laws and organic acts of the Philippines is sustained by the fact that, according to section 3 of the oil-contract bill passed by the Philippine National Assembly, the assembly itself, as a body, was conscious of this fact and deliberately violated the provisions of these aforementioned existing laws and organic acts of the Philippines, when the assembly inserted a protective and privileged clause, which reads as follows:

"This act shall be liberally construed to carry out and effect the national policy herein declared, and no agreement executed by the President and ratified by the national assembly, pursuant to the provisions of this act, shall be declared or held invalid in whole or in part on the ground that it is inconsistent with or contrary to the provisions of the corporation law, the Petroleum Act, the Mining Act, the internal-revenue and tax laws, or any other laws. Insofar as the provisions thereof are inconsistent with the provisions of any law other than this act, the provisions of this act shall be controlling," in order only to allow the Standard-Vacuum Oil Co. to enter into an exclusive contract with the Philippine Commonwealth.

For example, let me state the fact that in 1926, when the Firestone Rubber Co. decided to develop the rubber industry in the Philippines, their request to lease 200,000 hectares of land for said development was turned down by the Philippine Legislature then on the grounds that it constituted a violation of the corporation law of the Philippines, which would make impossible now the enactment into law of the Quezon oil contract with the Standard-Vacuum Oil Co. "This act shall be liberally construed to carry out and effect the

Vacuum Oil Co.

Therefore, proceeding along this line of argument, why is it that President Quezon is now so insistent in creating a special act which might be termed a privileged contract, and which, in my judgment, is a most pernicious legislation passed by the subservient Philippine National Assembly in order to satisfy the corporate desires of the Standard-Vacuum Oil Co. of New York, which would mean a complete monopoly over the oil industry in the Philippines.

To this one particular issue, the contract to be entered into by President Quezon on behalf of the people of the Philippines, with the Standard-Vacuum, is a violation of the Tydings-McDuffie Act

* * guaranteeing complete execution and enforcement of all existing basic laws and organic acts of the Philippines. Therefore, on this ground, the matter calls for judicial action to declare this contract unconstitutional and invalid.

I also charge and challenge that:

Contract unconstitutional and invalid.

I also charge and challenge, that:

2. That the President of the Commonwealth of the Philippines,
Manuel L. Quezon, has no authority to execute such contract
on behalf of the Government of the Philippines and people because the ultimate authority of the Commonwealth of the Philippines, as a political division of the state belonging to or under
the covariants of the United States reach exclusively either unconpines, as a political division of the state belonging to or under the sovereignty of the United States, rests exclusively either upon the sovereign power of the President of the United States; with the United States Congress; or with the United States Supreme Court, to declare any law or contract as legal and constitutional within the provisions of the constitution of the Philippines as approved by the President of the United States as authorized by the Congress the Congress.

Therefore, the authority of the President of the Commonwealth

Therefore, the authority of the Fresident of the Commonwealth of the Philippines today, as provided by the Tydings-McDuffle Act, is temporal and rests solely upon the sovereign power of the President of the United States as directed under the mandatory act of Congress to suspend the operations of any contract "which in his (President's) judgment will violate international obligations of the United States."

Article 27, No. 19, of the constitution of the Philippines states that:
"Until the final and complete withdrawal of American sover-

eignty over the Philippines * * * *
"No. 2. The President of the United States shall have authority to suspend the taking effect of or the operation of any law, contract, or executive order of the government of the Commonwealth of the Philippines, which in his judgment will result in a failure of the government of the Commonwealth of the Philippines to fuifill its contracts, or to meet its bonded indebtedness and interest thereon or to provide for its sinking funds, or which seems likely to impair the reserves for the protection of the currency of the Philippines, or which in his judgment will violate international obligations of the United States."

Is it the intention of the United States."

Is it the intention of the United States Congress, that after the complete withdrawal of the United States sovereignty over the Philippines in 1946, as provided by the Tydings-McDuffle Act, the United States Government and the American people must assume the obligations created and mandated in this particular oil contract between the Commonwealth of the Philippines and the Standard-Vacuum, which contract calls for a period of 25 years' duration, subject to renewal by both contracting parties?

If this is the intention of the Commonwealth of the Philippines and the Standard-Vacuum, which contract calls for a period of 25 years' duration, subject to renewal by both contracting parties?

If this is the intention of the Congress for the United States Government and people to assume national and international obligations after the withdrawal of the United States from the Philippines, then this particular oil contract executed by President Quezon is legal and constitutional.

is legal and constitutional.

If this is not the intention of Congress, then the Congress of the United States must declare this contract as unconstitutional and invalid, because it is contrary to the provisions of the Tydings-McDuffle Act, which calls for complete withdrawal of the United States sovereignty over the Philippines in 1946—assuming no further national or international obligations thereafter.

Obviously this particular oil contract binds the United States Government to act as guarantor, assuming all obligations arising from this contract executed by President Quezon, of the Commonwealth of the Philippines.

Sir, as your organization is one of the leading oil companies

Sir, as your organization is one of the leading oil companies Sir, as your organization is one of the leading oil companies which would be affected by this particular oil legislation, I am taking the liberty of addressing you this letter to have the expression of your opinion, so that when President Quezon, of the Philippine Commonwealth, actually executes the proposed contract with the Standard-Vacuum Oil Co., and when such contract subsequently commences to operate, I shall immediately institute legal proceedings to declare this Oil Contract Act as unconstitutional and invalid.

With assurances of my highest esteem. I remain

With assurances of my highest esteem, I remain, Very truly yours,

(Sgd.) Mr. Porfirio U. Sevilla,

Copies sent to: Mr. Teagle, chairman of the board, Standard Oil Co. of New Jersey; Mr. Berg, president, Standard Oil Co. of California; Mr. T. Rieber, chairman of the board, Texas Oil Co.; Mr. William Humphrey, president, Associated Tide Water Oil Co.

Again on January 12, 1939, Publisher Sevilla communicated exclusively with Mr. John A. Brown, chairman of the executive committee of the Socony-Vacuum Oil Co., and with Mr. Teagle, chairman of the board of Standard Oil Co. of New Jersey, whose corporate interests jointly own the Standard-Vacuum Oil Co. in the Philippines.

Philippines.

We quote from the letter in part:

"Sir: You will recall from my previous communication with you that I cautioned your organization regarding the unconstitutionality of the proposed oil contract under its present form, which is now pending before the Philippine National Assembly.

"But if this oil contract now under consideration is going to extend 1 minute beyond 1946 without the approval of the President and the Congress of the United States, then this particular contract is unconstitutional, and you, my dear sir, on behalf of your organization, are taking a decided risk by executing a contract such as this one now pending before the Philippine National Assembly.

tract such as this one now pending before the Philippine National Assembly.

"After all, using the expression of an authority, 'the entire transaction is to be negotiated under the auspices of the United States and by its recognition and aid.'

"It is therefore my privilege and I am contemplating to institute legal action against President Quezon and your organization calculated to defend the best interests of Philippine-American relations, particularly the 'conservation of our natural resources for Filippinos, as ordained by the Philippine Constitution.'"

Copies of the letter addressed to Mr. Brown on October 3, 1938, were also sent to the major oil companies in the United States, and we present letters of acknowledgment as exhibits C and D.

we present letters of acknowledgment as exhibits C and D.

THE TEXAS Co., 135 East Forty-second Street.

Mr. Porfirio U. Sevilla,

President, Philippine Exporting & Importing Co., 630 Fifth Avenue, New York, N. Y. DEAR SIR: Reply to your communication of October 4 has been delayed by reason of Mr. Rodgers' and my absence from the city.

Our company, as a matter of policy, does not inject itself into affairs of the sort referred to.

Very truly yours,

T. REIBER.

STANDARD OIL CO. OF CALIFORNIA, STANDARD OIL BUILDING, San Francisco, Calif., October 13, 1938.

R. C. Stoner, director.

Mr. Porfirio U. Sevilla,

630 Fifth Avenue, New York, N. Y.

DEAR STR: Your letter of October 4, addressed to Standard Oil Co. of California, attention: Mr. Berg, president, has been referred to me and I have noted what you say about your intention of attacking the "oil contract bill," recently enacted by the Philippine National Assembly.

Our company is not at this time interested in the production of crude oil in the Philippines nor are we directly informed as to the constitutionality of the act which you mention.

We thank you, however, for drawing this matter to our attention.

Very truly yours,

R. C. STONER.

On November 14, 1938, Publisher Sevilla dispatched a cablegram to the president of the Commonwealth of the Philippines, Manuel L. Quezon, which we present as evidence—exhibit E.

E

NOVEMBER 4, 1938-12:20 P. M.

President Manuel Quezon, Malacanang, Manila:

Leading citizens opposition parties Philippines transmitted me public records regarding your proposed oil-contract bill with Standard-Vacuum. After investigation, consultation with United States ard-Vacuum. After investigation, consultation with United States Senators, found you without authority execute such act. Clear violation constitutional provisions Tydings-McDuffle Act. Same Senators demanded me turn over such records to them; will bring issue before floor Senate next session Congress. In my opinion there is corruption in oil monopoly bill. I caution you not to execute that deal on behalf people Philippines, otherwise will resort United States court invalidate same. Your authority involves international obligations of United States Government, American people, after independence as well flagrant violation many acts under Philippine laws to satisfy your desire extending oil monopoly Standard-Vacuum. Standard-Vacuum.

PUBLISHER SEVILLA.

On December 29, 1938, in acknowledgment of the letter of Publisher Sevilla, a letter was received from the Honorable Juan Sumulong, which we present in part as evidence "Exhibit F."

LAW OFFICES, SUMULONG, LAVIDES & SUMULONG, Manila, P. I., December 29, 1938.

Mr. Porfirio U. Sevilla,

President, Philippine Exporting & Importing Co.,
630 Fifth Avenue, New York City, U. S. A.

Dear Mr. Sevilla: For your information, the oil contract in favor of the Standard-Vacuum Oil Co. proposed by Mr. Quezon was not approved in its original form by the national assembly in its last session, but instead another bill was prepared and approved authorizing Mr. Quezon to call for bids for the granting of concessions of our oil-bearing lands. Recently it was announced by Mr. Jorge B. Vargas, secretary to President Quezon, that the only bidder was the Standard-Vacuum Oil Co., and consequently the award was made in its favor. However, under the provisions only bidder was the Standard-Vacuum Oil Co., and consequently the award was made in its favor. However, under the provisions of the act passed by the national assembly, this award in favor of the Standard-Vacuum Oil Co. will become effective only upon approval and confirmation by the assembly. We therefore believe that until the award has been approved by the assembly it will be premature to present any legal action with a view to having it declared unconstitutional.

I am deeply impressed by the keen interest that you are taking in the affairs of our country. Your willingness to bear the pecuniary expenses that may result from the filing of the complaint mentioned in your letter is an example worthy of emulation by all civic-spirited citizens. May I assure you that it would be a pleasure for me to cooperate with you in any movement calculated to defend the best interests of the country, particularly the conservation of our natural resources for Filipinos as ordained by our constitution? constitution?

I also take this occasion to thank you for the copies of the Philippine-American Advocate that you have been sending me from time to time. Very truly yours,

JUAN SUMULONG.

Today Publisher Sevilla summarized his principal objections to this oil-contract bill negotiated by President Quezon with the representatives of the Standard-Vacuum oil interest in the Philip-

Firstly, ne considers the oil-contract bill unconstitutional.

Secondly, he considers it a virtual oil monopoly.

Thirdly, he is against any policy of President Quezon, which in this particular case he considers most destructive and detrimental to the well-being of the Filipino people.

Today Publisher Sevilla dispatched a cablegram to His Excellency, Señor Manuel L. Quezon, which we present as evidence, exhibit G.

FEBRUARY 3, 1939-12:05 P. M.

President MANUEL QUEZON,

Malacanang, Manila:

Malacanang, Manua:

Did I ruin your oil deal with Standard-Vacuum? So sorry. What is next your leadership? Read my publication March issue exposing your administration's relations with foreigners and foreign capital. Congressional consideration timely affecting J. P. C. P. A. report pending Congress.

PURLISHER SEVILLA.

Civil Aeronautics and National Defense

EXTENSION OF REMARKS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1939

ADDRESS BY CLINTON M. HESTER, ADMINISTRATOR, CIVIL AERONAUTICS AUTHORITY, AT THE WILL ROGERS ME-MORIAL DINNER, WASHINGTON, D. C., APRIL 28, 1939

Mr. RANDOLPH. Mr. Speaker, it was my good fortune the other evening to attend a memorial dinner for the late beloved Will Rogers. Several excellent addresses were given, among them the following speech, which is quoted in part:

You gentlemen are carrying on a truly great work. A great highway upon which the plain people of the United States will go back and forth in pursuit of all the homely little things that were so dear to the great heart of Will Rogers. I think that would have pleased him more than all the great buildings, all the special movements and monuments that have been proposed or are being carried by the keep his proposed or are being carried by the keep his proposed or are being carried.

ments and monuments that have been proposed of are being carried out to keep his memory green.

He was a constant traveler himself. It was one of the truly American things about him. With a deep passion, he wanted to know, always and everywhere, what the simple little fellow was thinking about, what he was talking about, what he was doing by way of earning his living and by way of having some fun with that living after he'd earned it. Because he did travel, because he did learn these things, he was enormously successful in expressing them, in his syndicated articles, on the radio, and in pictures.

learn these things, he was enormously successful in expressing them, in his syndicated articles, on the radio, and in pictures.

So it was with some diffidence and some doubt that I received your invitation to speak here tonight on the subject suggested to me. National defense, the getting ready of all those little people, Will Rogers' real friends, getting them ready for the bitter business of war, just doesn't seem to be the kind of thing that Will Rogers or Will Rogers' friends like to think about or like to talk about.

or will Rogers friends like to think about or like to talk about.

But national defense, my friends, properly conceived, conceived in
the good American way, is not getting the little fellows ready for
slaughter. Adequate preparation for national defense, according to
our concept, is the very thing that will save your children and mine
from the grim business of sacrificing life and limb for the defense
of those beliefs upon which we build the happiness of our hearts

and homes.

That kind of adequate preparation for national defense, my friends, will do more than save our children. When we look at China, when we look at Spain, when we read the story of what occurred at Munich and at Godesberg, we can be pretty sure that adequate preparation for national defense in these days will not only save our youth of military age. There are no noncombatants in modern war. Adequate defense will save our own more or less precious hides, of whatever age they be.

It has been said that if the politicians and the generals were to be sent to the front lines, there would never be another war. Today—and there is no doubt about that—the front line has been brought to the politicians and the generals. Last autumn it is no exaggeration to say that No. 10 Downing Street was as close to devastating enemy fire as was many a doughboy's funk hole out in the lines before the zero hour of an attack in 1918.

I say that with no disposition in the world to reflect upon the

I say that with no disposition in the world to reflect upon the Prime Minister of England or upon the decisions which he then took. He was faced in that decision with an alternative that very surely meant not only the placing of his own official residence under fire, but the placing under fire of the homes of the 7,000,000 little people who make up the population of the London area.

pecple who make up the population of the London area.

Tonight, thank God, no such decision, no such alternative can confront the Chief Executive of the United States. But what about tomorrow night? What about those nights a few years hence; yes, even a few months hence, when our own commercial airplanes are carrying four times a week their loads of peaceable citizens and mail across the oceans that God placed between the White House and any potential enemy? If, as we sit here tonight, our own airplanes can carry peaceable pay loads across the Atlantice and the Pacific, who can say that some night in the not very distant future an enemy plane cannot carry the threat of destruction and death not only here to Washington but to all those little people, the people Will Rogers loved, wherever they may be along people, the people Will Rogers loved, wherever they may be along our borders?

Under the farseeing leadership of the President and with the support of a truly patriotic Congress, the Navy is ready for any foreseeable task and is being made further ready for the development of such tasks as professional skill can plan for. Our small professional Army is quietly fitting itself for the task traditionally assigned it, the task providing trained leadership for a citizenry called to arms. And both the Army and the Navy, as you well know, have a perfectly clear idea of the arms to which that citizenry may have to be called. Thousands of them will have to be called to the arm of the air. Thousands of armed airplanes must be procurable for them to be called to. Unless that is done, for all of the oceans that once protected us, for all the devotion and skill of the men now in uniform, the very heart of this Nation, its people in their homes, may one day stand naked to the threat of alien force, force in the air.

With a wisdom well-nigh prophetic, Congress a year ago, by statute, confided just that task to the Civil Aeronautics Authority which it created. Congress ordered us to "encourage and develop" an air-transportation system adequate to the present and future needs of the foreign and domestic commerce of the United States, the Postal Service, and the national defense.

We found the finest system of marked, lighted, radio-equipped airways in all the world, 25,500 miles of them uniting every part of the Nation, owned, manned, operated, and managed by the Federal Government. Over those airways fly in regularly scheduled service some 350 of the world's finest transport planes, privately owned and operated and flying more miles, more safely, in the service of the Nation's economic needs than all the heavily subsidized and almost completely militarized alrlines of all the rest of the countries of the world put together.

The winter just past has provided striking proof of the safety scheduled airlines have attained. Our three transcontinental lines

The winter just past has provided striking proof of the safety scheduled airlines have attained. Our three transcontinental lines scheduled airlines have attained. Our three transcontinental lines and our principal north-south line flew 50,000,000 passenger-miles between December 21 and March 21—the time when in other years the records of the airlines have suffered—without even so much as a single forced landing. The airlines as a whole flew 65,000,000 passenger-miles between fatalities in this period. That record is more than good luck. It is not the result of any single panacea for safety. It is the result of the infinite capacity for taking pains on the airways and in the air.

than good luck. It is not the result of any single panacea for safety. It is the result of the infinite capacity for taking pains on the airways and in the air.

There is a fine example of democratic cooperation between business initiative and Government regulation and aid to meet a national need, economic now; perhaps, one day soon, strategically vital. And remember welf, Government from the beginning of aviation, properly realized that the safety of its citizens who fly was matter for Government concern. So, almost from the first stroke of a designer's pencil on a drawing board, down to the last radio message about the weather which the pilot receives in flight, Government aid and regulation has played its part in our civil aviation. The creation of the Federal airways, their equipment with the most efficient aids to navigation, and their manning by a personnel strictly chosen on a basis of professional merit have already sonnel strictly chosen on a basis of professional merit have already paid large dividends in safety.

To me, as Administrator in the Civil Aeronautics Authority, has

To me, as Administrator in the Civil Aeronautics Authority, has fallen the task of managing this plant and its crew. And I want right here to say that the 2,500 men along these 25,000 miles of airways, tending 2,130 beacons, standing watch day and night over the transmitters and receivers of 262 radio stations and markers, caring for 298 intermediate landing fields, serving the 30,000 miles of teletype circuits that bring the weather reports and other data to 353 stations, these are men who, again and again, have shown that their devotion to duty can meet any emergency.

It is more or less routine for them to struggle with snow or storm or flood that the radio and the lights shall not fall the pilot who needs them.

needs them.

On occasions like the New England hurricane last autumn the public sometimes hears of what they do. The day that freak storm struck, Newark, on the edge of the area, could not hear the Boston radio. All wire services were down. Within 15 minutes one of our radio-maintenance engineers was in his own car on the way to Boston. How he got there, over roads blocked by fallen trees, around wrecked bridges, we have never been able to get him to tell. But before night fell he reached the Boston airport. He

tell. But before night fell he reached the Boston airport. He found the radio wrecked. Within an hour, with such tools as he could find, he had that station working again. Before morning the air lines, following that radio beam, were the only means of communication into the hub of stricken New England.

If we but give them the material to work with, we know that men like that can be counted on in any emergency, the emergency of war as well as the emergency of storm. The one thing they need most, the one thing all flyers need most is better weather information. Great strides have been made in the methods of observing and predicting weather that will affect flight. But there are serious gaps in the system. On the Pacific coast, for instance, our forecasters suffer from lack of knowledge of weather conditions moving in from the sea. A little more than a year ago a huge transport left in from the sea. A little more than a year ago a huge transmort left San Francisco for the south and east with a prediction of winds of 20 miles an hour from the west. Actually those winds rose to 70 miles an hour, and that plane with its crew and passengers was blown into the side of a snowy mountain, where the wrecked plane with the bodies scattered about it was not found for months.

These aids to air navigation, it cannot be too often emphasized, are not for the exclusive use of the scheduled air-line transport companies. They are available to every Army, Navy, Marine Corps, or Coast Guard plane that moves about the United States. Weather, radio ranges and markers, lights, and traffic control are useful to every one of the 11,000 private planes that fly the skies from point to point in the United States.

Our military pilots have long recognized the advantages of using the Federal airways and of taking advantage of our traffic-control system. Today, in order that the military traffic may fit in safely with the other traffic of the airways, each military pilot cheerfully files a flight plan with the traffic-control tower, has it approved and has his movements checked as he moves amidst the other

traffic.

All these things are instantly available to the Nation in time of war. Air transport within the United States will be just as important as was railroad transport in the World War. But with this great system already integrated to Government control and Government personnel, the Government will need no such revolutionary step as the "taking over" of the airways, as Government had to "take over" the railroads in 1917. Due to the intelligent generosity of the Congress, we can take stock of the airways and the scheduled air lines and report them tonight as ready for duty, for any kind of duty they may be called upon to fulfill. That is only true, however, if these airways can be kept up to the huge advances * * in the arts of radio signal and communication.

Congress has always generously recognized this necessity for the completion of radio facilities on the airways and their improvement wherever possible. Through that generosity we have been able to convert all important radio stations to the most mod-ern type of simultaneous voice and signal transmission. Yet hardly have we accomplished this change when notable advances in the art confront us with the possibility that the entire system of radio communication, as applied to flying, should be changed into the ultra-high-frequency category. Static, as you know, has frequently interfered disastrously with the efficiency of aviation radio. Ultra-high-frequency radio has this supreme advantage: Its vibrations are at a higher rate than those of any natural phenomena and, hence, free of static, and they are far above the vibrations created by any other man-made device and, hence, free of interference with other radio facilities. The installation of the existing radio ranges has made it possible

for pilots to fly through weather hitherto considered impossible. Three other radio developments are now being tested which will Three other radio developments are now being tested which will make it possible for airplanes, civil or military, to take off and land under those zero-zero conditions hitherto considered impossible. The first of these is the blind-landing system. I myself have been riding in the copilot seat of the testing planes to see how these systems work at Newark, Pittsburgh, and Indianapolis. It is indeed an eerie thing to sit in a cockpit, where the pilot, under a hood, can see nothing but his instruments, and to see two lines on an instrument indicate so accurately the course an airplane should fly within a matter of feet and inches as its wheels approach the ground

ground.

I have been flying in the laboratory planes carrying the absolute altimeter, which, by an adaption of the echo principle to radio, likewise indicates in feet the distance above terrain at which a plane may be flying at any given time. This instrument is so accurate that in flying across the Potomac River its needle indicated the

that in flying across the Potomac River its needle indicated the moment when at 1,000 feet we passed from a point above the water to a point above the sea wall at Hains Point.

An airway, of course, is of no use unless you have at the point to which it leads a place upon which to land. Congress recognized the importance of this last year, and required the Authority to survey the entire airport situation and to make a report and recommendation. That has been done. Some of you are familiar with the vast scope of the work involved. One definite recommendation has been made to Congress, namely that the development of adequate airports is a matter of national concern. It is a matter of national concern not only because of their economic importance. of national concern not only because of their economic importance, but of their irreplaceable strategic value in the event of national emergency. Only with adequate airports can an adequate military

but of their irreplaceable strategic value in the event of national emergency. Only with adequate airports can an adequate military air force be moved to the points where it is needed.

Aside from the recommendation for an explicit recognition of this fact we merely asked a definite continuance of the policy toward airport development which the Congress has generously pursued the last few years, in the course of which through the relief-work agencies some \$140,000,000 has been spent upon airports.

But there is one kind of emergency duty which, frankly, the Federal airways and the scheduled air lines cannot be expected to perform. Despite all their fine record, far too few of our citizens still avail of the air lines' services. Though they carry a million and a half passengers a year, so many of these are habitual air travelers that the best estimate places the number of individuals who use the air lines as somewhere around half a million people. A half million out of a Nation of a hundred and thirty million. About the same number of individuals ride as passengers in private planes. In other words only about a million of us Americans, eight-tenths of 1 percent of us, are familiar even with the feel of this great new vehicle of commerce which may tomorrow be the weapon upon which the fate of the Nation depends.

If that tomorrow comes too soon, we face all the horror and all

weapon upon which the fate of the Nation depends.

If that tomorrow comes too soon, we face all the horror and all the loss of fine young lives that marked our effort to improvise an air force in 1917 and 1918. No conceivable expansion of our scheduled air transport system can remedy such a lack. To double the number of transport planes would give us 350 new ones—and we are credibly informed that the German plane manufacturing industry is geared to turn out that number of fighting planes in a single week under pressure. To double the number of our air-line pilots—about 1,100—would be merely to man the equivalent of a single German bombardment wing.

Happily that does not represent our entire stock taking and happily that is not all we can do about it. We have 11,000 private airplanes. We have some 20,000 non-air-line pilots and about

30,000 students who have made some effort of their own to learn to fly. And if we may accurately judge by our first efforts to do something about this situation, we have at least 2,000,000 other

youths who want to learn to fly.

Obviously, if the state of the world demands that American civil avation be healthily expanded—and who can question that?—it is in this field that expansion, on percentage, will produce ponderable

This was the firm mathematical basis upon which the President recommended to Congress that the Civil Aeronautics Authority be required to establish vocational extension courses in the colleges and schools to accommodate at least 20,000 of that estimated 2,000,000 youths who want to learn to fly. As a test program the President allocated \$100,000 of National Youth Administration funds with which in 13 colleges we are now training 330 young men. with which in 13 colleges we are now training 330 young men. There were more than a hundred serious applicants for every one of the places available in these first courses. That is why we say that if 20,000 places are to be provided in courses to be given next autumn, there will be 2,000,000 applicants. As Mrs. Roosevelt said so eloquently in a recent magazine article, "You cannot keep the youth of America out of the air."

so eloquently in a recent magazine article, "You cannot keep the youth of America out of the air."

But you can, and you must, put the youth of America into the air safely. And, aeronautically speaking, that is the first premise of our private pilot training plans. Private flying in the United States has not more rapidly expanded because, frankly, it has not been sufficiently safe. While the air lines were building up to the magnificent record of safety marked by their 65,000,000 passenger-miles between fatalities this winter, private flying was steadily losing patronage because, we firmly believe, private flying was only marking up some 850,000 plane-miles per fatal accident as against the last year's record of over 13,000,000 plane-miles per fatal accident on the air lines.

So we believe that the first effect of the addition of this large body of rightly trained, of safely trained pilots to the private ranks will be a tremendous increase in the safety, and therefore in the usefulness of flying to such large numbers of our youth will, we feel sure, result in a demand for more private flying, for more private airplanes, for the factories in which such planes can be built, for the mechanics to service them, in their use upon the airways, and in every phase of the multifold activities of the plain, simple American citizens.

That will be a gain to the economic activity of these United States upon which it is difficult to set a limit. It may well mean

simple American citizens.

That will be a gain to the economic activity of these United States upon which it is difficult to set a limit. It may well mean the creation of that big new industry which so many of our economists have been looking for to solve so many of our domestic economic woes of unemployment and high taxes. Personally I believe it is the first rational approach to the problem of putting aviation to work in the interests of the eighty billion a year total income that this Nation should enjoy.

aviation to work in the interests of the eighty billion a year total income that this Nation should enjoy.

And if you would measure the effect of such an economic development upon our national strategic position, let me take you back again to the days of 1914, 1915, and 1916. A great President was then striving mightily to keep us out of war. He failed because Germany saw in us no threat. But let me ask you this: Suppose in those days that the automobile and the capacity to manufacture automobiles had been and had been generally recognized as the factor that would decide the fate of nations on the battlefield. Admiral von Tirpitz, I venture to say, would not have advised his imperial master to pursue unrestricted submarine warfare in total disregard of the rights and the protests of Americans on the high seas. Potsdam might well have quailed before the poten-

in total disregard of the rights and the protests of Americans on the high seas. Potsdam might well have qualled before the potential onslaught of Detroit, of the model T Fords alone.

The analogy is not entirely humorous. It is certainly not farfetched. We are not starry-eyed optimists about aviation. We do not foresee production lines turning out Boeings and Douglasses and Lockheeds like Fords and Plymouths and Chevrolets. But if we are allowed to add through the pilot-training program 20,000 intelligent, capable consumers of civil aviation each year, we do foresee the production for those consumers of airplanes by the thousands instead of by the hundreds as at present. And when thousands instead of by the hundreds as at present. And when you get into production by the thousands you get into the kind of mass production at least that enables you to buy a Packard today for what a Ford cost 30 years ago. You break the bottle neck that still keeps flying costs too high for the average American. Once that bottle neck is broken—and provided that always and ever the product, civil aviation, is kept safe for the average American to use—you throw the full weight of the economic power of this peace-loving country of ours directly into scales on which against it no dicator, however mad, dares throw the weight of a temporary military superiority.

porary military superiority.

On this occasion, with a full appreciation of my duties as a public servant, I do not hesitate to ask your support to that end. We want to give proper training to every youtin we can. We want to close every gap in the Government's service to safety. I do not hesitate to ask you to consider the morale of this fine body of men that man the lighthouses of the air along the Federal airways. I do not hesitate to ask your support for the perfection and extension of those aids to navigation.

I hesitate less when I realize that it was for lack of aids to navigation in the Territory of Alaska that Will Rogers and Wiley Post were lost. I am glad to tell you that on the 1st of July we will begin the installation of such aids up there on a program generously provided for by the Congress. I know how he would have approved this highway from Chicago to Santa Monica. I feel sure, too, that he would have gloried a little in the perfection of the highways of the air and their extension to the farthest of our possessions, possessions.

APPENDIX TO THE CONGRESSIONAL RECORD

But I think the thing that would have pleased Will Rogers most was the possibility of extending the fun of flying, which he loved, to the youngsters of America who so loved him. And I think that sly grin of his would have gone a little solemn, as it sometimes did, had he realized this fact—that so many of the simple Americans he typified were getting fun out of flying, were making their livelihoods out of it, and by that very fact were protecting their safe and peaceful comings and goings on the highways and the skyways, safe and peaceful in their homes and in their travels. Will Rogers would have been gled to know that a sound and safe and hig civil would have been glad to know that a sound and safe and big civil aviation was the thing that made the United States, his United States, into "a strong man armed that keepeth the peace."

United States Foreign-Trade Policy One of Giving and Losing

EXTENSION OF REMARKS

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1939

ARTICLE BY E. CLEMENS HORST APPEARING IN THE DAILY COMMERCIAL NEWS OF SAN FRANCISCO

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks I desire to include an article relating to the foreign-trade policy of the United States, written by E. Clemens Horst, California farmer and practical economist, who does not believe that the present international policy meets the Nation's needs.

In this article, which appeared in the San Francisco Daily Commercial News, April 21, 1939, Mr. Horst shows that the policy of reciprocal-trade agreements has resulted in the United States giving and losing in its trade with Brazil. His conclusions, it is explained, are predicated on authentic data obtained from the Federal Government. The article follows:

(By E. Clemens Horst)

Our dealings with Brazil, as herein shown from Government reports, prove the wild extent of our giving and losing without getting anything in return.

The United States Government reports cover the period of each

of the past 12 years, namely, 1927 to 1938, inclusive.

From 1927 up to and including the year 1938 we have given to Brazil or lost in our dealings with her:

(1) Our investors lost about \$300,000,000 on defaulted Brazilian

bonds. (2) Our investors have expended about \$1,000,000,000 in Brazil

for farms, factories, public utilities, etc.
(3) We have allowed Brazil to collect income taxes that would

otherwise be due to the United States on the profits of these investments.

(4) Above item No. 3 is a so-called reciprocal arrangement, which is not reciprocal because Brazilians have no investments in the United States.

(5) Brazil collects export duties on shipments of coffee and rubber to the United States of America, which shipments are allowed to be imported into the United States of America free of duty. In

other words, Brazil collects as export duties for her treasury what we should collect as import duties for our Treasury.

(6) Brazil collected in import duties in 1938 an average of 23 percent of the total value of all her imports as against the United States of America collecting only 15 percent on the total value

of all of our imports.

(7) In addition to the above 23-percent import duties collected by Brazil, she also charges 5-percent taxes on the amount of all bills of exchange in her payments of merchandise imports and also collects 10-percent taxes on all other Brazilian foreign bills of exchange. The United States of America charges no taxes on

any bills of exchange.

(8) In 1935 the United States made its first Brazilian trade agreement. Since then for the year 1938 our exports to Brazil have decreased, and for the year 1938 our imports from Brazil have

(9) In 1937 the United States Government loaned to Brazil \$60,000,000.

(10) In 1939 the United States Government loaned to Brazil \$150,000,000.

(11) From 1927 to 1938, inclusive, the United States of America imports from Brazil were \$1,550,000,000, which exceeds United States of America exports to Brazil of \$705,000,000. Excess of United States of America exports, \$845,000,000. We loaned Brazil in 1937 \$60,000,000. Excess of our imports from Brazil, plus above 1937 loan, \$905,000,000.

(12) To the excess of the above receipts in goods and money by Brazil from the United States of America, \$905,000,000, item (11), there are the following additional advantages:

(13) Brazil has had the advantage of decline in value of \$300,-

000,000 of defaulted Brazilian bonds, item (1).

(14) It does not appear to have been common-sense business on the part of the United States of America to have loaned to Brazil, in March 1939, in addition to all the above, another \$150,000,000.

(15) Our exports to Brazil are confined to such commodities that Brazil cannot buy cheaper or as cheap as Brazil can buy in other markets. The most important of our exports to Brazil are petroleum, automobiles, and other specialized or of mass-production machinery.

tion machinery.

(16) The fact during the past 12 years we have imported from Brazil over double the value of our exports to her leaves an enormous balance in Brazil's favor for increasing her purchases from the United States without any of the \$210,000,000 we recently loaned her. Those loans are prejudicial to our interests because the loans encourage the increase of purchases by Brazil from countries other than the United States of America.

(17) Our imports from Brazil, exclusive of coffee, are largely farm products directly or indirectly competitive with our own farmers

(18) The net profits to the United States of America, if there were any, on our foreign trade with Brazil would take the accumulations of hundreds of years to overcome the United States Government loans to Brazil of \$210,000,000 in 1937 and 1939, plus the other benefits our country has given and is giving to Brazil, heretofore specified.

The statistics herewith show that with all our favors to

Brazil our exports to them have decreased.

Mr. HOLT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Pittsburgh Post-Gazette entitled "Mr. Benedum Knows the Remedy." Mr. Benedum, a native West Virginian, is now a very successful businessman in Pittsburgh. He has always taken a great interest in governmental

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the Pittsburgh Post-Gazette] MR. BENEDUM KNOWS THE REMEDY

M. L. Benedum, the oil man, was not talking politics yesterday M. L. Benedum, the oil man, was not talking politics yesterday on his return to his home here after a 5-month stay in Arizona and California. Rather his advice to the American people in this critical period is to cease thinking as Republicans or Democrats and devote themselves strictly as Americans to the solution of

critical period is to cease thinking as Republicans or Democrats and devote themselves strictly as Americans to the solution of their problems.

He emphasized a point that is increasingly being stressed lately; namely, that if this country gets its unemployed back to work and restores prosperous conditions "the Nation need have no fear of any foreign foe." Fascists and Nazis will have been robbed of one of their stock charges against the democracies, which are said to be unable to end unemployment.

A happy and prosperous people, Mr. Benedum repeated, "is as important to national defense as armament."

He declares that the only barriers to prosperity are excessive government spending and destructive taxation. "Spending to prosperity" was declared contrary to experience and repugnant to reason. The first logical step to recovery "is to eliminate unnecessary expenses of government."

If these remedies were applied and business given encouragement, "an era of unparalleled prosperity would result," because there are so many demands to be met—so much that needs to be done. "The Nation needs a million new homes. Our national inventory is low. The heavy industries need to spend billions."

Must There Be More Gold Star Mothers?

EXTENSION OF REMARKS

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1939

EDITORIAL FROM THE SAN FRANCISCO EXAMINER

Mr. STEFAN. Mr. Speaker, yesterday, we in this House passed a bill to provide certain additional benefits for World War veterans and their dependents. Outlasting the life of any of us here will be the tragic consequences of that great world conflict. Every Member of this body now has on his desk letters from hundreds of American mothers, all pleading that no thing be left undone to prevent the United States from again becoming embroiled in a foreign war. We cannot be insensible to this plea of American mothers.

Recently an American mother wrote a letter which inspired an unusual editorial. The letter and the editorial should be read by every Member of Congress. The editorial, written by my friend, Charles S. Ryckman, appeared in the San Francisco Examiner. Mr. Ryckman formerly lived at Fremont, Nebr., and while there, in 1930, he was awarded the Pulitzer prize for the best-written editorial of the year.

I regard Mr. Ryckman's recent editorial both timely and significant. It is as follows:

[From the San Francisco Examiner]

[From the San Francisco Examiner]

Those who possess the awful power to put this country into war should ponder deeply over a letter written to the editor of the Examiner by "An American Mother."

Commending the efforts of the Hearst newspapers to keep the United States out of another costly foreign war, the letter said:

"We mothers of sons certainly do not wish to ever become Gold Star Mothers—some day to be granted that great boon of a trip across the ocean to shed futile tears before little white crosses in France—and, merely because another rash, visionary President may deem it the high idealistic thing to do, to conscript our boys and send them overseas to pour out their hearts' blood on the ungrateful fields of some foreign land."

That recalls something some of our people have forgotten and that some of our younger people probably never knew.

Some years after the World War the Government of the United States suddenly remembered that for each boy who died for his country in that conflict there was a mother who had died a thousand deaths, first in fearful waiting, and then in the knowledge of a dreadful fact.

dreadful fact.
So a pathetic little band of American mothers went overseas as guests of the Government to shed futile tears, as this letter reminds

us, over little white crosses in France.

That was a fine gesture, and the country should be very glad it

That was a fine gesture, and the country should be very glad it was made.

But it made up nothing to mothers who had lost their sons.

Young men in the prime of life, mere boys with all of life before them, had been taken from their homes to die.

And the unanswered and unanswerable question in every Gold Star Mother's heart was, "Why?"

Twenty years after the World War a majority of the American people were represented in a national poll of public opinion as being convinced that the entry of the United States into that struggle was a mistake. struggle was a mistake,

We do not have to answer to the dead for that mistake.

But what can we say to the living dead, the American mothers for whom the whole world and time itself came to an end in an adventure that we now brand as a mistake?

It is too late to do anything for the Gold Star Mothers of the World War, except to honor and respect them for a great sacrifice unselfishly and unquestioningly made.

But since the World War a new generation of American mothers has raised another generation of young men with life before them if their country remains at peace, and with death before them if it goes to wer. goes to war.

These recent weeks and months of world crisis have clouded their

Irese recent weeks and months of world crisis have clouded their lives with a great fear.

Is their country to make another mistake?

Are they, too, to be Gold Star Mothers?

Are their sons to be taken out of their homes, out of schools and colleges, out of the useful and happy occupations of peaceful production "to pour out their hearts' blood on the ungrateful fields of some foreign land"?

some foreign land"?

American mothers know how to make the supreme sacrifice for their country as well as the young men of America know how to die, bravely and unquestioningly, when liberty and homeland and honor are at stake.

when the time comes for American blood to be shed in the defense of this free land there will be no holding back of valiant sons of heroic mothers, because tears must also be shed.

But American mothers have a right to know that war, if it comes, is the last recourse of honor and security.

And no emergency confronts the United States today that justifies the torment of American mothers with the fear that is now in their hearts or that justifies the sending of American boys to die on foreign battlefields.

Let us assure both mothers and sons that this time there will be:

Let us assure both mothers and sons that this time there will be no mistakes, and that while we stand ready to defend America at any cost, we cannot be persuaded, beguiled, or paid to meddle in foreign affairs or participate in foreign wars.

Power Trust Violates Corrupt Practices Act-And Gets Caught!

EXTENSION OF REMARKS

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Monday, May 1, 1939

ARTICLE FROM THE ST. LOUIS POST-DISPATCH OF APRIL 21, 1939

Mr. RANKIN. Mr. Speaker, several days ago I stated on the floor that the opposition to the administration's power program was, in my opinion, inspired by the Power Trust,

which had been contributing to the campaign funds of candidates to public office and using their influences generally to control elections throughout the country by corrupt methods.

That statement was challenged by at least one Member of the House who demanded the proof.

THE SHOCKING PROOF

The proof is now coming in, and I predict that before the Securities and Exchange Commission gets through with its investigations there will be such an abundance of this proof as to leave no doubt in the minds of the American people.

Under permission granted me to extend my remarks in the RECORD I am inserting an article from the St. Louis Post-Dispatch of Friday, April 21, 1939, as the first installment of this proof which I hope every Member of the House

will read carefully.

The matter referred to follows:

[From the St. Louis Post-Dispatch of April 21, 1939]

SUIT TO CANCEL UNION ELECTRIC'S CHARTER IS FILED AT ST. CHARLES—PROSECUTOR DAVID A. DYER BEGINS ACTION TO OUST UTILITY FROM CONDUCTING BUSINESS IN STATE FOR POLITICAL ACTIVITIES—ALLEGES VIOLATION OF CORRUPTION LAW—CHARGES BASED ON DISCLOSURE BY THE POST-DISPATCH THAT COMPANY SUBSCRIBED MONEY TO CAMPAIGN FUNDS OF CANDIDATES

Forfeiture of the corporate charter of Union Electric Co. of Missouri for alleged violation of the State Corrupt Practices Act is asked for in a suit filed yesterday in Circuit Court at St. Charles by Prosecuting Attorney David A. Dyer.

The suit grows out of disclosures made by the Post-Dispatch last

January that Union Electric Co. had contributed financial aid to certain favored candidates in St. Charles municipal elections in 1937 and 1938 and had placed one of its employees on the staff of the St. Charles Cosmos-Monitor in the guise of a news reporter to conduct propaganda against a movement for a municipal electric plant in St. Charles which is now served with electricity by Union Electric.

PERVERSION OF FRANCHISE

Alleged unlawful acts of the company in connection with the St. Charles elections are said in the suit to have been "a great harm and injury to the public and to its (Missouri's) form of government and are a perversion and a misuser of the franchises granted to it by the State of Missouri."

These acts, the suit asserts, constitute "usurpation of franchises

and privileges not granted to it (the company) by the State of Missouri, all to the great injury of the general public of the State of Missouri."

Union Electric Co. of Missouri, a Missouri corporation, is a subsidiary of the North American Co., one of the largest public utility holding companies in the United States. It owns the huge Keokuk and Bagnell hydroelectric plants and distributes electricity in St. Louis and adjacent Missouri counties and through subsidiaries in East St. Louis and some other Illinois and Iowa communities.

THE LAW IN THE CASE

The LAW IN THE CASE

The Missouri corrupt practices statute (sec. 10478, Rev. Stat. of 1929) makes it unlawful for corporations to attempt to influence the results of elections or to endeavor to procure the election of any person or persons by the use of money, directly or indirectly, or to contribute to the campaign funds of any individual or party. The statute provides that as a penalty for violation the circuit court may adjudge the charter of a guilty corporation to be forfeited and may enjoin the corporation from transacting any business in the State. Besides asking for the forfeiture of the company's charter, Dyer's petition also asks that the corporation be enjoined from doing business in the State. This would not prevent the operation of utility properties owned by the company, under orders of the court.

The suit charges specifically that in the city election of April 1937, Union Electric Co. subscribed money to the campaign fund of Mayor Edward J. Schnare, who was an unsuccessful candidate for reelection, and to the campaign funds of C. W. Westerfeld, Oscar Koester, and Harry L. Chrismer, candidates for the city council; and also paid for campaign literature favoring these candidates and for precinct workers engaged in promoting their candidacies, and otherwise endeavored to procure the election of the particular candidates.

It charges also that in the city election of April 1938, when four councilmen were to be elected, the company similarly sought to procure the election of Richard Nordeen, Raymond Buerges, Louis F. Ebeling, and Frederick A. Wehmeier.

REIMBURSED FOR CAMPAIGN GIFTS

As has been told, William F. Waye, Jr., of St. Charles, an attorney for the Union Electric Co., admitted to the Post-Dispatch last January 20 that he had contributed funds to be used in the 1937 and 1938 elections in behalf of certain candidates and said the company had reimbursed him for the expenditures.

Before the 1938 city election, the suit asserts, Union Electric Co. caused to be prepared, and paid the cost of preparing, a card index of all qualified voters for use in trying to influence the result of the election in favor of certain candidates. Leslie B. Harrison, the reporter placed on the staff of the St. Charles Cosmos-Monitor by

Union Electric, told of this activity in the exclusive account of his participation in St. Charles politics published in the Post-Dispatch in January.

PAID SECRET PROPAGANDIST

The efforts of Harrison as a paid but secret propagandist for the company also are cited in the information as evidence of the company's attempts to influence unlawfully the results of the 1937 and 1938 elections. The petition alleges that during the time Harrison was connected with the Cosmos-Monitor the articles he wrote for that paper were subject to the control and supervision of officers and agents of Union Electric Co.

In the account published in the Post-Dispatch January 17, Harrison told of having joined the staff of the Cosmos-Monitor in the summer of 1936 under arrangements made by representatives of Union Electric and of having received his salary from Union Electric throughout his employment there, which terminated in the summer of 1938. He named Fred J. Martin, an employee of the company, and Attorney Waye as persons through whom he received compensation and instructions.

Compensation and instructions.

Harrison, who is now in California, said that some time before he left St. Charles he was told by a representative of the company that a Federal investigation of Union Electric might be made and was advised to leave. He said the company gave him \$600 when he departed.

S. E. C. INQUIRY

An investigation of Union Electric's political activities, legislative lobbying, and business practices was begun last December by the Federal Securities and Exchange Commission. This inquiry, which thus far has been confidential, is understood to have included the

thus far has been confidential, is understood to have included the St. Charles incidents and many others.

A recent order of the S. E. C., however, has turned the inquiry into a public investigation, scheduled to open at Washington next Monday. Federal statutes giving the S. E. C. jurisdiction over utility holding companies and their subsidiaries provide severe penalties for interference in elections and for filing false or misleading statements with the S. E. C. Maximum penalties for various offenses under the Federal statutes and regulations range from 2 to 5 years in the penitentiary or fines up to \$10,000, or both imprisonment and fine prisonment and fine.

NO KNOWN PRECEDENT

There is no known precedent for a suit such as Prosecuting Attorney Dyer has instituted. Because of lack of precedents, Dyer, a young lawyer serving his first term in office, took a great deal of time to study the case and consult with older counsel before filing the suit.

Union Electric Co. operates under franchises from the city of St. Louis and other cities, and also under a certificate of con-venience and necessity from the Missouri Public Service Commis-

Principal executives of Union Electric are Louis H. Egan, president, and Frank J. Boehm, executive vice president. Its chief dispenser of political favors and ace legislative lobbyist is A. C. Laun, vice president.

ST. CHARLES EDITORS AMONG WITNESSES SUBPENAED

St. Charles witnesses were subpensed Wednesday for the Securi-St. Charles witnesses were subpensed wednesday for the Securities and Exchange Commission's public investigation of Union Electric Co. of Missouri next week in Washington. It was learned that among those subpensed were Editors Lee Renno and Martin Comann, of the St. Charles Cosmos-Monitor, the newspaper for which Leslie B. Harrison worked from 1936 to 1938 as a reporter while being paid by Union Electric to spread propaganda against municipal ownership and in favor of the company and its candi-

dates for city offices.

Comann has been in poor health, and it was uncertain whether he would be able to go to Washington. Attorney William Waye, Jr., also under subpena, has been under the care of a physician. The St. Charles subpenas directed the witnesses to appear Wednes-

Export Subsidies and Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1939

Mr. REED of New York. Mr. Speaker, a major argument used by the New Deal in behalf of its reciprocal trade agreement program is that this program would increase foreign demand for our farm products, and thus aid in solving problems which confront American agriculture.

Proof that the reciprocal-trade agreements have failed even in this respect is found in the fact that the administration has been forced to subsidize exports in order to stimulate our foreign trade. Had the trade-agreement program functioned as the New Deal promised, it would have been unnecessary for the present administration to inaugurate the

export subsidy scheme for wheat in the summer of 1938; nor would the President have had to announce plans for a similar

scheme to apply to cotton.

Figures recently released by the Department of Agriculture show that we have heavily subsidized wheat exports. A press release of the Department of Agriculture dated April 13, 1939, indicates that sales of wheat and flour for export totaled approximately 101,300,000 bushels from July 1, 1938, to April 1, 1939. Of the total sales for export, the sale of approximately 77,000,000 bushels or 76 percent have been subsidized by the American taxpayer.

The country of destination is given for 41.000.000 bushels of this subsidized wheat. Of the total subsidized exports for which the country of destination is given 36,629,000 bushels were exported to countries with which we now have trade agreements. This is 89 percent of the total subsidized wheat

for which the country of destination is given.

In the face of these facts it is difficult to ascribe much importance to the trade-agreement program.

I insert the number of bushels of wheat shipped to those countries with which the United States has entered into trade agreements:

export destination:	Bushels
Belgium	10, 229, 730
Holland	2, 862, 267
United Kingdom	21, 948, 898
France	710, 344
Salvador	126, 856
Honduras	1, 838
Colombia	106, 500
Canada	947, 038
Cuba	21, 617

New Industries Board

EXTENSION OF REMARKS

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1939

ADDRESS BY HERBERT WACHSMANN BEFORE THE CHAMBER OF COMMERCE AND CIVICS OF THE ORANGES AND MAPLE-

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of the address by Herbert Wachsmann before the Chamber of Commerce and Civics of the Oranges and Maplewood, and a report on the new industries board of the chamber of commerce.

The address is as follows:

The address is as follows:

Mr. Chairman, members of the Chamber of Commerce and Civics of the Oranges and Maplewood, and friends, our president, Mr. Schuyler G. Harrison, has asked your committee on the new industries board proposal for a report to the membership on our activities. Mr. Carroll Dunham Smith, chairman of the committee, has given me, as the original proponent of the idea, the honor of making this report on the subject which illustrates the broad general fields of national importance to which the activities of our small chamber extend. A committee headed by Mr. Carroll Dunham Smith was appointed with the following members: Mr. George E. Stringfellow, Mr. Denis F. O'Brien, Colonel Longley, Mr. A. J. Hart, and myself, and in a series of meetings came to the conclusion that a new industries board, to function on the national scale necessary, had best be located in the Department of Commerce in Washington.

Our new industries board proposal is intended to aid in the solution of what is admittedly the greatest national problem of the day—unemployment in the midst of potential plenty in the greatest Nation on earth. In arriving at the definite program which we have presented to the authorities of the Department of Commerce in Washington, we first considered the various directions in which jobs can be made. For a fuller understanding of the advantages of a previous transport of the preserve that I give out the contract of the preserve that I give out the preserve that I give out the contract of a previous transport that I give out the contract of a previous contract of the preserve that I give out the contract of the preserve that I give out the contract of the preserve that I give out the contract of the preserve that I give out the contract of the preserve that I give out the contract of the preserve that I give out the contract of the preserve that I give out the contract of the preserve that I give out the contract of the preserve that I give out the contract of the preserve that I give out the contr

Washington, we first considered the various directions in which jobs can be made. For a fuller understanding of the advantages of a new industries board it is necessary that I give you a brief outline of those primary considerations.

Jobs in a democratic country under a capitalist economy can exist only in two major divisions. These are, first, in private industry with all which that term connotes; and, second, on the public pay roll in one form or another. Now, then, no job on the public pay roll—not a Government job—can or should be productive in the same sense that a job in private industry is productive. And all moneys used to pay for Government job—come from tive. And all moneys used to pay for Government jobs come from

levies in one form or another upon private industry. However, I do not wish to create the impression that such Government jobs as have been made in the last few years by the various relief agencies are entirely wrong. Something had to be done to help those who, by no fault of their own, were in need. And some of our Government agencies, such as the W. P. A. and P. W. A., for example, have done invaluable work in alleviating human misery, and perhaps even in avoiding some worse social effects such as have overtaken other countries. But we all agree that private jobs are by far preferable, regardless of the unquestioned need of Government jobs, until the number of real jobs eliminates that

Government jobs, until the number of real jobs eliminates that need.

With this belief as a starting point, we then considered the reasons for not having sufficient jobs in private industry. And here we stayed clear of politics, personal wishes, and what may be called the individual interpretations of economic preachers and their so-called natural laws. We came to the conclusion that there were not sufficient jobs in private industry for the simple reason that there was not enough profit prospect in any business, in the larger sense, to warrant expansion of production and hence make jobs. This applies to the national, and even international, economic impasse of the last decade.

Then, continuing along these broader lines of job hunting we

Then, continuing along these broader lines of job hunting, we came to the conclusion that private jobs could only be made now on any scale in such industries as could make profits, as a general

classification.

classification.

Now, since we saw no hope of expanding existing industry, the only remaining possibility appeared in the direction of what we called noncompetitive new industry. By this we mean things which do not compete with or replace an existing commodity or service within a reasonable time—such things as will increase the social or economic well-being of the Nation on the whole—rather than a new and cheaper gadget to perform an already existing service at less expense. service at less expense.

service at less expense.

It has been estimated that two-thirds of the jobs today are in industries and services which did not exist at the turn of the century. We accept and expect from modern civilization goods and services which our fathers did not have and of which our grand-fathers perhaps did not even dream. The benefits which the automobile, radio, telephone, telegraph, airplane, and other inventions brought in the past must again be brought to us by other similar new industries of a broadly noncompetitive kind.

That in short summary is the sequence of deliberations which

tions brought in the past must again be brought to us by other similar new industries of a broadly noncompetitive kind.

That, in short summary, is the sequence of deliberations which led to the decision that the most promising direction for finding additional jobs in private industry is noncompetitive new industry. It is to be strictly a national coordinating agency in the Department of Commerce, functioning as a liaison between the sources of new industry, the research and development facilities of the Nation, and the producing and distributing plant of the country. The entire functioning is to be on a voluntary basis, with all decisions as to commercial feasibility to remain in the hands of private enterprise and no Government moneys to be used at all in the financing of any project whatsoever. The rights of the original submitter of an idea capable of affording additional employment in a noncompetitive new industry to be protected by advance agreements on a percentage-royalty basis—however, contingent upon actual sales. Thus in effect the new industries board would be a national contact agent, operated by a small staff of qualified persons at a cost of not more than \$100,000 annually. This sum should be initially provided by appropriation either directly or as part of the Department Budget for a period of 2 years. Thereafter a sufficient tax on the new industries resulting from operation of the board would be levied.

It is to be emphasized that such a tax would be on entirely new the board would be levied.

It is to be emphasized that such a tax would be on entirely new sources and would in no way be an additional burden on existing enterprise, nor would it disturb price, wage, or other relations. The operation of a new industries board, it is hoped, would materially speed the time from the birth of an idea or granting of a patent to the use of the new product by the consumer. It would speed the next industries which would do for us what the telephone, telegraph, automobile, radio, etc., have done in the past toward making life fuller, more comfortable, and happier. Its successful operation might provide additional jobs in private industry at purchasing wages to the extent of millions annually. That, in a nutshell, is the program your committee evolved.

The next problem was to devise a practical means of spurring real

The next problem was to devise a practical means of spurring real action in the direction decided upon. The individual members of your committee all had some personal experience with the development of new enterprises, some as executives and managers, others as actual inventors or associates of inventors. All agreed that our past and present haphazard methods, from the birth of an idea to its commercial realization, were too slow. Too much is required of one man in too many different fields—technical, organizational, financial, and legal—to make for rapid progress. We also knew from personal experience that practically all the basic functions essential to the development of a new idea up to the point of compared to the progress of mercial feasibility are already extant and in many cases highly developed. But there is no real coordination of them on any scale

which can promise definite results.

The three factors involved are: First, the sources of new inventions; second, the research and development facilities; and third, the production and distribution plant of the country. The last of these has, in general, all necessary financial means or

Now, then, Americans as a nation are known for their inventive ability, which is that combination of imaginative energy and disregard of impossibility. Organized research in our country is at least on a par with that of other nations. Our production and distribution plant is operating at a pitiable fraction of capacity, and is ready and anxious to go forward. Hence, it seemed to us desirable to have these three factors coordinated on a national scale. We realized that the problem would not be simple, but on the other hand felt that even greater problems of organization had successfully been solved on a cooperative basis.

scale. We realized that the problem would not be simple, but on the other hand felt that even greater problems of organization had successfully been solved on a cooperative basis.

Most of the genuinely new inventions of the job-producing kind required the cooperation of various existing facilities with, in many cases, the development of entirely new ones. Also, in an economy in which the profit motive is the mainspring of progress, we felt that the coordinating agency which should help private industry toward profits through additional jobs would best be a nonprofit organization. There are many reasons for this decision, and I will give you only the major one. That is the fact, sad but true, that only as a nonprofit organization do we feel that our new industries board could be free from the suspicion and lack of confidence which we have found to be a large handicap in the development of new industry. This brought us to the conclusion that a new industries board, to function as a national coordinating agency on a cooperative basis, would be located in the Department of Commerce in Washington.

Now, we prepared a detailed outline of how we considered such a new industries board should function as to procedure and policy. After approval of our board of directors, this outline was presented in Washington by Mr. Stringfellow, of our own committee, and myself last August.

I will not take your time to go into the minutiae of the proposal, but can tell you briefly that the idea is to have a voluntary coordinating agency through which an invention, capable of producting additional jobs in a noncompetitive new industry, can be submitted to the new industries board for routing to properly qualified development and production organizations. The cementing link is to be a minimum royalty to the inventor and development organization, but entirely contingent upon actual commercial interest of all were included. All decisions on commercial desirability are to be in the hands of private industry.

The new industries board is

business and in no way disturbing to existing price, wage, or other

relations.

business and in no way disturbing to existing price, wage, or other relations.

And now a word on the present status. Our reception throughout the Department of Commerce has been very favorable. Through Mr. Stringfellow and our Representative in Congress the Honorable A. L. Vreeland, Mr. Smith, and I were in Washington again last month, and this was confirmed after previous correspondence and a meeting in New York City last November with gentlemen from the Department. There are certain procedural details which must be worked out before what eventually will be a new industries division in the Department of Commerce comes into being. But we feel assured that work on the project is continuing and we expect soon to have word of definite action.

I may also tell you that three national associations of American business have given us off-the-record assurance that they are in favor of our plan but wish for the present to remain anonymous. In conclusion, let me tell you what we feel can be accomplished by a new industries division. It is, of course, impossible to estimate accurately at this time. But we believe that the additional private jobs resulting from operation of this division could run into millions of dollars annually. We do not believe that unemployment can be solved overnight. It would take some years for that to happen, but we would be starting now on a new and permanent basis of job making. Concrete results should be noticeable within the first year of operation—might even come in a matter of months. Such is the kind of activity of our organization, and it is our hope that the Chamber of Commerce and Civics of the Oranges and Maplewood may be instrumental in helping to solve our greatest national problem.

I thank you for your patience, particularly as I did not tell any new jokes, for unemployment is no joke.

I thank you for your patience, particularly as I did not tell any new jokes, for unemployment is no joke.

America Goes to Town, or What We Need in Roads of Tomorrow

EXTENSION OF REMARKS

HON. THOMAS M. EATON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1939

Mr. EATON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to quote excerpts from an article, America Goes to Town, written by Paul G. Hoffman in the Saturday Evening Post of April 29, 1939. Mr. Hoffman, who has been in the automobile business almost all of his life, is well qualified to write on the question of

roads and highways, because the modern automobile has made the modern highway necessary.

I am quoting a few paragraphs of this article in order that the Members of Congress may make up their minds just where the money should be spent in building the roads of tomorrow. Mr. Hoffman says:

Thirty years ago we didn't know what an automobile was. Not as we know today. And today we don't know what a highway system is. Not as we'll know 20 years from now. By this I do not mean what most readers of this magazine probably think I mean; most of us confuse fanciful ideas with a driver's knowledge of most of us confuse fanciful ideas with a driver's knowledge of highways. My brother-in-law, for instance, is a fair-sized sample of an intelligent American citizen. He looked up from his newspaper with a dreamy expression one day and said, "Paul, won't it be grand when we can shoot right across the country from Atlantic to Pacific on superhighways all the way?"

I have been known to do a little tradition-smashing myself, but I said, "Potter, I don't believe you'll live long enough to see it."

"Why not?" he asked, slightly peeved.

"People don't travel from the Atlantic to the Pacific."
"I do."

"People don't travel from the Atlantic to the Pacific."

"I do."

"Yes; you and a few others."

"A few! Tens of thousands."

"Make it hundreds of thousands. But even so, you're only a drop in the bucket, you transcontinentalists. Just a drop."

Ever since covered-wagon days it has been one of our holy notions that we are a westward-moving people. We were once. But we aren't now. Not any more.

Again, several of us were talking at lunch about roads and automobiles and a man who has done a lot of long-distance touring said: "What we need in this country is good highways around the cities so you can bypass 'em. Why last summer when we were going from Indianapolis to Boston—"

I listened to his story of comfort and speed in the country and crawling and misery in the cities and when he was through, I said, "Bill, you want roads built for your own convenience. Well, that's natural. So do I. And you imagine there must be a lot of others who want to miss the cities, the same as you do. Well, a lot of us do want to miss them. Sometimes. But of all the drivers there are on the road, how many do you suppose want to go around the cities?"

He guessed it would be as high as 30 to 40 percent. I told him the number is actually in the neighborhood of 5 or 10 percent, as

It is.

We have spent a mint of money for roads in this country in the last 30 years, and on the whole we have done a grand job. We have pretty well pulled ourselves out of the mud. The Saturday Evening Post published two pages of pictures not long ago showing the kind of roads that daring transcontinentalists encountered 25 years ago. They wallowed through Iowa with chains on all four wheels, and still got stuck hub deep in mud. In Nebraska the Lincoln Highway was ruts where it wasn't mostly the bed of a creek. And in Nevada you looked across endless miles of sandy gashes slashed through sage or across big boulders. That was your highway. That sort of thing is history now, and mighty glad we are that it is.

Mr. Hoffman then shows why we must plan our highways years in advance. I quote further:

Consider, on the business side alone, a conclusion which I am satisfied may fairly be drawn from some of these studies. With our present highway system and the thirty-odd million cars, trucks, and busses that we now have, we are getting about 250,000,000,000 vehicle-miles per year, or 500,000,000 op passenger-miles, counting two passengers to a vehicle. The conservative estimate is that in another 20 years we will have about 40,000,000 cars, some 10,000,000 more than at present; not a startling increase, just normal, anticipated growth. But what kind of cars will they be? And what use will they give us?

It is my reasoned conviction that the use of cars in this coun-

It is my reasoned conviction that the use of cars in this country—not their number, but their use—will easily double in the next 20 years. Instead of getting 250,000,000,000 vehicle-miles with 30,000,000 cars, as now, we will get 500,000,000,000 vehicle-miles with 40,000,000 cars. There are two good reasons for this.

In the first place, cars are going to continue getting better and better, and less and less costly to operate. Forty years ago it cost a motorist about 30 cents per mile to own and operate a car. Today the average cost is down to 2.7 cents per mile, and unless I am sadly mistaken, it will go to 2 cents, and probably less.

Long-distance motoring is not so important as first imagined. Read on:

Long-distance motoring does not play nearly as big a part in our traffic as most of us imagine. Like my brother-in-law, we think of ourselves as confirmed transcontinentalists. Yet the amount of

of ourselves as confirmed transcontinentalists. Yet the amount of highway traffic moving from coast to coast is insignificant.

If you draw a line across the United States from Mexico to Canada, and if at every point where a main highway crosses the line you station a man or two to count cars going east or west, and if you stop people and ask where they're from and where they're going, what will you learn? The Bureau of Public Roads tried it. Their line was drawn right across Idaho, Nevada, and Arizona. They didn't concern themselves with in-State cars but tackled only those that were crossing the State, and were bound to or from points west of these three States, or to or from points

east of them. Traffic isn't heavy out there at its thickest. It's a jam, in some places, if three cars are in sight at once. And there, if anywhere, you're bound to catch practically all transcontinental traffic

what did the study reveal? This: An average of 2,532 out-of-State passenger cars daily crossed that long line from Canada to Mexico. Not very many. In the East there are hundreds of roads, not considered extremely important, which carry that many cars. Probably a good many of those 2,532 cars, however, were coast-to-coast bound, weren't they? Fact is, of the 2,532, just 251 came from or were bound for the Atlantic seaboard. Less than 10 percent. What's more, only about 30 percent were bound from or to points east of the Mississippi.

Consider now what results we'd get if it were feasible to make a similar study along a line drawn, say, from Tallahassee, Fla., to Cleveland, Ohio—in a part of the country, that is, where motor traffic is many times as great as in the West. The percentage of the total that was coast-to-coast bound would shrink to a nearly negligible fraction of 1 percent. In the Eastern States the volume of traffic traveling north and south is far greater than that bound from coast to coast. Counts were made of in-bound and out-bound from coast to coast. Counts were made of in-bound and out-bound out-of-the-State traffic on all main roads entering Florida, and it was found that there were 3,025 such cars on the average daily.

out-of-the-State traffic on all main roads entering Florida, and it was found that there were 3,025 such cars on the average daily. The State line of Florida is short, compared with the distance from Mexico to Canada across Arizona, Nevada, and Idaho.

We do make long motor trips, of course, even from Portland, Maine, to Portland, Oreg. But they loom large in our minds because they are rare.

A large proportion of all one-way passenger-car trips made outside of city limits actually cover distances of 5 miles or less. You doubt that, don't you? Well, how about this? If you count all trips of 30 miles or less, you include something like 90 percent of the trips made by car in this country. Sounds ridiculous, I know. A 50-mile trip in a car is nothing. Yet these are the facts. They are among the truly surprising conclusions brought to light through Chief MacDonald's surveys, and there's no guesswork about them. They were reached after questioning a great many motorists in 11 representative and widely scattered States—from Utah and Washington to Florida and Vermont—and asking them about their comings and goings. The number of trips of 100 miles or more was not above 2.3 percent of the total in any State, and in some States was less than 1 percent.

We use highways, then, chiefly for short trips. And where do we go?

e go? We go to town.

I suggest that those Members who are interested in modern roads read this entire article and you will be surprised at the conclusion that supertranscontinental highways are not so necessary but "the significant thing is that most of this traffic is going to or from town-much of it to or from the center of town."

Solution of Our Social and Economic Problems

EXTENSION OF REMARKS

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 2, 1939

EXCERPTS FROM ADDRESS OF HON. MARTIN F. SMITH OF WASHINGTON DELIVERED BEFORE MEN'S CLUB, ORANGE, VA., MAY 1, 1939

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks, I insert excerpts from an address which I delivered before the Men's Club in St. Thomas Episcopal Church, Orange, Va., May 1, 1939. The excerpts referred to are as follows:

According to some of mankind's outstanding thinkers and philosophers, after 6,000 years of human history, we find that our most serious national and international problems arise principally from two causes: First, our failure to learn how to properly and justly distribute and share the manifold fruits and products of the field, the factory, the forest, and the mine; secondly, our failure as nations to learn how to live together in peace, harmony, and understanding. To deal constructively and effectively with these two primary causes of our economic, social, and political ills becomes the supreme task and duty confronting and challenging mankind

AMERICA UPON THRESHOLD OF GREAT ERA OF SOCIAL AND ECONOMIC DEVELOPMENT

We have here in America sufficient natural resources, raw materials, electrical power, inventive genius, skilled labor, and everything that is required to build the grandest civilization in human

history and make it possible and certain for every man, woman, and child to live in comfort, even in luxury, and enjoy abundant prosperity, security, and happiness. Any person of average intelligence who will make only a cursory study of present technological trends and their social implications will be forced to the conclusion that the scientists and engineers are absolutely correct in their sion that the scientists and engineers are absolutely correct in their contention that we in America stand upon the threshold of the greatest era of social and economic development and progress ever experienced by mankind. If we apply the new secrets, formulas, and processes of modern science and chemistry in the manufacture of goods and the production of foodstuffs, we can give immediate employment to every idle person in the country and keep them steadily employed for decades to rebuild America by introducing the latest approved scientific methods in our industrial and agricultural structure. We can thereby create almost unlimited new wealth to be distributed in wages and bonuses to employees, in salarles and bonuses to employers, in dividends and interest payments to investors, in taxes and revenues to the Government. ments to investors, in taxes and revenues to the Government.

SOLUTION OF OUR PROBLEMS NOT LEGISLATIVE
